Similarly, everything from the eye (the organ which sees and the faculty of sight present in it) to the object seen and observed is Chinmaya. [That is, right from the object seen or observed which might be an illusion to the intelligent mind that is endowed with the unique ability to make sense of what is seen and determine its truthfulness or falsehood is one or the other manifestation of the universal Spirit called Brahm.]

Indeed, this Chinmaya is a very mysterious, esoteric and enigmatic entity which has numerous paradoxical characters and contradictory attributes. That is why it is so unique and one of its kind.

The gross body, the subtle body and the causal body—all of them are nothing but pure consciousness personified—i.e. they are Chinmaya¹.

I, you, we, and the rest of the entire visible as well as the invisible world consisting of uncountable varieties of creatures—all are Chinmaya.

All auspicious and noble deeds and virtuous actions as well as those that are inauspicious and unrighteous—all are Chinmaya².

All the different determinations and firm vows that a creature makes and the aspirations that he has; all the numerous and varied experiences that a creature has in his life—all of them are Chinmaya.

All the Mantras, all their patron Gods (i.e. all the Gods to whom these Mantras are dedicated), all the Dikpals³, and all the rest of exalted forms of creation right up to the Supreme Being—all of them are Chinmaya.

Maya (delusions) and Pooja (worship and devotion), all that is truthful and worth accepting and believing in—all of them are Chinmaya.

All forms of wealth and treasures (worldly and spiritual), all that is unspoken and all that is spoken about (i.e. things about which one speaks as well as those things about which no one speaks or which are not within the ambit of being spoken about), all that is near and all that is far away (i.e. all that is approachable as well as all that is beyond reach), all the grand virtues of renunciation and dispassion that the spiritual aspirant has (which are regarded as the best attribute in him), the whole of the past,

the present and the future (i.e. all that which experienced and witnessed in the past, is being done now, and would be done in the distant future)—verily, all of them are Chinmaya.

The Upanishads and their teachings all point to this one universal truth about Consciousness vis-à-vis this world. The cycle of birth and death as well as liberation and deliverance—both are the same for an enlightened soul because both of them are Chinmaya⁴. Indeed for him, everything is Brahm personified; everything is Consciousness; everything is Chinmaya—it does not matter whether he lives or dies.

‘Oh! I have realised the presence of that one single Consciousness in everything, including my own self, in you, in the Gods, in the tenets of the scriptures. This profound realisation has made me my own teacher and guide (Guru). I have obtained the ultimate ‘Mukti’, i.e. I have reached the pinnacle of enlightenment that has made me liberated and delivered (from the fetters of ignorance and delusions); I have achieved emancipation and salvation. Indeed, real Mukti is obtained with this eclectic and divine form of Gyan (knowledge of the reality and truth) (31-43).

[Note--¹Though it is said in the Upanishads that the *body* is not the Atma but only a habitat of the latter, this verse appears to contradict it, but the intention is not that. The fundamental idea being propounded here is that since everything in existence has its origin in Brahm, since the latter has manifested itself as each individual unit of this vast creation, and that nothing in existence exists devoid of the presence of Brahm, from the sub-atomic particle to the colossus sky, it naturally follows that the ‘body’, which is part of this creation and not outside of it, is Brahm personified, or pure consciousness personified. That is, the body is also virtually ‘Chinmaya’ because it harbours the consciousness in it and exhibits all the physical signs and characteristics that would distinguish anything conscious from another thing that is not conscious. In other words, the body shows all signs of life and consciousness in it—it sees, it hears, it feels, it tastes and it speaks, it moves and accepts things, it thinks, it is able to discriminate, it learns and it disseminates information for others to learn, it reproduces its own kind, etc. All these are functions of the living entity known as the ‘Chinmaya Atma’. Therefore, the body is also one of the numerous forms of Chinmaya Brahm. The central idea is that this Brahm is universal and uniform in this creation.

²That is, when one has developed a holistic and all-inclusive view of creation and begins to visualise the supreme Divinity in each and every action and in each and every deed, all distinctions of something being good and the other being bad are removed. This of course is the citadel of enlightenment, and it should not be construed as a license given to imposters for reckless wickedness and wayward behaviour in the name of everything being Chinmaya and therefore arguing that every action and deed is allowed and is pardonable. No, it is never the intention of this verse. This entire Canto is basically intended to establish the universality of the conscious Spirit or Soul as the only truthful entity in existence. It is intended to spread the message of universal brotherhood and the eclectic view of treating all alike with equanimity and love, and remove artificial distinctions and distortions in society that are at the root cause of so much strife, disparities and dichotomy.

³According to the Purans and Ram Purva Tapini Upanishad, canto 4, verse no. 38-39, there are ten *Dikpals* who are the Gods who act as the guardians or custodians of the ten directions of the world and support the latter from every corner. They are the following—(1) Indra (the king of Gods; he has a thousand eyes on his body and is therefore called ‘the one with a thousand eyes’), (2) Fire God, (3) Yam (the God who protects Dharma by killing the evil ones; he also judges a creature for his deeds at the time of death), (4) Nirriti, (5) Varun (the Water God), (6) Anil (the Wind God), (7) Kuber (the treasurer of the Gods), (8) Ish (Lord Shiva), (9) Brahma (the creator), and (10) Anant (Lord Seshnath, the legendary serpent who holds the earth on its hoods,

and upon whom the supreme Lord Vishnu reclines in the celestial ocean; the word also refers to Vishnu himself).

The following are the various direction in which these ten Gods should be worshipped— (i) Indra in the east, (ii) Fire in the south east, (iii) Yam in the south, (iv) Nirriti in the south west, (v) Varun in the west, (vi) Anil in the north west, (vii) Kuber in the north (represented by the Moon in the sky because the latter stores the Amrit/ambrosia for the Gods), (viii) Shiva in the north east corner, (ix) Brahma in the top or zenith, and (x) Anant (Sheshnath) in the bottom corner or Nadir.

The seed-Mantras of these Gods are respectively lun(g) (लृ), Run(g) (रृ), mun(g) (मृ), ksham (क्ष), vun(g) (वृ), yun(g) (यृ), san(g) (सृ), hun(g) (हृ), aan(g) (आ), and nun(g) (नृ).

The 10 weapons of the 10 Gods are as follows :- Indra's Vajra, Fire-God's energy, Yam's baton, Niruti's sword, Varun's sling/loop/snare/shackle, Wind-God's goad, Kuber's (represented by the Moon) mace, Shiva's trident, Brahma's lotus, Vishnu's (or Anant's) discus.

⁴This particular view-point is called 'Jivan Mukti'—the enlightened view of emancipation and salvation when the enlightened and self-realised spiritual aspirant has attained the citadel of enlightenment when he feels completely emancipated and liberated from the fetters of ignorance and its accompanying delusions even while living in this physical world with a body and going about his normal duties. But internally he is not at all involved in any of the activities of the body and instead remains in a perpetual state of eternal blissfulness, the state of existence called Samadhi. For such a person, it does not matter whether or not the body exists as he is totally detached from it at the mental and spiritual plane. And when finally his body does disintegrate in due course of time, his Atma and Pran simply move out of the limits imposed by this body to merge and become one with the cosmic wind element present in the vast cosmos outside the body.]

Canto 3

[Canto 3 is an extension of what has been expounded upon in Canto 2. Once the spiritual aspirant understands the importance and significance of the meaning of non-duality and universality of the consciousness that is known as the Truth of creation and the individual's Atma, his 'true self', it is a natural corollary that such a self-realised person proclaims 'I am Brahm' and asserts that he possesses such and such glorious virtues as possessed by Brahm and enumerated in this Canto. The spontaneous outburst of ecstasy when one discovers one 'true self' is the main theme in all the following Cantos of this glorious Upanishad. Refer also to Rig Veda's Atma Bodh Upanishad which has been published in volume 1 in this series dealing with the Upanishads of this Veda. Also refer to Brahm Vidya Upanishad which belongs to the Krishna Yajur Veda and is Chapter 16 of the present volume.]

1. Kumar (Shadaanan; Kartikeya) once again asked Lord Shiva questions regarding the Atma (the pure consciousness and the truthful 'self'), and how to experience and witness it.

Lord Shiva explained—I¹ am a personification of the supreme transcendental Brahm. I am an embodiment of supreme beatitude and felicity. I am nothing else but Gyan (truthful knowledge, wisdom and enlightenment) personified. I am the Supreme Being personified (1).

[Note—¹The word ‘I’ refers to the untainted, uncorrupt, immaculate, pure and truthful ‘self’ of an enlightened being. When a self-realised person makes this statement, he is not being haughty and arrogant or egoist, but he is simply affirming a spiritual truth that is universal and irrefutable. Kartikeya has asked Shiva to tell him how to experience and witness what Atma is, and the Lord is teaching him what it is. If one sincerely understands that his Atma has the characteristics mentioned here, he would have realised the real meaning of the term ‘pure consciousness’ as being his true ‘self’.

Canto 5, verse no. 2 unequivocally asserts that the Atma is Shiva personified.

Another point noteworthy here is that Shiva is *not* talking about himself when he uses the pronoun ‘I’ as it appears to be on the face of it. He is answering Kartikeya’s query, so the word ‘I’ means ‘my true form, my true self’ and it refers to Kartikeya or any spiritual aspirant for that matter. Refer also to Sarwasaar Upanishad, verse no. 16-21 which is Chapter 12, and Brahm Vidya Upanishad, verse nos. 81-109 which is Chapter 16 of this volume.]

2. I am most peaceful and calm, most tranquil and serene. I am nothing else but ‘Chinmaya’—i.e. I am a personification of the all-pervading, all-incorporating and all-encompassing unique entity that is the universal Truth and pure cosmic Consciousness in creation. I am eternal and perpetual; I am universal and uniform; I am permanent and immortal (2).

3. I am an embodiment of eternal and irrefutable Truth which has these (above) eclectic qualities, and anything that is not this ‘truth’ is not me (or, I have discarded all that is not the ‘truth’). I am like the all-encompassing and all-pervading sky element which encloses everything and is present in the subtlest space in the entire creation, but mysteriously remains uninvolved with it, remaining untainted from and unaffected by any of the influences of things which it covers and in which it is present. [That is, like the sky, I too am unattached and uninvolved in anything in this world though I live in this world and do numerous deeds while I live here. I am totally free from all blemishes and faults associated with this world of delusions and artificiality.] (3)

I live in the fourth state of ‘Turiya’, and even transcend this state to exist in the state beyond it, called the ‘Turiya-teet’¹ state. I am only in the form of pure consciousness, and am a personification of eternal blissfulness and happiness, of eternal beatitude and felicity (4).

I have only a subtle form which has no gross body and physical form. As such, I am immaculate, pure, uncorrupt and unadulterated in any form. I am nothing but Gyan (knowledge, wisdom and enlightenment) personified, and therefore I am the only entity worth loving, worth endearing, and worth caring for, an entity that is the most dear for all spiritual aspirants (5).

[Note--¹The *Turiya* state of consciousness is the fourth in which the spiritual aspirant lives in a state of perpetual Samadhi. That is, he remains in a constant state of blissfulness and meditation though he lives in this physical world and goes about his normal affairs like an ordinary man. The first three states are the waking, the dreaming and the deep sleep state of consciousness. The fifth state of *Turiya-teet* is one step further ahead and the last stage in spiritual upliftment when the person crosses the threshold of awareness of this world and he ceases to participate even in his normal functions in this world. He remains like a log of wood, totally uninterested in and completely oblivious of the world around him.

The concept of Turiya and Turiya-teet have been explained in detail in Dhyānbindu Upanishad, verse nos. 93/14 and 93/15 respectively. This is Chapter no. 15 of this volume.]

6. I am one of my own kind because I have no alternatives and parallels (Nirvikalp). I am totally dispassionate and non-desirous of anything (Niriha).

I am spiritually healthy and without any moral or spiritual ailments or tainting affects that are like a disease that might afflict my true self (Niraamaya).

I am alone and remain without any company, being self-sustained and self-sufficient, and needing no support and help from anyone else (Asanga).

I am inculpable, incorruptible and without any faults, taints, defects and shortcomings of any kind (Nirvikar).

I am eternal, unchanging and imperishable; I do not diminish or get degraded or spent (Avyaya) (6).

7. I stay in one uniform form, remaining steady and unchanging in my divine state of existence. I am an embodiment of pure and supreme cosmic Consciousness that is almighty and all-intelligent, called Chinmaya. I am limitless, undefined, undivided and one single whole (Aparichinna) because by nature I cannot be divided, mutated and broken into parts or divisions or sections; I am that mystical divine Being who is eternal, uniform, universal, everlasting, perpetual and infinite (because by nature I am Akhand) (7).

8. I am an embodiment of Satya (truth) and supreme Anand (beatitude and felicity). I am the supreme transcendental cosmic Consciousness which is characterised by this Anand. As such (i.e. in the form of the cosmic Consciousness—see Canto 2), I live inside as well as outside of everything in existence, both the visible as well as the invisible, including my own body which has visible (the external organs of perceptions and actions) as well as invisible organs (the internal organs and tissues of the body) (8).

9. I am ever submerged in and surrounded by the supreme state of blissfulness obtained by self-realisation of the pure conscious Atma. I remain ever engrossed in contemplating upon this eternally truthful Atma which gives me true happiness and joy. Indeed, I am an image of that supreme Atma. Indeed, that Atma is ‘me’, and it is the eternal form of auspiciousness, blissfulness, wisdom, enlightenment and well being personified by Lord ‘Sada Shiva’. [The word ‘Sada’ means that which is constant, always, eternal and steady, while ‘Shiva’ stands for auspiciousness, beauty, blissfulness and enlightenment.] (9).

10. I am an embodiment of the light of enlightenment and wisdom, the light of pure consciousness and holiness that is emanating as divine effulgence from the self-illuminated Atma. I represent the brilliant light of the self-radiant and the self-illuminated Atma. I am the essence of this Atma and its glittering light. I have no beginning, no middle and no end, as I am like the eternal, infinite and endless sky (10).

11. I am an embodiment of the eternal, infinite, pure, immaculate, truthful and blissful cosmic Consciousness that is the only almighty and omnipotent Authority having divine powers and potentials in existence. This authoritative Consciousness is

imperishable and non-diminishing. It is eternally and perpetually wise, erudite, sagacious and enlightened; It is eternally and perpetually pure, untainted and uncorrupt; and it is eternally and perpetually blissful and happy. I am 'that' consciousness (11).

12. I am that eternal and infinite entity which remains or survives after everything else comes to an end. I am beyond all that visibly exists and outlast this visible existence. I cannot be defined by any specific norms or forms having any special characteristics, attributes and qualities, and I am established in my own unique form which is both subtle and sublime. I am a personification of the unique virtues possessed by the great sky extending endlessly to infinity (12).

13. I am a personification of the Supreme Being called 'Bhuma', the almighty and omnipotent one, and therefore I have no one as my superior Lord as I am the greatest amongst all. I personify beatitude and felicity. I cannot ever be described in words. I am the foundation of all else in existence, and therefore need no other support for myself. I am an eternal treasury of pure consciousness (13).

14. I do not consider my body as my self and am indifferent towards the body, because I am not the body (but pure conscious Atma). I do not have any worries of any kind whatsoever (because I am not an ordinary creature tormented by so many problems pertaining to this mundane existence). I am also free from being affected by any of the tendencies and temperaments of the mind and its inherent nature to think about everything that affects the creature and which are related to the latter's interaction with the world. Instead, I am filled with bliss and happiness that comes with renunciation and enlightenment (14).

15. I am that unique entity that is beyond the purview of the mundane faculty of sight (because I am the subtle and sublime Atma which is microscopic and atomic in nature so that it cannot be physically seen by the naked eye of the gross body), but at the same time I can also be seen (because I have a physical body in which this Atma lives, and this gross body can be clearly seen by the eye).

I am always fulfilled; I am always contented (15).

16. I am Brahm personified. I am pure cosmic Consciousness. I am that Brahm and Consciousness; I am the greatest and supreme; I am what I am. I am like the vast and infinite sky element (16).

17. I am the great Atma. I am the supreme transcendental Authority. Though I am such an exalted and supreme entity, I appear to have a gross physical body (17).

18. I appear to be so ignorant and humble that I become a disciple or a student (because I have to learn so many things in this world when I take a birth here with a body, though I am inherently all-knowing in my ethereal form as the Spirit). I am that Authority which gives support and succour to the three worlds (i.e. I am the supreme Brahm which supports the three units of creation—the terrestrial world of mortal creatures that live on the surface of the earth above water, the nether world of subterranean and aquatic creatures, and the celestial world of Gods and holy Spirits). I am beyond the limitations created by the three phases of time, such as the past, the present and the future (because I am uniform, universal, eternal, imperishable and

infinite—therefore such factors as past, present and future do not apply to me). I am the Vedas personified (i.e. I am a fount of all knowledge because I am eternally omniscient and all-knowing, though I appear to be a student and disciple as mentioned above) (18).

19. I am that ultimate Absolute Truth which has been finally determined and affirmed by all the scriptures. I am established as the pure consciousness and the target of the mind's faculty of concentration and thinking. I have revealed myself as the earth that harbours this world¹, and anything that is not me has no existence (19).

[Note—¹This is a very significant observation by the ancient sage who envisioned this Upanishad. It shows that he was aware of the fact that earth is the only planet that harbours vibrant and colourful life in all its glorious radiance and splendour. Since consciousness is synonymous with life it is apt to liken it with earth.]

20. Be certain about it that there is nothing besides me, because everything in existence is the non-dual Atma. I am indeed Brahm; I am indeed Siddha (the acclaimed one, the mystical one, the attained one, the one with supernatural powers, the one who has successfully accomplished mastery over certain skills and craftsmanship). I am eternally and infinitely pure and immaculate, uncorrupt and unpolluted (20).

21. I have no specific attributes, no particular characteristics and no qualifying qualities that are definable and limiting in their nature (Nirgun), nor do I have any specific contours, forms, shapes and sizes (Nirakar). This is because I am the ethereal, eternal and infinite 'Atma' which is beyond the purview of such mundane things.

I am the supreme Brahm personified. I am not liable to decay and come to ruin (Ajar) as I am eternal and imperishable and do not die (Amar) (21).

22. I am always in my own original form (for I have no duplicity and no secondary or parallel forms); I am always established in my own self (without seeking any other assistance). I am the wholesome and healthy Atma. I am the ultimate destination of all spiritual pursuits, and I represent the most exalted state of existence called the 'Param Gati' (22).

23. I am the consumer and enjoyer of everything. I am an embodiment and fountainhead of glorious light (representing holiness, auspiciousness, nobility, righteousness, conscientiousness etc.), and all the other virtues that come within the ambit of magnificence and greatness (23).

24. I remain engrossed in my own self and enjoy it myself. I am the seer, and at the same time I see myself everywhere. [This is because 'I' am the Atma residing in my own body as well as everywhere outside the body as the cosmic Consciousness and in the body of the person in front of me.]

I am happily and comfortably ensconced in my own self (as the Atma enthroned in the subtle heart). I am the only entity that remains when everything else is eliminated (i.e. I am the remainder that lasts after all other factors in this deluding world are removed, signifying my truthful, imperishable, everlasting and eternal nature) (24).

25. I happily live as an Emperor in my own kingdom in the form of pure consciousness. I am sitting inside my own Atma which acts as my throne, and I do not think of anything other than my own Atma. [That is, my Atma is what gives me my powers and authority, it is therefore useless for me to look anywhere else in search of this power and authority. If I do so, I would be demeaning and in-subordinating my Atma.] (25).

26. I am nothing but pure consciousness personified. I am a personification of the non-dual Brahm who is eternally blissful and truthful. I am a treasure of beatitude and felicity which are the virtues possessed only by Brahm. And, therefore, I am Brahm (26).

27. I am ever present and perpetual. I am like the void or the numeral zero (because I remain free from any contact, attachment or appendage, because I am non-aligned and detached from all emotions and free from all thoughts, because like the zero I give everything its value but remain neutral myself, and because I am like the vacant sky which appears to be a big void but which harbours everything in creation).

I am the Atma that is present in all living creatures. I am an embodiment of Anand (supreme blissful state of existence).

I am eternally in a blissful state of existence. I am that Atma which not only lives in the subtle sky of the heart but has the virtues of the sky (as being all-encompassing, all-pervading and omnipresent in the cosmos).

I am constant and unwavering, steady and perpetual, always present universally and uniformly everywhere in all planes of time (i.e. I am 'Nitya') (27).

28. I am the glorious consciousness that illuminates the subtle sky of the heart much like the splendorous sun shining brightly in the sky. My form as the Atma is fully contented and fulfilled in its own self. This eclectic form of mine is imperishable, eternal and unchanging; it does not get diminished or degraded or unspent (Avyaya) (28).

29. I cannot be quantified and measured in numbers such as one etc. I am always and eternally liberated and delivered (Mukta). I am subtler than the sky element, and have no beginning and end like it (29).

30. I am an embodiment of divine light and splendour. I am an embodiment of great and immeasurable happiness and joys. I am the only authority in creation. I am a personification of the state which is called the Param Pada which is the final emancipation and salvation of the creature (because I represent the ultimate Truth and cosmic Consciousness which are synonymous with Brahm, and there is nothing beyond me) (30).

31. Satya (immutable and irrefutable truth) and Anand (bliss and happiness) are my true and fundamental forms. [Or, truthful bliss that is real and not artificial is my inherent nature and subtle form.]

Similarly, Gyan (truthful knowledge and erudition, wisdom and enlightenment) and its accompanying Anand (exhilaration, ecstasy and blissfulness that is characteristic of truthful spiritual enlightenment) are my true and real form.

I am an embodiment of pure 'Vigyan'¹ having unique characteristics. I exhibit signs of truthful Anand that is eternal and infinite (31).

[Note—¹*Vigyan*—(a) That empirical body of knowledge which stands the test of proof and verification; scientific and logical form of wisdom and relevant knowledge is called *Vigyan*. When ordinary ‘Gyan’ is put to test and a rational body of knowledge is arrived at, when it is witnessed or experienced in practical terms, it is known as ‘Vigyan’. It is logical derivation, confirmation and affirmation of certain things known in theory and now ratified as the unequivocal truth and the irrefutable fact, reasoned acknowledgement, or actual witness of facts so that there is no doubt or confusion as to their authenticity, veracity and truth. In other words, Vigyan is experimental Gyan, or Gyan put to practice by following the guidelines of Vedant. (See Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39.0

Therefore, Vigyan literally means application of mind, intelligence and rational logic, having in-depth knowledge, intelligent and rational learning or science of anything which can be verified, any knowledge which is empirical, rational, logical, scientific and applicable in practice. Vigyan is analytical and critical intelligence and knowledge obtained as its result. (The concept of Vigyan has been elaborately described in Chandogya Upanishad, canto 7, section 7.)

Besides this, Vigyan is the progenitor, sustainer and concluder of the entire creation. It is obvious deduction because creation is such a complicated process that it requires exceptional intelligence and skills as well as critical ability to use available information to start, sustain and conclude the tremendous explosive potentials of the forces and energy of Nature for constructive purposes, and to keep a strict tab on it so that it does not digress from its mandate and prove counter-productive. Even during the life of a creature, it needs the help from all fields of knowledge in order to meet its daily needs and provide for its material and bodily comforts and well being.

This has been elucidated succinctly in Taittiriyo-panishad of Krishna Yajur Veda tradition, Valli 3, Anuvak 5. Briefly, it says “All the creatures are born out of Vigyan (i.e. special knowledge and skills are needed to set in motion the process of creation); they are sustained by Vigyan (i.e. special knowledge and skills are needed to provide for all the material needs of this living world and take care of its general welfare); and they conclude in Vigyan (i.e. special knowledge and skills are needed even to dispose of the body properly by way of performance of elaborate cremation rites and other rituals, or embalm it before burying).

In short, from conception right up to conclusion creation needs Vigyan at each step of its existence. At the time of death, a wise man benefits from his lifetime of experiences and learning, and detaches himself from this delusory and illusionary world of material objects which are non-eternal and the cause of all miseries because they tend to tie and bog the Atma down to this lowly world of transmigration and prevent its final liberation and attainment of salvation”.

‘Vigyan’ is the wisdom and intellect that is inherent in a man. It is the rational mind that decides what is to be remembered, what is to be thought, what needs attention and concentration of mind, and what is worthy of paying any attention and thought at all in the first place. This selective aspect of the discriminatory intellect is called Vigyan.

Any body of knowledge is called Vigyan because it is verifiable and derived at by application of intellect and mind free from any pre-conceived notions and belief. Consciousness is called Vigyan because it is self-sustained, self-enlightened, self-illuminated, radiant and glorious; it is a fount of knowledge and awareness, of wisdom and enlightenment. All other entities in this creation have whatever they have because of the potentials and powers bestowed to them by this consciousness. Their very relevance and importance and significance are there because the consciousness has given them this privilege. These entities are nothing else but a marvelous display of the magnificent majesty and potentials of the consciousness. This realisation is called Vigyan because it is based on intelligent application of knowledge and wisdom. It is Vigyan because it is empirical and thoughtful; it is rational and logical;

it is truthful and real. Vigyan refers to a superior body knowledge that is not based on hearsay or conjectures. It has a solid foundation and steady relevance.

Information and knowledge that stand the test of logic and rationale is called Vigyan; it is this Vigyan that takes a man forward. With knowledge come joy and happiness, satisfaction and a sense of achievement, elation and a sense of fulfillment. In the spiritual realm, this leads to bliss and self-realisation. This realisation pertains to the awareness of the irrefutable and immutable Atma or soul which is consciousness. The macrocosmic counterpart of this individual Atma is known as Brahm. Hence, self-realisation is equivalent to Brahm-realisation.

Consciousness itself refers to the truthful knowledge of anything that is real and true, and not that is hypothetical and imaginary. That is why the Atma or soul is called consciousness and a personification of Vigyan.

(b) *Relationship between 'Gyan' and 'Vigyan'*--The difference between 'Gyan' and 'Vigyan' can be succinctly summed up in the statement—'Brahm is' or 'Lord is'. This awareness and firm conviction of its truth is Gyan, while to say truthfully that 'Brahm is I' or 'Lord is I' is called Vigyan.

'Gyan' and 'Vigyan' are closely related to each other. The realisation or awareness that Atma is, inter alia, different from the body, and is the true identity of a creature, is called 'Gyan'. This Atma is a very unique entity and is called the 'true self' of the creature. Gyan refers to self realisation and attainment of enlightenment about the absolute Truth and Reality in this creation. It encompasses a broad swathe of philosophy which is taught by the Upanishads, called Vedanta. When Gyan is put to test and a rational knowledge is arrived at, when it is witnessed or experienced in practical terms, it is known as 'Vigyan'; it is logical derivation, confirmation and affirmation of certain things known in theory and now ratified as the unequivocal truth and the irrefutable fact, reasoned acknowledgement, or actual witness of facts so that there is no doubt or confusion as to their authenticity, veracity and truth. In other words, Vigyan is experimental Gyan, or Gyan put to practice by following the guidelines of Vedant.

Therefore, 'Vigyan' literally means intelligent application of mind; intelligence and rational logic; having in-depth knowledge; intelligent and rational learning or science of anything which can be verified; any knowledge which is empirical; rational, logical, scientific and applicable in practice. (The concept of Vigyan has been elaborately described in Chandogya Upanishad of the Sam Veda tradition—7/7, and in Brihad Aranyak Upanishad of Shukla Yajur Veda tradition—3/7/22).]

32. All this around me is Brahm, and nothing but Brahm. Verily, I too am that eternal and universal Sanaatan Brahm (i.e. Brahm who is eternal, perpetual, infinite, everlasting, primary, primeval, most ancient and traditional) who is ever in a blissful state of existence (32).

33. 'You' (i.e. the second person) and 'he' (i.e. the third person)—all the entities indicated by these pronouns are none but Brahm. It is 'me' (i.e. the first person) as Brahm in those forms, because there is nothing but Brahm anywhere in existence. I am Shiva¹ (the auspicious, divine, truthful, wise and enlightened One) who is a manifestation of that supreme consciousness known as Brahm (33).

[Note—¹The word *Shiva* has a dual meaning here—one refers to the preacher of this Upanishad who is Lord Shiva as he is the one who has revealed this fine Upanishad as an answer to queries raised by Kartikeya, and the other is a reference to the spiritually enlightened person's solemn affirmation that he is himself Shiva and that he embodies all the virtues that Shiva stands for.]

34. I have all the eclectic and glorious virtues in me; I am an image of these virtues. I am happy and comfortable. I do not have any of the gross properties of material things in this world, but I am a witness to all the gross things that exist in this world. [That is, inspite of me being in close contact with this materialistic world and witnessing it up close, I am totally detached and disinterested in it and remain unaffected or uninfluenced by any of its tainting virtues.] (34).

35. I have a gross body but am not it; instead of it I am the Sanaatan Brahm (the eternal, universal, supreme transcendental Truth in creation) which is pure conscious Atma manifested in my body.

I am the beginning and the end, as well as the remainder. [This word 'remainder' indicates that I am eternal and that entity that outlasts the end of the body. I am the universal Spirit which outlives the body, and which was present before the body came into being.] (35).

36. I do not have a name or physical form. I am eternally freed from being limited by such definitions and delineated into different categories. I am an embodiment of beatitude and felicity. In spite of this observation, I appear to have a body with sense organs and exhibit all their characteristic features, attributes, functions and qualities (36).

37. I am without any kind of binds and fetters that can ever shackle me. At the same time, there is no such thing as 'obtaining liberation and deliverance' for me (simply because I am not tied with any fetter and shackled to anything, and am an eternally free Spirit).

I am an image of eternal, universal and truthful Anand (ecstasy, exhilaration, bliss, beatitude, felicity, happiness and joys that come with self-realisation). I am the primary and primeval consciousness which is immutable and indivisible (37).

38. The mind and its faculty of speech cannot grasp, understand or know me. [That is, I am beyond the purview of the mind and am so mysterious and enigmatic that I cannot be explained and defined in words.]

I am always in a state of immense blissfulness, joy and happiness.

I am completely wholesome and fulfilled in every way. I am an embodiment of great Anand (blissfulness and ecstasy) (38).

39. I am fully satisfied and contented, and what is known as the essence of Amrit (the divine ambrosia of eternity and blissfulness) is nothing but me.

There is no doubt and confusions about the fact that I am that Brahm who is non-dual and one of his kind (39).

40. I am neutral and devoid of everything like the great void. I cannot be seen or observed visibly¹.

I am already freed from all fetters, and therefore am beyond such situations that would necessitate efforts to obtain freedom. I embody emancipation and salvation; I am an image of happiness and bliss obtained by emancipation and salvation (40).

[Note--¹That is, I exhibit no attributes, no features, no qualities and no characters of any kind as are understandable and grasped by the mind and intellect or perceived by the sense organs. I am much beyond this. I am transcendental and so sublime and

subtle that I go beyond the reach of the mind and intellect as well as the sense organs of perceptions.]

41. I am an embodiment of Satya (truth), Vigyan (empirical knowledge) and truthful and eternal Anand (happiness and blissfulness).

I exist in the transcendental state called Turiyateet (the fifth state of consciousness marked by supreme enlightenment and beatitude which is synonymous with the state of Brahm-realisation).

I have no doubts and confusions in me (as I am beyond the purview of worldly considerations) (41).

42. I am eternal and perpetual. I am without a birth. I do not have any of the diseases (a metaphor for physical and spiritual problems) that afflict ordinary mortals in this world. I am therefore honoured by the epithet of Niranjana—one that is faultless, untainted and without any blemishes or flaws.

I am immaculate and uncorrupt; I am erudite, sagacious, enlightened and wise; I am eternal and perpetual; I am the Lord himself (42).

43. I represent the essential meaning of the ethereal word OM¹, and am without any blemishes, aspersions, shame, slander, spot, slur, ignominy, taint, disgrace and other moral, ethical and spiritual faults of any kind (Nishkalank). I am a personified form of OM.

I am an image of pure consciousness. I am so mysterious, esoteric and enigmatic that I am neither this nor that. I am ‘that’ (i.e. Brahm, the Supreme Being) personified (43).

[Note—¹The word *OM* is a synonym of the supreme transcendental, the cosmic Consciousness from which the entire creation has evolved, and it incorporates the entire spectrum of creation, i.e. its origin, its expansion and its conclusion in its ambit. See also Canto 1 of this Upanishad.]

44. I do not have any specific and tangible form and shape of any kind (as I am the ethereal Spirit and cosmic Consciousness). I have no deeds and actions (i.e. I do not do anything nor do I act in any way, being neutral and detached from this world characterised by deeds and actions).

I have no fractions and divisions in me, and neither is I a fraction or part of anything else (as I am a complete whole, being immutable, indivisible and non-dual Atma). I am beyond perceptions of the mind and sense organs, and neither am I the mind or sense organs (because I am the pure conscious Atma residing in the causal body of the creature, and the subtle body consisting of the mind as well as the gross body consisting of the sense organs are separate from me) (44).

45. I am not the intellect (the subtler and higher form of the mind) either. I have no alternatives or confusing duality in me. I am independent of the three types of bodies of the creature—viz. the gross body, the subtle body and the causal body. [That is, I am the Atma which resides in the body which has been classified into these three hypothetical divisions for the purpose of metaphysical study only. Being a mere ‘resident’, I am not the ‘body’, but an independent entity quite distinct from it.]

I am not any one of the three states in which the consciousness exists in this world—i.e. the Jagrat state (the waking state), the Swapna state (the dreaming state) and the Sushupta state (the deep sleep state) of consciousness (45).

46. I do not suffer from any of the so-called three torments or ‘Taaps’ that afflict all the mortal creatures in this creation¹. And neither do I have any of the three desires².

I am pure consciousness personified as the Atma which does not require any deep thinking and pondering over any subject (to understand its import and fully grasp it) nor does it need to hear anything to learn about it which is not already known to it (because the Atma is all-knowing and omniscient) (46).

[Note—¹The three torments that afflict the creature are the following-- Adhi-bhautik—related to terrestrial creatures such as enemies and animals; Adhi-daivik—related to unfavourable Gods and malignant stars; Adhi-daihiik—related to the body such as diseases and horrors of old age etc.

²The three desires are the following—desire for fame, desire for wealth and desire for comfort/pleasure.]

47. I am so detached from the mundane world that I do not have anyone who can be called my clansman, or my kith and kin, or my peer, compatriot and companion. [This is because I am the pure conscious Atma which is an independent entity not related to anybody whatsoever.] At the same time, there is no one who is not related to me. [This is because the pure consciousness known as the Atma, which happens to be my true identity, is the same in my body as it is in the body of the other person. Therefore, we are all ‘one’, or are like siblings of the same cosmic universal Father known as Brahm.]

Indeed, I am far beyond these debates and classifications of relations. [That is, being the truthful cosmic Consciousness personified as the Atma, I transcend worldly classifications of relations such as one person being my father and the other my brother or friend. For me, all are equal and my own image; there is no fundamental distinction or difference between two or more individuals because all have the same Atma in them.] (47).

48. Mana (mind and emotional heart), Buddhi (intellect) and Ahankar (the notion of pride and ego) are all false and imaginary. I have none of them. [This is because mind and intellect are the subtle components of the creature’s physical body, and I have no physical body which would have these subtle components. Since I am without any form of corruptions and flaws in my immaculate character, there is no question of me having such negative traits as ego and pride that would in any way taint my immaculacy and pristine pure form.]

I am Nitya (always, perpetual and ever present); I am Shaaswat (eternal, perpetual, immortal, infinite and permanent); I am Ajaha (without a birth) (48).

49. The three forms of hypothetical bodies¹ that a creature possesses are imaginary divisions of the essentially indivisible eclectic entity (known as the pure conscious Atma) that has manifested itself with a body.

The three planes into which the time element—which is essentially uniform and indivisible—is segregated and divided into are equally artificial and not a true depiction of its real and truthful nature².

Similarly, the three Gunas³ are also not relevant and applicable to me (as I am, in my primary and eclectic form, without any definable attributes and qualifications).

I am truthful and immaculate, untouched by such perplexing subjects (as to what is the actual meaning and form of the three bodies, the three planes of time and the three Gunas; I am unconcerned with them and not affected by them) (49).

[Note—¹The *three bodies* of the creature are the following—(a) its gross body consisting of the five organs of perceptions—such as eye, ear, nose, tongue and skin

which are related to the sense of sight, hearing, smell, taste and feeling respectively, and the five organs of action—such as leg, hand, mouth, genital and excretory which are related to the five functions of the body such as movement, acceptance, eating and speaking, reproduction and excretion; (b) its subtle body consisting of the mind-intellect complex; and (c) the causal body that harbours the pure conscious Atma which is the causative factor for the other two bodies acquiring their importance and relevance as well as making the creature alive and active. Refer also to Canto 5, verse no. 17.

²The *three frames* of time are the past, the present and the future. It is an artificial division because time always remains uniform, unchanging and indivisible, and this boundary between the past, the present and the future is artificially created in order to understand things that constantly keep on changing. We try to come to grasp with the ever-changing nature and form of things in this world when we compare their present existential form with how or what it was in some hypothetical point of time in the past and what or how would it look like in some equally hypothetical point of time in the future. This situation arises because the object of our research is ever changing. On the other hand, if we consider anything that never changes, time would literally come to a standstill in relation with it; the time would be the same in the past as it is in the present and would be in some abstract point in the future vis-à-vis that thing which is unchanging and uniform over time. This is exactly what is intended here. The 'Truth' is the only unchanging and uniform entity that remains steady over a period of time, and for it the time is always the same. On the other hand, all things that are false and illusionary keep on changing every moment depending upon the time and circumstance as well as the perceptive abilities and aptitude of the mind and intellect of the individual.

For example, we say that with each passing moment 'we' are coming so much closer to death and go away from birth. This observation is basically faulty because what changes with time is the body and not the 'soul' which is the true 'self' of ourselves. In order to understand the transient, mortal and ever-changing things in this world as they stand today we imagine what they looked like in some time in the past and what they would look like in the future. This helps us to have a three dimensional view and a perspective of things in this mortal world. But we forget in the process that the basic definition of anything being 'true' is that it would remain unchanging, constant, steady and uniform in every plane of time; it would be in the future as it is in the present and was in the past. Everything that is not constant and everlasting is transient and perishable, and as such it cannot be the 'ultimate truth'. In that case, it has to be false and illusionary, something that is not the 'ultimate, irrefutable, unequivocal and immutable truth' but only 'apparent and conditional truth depending upon how we perceive the world and ourselves'.

The supreme transcendental Consciousness is unchanging in every frame of time, and since the thrust and quest of the Upanishads is to search out that entity which is the 'real truth' that remains uniform and untouched with the shifting sands of time, the 'truth' that is always the same and not an 'imaginary truth' that constantly changes in an artificial division of time that our mind has created in order to justify something that is inherently false as being the truth, it treats the Atma as that 'truth' and the 'indivisible aspect of time' as representative of this 'truth'. All the rest is artificial, transient, perishable and deluding.

³The *three Gunas* are the following-- The three characteristic qualities inherently present in the creature, in different ratios, are the three thought textures which bombard the mind. These three thought textures are manifestations of the 'Vrittis and Vasanas' (inherent tendencies or desires) of the creature which mire its pure conscious Atma or soul as a covering or veil. These three basic qualities or *Gunas* which are inherent in all the living beings determine their nature, habits, temperaments and inclinations which in turn decide the behaviour, personality and outlook of each individual in this world.

(a) *Sata Guna* or quality is the best quality present in a creature and it is marked by a predominance of auspiciousness, righteousness, virtuousness and noble qualities. It is marked by such high standards of ethical existence that have, as their characteristic features, such qualities as coolness of head, peace, contentedness, humility, devotion, wisdom, mercy, compassion, creativity, selflessness, service, righteousness, virtuousness, holiness and nobility of thought and action etc. As is evident, these qualities are the best qualities that one can have in him; they have a spiritual dimension to them; they are spiritually uplifting and give a divine halo to those who practice them. This quality creates an inherent affinity in a creature towards things in life which are of high moral value and uplifting for the soul rather than things which are demoting and denigrating for the spirit.

The *Sata Guna* or quality is the veil covering the soul like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the *Satwic* desires; its removal requires the least effort. It is the foremost and the best amongst the three characteristics of a creature such as good and positive virtuous such as righteousness, creativity, noble deeds and thoughts, the positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc.

(b) *Raja Guna* is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, desires, selfishness, expansionist tendencies, desire to sustain etc. All these pertain to this materialistic world, and they create an inherent affinity in a creature towards the material world of sense objects and their enjoyments rather than the world of spiritualism. In other words, those creatures who have this quality as a dominant trait are more inclined towards the world as compared to those creatures who have the *Sata* quality in a greater density. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the *Satwic* qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The *Rajasic* quality or *Guna* can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with *Satwic* quality. *Rajasic* tendencies are the second best quality which produces worldly desires, ambitions, passions, selfishness, various obsessions, desire to sustain and expand etc.

(c) *Tama Guna* is the third quality which is the meanest and basest of the three types of qualities in a creature. It is marked by evilness, perversions and sinfulness. It is the most degrading, denigrating and contemptible of the three characteristics in a person, leading him to such negative traits as sins, vices, perversions, greed, avarice, haughtiness, pride, lust, attachments, yearnings, intoxication, wild behaviour, promiscuity, evils, utter disregard for anything which is righteous, ethical and noble etc. This quality creates an inherent affinity in a creature towards things which are very mean and lowly, which are totally sensual and pertain to the immediate gratification of the sense urges without any thought to what would be their consequences in the long run. In brief, behaviour which is utterly immoral, denigrating and depraving for the creature, marked by grossness, crassness and recklessness of demeanors. It is the lowest and meanest of the three qualities leading to a person's downfall, ignominy and ruin.

The *Tamsic* quality or *Guna* covering the soul is like a foetus in the womb covered by the embryonic membrane—they cannot be removed easily and require diligence, effort, dedicated and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, the worst type to possess, and is marked by such negative traits as sin, evil, perversions, immorality, vices, misdemeanors, anger, inertia, delusions, deception, gloom, ignorance et al.

Since each individual is like an independent piece of mosaic that completes the entire picture in conjunction with other such pieces, this individual creature's nature and character helps to determine the overall shape of the creation. These Gunas keep the creation in a state of constant change, because numerous creatures die every moment and new ones are born. The Supreme Being has to be constantly on the alert because of this flux.

The various permutations and combinations of these three qualities create a particular 'nature' of an individual giving him his individuality and his special characters which are unique to him; they determine his temperament, behaviour, thought process et al. Two individuals having the same external form of the gross body—e.g. two men—might look very much alike but they vary immensely in their nature, habit, behaviour, thinking, outlook, action and deeds, wisdom and way of living. This is what is meant when it said that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual, countable specific number that there are actually and physically 84 Lakh types of bodies of living beings; it only symbolically refers to the huge possibilities that are possible with these three 'Gunas' and their different combinations that can imaginably produce a myriad variety of creation that can be created with these three basic qualities and their various sub classes of qualities.

Upanishads symbolically refer to the *three primary colours* when they describe these *three basic qualities* in the creature. They are white for the Sata Guna, red for the Raja Guna, and black for the Tama Guna. Refer—Shwetashatar Upanishad, 4/5.

The Chandogya Upanishad, 3/5/4-3/9 and 6/3-4 uses these three colours to describe the different types of characters called Sata, Raja and Tama defining the three basic types of creatures and their individual personality traits and temperaments that exist in this creation.

The Paingal Upanishad, 1/3-9 of the Shukla Yajur Veda clearly states that these three colours were the ones with which Nature representing creation was born and how the supreme creator had subtly entered the entire creation to be uniformly present in its very minutest of corner.

The concept of *Gunas affecting the Atma* has been elaborately dealt with in various Upanishads, for example the Maitrayanyu Upanishad, 1/11, 2/5, 3/5, etc. of the Sam Veda tradition.]

50. When I have realised my true form as the pure transcendental consciousness that is a wholesome Truth, all the different bodies of knowledge such as the Vedas etc. become redundant. [That is, knowledge contained in them is relevant only till the point that their objective is not achieved, and that is to awaken self-realisation in a person and enlighten him about the ultimate Truth in creation so that he stops falling prey to falsehood, and instead rise higher from this lowly plane of mundane existence and obtain freedom for himself. Once this noble purpose or spiritual objective is accomplished, there is no further need to study the scriptures.] (50).

51. I—the supreme, transcendental, eclectic and the greatest form of eternal divinity known as 'Bhuma* Sada Shiva'—am the only auspicious Truth in creation which is absolute, eternal, perpetual, immutable and imperishable, while the rest of this creation, including the Trinity Gods (Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder), the living creatures, all the primary elements etc., are not the real 'truth' (51).

[Note—There should be no confusion here. The phrase *Bhuma Sada Shiva* has three components—*Bhuma** meaning someone who is the greatest and grandest, the almighty and supreme Authority in creation, the word 'Sada' means always, everlasting, eternal and perpetual, and 'Shiva' refers to that entity that is divine,

truthful, auspicious, holy, enlightened and self-realised. Hence, the phrase 'Bhuma Sada Shiva' refers to the Supreme Being known as Brahm who has manifested as the pure and truthful consciousness or Atma or soul of the entire creation. This Atma is most enlightened and wise; it is not only a fountainhead of all knowledge but knowledge itself personified. This Atma is the ultimate 'truth' which has no particular form or attribute; it is universal, immutable and uniform in nature. All the rest of the units of creation have some or the other unique features and virtues characteristic to them. So they might be very powerful and mighty like the three Gods of the Trinity, or they might be the basic units of creation such as the elements, or they might be the visible form of those powers and elements—but they cannot be the supreme Authority from where all of them have got their individual powers and potentials and glory. In fact all of them are merely fractional parts of the vast cosmic scene of which the Supreme Being is the artist and composer, doing specific deeds and carrying assigned duties fixed for them by the ultimate deciding Authority. The units of this cosmic scene or the players of the cosmic drama cannot supersede the master who has conceived the very idea itself, and once the master decides to wind up the game none of them can stop him from doing so, whether it is Brahma, Vishnu or Shiva.

*Let's have a closer look at the word *Bhuma*. It refers to that which is most and very great, magnificent, glorious, exalted, multifaceted, abundant, vast, ample, ultimate, supreme and immense in every way. 'Bhuma' literally means the One who is vast and colossus as the visible world of which he is the undisputed Lord. It refers to the Viraat Purush who is the cosmic gross body of the Supreme Being known as Brahm, and from whom the rest of the visible creation has evolved. The word is often employed to address the supreme Brahm himself because there is only a subtle difference between the Viraat Purush and the Supreme Being known as Brahm. The word implies someone who is the greatest and grandest, the almighty and supreme Authority in creation. The concept has been elaborately described in Chandogya Upanishad, canto 7, section 23 of the Sam Veda tradition.]

52. The Guru (moral preceptor and teacher) and the disciple¹ as well as the Mantras which the former gives the latter at the time of initiating him as his disciple², are all imaginations of the mind as is the visible world outside in which the Guru and the disciple live. [Refer verse no. 31-43 of this Canto.]

Do not treat me at par with them; do not think that 'I' (i.e. Lord Shiva who is the divine Brahm revealed, the supremely realised One, as well as the pure conscious Soul, the 'true self' of this self-realised One) am like these false entities. [That is, do not think that since I, Shiva, am teaching you, Kartikeya, as my disciple, that either of us come under this category. Don't be misguided and misconstrue my statement, and don't get bogged down and entangled in unnecessary doubts and confusions. I am just trying to drive home the point that all relationships in this world are transient and false because this world itself is false. The only entity that is stable and like a 'common denominator' in mathematics is the truthful Atma.] (52).

[Note--¹That is, this relationship of someone being a teacher and the other being his disciple presumes that the *Guru* is more learned and wise than the *disciple*, and therefore information and knowledge need to be transferred from the former to the latter. This is fundamentally a fallacious conception because the Atma, which is the true identity of both the Guru as well as the disciple, is the same entity, and this Atma is eternally all-knowing and omniscient. Where is the need of someone being another's teacher? This relationship of 'teacher and disciple' is limited to the physical body and do not apply to the conscious Atma. The body is perishable and therefore it cannot be true because 'truth' does not decay and perish. Hence, the body, along with the mortal world in which it lives, is 'false'.

The need of the Guru is only felt till the time the light of wisdom and enlightenment do not shine on the mental horizon of the spiritual aspirant, but after that this need does not arise. For instance, the matchstick is needed only to light the candle, but once it is lighted, the matchstick is no longer needed. If fact, the light of another candle might be needed to locate the matchbox in a dark room.

²The *Mantras* are simply tools for realisation of the supreme transcendental Brahm, and when this eclectic knowledge sprouts all of its own in the heart of an enlightened creature there is no need for him being initiated or repeating any Mantras given by someone else.]

53. [The basic idea expressed in verse no. 52 has been elaborated further.]

In this world, whatever is regarded as worthy of thoughts and contemplation, all that is regarded as logical and rational, as well as everything that is regarded as advantageous, beneficial, profitable and salutary in this world—none of them are essentially true (simply because the world itself is not true, being ever changing and perishable, characteristics that ‘truth’ does not possess as the latter is eternal, everlasting, steady and uniform).

But ‘I’ am not this falsehood or non-truth. [That is, I am beyond this mundane world and therefore beyond the purview of its definitions and criterions. And therefore I am the only entity that ought to be searched and researched. Refer also to verse no. 52.] (53).

54. All the various forms of Pran (the vital life-sustaining winds having different names and functions), all the different types of sufferings as well as enjoyments, all the things heard of or physically seen in this mundane world—everything that fills this world are false and non-truths (54).

[Note--This is because of the basic premise that the physical world is itself false and an illusionary conception of the mind. The world along with all its constituent parts is mortal, perishable and transient, and anything that is temporary and not sustainable cannot be the ‘truth’. Truth is eternal, permanent and imperishable.]

55. All that is worth doing in this gross physical world as well as that which is not worth doing, all that which has decayed and perished as well as all that which has been received or obtained and is still present now, all forms of sorrows and miseries as well as joys and happiness—verily, all of them are false and non-truths (because they all relate to this transient and untrue world) (55).

56. The concept of something being full and complete or it being incomplete, the notion of Dharma and Adharma (i.e. something being righteous, auspicious, noble and lawful, or the reverse of it), the idea of something being beneficial, profitable and favourable, or being the opposite of it, and the perception of victory and defeat—all of them are illusionary and non-truths (because such considerations arise in the mind of a person who has regarded this material world and its objects as the ‘real world’ that matters to him without realising that what he considers as ‘real and truthful’ is actually transient and perishable, and therefore non-truth) (56).

57. In a similar vein, all forms of perceptions such as those related with hearing of words, the sense of touch and its relevant feelings, the perception of sight and its relevant objects, the perception of taste and the sense of different flavours—all are non-truths (because they all relate to the mortal and perishable body and the world which is equally mortal and perishable) (57).

58. The perception of smell and various fragrances that are perceived—all are illusionary in nature, all are due to ignorance of what constitute the real ‘truth’.

‘Illusion and ignorance of the fact’ is at the base of creation of this colourful world of myriad diversities and variations. In fact, the world itself is an illusion and has come into being out of misconception about the reality (58).

[Note—The Upanishads say that the world and its charms are like the mirage seen in the hot desert. It is there because the hallucinating mind thinks that it is there. If one applies his wisdom and peeps behind the curtain he would see the truth behind all the colourful props on the stage. If the world is true and real, then why does it decay and die, why does it not give permanent peace and happiness to the creature that has spent his entire life faithfully serving this world? Anything that is not permanent cannot be the ‘truth’ as truth is characterised by being eternal and infinite, uniform and universal; truth is not subject to decay, extinction and degradation like its arch rival ‘falsehood’.]

59. All the different Gunas (the three basic qualities of Sata, Raja and Tama that are present in all the creatures and determine their character in this physical world) are also illusive and non-truths (because these Gunas are present in varying quantum in different creatures and are not a constant factor in all of them, they can be enhanced or diminished by practice, whereas the pure conscious Atma is a constant factor that remains uniform and in equal measure in all the living beings in creation).

Therefore we conclude that the ‘pure self’ known as the Atma, a representative of the supreme transcendental Truth known as Brahm, is the only truth in creation.

Hence, ‘I am the Atma’ is the best Mantra (i.e. a formula for realisation of the ultimate ‘truth’ in creation) and its knowledge is the best spiritual achievement (59).

60. [Verse nos. 60-74 marks the culmination of Gyan when the spiritual seeker has found the ‘truth’ he was searching. He has become truly ‘self-realised’ by understanding that he is Brahm personified. Refer Canto 6, verse no. 31-45.]

‘I am Brahm’—this is the most eclectic of all the Mantras¹. It is potent enough to eliminate all the evil effects of all kinds of misconceptions and misdeeds (called ‘sin’ because they mislead and inspire the creature to violate the sanctity of truthful way of life by pursuing falsehood in the misplaced belief that what the creature is doing is the truthful way of life, thereby causing the creature to commit so many sins and errors in its wake that breach the sacrosanct codes of moral and righteous conduct, inviting punishment). It is potent enough to eclipse all other Mantras as it is the culmination of the spiritual aspirant’s endeavour towards realising the ultimate ‘truth’ and find eternal and infinite fountain of beatitude and felicity (60).

[Note—¹The statement ‘I am Brahm’ or ‘Aham Brahmasmi’ is not contradictory to the other statement ‘I am the Atma’ because Atma is the microcosmic counterpart of the macrocosmic Brahm. It is cosmic transcendental Consciousness known as Brahm that has revealed itself as the pure consciousness known as the individual Atma of the individual creature to live inside the latter’s body. Refer Shuk Rahasya Upanishad, verse no. 22 in this connection. This Upanishad is Chapter 13 of this volume.]

61. ‘I am Brahm’—this is the eclectic Mantra that can eliminate all the faults that arise due to the presence of the gross body. [That is, as soon as the spiritual aspirant realises the truthfulness of this statement, he becomes enlightened of the fact that his

true self is a much higher and senior authority which is far more sublime and subtle and very different from the grossness that marks this body.]

‘I am Brahm’—this eclectic Mantra eliminates all the sins committed over different births. [This is because the aspirant has become enlightened enough to realise that sins are committed by the body and not the soul, and since his ‘true self’ is the soul or Atma and not the physical gross body, the very cause that commits sins is removed.] (61).

62. ‘I am Brahm’—this eclectic Mantra eliminates all the fetters that are represented by the fear of death. [This is because the aspirant realises that he would not die like ordinary mortals. ‘Death’ occurs to the body and not to the Atma which is eternal, imperishable and infinite.]

‘I am Brahm’—this eclectic Mantra eliminates the cause of all the mental and spiritual perplexities and their attendant sorrows and miseries arising out of the sense of duality in this creation¹ (62).

[Note--¹It is only when the aspirant thinks that the other person is different from his own self does he begins to have some kind of emotions towards him, for example he might either hate him or love him as his rival and enemy or his friend and companion. But when he removes this sense of duality and sees the other man as another form of the Supreme Being, all sense of dichotomy are removed and this helps to spread the culture of universal brotherhood. Similarly, such a Brahm-realised man would remain satisfied with whatever is available to him for he would treat everything and every circumstance with equanimity and in the same manner. This removes all cause of ill-will and animosity as well as of all sorrows and vexations that arise due to unresolved desires and unfilled aspirations. Duality causes doubts and confusions as to what is the truth and what is not, and removal of this notion creates a sense of uniformity and universality which gives peace and calmness of demeanors.]

63. ‘I am Brahm’—this eclectic Mantra eliminates the cause of all dichotomy created by the sense of existence of differences between any two given entities which are fundamentally the same (because the same Brahm prevails uniformly in the entire creation, and therefore these two apparently different entities are factually two views of the same Brahm revealed in their forms). [This marks the high watermark, the high citadel of Advaita Vedanta.]

‘I am Brahm’—this eclectic Mantra eliminates the cause of all worries and sorrows that accompany these dichotomies¹ (63).

[Note--¹For example, when a man begins to treat all people alike, there would be no one from whom he has to fear. Similarly, when he begins to treat two opposing circumstances alike, there would be no cause for him to get uneasy or flummoxed or rattled in one set of situation, or feel eclectic, elated or exhilarated in another. He would remain calm, placid, unruffled and steady under both the circumstances. This would give a steady evenness to his mind and profound calmness to his demeanors, removing the major irritating cause for all miseries and torments that generally afflict the creature.]

64. ‘I am Brahm’—this eclectic Mantra eliminates the cause of all problems arising out of a faulty, defective and deluded intellect.

‘I am Brahm’—this eclectic Mantra destroys all the fetters created for a creature by a deluded ‘Chitta’, i.e. a misguided and hallucinating mind-intellect complex and its sub-conscious that leads to flawed reasoning and inability to pay proper attention and fix concentration, which in their wake create an imperfect memory, faulty recollection and misplaced interpretation of truth and reality (64).

65. In fact, the eclectic Mantra ‘I am Brahm’ is potent enough to destroy all ailments and torments that might afflict the spiritual aspirant in this world.

‘I am Brahm’—this eclectic Mantra eliminates the cause of all sorrows, grief, distresses and miseries of the creature¹ (65).

[Note--¹This is because a creature feels sorrow or grief and experiences distress and miseries only till the time he relates himself with the body and the world outside. Once he is able to understand the basic spiritual truth that his ‘true self’ is not the body but his pure conscious Atma, and this Atma is eternally free from all fetters caused by worldly delusions and ignorance as well as is perpetually in a blissful state of existence, then all causes of sorrows and miseries are dispelled automatically because they are related to the mortal body and the mortal world. The Atma is immortal, imperishable and eternally blissful unlike the body and the world.]

66. ‘I am Brahm’—this eclectic Mantra eliminates the cause of different distresses, such as Kaam (worldly desires, passions, lust and yearnings) etc. in an instant. [This is because for an enlightened man the world does not have any meaning, and he has no interest in its illusive charms. Thus, there is no basis on which Kaam can breed and entangle him in its deluding and entrapping web.]

‘I am Brahm’—this eclectic Mantra vanquishes Krodh (anger, indignation and wrathfulness)¹ (66).

[Note--¹This Mantra enlightens the creature about his true self as being the Atma which exists in an eternal state of calmness and tranquility. It has no enemy and no desires unfulfilled. It is full of equanimity and benevolence, being compassionate and gracious to the hilt. Anger and frustration come from unrequited desires and unfilled wishes, as well as from inability to successfully accomplish one’s objectives, complete one’s desired tasks, obtain one’s goals in life, and reach one’s chosen destination because of real or imaginary competition, rivalry or hurdles created by the other person, or even by adverse circumstances. This causes ill-will, jealousy, hatred, animosity and a tendency for vengeance, which in their wake breed wrath and anger.]

67. ‘I am Brahm’—this eclectic Mantra eliminates all the various ‘Chitta Vrittis¹’ that form road-blocks in the spiritual liberation of the creature.

‘I am Brahm’—this eclectic Mantra helps to eliminate all the different ‘Sankalps²’ etc. that the creature makes along with their perpetual attendant problems (67).

[Note-¹The numerous *Chitta Vrittis* are the different states of existence or conditions of the mind-intellect complex of any given living being along with the various tendencies and natural inclinations that it possesses and exhibits. These Chitta Vrittis determine how the individual thinks, how he reacts to a given circumstance, and how his mind-intellect interprets a given set of inputs. If the mind-intellect has a basic propensity for being attracted to the charms and pleasures of the world, unmindful of their truthfulness and permanence, it would have a natural affinity to the material objects of this artificial world so much so that it would sweep aside any hint of doubt about their pitfalls and warning about the dangers that they portend. On the other hand, if the mind-intellect has a higher degree of wisdom and enlightenment ingrained in it then it would see the trap that these false worldly charms pose for the Spirit and would endeavour to avoid them.

The word ‘Chitta’ refers also to the sub-conscious mind. A person gathers so many varied experiences during the course of his day to day worldly intercourse and they are all stored in his sub-conscious mind and forms its data bank. These in turn affect his thinking process and overall personality. If the sub-conscious mind is corrupted and tainted, then it is obvious that the entire personality and thinking of an

individual would be commensurately affected; his actions, outlook and behavioral patterns are proportionately affected. The entire blame falls upon the Atma because the latter is the sovereign of the entire setup. So the eclectic view-point that 'I am immaculate, untainted, uncorrupt and holy like Brahm' has a positive affect on the psychology of the aspirant. It is an instrument of positive thinking and generated positive energy around him. It is 'auto-suggesting' oneself that one is good and noble instead of being bad and evil which create negative energy. It is like advising a man under depression and seemingly lost to think high and constructively about himself; to think that he can do everything, that failures are a part of the game, that there is nothing that he cannot do, that he must get up and try again and do it confidently as he is bound to succeed. This helps him to overcome his darkness and depression at failures, and he goes about the unfinished task with renewed vigour and life.

So we observe how different shades of the various inherent tendencies and natural propensities of the mind-intellect complex, its level of enlightenment, wisdom, sagacity and erudition, along with the way it is able to absorb and adapt its self to newer information and circumstances depending on its willingness to learn and rectify that would determine the creature's overall personality and behaviour, how he reacts to a given set of circumstances and how he interprets a set of inputs or stimuli originating in this world. Refer Canto 4, verse no. 53 also.

²*Sankalp* literally refers to the resolve, a solemn promise, a firm vow, a will and determination that a creature makes. The word also incorporates in its ambit all the ambitions, aspirations and volitions that he has, leading him to make necessary efforts to fulfill his dreams and accomplish success in his efforts. But in the process he forgets that he is pursuing an imaginary dream in an equally imaginary world. The material world is impermanent, transient, mortal and perishable, so how can anyone expect eternal peace, bliss and happiness in this setup? The entire arrangement is a creation of his deluded mind, described as the misguided Chitta Vritti, which impels him towards pursuing a mirage which can never give him eternal peace and happiness. This is because even if he successfully manages to accomplish one dream, another more charming than the first would crop up suddenly from nowhere creating new desire to pursue it while efforts have to be made continuously to retain and protect the gains of the first dream. 'Sankalps' are like a misguided creature running determinedly behind the sun moving towards the western horizon with an ambition to catch it! What more stupidity can he show? Refer also to Canto 5, verse nos. 2, 5, 16, 63, 97.]

68. 'I am Brahm'—this eclectic Mantra helps to destroy countless faults and shortcomings in the creature that create as many hurdles in his spiritual elevation and enlightenment.

'I am Brahm'—this eclectic Mantra helps to eliminate all dependency upon others¹ (68).

[Note--¹This is because when the creature realises that his true self, his Atma, is as powerful and authoritative as the supreme transcendental Brahm, the almighty and omnipotent Lord of the entire creation, he feels that he is like an Emperor who does not depend upon others for anything. The Atma is sublime and subtle unlike the gross body which needs so many props and support to physically survive in this world. The creature in his gross form as the body is dependent upon all others in this world, because the latter is an interactive society where all individuals are interdependent not only amongst themselves but also upon the numerous things and objects that exist around them. But this does not apply to the pure conscious Atma as it is ethereal and without forms like the air and sky elements which do not need any base or support for their own survival.]

69. 'I am Brahm'—this eclectic Mantra helps to abolish all ignorance and delusions, thereby kindling the light of wisdom and enlightenment marked by certitude about the real Truth and absolute Reality in creation.

'I am Brahm'—this eclectic Mantra helps to bestow the Atma with the honour of being a conqueror of the entire world² (69).

[Note--¹This is because as soon ignorance and delusions pertaining to unreality and imaginary truth are vanquished, the spiritual aspirant is able to stand upon a high moral and spiritual ground from where he can intelligently and wisely look upon this world and survey its truthfulness and worthiness vis-à-vis its falsehoods and vanity. He becomes independent of all delusions and their accompanying sycophantic worldly charms, material comforts and sensual pleasures. This is tantamount to his conquering this world because these worldly attractions are such baits that are almost impossible to resist, they present such temptations that defy being overcome easily by an ordinary mortal creature.]

70. 'I am Brahm'—this eclectic Mantra is a provider of eternal and truthful happiness and joy to the spiritual aspirant. It bestows eternal beatitude and felicity to him.

'I am Brahm'—this eclectic Mantra helps to eliminate all forms of grossness, indolence, lethargy and inertia (because it makes the aspirant realise that he is not something gross like this body and the world, but something as exalted and sublime as the ethereal Spirit) (70).

71. 'I am Brahm'—this eclectic Mantra helps to subdue and conquer this demon-like world¹.

'I am Brahm'—this eclectic Mantra helps to reduce to rubble the great mountain representing all that is non-truth and characterised by falsehoods and delusions (71).

[Note—¹The world is likened to a *demon* because it is betraying, merciless, selfish to the core, uncompassionate and cruel. It would bite the hands that feed it. It sucks the blood out of the creature and then relegates it to a small space in a page of some obscure history book.]

72. 'I am Brahm'—this eclectic Mantra helps to abduct and imprison all 'demonic and evil forces' in this creation.

'I am Brahm'—this eclectic Mantra is the provider of supreme emancipation and salvation to the creature's Atma, called attainment of 'Moksha'. This achievement gives immense and immortal beatitude and felicity to the aspirant as it marks the culmination of his spiritual pursuit. [This 'Moksha' is attainment of Truth which is synonymous with self-realisation and Brahm-realisation. It helps the aspirant to break free from the seemingly endless cycle of birth and death.] (72).

73. 'I am Brahm'—this eclectic Mantra blesses the spiritual aspirant with a sublime happiness along with a sense of fulfillment and contentedness obtained when one has obtained the best form of knowledge and wisdom which he had been pursuing for so long and which had eluded him till now.

There are seven 'Koti' (1 Koti = 10 million) other great Mantras¹, but all of them keep the creature trapped in an endless cycle of countless birth and deaths as none of them show him the path of self-realisation that enlightens him about the eternal truth of the pure conscious Atma which is his truthful 'self' and point out to him its parity with the supreme transcendental Brahm, the Supreme Being who is the Lord Master of this entire creation (73).

[Note—¹This observation should not be taken too literally but its true spirit must be grasped. The numeral 7 times ten millions is just a figure of speech to emphasise that they are countless paths which promise liberation and deliverance to the spiritual searcher, but only the true understanding of what is meant by the Mantra ‘I am Brahm’ can actually lead to eternal peace and bliss obtained by reaching one’s true destination and discovering one’s roots. It fills one with a sense of immense ecstasy and profound elation at having found the ‘truth’ he has been searching painstakingly for so long. This feeling of jubilation cannot be described in words. Once one reaches one’s destination, there is no need of the chariot, and similarly when one has realised the ultimate ‘truth’ there is no more need of Mantras and performance of elaborate rituals with these Mantras.]

74. Therefore a wise seeker should discard all other Mantra and concentrate only upon this single Mantra ‘I am Brahm’. This concentration on one Mantra speeds up the process of reaching one’s spiritual goal and obtain ‘Moksha’, i.e. liberation and deliverance from ignorance and delusions about the ‘factual and real ‘truth’ as opposed to ‘imaginary or perceived truth’, which in turn opens the gate for the Spirit’s or Atma’s emancipation and salvation.

There is not even a fraction of doubt in it (74).

Thus ends Canto 3

Canto 4

[Canto 4 describes the two types of ‘Muktis’ called ‘Videha Mukti’ and the ‘Jivan Mukti’. The word ‘Mukti’ refers to the liberation and deliverance of the soul of the creature from ignorance and delusions, and its ultimate emancipation and salvation so that it does not have to come back and enter the cycle of birth and death in this mortal world. This is once again elaborately explained by Lord Shiva to his son Kartikeya. This Canto is an extension of the observations made in Canto 3. It would be observed that a combined reading of these two Cantos fills the spiritual aspirant’s mental horizon with positive thoughts of a high degree of refinement and kindles self-respect and self-dignity in him. It does away with negativity and depression that have become the norm in modern world. When the person constantly tells himself that he is noble, good and auspicious, his sub-conscious mind become conditioned and trained to think in positive and constructive terms, and consequentially there is no scope of his committing evil and demeaning things—because it is the mind that decides what a man does.]

1. [Verse nos. 1-32 describe the concept of Jivan Mukti.]

Kumar (Kartikeya or Shadaan—refer verse no. 80) asked the great God Lord Shiva—‘Oh Lord! What is the condition of a person who has obtained either ‘Jivan Mukti’ (liberation and deliverance, or emancipation and salvation of the soul while the person is still alive in this world) or ‘Videha Mukti’ (liberation and deliverance, or emancipation and salvation of the soul after the person has left the world, i.e. after he has died)? What are the characteristic features of these two types of Muktis?’

The great Shiva replied—‘A person who bears life, i.e. who lives in this world with a holistic spiritual view of his own self as being a sublime and divine entity that

is the truthful, eternal, enlightened and pure conscious Atma called the 'self' which is a manifestation of the supreme Atma which is the cosmic Consciousness in this creation, the Atma which has no qualifications and attributes that can conclusively define it, and which is a personification of the supreme transcendental Brahm, the Supreme Being himself—such a person is said to be 'Jivan Mukta', or a person who is deemed to be spiritually liberated and delivered from the fetters of ignorance and delusions while he leads a normal life in this world and has a gross body in which his Atma—his 'true self'—lives. His condition is quite the opposite of a person who thinks that his 'self' is the gross body and not the Atma, thereby shackling him to the fetters of ignorance and its attending delusions (1).

[Note—The term *Jivan Mukta*—has two components—viz. the word *Jivan* which means 'life', and *Mukti* which means 'freedom and liberation'. A person who has the grand, noble, righteous and virtuous characteristics as well as is enlightened and self-realised about the ultimate truth of this creation becomes totally detached from this artificial, mundane and illusionary world even while he physically lives in it, has a body, and goes about his routine duties and chores and does his assigned jobs in this world. But with erudition and truthful knowledge he has realised the futility of this world, and therefore he remains completely dispassionate and detached from it just like a dew drop lying on the petal of a lotus flower. He does not get the least agitated or affected or passionate by any set of circumstances, whether adverse or favourable. He remains aloof and unruffled. That is being equivalent to becoming free from all the mental, emotional and physical uneasiness created by the turmoils of this world. It is deemed that such a person has obtained virtual deliverance from the shackles of this entrapping world, a condition called 'being emancipated and delivered while still alive'; this phrase explains what constitutes Jivan Mukti.

The Jivan Mukti state refers to freedom from being mentally engrossed in this delusory and artificial world and becoming free from the shackles that tie a person to the cycle of transmigration in this world while he still physically lives in it and carries out his assigned and designated duties and works with dispassion and detachment. This enables the creature to be free from any mental bondage that tie it to the ensnaring world; it is tantamount to be liberated from the shackles of this world while still living in the world with a body and going about one's daily chores in a routine manner. After all, the very existence of the world is due to the mind; if the mind does not think that the world has any relevance, then it loses all pertinence and relevance for the creature.

It would be relevant to point out here that without the control of the Mana (mind) and Indris (sense organs) it is practically impossible to dissociate oneself from the world. The mind and the sense organs of a man are inherently very restless. Their control is called 'Nigraha'. The word 'control' implies that both of them are reined in and prevented from recklessly following their usual sense objects of the material world, seeking comfort and pleasure from them. To do this we have to set a goal, and then focus them on these goals, for then, their energy and agility would be diverted towards that goal. For this purpose the goal would be spiritual and that would mean self knowledge and self realisation. Once this spiritual goal is set, the Ahankar or self esteem, pride and ego inherent in a man will take care of the rest—for now he would do his best not to fail in his endeavour which he has set for himself by himself. A focused mind and sense would help the man to control them, for now they would find no time and energy to go berserk and have to live up to their expectations.

Another method is to focus the mind on one thing at a time—and this time it is self knowledge. Once the mind is focused on this target, it would try to find out how to achieve it, and then actually implement that method.

These methods are positive and are more helpful as compared to methods used to suppress the mind and sense organs, because then they would feel like being trapped

under duress and would try to break free at the first opportunity, creating greater distress to the seeker.

A *Jivan Mukta* person is one who has become enlightened enough to realise the truth about his own self as well as the falsehood of the world surrounding him. He therefore does his worldly duties but remains detached from them. He realises that all that he sees is an illusion and perishable, and it makes no sense in pursuing a mirage. On the contrary, he is deemed to have tasted the nectar of eternal bliss and happiness which gives ecstasy and thrill which no material pleasure and comfort of the world can match. Such a man is deemed to have obtained liberation from the fetters that shackle an ordinary creature to the delusions created by this entrapping world of materialistic pleasures which are illusive and temporary as well as the miseries and torments which are equally false and transient. Such a person remains engrossed in contemplation and meditation of the supreme Brahm in the form of Lord Ram, and derives immense eternal pleasure and bliss by remaining submerged in this ocean of bliss and happiness while he is still alive in this world and goes about his daily routine in a normal way. In other words, though he appears to behave normally externally, from the inside he remains detached from and indifferent to his materialistic surroundings and their inherent plethora of miseries and pains as well as pleasures and joys. On the contrary, he remains perpetually submerged in an ocean of bliss that is obtained by meditating upon the supreme Truth known as Brahm as well as his own self which is his Atma representing that Brahm. Once he has tested the nectar of ultimate eternal bliss and happiness that fills his heart and being with ecstasy and thrill of self-realisation, he gives a damn to the superficial, temporary and pith-less happiness derived from the sense objects of the materialistic world, as well as is unmoved by its pains and miseries because these only affect his body and not his Atma, which is pure consciousness and his actual and truthful identity.

The concept of *Jivan Mukta* has been elaborately described in other Upanishads also, notably Maho-panishad, Canto 2, verse nos. 36-73; Ram Rahasaya, Canto 5; Muktiko-panishad, Canto 2; Paingal Upanishad, 3/9-11; Mandal Brahmin, 2/4/3-4 and Annapurna, Canto 2.]

2. 'I' am not the body of the creature, a body that has been hypothetically divided into three sub-divisions—viz. the gross body, the subtle body and the causal body. On the contrary, I am nothing but 'pure consciousness' personified. I am therefore Brahm personified¹.

A person who has this holistic and divine view of his own self is deemed to be *Jivan Mukta*, or freed from all shackles represented by ignorance of the truth, and thereby is deemed to be spiritually delivered even while alive and having a gross body in which his Atma, his 'true self' lives in this world (2).

[Note—¹The pronoun 'I' refers to the 'true identity' of the spiritual aspirant which is his Atma or pure conscious 'self' which is different from the gross body in which this Atma lives during its sojourn in this world. The body of any individual creature has been divided into three sub-divisions in order to facilitate its analysis and the understanding of its functioning from metaphysical point of view. These three divisions are the following—(a) The gross body consisting of the five organs of perception such as the eye, nose, ear, tongue and skin which deal with the five sense perceptions such as the sight, smell, hearing, taste and feeling, and the five organs of action such as the hand, leg, mouth, genitals and excretory which deal with the five actions of the gross body such as acceptance, movement, eating and speaking, reproduction and elimination of waste from the body. (b) The subtle body consisting of the mind and intellect which acts as the control and command center of the body. And (c) the causal body which harbours the pure conscious Atma and is so-called because it is due to the presence of this Atma that the body is alive and conscious.

This Atma is the 'cause' of the entire setup becoming active and alive, and hence the body in which it lives is called the 'causal body'.]

3. A person who is convinced that he is an embodiment and an eternal treasury of bliss and happiness of the best spiritual kind, a person who has complete disregard for his physical gross body (i.e. he does not regard his body as his 'self') and is firmly convinced, without having any doubt, that he is a personification of the supreme transcendental Brahm—such a person is full to the brim with immense bliss of self-realisation, and is deemed to be Jivan Mukta (3).

4. A person who does not believe in the truthfulness of the body but is firm in his conviction that his pure conscious Atma is his true self, who believes that his establishment as a living being who has a body which exhibits life and vitality is due to the presence of the Atma inside the body, the Atma which is pure and sublime and nothing but enlightened Consciousness—such a man is Jivan Mukta (4).

5. A person who sees this Atma as one complete whole, self-sufficient and without any shortages and shortcomings, the Atma which is an all-pervading and all-encompassing divine entity, an indefinable entity that is full of eternal and infinite beatitude and felicity that cannot be described—such a man is Jivan Mukta (5).

6-8. A person who has a holistic view of his own self as pure transcendental consciousness, who is devoid of all illusive attachments and entrapping infatuations of all kinds, preferring to remain without any company other than his own Atma, one who remains in a perpetual state of bliss and happiness, one who is a personification of the eternally happy and bountifully joyous Atma, one who is without any worries of any kind, one who does not believe in the truthfulness and existence of anything else other than the individual Atma which is the creature's pure conscious 'self' and the supreme transcendental Brahm, the cosmic Consciousness of the entire creation—such a person is said to be Jivan Mukta.

He is steady in the conviction that he is not any one of the following entities, i.e. that he cannot be judged and defined by any of the characteristic features, any of the qualities and virtues that are hallmarks of the following entities—Chitta (mind and the sub-conscious along with their powers to focus attention, think and remember), Buddhi (intelligence, rationality and powers to intelligently deduce), Ahankar (the sense of pride, ego, arrogance, haughtiness and hypocrisy), Indris (the various organs of the body), Deha (the gross body), and Pran (the life-giving vital winds, such as breath).

Similarly, he is convinced that he is untainted by and beyond the reach of such negative traits as Maya (delusions and ignorance pertaining to the artificial world), Kaam (worldly desires, lust, passions, yearnings etc.), Krodh (anger, indignation and wrathfulness) etc.

Verily, I am absolutely distinct from them (6-8).

9-10. This world is not at all related to me and I have nothing to do with it. I am immaculate and without any of the taints that are so characteristic of this world. I am without any specific gross features or signs that are regarded as criterion for establishing an entity's existence and truthfulness in this mortal world of material sense objects.

The eyes, mind, ears, nose, tongue, hands etc.—none of these gross features belong to me or my formless sublime form.

I do not keep awake nor do I sleep—that is, I do not have any specific physical state of my existence which can be defined as either sleeping or wakeful. [This is because, as I have already affirmed, I do not have a gross physical body which sleeps or keeps awake, as I am the Atma which is an ethereal Spirit that neither sleeps nor keeps awake.] (9-10).

11. The fourth state of existence of the creature, called the Turiya state, is also not the state in which I exist (for I transcend that state and live in the fifth state called 'Turiya-teet' state. A person who is wise, erudite and enlightened enough to sincerely believe in the truthfulness and authenticity of these statements is the one who is deemed to be Jivan Mukta. [Refer also verse nos. 48-49 of this Canto.]

All that which is seen around me (i.e. all my physical characteristics as well as the visible world in which I live and move) has got anything to do with me, and neither have I got anything to do with it (11).

12. I am not to be sought in this manifested world in any of its myriad forms such as 'Kaal' (any existential plane of time, era and circumstance), 'Desh' (some specific geographical area or country considered more holy than the other, such as a piece of territory designated as a holy place, a pilgrim city or any other holy place such as a mountain or cave), 'Vastu' (any material thing or sense object), 'Mati' (the various conceptions of the mind, understanding and thought, the sense, opinion, belief, desires, inclinations, wishes, etc. that any individual creature has developed with relation to the physical world around him), 'Snaan' (taking ritualistic purifying baths in the false belief that such activities would provide 'Mukti'—emancipation and salvation—to the creature), 'Sandhya' (the religious sacraments, such as prayers, that are offered three times a day when two periods of time meet each other, i.e. at dawn, at noon and at dusk), Deva (various Gods that are worshipped in holy places as well as to whom offerings are made during religious rituals in the hope that it would provide me with Mukti), and 'Sthal' (a particular holy or religious site or location where people offer prayers and do rituals in the hope of attaining salvation). [Refer also verse no. 50 of this Canto.] (12).

13. Similarly, I am not to be found in 'Tirtha' (pilgrim places or going on pilgrimage), 'Sewa' (service), 'Gyan' (acquisition of knowledge, scholarship, erudition and skills), 'Pada' (various honours and titles, different epithets and designations having so many names).

I am not bound by fetters of any kind (as I am eternally free like the ethereal spirit). I have no birth (as I am immortal, imperishable, eternal and infinite). I am not defined by words and am beyond the faculty of speech (a reference to the fact that Atma is such a subtle and sublime entity that no letter, word or phrase can ever hope to describe it). I am not even 'Ravi' or Sun (because of the fact that the Sun has a certain life span whereas I am eternal, the Sun is visible and hot while I am invisible and cool, the Sun rises and sets whereas I am steady and constantly shining as the pure conscious Atma in the subtle sky of the heart of the creature) (13).

14. I am not affected by such mundane considerations as 'Punya and Paap' (something being auspicious, righteous and good or something being just the opposite of it, that is, it being inauspicious, unrighteous and bad respectively). I do not depend

upon Karya (action and deed) and neither do my Mukti (emancipation and salvation) depend upon any auspicious and righteous deed done by me¹.

I am not a Jiva (an ordinary creature with a gross body) as I am the purely enlightened consciousness known as the Atma (which has no form whatsoever). I am beyond the purview and definitions of the three worlds (i.e. the mortal world where mortal creatures live, the celestial world where the Spirits live, and the heaven where the Gods live). This is because I have an independent existence as the unique, most exalted, eternal and non-dual Atma (14).

[Note--¹In other words, my spiritual enhancement and well being, my emancipation and salvation does not depend upon my doing any good deed, and neither would its fall and demotion would dependent upon my doing any bad deed. This is because the deed is done by the body and not the Atma, and the body is not my true identity and as such I am not liable to be either rewarded for good deeds or punished for bad ones.]

15. I do not come within the purview of concepts such as 'Moksha' (liberation and deliverance, emancipation and salvation—because I am eternally liberated and delivered, I am forever emancipated and do not need any fresh salvation), 'Dvait' (the concept of duality that there are two independent forms in which the creation exists, one is the mortal creature and the other is the immortal creator—because the pure consciousness known as the Atma is the ultimate 'Truth', and the latter is a non-dual entity).

I do not need to know the 'Vedas' (the body of all available knowledge—because I am all-knowing and omniscient myself, being a personification of the Vedas themselves in my form as wisdom and enlightenment personified) and the different 'Vidhis' that these Vedas contain and espouse. [The Vidhis and Vidhans are the numerous doctrines, codes, tenets, maxims and axioms enshrined in the scriptures to guide a person in his day to day life. I do not need them because I am always righteous, noble and auspicious in my actions and deeds.]

I have no end (as I am endless, infinite, eternal and imperishable). I am not far (as the truthful and pure conscious Atma is a resident of the heart of the creature and can be sought inside his own self by meditation and contemplation instead of being somewhere far off in the heaven where a man can go only after death, or some distant holy place which has to be visited after a long journey).

I am a neutral entity, for I am neither knowledgeable nor ignorant (15).

16. I cannot be limited by specific titles, designations, attributes or qualities and segregated according to them, such as me being a 'Guru' (a moral preceptor, a teacher, an expert and a guide, a person who is skilled in any particular field and has an excellent knowledge of a subject), or me being a 'Sishya' (a disciple or student who is still ignorant of that knowledge and goes to the Guru to acquire it). [This is because I, as the Atma, am present in both of them besides the fact that there is nothing that this Atma does not know and needs to learn as it is omniscient and all-knowing. Therefore there is no need for creating an artificial segregation between two people as one being a Guru and the other being his disciple. Both are equal from the spiritual perspective.]

In other words, I do not lack in anything and neither do I have anything in bountiful. [The disciple lacks knowledge whereas the teacher has this knowledge. Since the Atma is the same in both of them, such segregations into separate classes as one being more knowledgeable than the other is artificial and man made, and not a correct depiction of the fact.]

I am not Brahma the creator, Vishnu the sustainer and protector, Shiva the annihilator or concluder, or the Moon God (16).

17. I am not any one of the elements such as the earth, water, wind or air, sky or space and fire. I have no 'Gotra', i.e. I have no race, caste, clan, family or blood lineage, relations etc. I am not an object that can be physically seen or observed, and neither can I be the target or aim of any material research and treasure hunt. I am beyond such considerations (17).

18. I am not the 'Dhyata' (a person who aspires for anything, who seeks and searches for anything; the meditator who meditates in order to attain divine knowledge and mystical powers), nor am I the 'Dhyea' (the aim of all search, the spiritual goal or objective in life for which the seeker meditates), or the 'Dhyan' (the process of meditation and contemplation, the focusing of the mind on the task at hand and fixedly pursuing it till its successful accomplishment)¹. [Refer verse no. 28.]

I am not the mind that is subjected to such perceptions as hot and cold, or has the feeling of thirst and hunger. [In other words, I do not feel cold or hot, and neither do I have thirst and hunger.]² (18).

[Note—¹In other words, I do not need to pursue anything and think about it, as I am fulfilled and fully contented, not needing anything whatsoever.

²I do not feel such things as I am of an equitable mind, have equanimity of emotions and am full of fortitude and tolerance, treating opposing inputs of perceptions originating in this gross world with stoic indifference and equanimity. This is because I know that such things as hot and cold, thirst and hunger etc. are felt by the physical body which is gross and fickle in nature, but not by the Atma which is sublime and subtle, of a calm and even bearing, stable and poised, and ever contented, fulfilled, satisfied and blissful. The Atma is an ethereal Spirit and not gross like the body. So, there is no question of the Atma ever feeling the need for drinking water or eating food to quench its thirst or hunger. The Atma is never swayed by external influences which are nevertheless transient and would sooner or later pass away in due course of time.]

19. I am neither a friend of anyone nor am I anybody's enemy. Similarly, I do not have a friend or an enemy. I have nothing to do with 'Moha' (the notion of having attachment and infatuation with anything or anyone in this world; the concept of delusions and misconceptions) and 'Jaya' (the idea of victory and success in any worldly endeavour).

I am not limited to and defined by such indicators of directions as western or upper or any other specific direction¹ (19).

[Note--¹In other words, I have no horizontal or vertical dimensions or specific planes of existence. No measurements or yardsticks apply to my exalted being, and there are no specific paths or courses that can or cannot lead to me, or where I am not present. It should be noted here that the pronoun 'I' is being applied to the Atma which is the all-pervading and omnipresent ethereal Spirit present as the conscious soul of an enlightened person. 'I' does not mean his physical gross body which has a lot of limitations as opposed to the ethereal Atma which has none. Like the sky or air element, this 'I' is present everywhere.]

20. I have nothing to say, nothing to hear, no where to go, and nothing to think or contemplate about (20).

21. I do not have to either enjoy or suffer from anything. I do not have to remember anything either (for everything is known to me).

I am not interested in 'Bhog' (enjoyments of the material comforts and pleasures of the sense objects in this world) or 'Raag' (having mental attachments, desires, love and infatuations with anything or anyone in this world). Likewise, I am not interested in becoming a Yogi (an ascetic, a hermit, a monk, a friar) who has renounced the world along with all its myriad charms and delusions, including the notions of Bhog and Raag mentioned here, nor do I wish to completely renounce and abandon everything and dissolve myself into nothingness¹ (21).

[Note--¹In other words, I have no specific wishes that remain to be fulfilled. If I had wished to become an ascetic then it implies that till date I was not one, and if I desire to vanish from sight and dissolve myself into the elements by leaving this body and allowing it to disintegrate into the elements, it would mean that till date I was having a body which needs to be left and discarded, and myself to be merged into the primary elements of creation which are nothing but my primary forms in Nature. As I am an enlightened being, these assumptions are excluded, and so I do not have any specific wishes, for the very idea of having any wish whatsoever would suggest that I am not fully free from shackling desires and aspirations.]

22. I am not a stupid being of a dull mind-intellect, and neither do I need to cultivate tranquility, calmness and serenity of temperament and demeanors in me¹.

I am, at the same time, not indolent, lethargic and disinterested in everything like an entity which has no life in it (because I am very much active and conscious).

I do not have any kith and kin, any friend and companion. I have no one who is dear to me and who I love (because I am dispassionate and remain detached from this body and am therefore immune and indifferent to the various relationships that exist in this world).

I am not interested in numerous comforts, pleasures and enjoyments that are part of this material world and its sense objects.

I am neither gross nor subtle, nor am I fat or emaciated (because I don't have a physical body which has these characteristics) (22).

[Note—¹In other words, I am not a fool to indulge in senseless gossip, do senseless things, and run aimlessly in search of no fixed target. Similarly, I am already peaceful and calm, so I don't have to inculcate these eclectic virtues afresh in me.]

23. I do not become big or expand in any way, and neither do I become small and diminutive or get reduced in stature and importance. [That is, I do not feel elated and feel puffed up by praises, nor do I feel humiliated and belittled by insults. I am not a giant nor am I a dwarf.]

I do not develop nor do I decay (because I am eternal, even, infinite, constant, steady, imperishable and perpetual).

I do not have anything to do with 'Adhyaarop' and 'Apavaad' related to the Vedas and their tenets and doctrines¹.

Whether such misconceptions and illusionary ideas are one or many, whether they pertain to one or more than one object—I have got nothing to do with them (23).

[Note—¹*Adhyaarop* is the erroneous conception of imagining anything unreal in another thing which is real. It is a faulty perception or inference of the truth. It is a false accusation based on erroneous perceptions and defective mind. To wrongly transfer an attribute from one entity to another, thereby creating wrong impression about the latter's true nature and form.

Apavaad literally means slander, reproach, infamy, aspersion, defamation, accusation, blame, exception. When these two words are applied together in relation

to the Vedas it implies that one wrongly interprets the tenets and doctrines of the Vedas and then creates an entire body of assumptions and precepts that are totally at divergence from the truth, and are therefore misleading. Such misrepresentations of the truth and misreading of the maxims and axioms of the scriptures lead to a vicious cycle of delusions, wrong ideas, erroneous theories, and the hordes of their accompanying problems.

For example, to visualise that the artificial, fractured, perishable and deluding world exists in the supreme transcendental truthful Brahm which has none of these characters, instead of the other way round—i.e. seeing the universal Brahm in everything in existence as its fundamental building block, its basic unit, and then realising the fact that the unstable form in which this world exists are actually revelations of the one and the same non-dual universal entity known as the cosmic Brahm. It is like the metal ‘gold’ being moulded into numerous ornaments but having worth only because of the presence of gold in them as their primary ingredient.

Misconceived and half-baked knowledge is more dangerous than not having any knowledge at all. A person who knows that he has no knowledge would endeavour to acquire it, and at least would not have false pride of knowledge in him. On the other hand, a person who thinks that he has a correct knowledge would not only fall down the spiritual precipice himself but take others down with him.

“He who knows and knows that he knows is a wise man; seek him. He who knows not and knows that he knows not is a child; teach him. He who knows and knows not that he knows is asleep; wake him. And he who knows not and knows not that he knows not is a fool and ignorant stupid; shun him.”]

24-25. I am not blind, nor am I stupid or clever—because such conditions pertain to the body which I am not. That is also why I am not someone who has a physical gross body consisting of the following seven elements—flesh, blood, abdomen, marrow, bones and skin (and other skeletal structures).

Similarly, I do not have a colour to my complexion, such as white (fair), red (copper colour or tanned skin), purple or dark complexion etc. (simply because only a physical structure such as a gross body can have a colour and complexion) (24-25).

26. I have no torments or miseries affecting me. I have nothing to gain from anything.

I am neither anybody who is honoured as a chief or have any special privileges, nor am I—or can be—sidelined by anyone and relegated to the fringes as being inconsequential and irrelevant¹.

I do not have any doubts and confusions and their accompanying perplexities and vexations in me. I neither roam about nor do I stay put at one place.

I am not something that is a secret and mysterious (because anyone can access me, the pure conscious Atma representing the supreme transcendental Brahm by proper level of enlightenment and self-realisation).

I do not belong to any clan or caste or family (because I am not someone who takes a birth, for I am eternal and universal ethereal Spirit which does not take birth nor does it die (26).

[Note—¹This stanza can be read as follows also—‘I do not regard anyone as important and consequential, nor do I treat anyone as unimportant and inconsequential. I treat everyone with stoic indifference and equanimity’.]

27. I do not regard anything worth discarding or being disinterested about, nor do I treat anything to be worthy enough to being accepted and making efforts to access it or reach it.

There is nothing that I laugh about. [In other words, I do not think anything or any circumstance to be so useless, so funny, so incredulous, so ridiculous, so absurd and so hilarious that I treat it with disdain and laugh at it with contempt at its stupidity and irrelevance.

I do not follow any precepts, tenets, doctrines and principles and neither do I conform to them (because these have been devised as instruments to guide a creature towards its destination, but I have already reached it and have realised the Truth, so I do not need them any longer). That is also why I do not conform to any preset rules and regulations as well (because I am not a mortal creature of this humdrum world who must be properly trained and regulated in order to keep the society civilized, regularized and controlled).

I do not have any regrets and feel depressed in mind (when I make the above bold observations because of the fear that they might cast me in a bad light as being haughty and arrogant simply because I am sincerely speaking the truth and not deceiving anybody to serve some selfish vested interests of mine). I do not cause any harm to anyone. I do not desire and wish anything from anyone (27).

28. I am not a 'Gyata' (an expert and knowledgeable person), nor am I the 'Gyan' (the knowledge itself) or the 'Gyea' (something worth knowing; the object or aim of knowledge). [Refer verse no. 18.] Actually, I do not know how to describe myself.

You are not for me and neither am I for you. Similarly, neither can I call you mine, nor can you call me yours. [This is because the concept of 'I' and 'you', 'my' and 'your', 'mine' and 'yours'—are limited to the gross physical body and not to the ethereal Atma which has no physical relationships with anyone. Refer verse no. 42 below.] (28).

29. I am not old, I am not a child, I am not a youth or an adult. Verily, I am Brahm; I am indeed Brahm; certainly and irrefutably I am Brahm!¹ (29).

[Note—¹Refer Canto 3, verse nos. 60-74 in this context.]

30. I am an embodiment of enlightenment and wisdom. I am pure consciousness personified. I am nothing but it—this realisation, when it is heart-felt and sincere, is the state when a spiritual aspirant can say with conviction that he has become 'Jivan Mukta', i.e. he has obtained spiritual liberation and deliverance, he has achieved spiritual emancipation and salvation even while living in this world with a physical body, or even while he is still alive and going about his normal duties in this mortal world.

I am indeed Brahm personified. I am indeed no one else—this realisation is Jivan Mukti; it is spiritual liberation and deliverance even while the person is still alive in this world (30).

31. A person is called Jivan Mukta if he is like a divine 'Swan'¹ because he is established in his own divinity and glory. He sees his own truthful form (as the pure conscious Atma and the supreme Brahm) everywhere and in each unit of this creation. Thus, when he observes that the entire creation is his kingdom, he cheerfully lives in it like a King does in his realm. He enjoys the bliss and happiness that comes with the realisation of the true nature of the exalted 'self' (31).

[Note—¹The concept of Swan being a representative of a truly self-realised soul has been elaborately described in Hanso-panishad of Shukla Yajur Veda tradition. It has

been explained as note no. 3 to verse no. 4 of Canto 1 of the present Tejobindu Upanishad also.]

32. A person is called Jivan Mukta who treats himself as the only brave warrior (who has conquered all the enemies in the form of numerous delusions and ignorance that are related with this mundane life, the world and the body). He has realised that he is the only Lord of his own self (as the Atma is not bound to anyone to serve him); and that his own self is glorious and divine (32).

33. [From this verse onwards, the concept of 'Videha Mukti', i.e. to be liberated from the fetters of the gross physical body is being elucidated. This is a higher form of Mukti which envisions complete dispensing of the physical body. A Videha Mukta person's body may be set afire or put to great discomfiture but he would not even feel it. This state of existence is above the Jivan Mukti state of existence and is attained after success in obtaining the latter stage. It is like one doing Master's degree from a university which assumes that he must have successfully completed the Bachelor's degree. What one learns in the undergraduate class is simply elaborated and fortified in the post-graduate class; what spiritual gains are made by an aspirant in the Jivan Mukta state are simply reinforced and bolstered in the Videha Mukta state. A person who is Videha Mukta must automatically be Jivan Mukta. In fact, these two forms of spiritual liberation and deliverance go hand in hand, complimenting and supplementing each other, and do not exclude or contradict each other.]

'I have become one like the supreme transcendental Brahm. In this form of existence (or, with this divine and holy view-point firmly established in me), my Atma is blissful and happy, experiencing the glorious beatitude and felicity of Brahm-realisation. I, as my ethereal Atma, am contented and happy, pure and uncorrupt, silent and calm. I am convinced that I am not the body as Brahm does not have a physical gross body'. A person who has these magnificent thoughts firmly ingrained in his psyche is indeed 'Videh Mukta'¹—that is, he has freed himself from the fetters that shackle an ignorant and deluded man to this gross body (33).

[Note—¹The word *Videha* means one without a physical body. This state is obtained obviously when a person dies, for then his Atma or soul escapes from his body as Pran, the vital wind responsible for keeping the body alive and active; the vibrations of life; the rhythm and essential functions pertaining to life. The Pran leaves the body in the form of 'breath'; and therefore, it is also treated as being synonymous with breath. Now, breath is 'air' with all its characteristic virtues and qualities. It is present everywhere, but it is neither visible nor felt unless it blows as a soft breeze when it is felt by its touch on the skin. So, in this case, the soul of a person who has become *Videha Mukta* is compared to this all-pervading but invisible wind or air which is the mainstay of life in the form of breath or 'Pran'.

The Atma is not physically felt or seen but can be witnessed when a gross body becomes alive when consciousness is injected into it as its Pran. This same body which is lifeless without the Pran can achieve stupendous feats once the Pran makes it alive and active.

When a person dies, the breath or Pran easily moves out of the body without any trouble. Air as breath known as 'Pran' is not a dead entity but very much alive and active like the Atma or soul of the creature. In practical terms, Pran and Atma can be regarded as being synonymous with each other because the creature cannot survive without either of them. When a person dies it is said that his Pran and Atma are freed from his body. In other words, these two divine entities are set free from the artificial boundary that was imposed upon them in the form of the gross body, thereby limiting their maneuverability and versatility. Upon death, the Atma sets itself free

and merges with the vast cosmos which is present outside the body even as the 'Pran' (or breath; the vibrations of life; the rhythm and essential functions related to life) present inside the body is liberated from it when it is exhaled and merges with the air present outside the body. This is tantamount to having liberation without the encumbrance imposed by the body on the Atma of the creature. Taken in its literal sense, the Videha form of Mukti is this.

Since the true identity of the creature is not his body but the Atma, in the case of *Videha Mukti*, this Atma or soul exits from the trappings of the body much like the breath going out from inside the body and finding liberation in the outside air. Even as the air does not perish after it leaves the body, the Atma which is the true identity of the creature also does not perish once it leaves the body and is set free.

The word *Videha* means without a body, and the word *Mukti* means liberation and freedom, emancipation and salvation. So loosely, the phrase 'Videha Mukti' means 'freedom from the encumbrance and limitations of the body'. This Videha Mukti, generally speaking, is possible when the individual Atma, which is the truthful identity of the creature, leaves the body to merge with the cosmic Atma present outside the body of the individual creature. The example of the breath leaving the body as cited above is the best and simple way to explain the concept. While the breath is inside the body, it represents the Atma of the individual because it is surrounded by the physical, gross body, but as soon as it is exhaled it becomes synonymous with being provided with Videha Mukti because it finds freedom from the encumbrances and limitations of the body and merges with the wind present in the vast space outside the body. So if a wise creature becomes totally unaware of his body so much so that he does not even feel the pain of a pin pricking it, when he is totally oblivious of the fact that the body even exists, then in that state of existence he is equivalent to having actually lost the body altogether—that is, the creature has obtained Videha Mukti. This state is usually achieved during meditation by Yogis when they enter 'Samadhi' which is a trance-like state of consciousness.

In the context of this particular Tejobindu Upanishad however, the phrase 'Videha Mukti' assumes a special significance in as much as that it does not necessarily mean leaving one's body in physical terms, but becoming totally detached from it as if it did not exist at all for all practical purposes. The body may be subjected to any sort of physical treatment but for a true Videha Mukta person it just does not matter. Obviously, it is not as easy as it seems to be; an extremely high level of spiritual evolvment and development is needed to inculcate this stoickness and indifference and make this state of spiritual existence practical.

As soon as this highly detached and indifferent mental condition is developed, the person becomes immune to anything related with the physical body and it is equivalent to his actually leaving it altogether. It ought to be understood here that an idea expressed in words should be taken and understood in a complete and holistic fashion, for it may mean different things under different contexts and circumstances, sometimes appearing to be contradictory to each other if the 'spirit' of that idea is not properly comprehended. The best approach to interpret any great idea or understand the essence of any axiomatic maxim and see it correctly is to relate it in the light of the context in which it is said or expressed without compromising on the basic truthfulness of the idea or maxim which has been expressed in a particular phrase or word by allowing one self to be mired in and get flummoxed or perplexed by too literal a translation of the concerned word or phrase.

Paingalo-panishad, canto 3, verse no.12 of the Shukla Yajur Veda tradition explains what it is like to be in the Videha Mukti state. It says—"In the final analysis, the soul or Atma transforms into an entity that is without a speech or which cannot be ascribed words to describe it, that cannot touch or feel and can neither be touched or felt, that has no form and shape, that has no taste or sap and neither can it taste any sap, and that has no smell or fragrance nor can it smell any fragrance. It achieves the stature which is imperishable, that does not decay

or diminish, that is without a beginning or is most ancient, that is eternal and infinite, and that is most majestic and stupendous. It attains the supreme transcendental state which is steady and stable, which is pure and immaculate, and which is known as the faultless and healthy Brahm (12).”

A truly liberated soul is one who has understood the import of these two types of Muktis and creates a synergy between the two. Such a person not only becomes ‘Jivan Mukta’, or freed from the burdens cast by this mundane world, but also attains ‘Videha Mukti’, or is freed from the encumbrances and limitations caused by the body at the same time. These two types of liberation and deliverance go hand in hand; they complement each other.

The best example of a person having both these forms of Muktis simultaneously is the legendary king Janak (father of Sita and father-in-law of Lord Ram) because although he was a king taking care of the mundane work of the kingdom, internally he was completely detached from the world and is considered the most enlightened and wise king that ever existed. That is why he is also called ‘Videha’. The concept of various ‘Muktis’ has been elaborately explained by Sri Ram to Hanuman in Shukla Yajur Veda’s Muktiko-panishad.

This concept has been also explained by King Janak to sage Shukdeo in Mahopanishad, canto 2, verse nos. 36-73, Canto 5 of Sam Veda tradition.]

34. A Videha Mukta person is one who has a holistic view of the Atma and sees it everywhere in an omnipresent and all-pervading form. He has a uniform view of the world because he sees the same Atma everywhere, treating everyone without any distinction as a manifestation of the Atma. He is clean in his view of his own self and treats his Atma as pure, uncorrupt and untainted.

He has no sense of false superiority complex about himself in the belief that he is one notch better than the others in this creation because his Atma is supreme, divine and holy, leading to the breeding of such negative traits as ego, self pride, haughtiness and arrogance of his superiority and immaculacy. This is because these negative emotions are not the attributes of the perfect, immaculate and uncorrupt Atma which is as much the true self of the Videha Mukta person as it is of the other person who is engrossed in the world out of sheer ignorance.

He treats the entire world as a manifestation of the same Atma that forms his ‘self’, and which is unique in the sense that it is non-dual and one of its only kind. Therefore, all the living creatures in this world have this Atma in them which gives them their unique identity and individuality which is uniform, universal and independent of the physical form that this creature has got. It is the universal presence of this ubiquitous Atma in all the creatures in creation that binds them together in one uniform whole (much like the thread that holds the beads of the rosary together and gives the latter its identity, importance and shape¹).

In fact, the essence of this creation and the world around him is only the Atma which is also his true self (34).

[Note—¹In this example, the thread is the Atma, while the colourful beads are the numerous bodies of countless species that form this multifarious and varied creation of astounding diversity.]

35. A Videha Mukta person treats the Atma as having no birth or beginning, as it is eternal and imperishable. Therefore he treats himself also as without having any birth or end (because his true ‘self’ is his Atma and not the body). He regards himself as the Atma which is a wellspring of Amrit, the ambrosia of eternity and bliss, the fountainhead of divinity and holiness, the treasury of auspiciousness and goodness.

He has only one aim in life, an aim that is worth pursuing and achieving, and that is the obtaining of a holistic, correct and true knowledge about the Atma. He sees this Atma literally as the target at which his sight is fixed. This Atma is very beautiful and auspicious; it is fascinating and magnificent beyond description.

Having decided his aim and target in life, he concentrates on it by becoming silent and fixing all his energy and attention on it in a quiet manner¹ (35).

[Note--¹In other words, he quietly meditates upon this Atma, fixes his attention and concentrates his energy on accessing it so that this difficult citadel of divinity can be eventually conquered. He does not boast of his progress or is ever proud of his success in this endeavour, preferring to pursue his goal silently and without advertisement, doing it with a focused mind and fixed attention that is needed by an acclaimed archer who is able to successfully shoot the bull's eye from a long distance.]

36-37. A person is deemed to be Videha Mukta when he is convinced that the Atma is an image of Anand (bliss and joys), that it is most dear and loving in this creation, that it is perpetually emancipated, that it has overcome and conquered all obstacles and broken free from all the fetters of delusions and ignorance that are so characteristic of this mundane world and which keep the creature shackled and bogged down in their swampy prison, preventing its salvation.

Such a person has a holistic view of himself as Brahm personified. He regards himself as pure consciousness and an embodiment of wisdom, erudition and enlightenment. He does not allow himself to be drowned in and be deluded by so many doctrines, for he thinks of nothing else but his own self-enlightened and conscious Atma (36).

A person who is firmly established in the view point that he is nothing but the pure conscious and self-illuminated Atma which is wise and enlightened, is deemed to be Videha Mukta¹ (37). [36-37.]

[Note—¹A person with such a noble notion of the self is deemed to *Videha Mukta*, or one who is not bound to the shackles of the body which cause hordes of hindrances in his spiritual progress because he has freed himself from the basic erroneous conception that mires the mind and intellect of all ordinary creatures who are not fortunate enough to be self-realised. It is the fallacious belief that 'I am the body; the body is my self; my identity is my body, and I am recognised and known by it. If my body is harmed, I am harmed; if my body suffers I also suffer', and such other ideas centered around the misplaced notion about the true nature of the body vis-à-vis the Atma.]

38. A person who has only one firm conviction, who believes in one 'truth' and does not get confused by any doctrine other than the maxim 'I am Brahm personified' ('Aham Brahmeti') is the wise, erudite and enlightened person who can be called 'Deha Mukta'—i.e. one who has obtained freedom from the fetters created by ignorance related to the true identity of the 'self'¹. He is known as 'Videha'.

Such a person's inner self is calm and serene, devoid of all consternations and perplexities, and is full of beatitude and felicity (which comes naturally with Brahm-realisation and self-realisation (38).

[Note--¹That is, such a person has realised that his true self is not the body but the Atma, the pure consciousness that has all the glorious virtues and divine qualities which are associated with the supreme Truth in creation. This 'Truth' is the common denominator in every conceivable form in which this creation has evolved, both the visible as well as the invisible, and from the minutest single-cell organisms to the colossus form of creatures that ever walked on the surface of the earth, not to mention

all forms of heavenly bodies that exist in the sky and in the farthest recesses of the cosmos. This 'Truth' is called the cosmic Consciousness, or the supreme transcendental Brahm without which the creation would lose its meaning.

When we talk of the heavenly bodies as revelations of Brahm we do not mean that they are as lively and vibrant with life as our mother planet Earth, but we refer to the fact that they show some physical activity such as movement, changes in their atmosphere, surface and core, that they are in varying stages of development or disintegration as the case may be, the fact that they are subject to some well defined set of laws of Nature which they cannot violate—all indicative of some cosmic Authority and superior Power that is regulating them and exercising its control over the remotest recesses of the universe in the same way as it does on Earth and the creatures that inhabit it. From the perspective of the Upanishads, this cosmic regulating and controlling authority is called Brahm, the supreme transcendental Authority.

This Brahm has its existence comparable to the basic entity known as the 'atom' in this material world. The best way to understand the philosophy of Advaita Vedanta would be to understand the basic concept of the structure of all material things which states that the 'atom' is the fundamental unit around which all the structural features of all existing material things are crafted. It is the atom which forms the molecules, and these molecules give the material its specific texture and shape. The atom has certain basic structure and it remains the same in all the things. So, if one were to understand how this single entity known as the humble, neutral and invisible 'atom' can not only create the uncountable number and variety of material things seen around us but even embody in its self a hidden source of stupendous energy, called the atomic energy, the potential of which is unimaginable to say the least, it would be easy to visualise how this single cosmic entity known as 'Brahm' can reveal itself in this multifarious and diverse world which has no two units exactly alike. When we talk of this basic unit of creation at the macrocosmic level we prefer to call it 'Brahm' which is universal, all-powerful, all-pervading and all-inclusive, and when we talk of it at the microcosmic level we prefer to call it the 'Atma' of the individual creature.

We learn in science that the single element called 'carbon' is at the core of the entire field of chemistry known as organic chemistry, and the uncountable number of chemical compounds produced in this field is due to bonding of this single element with other elements of the periodic table in a stupendous array of combinations and permutations so much so that no two compounds are alike and even their chemical names are so complicated and grotesque that a layman is unable to even pronounce them let alone comprehend their chemical structure. When we extend this analogy to the Atma, we deduce that the same Atma (like the carbon atom) assumes countless personalities showing as many individual characteristics, forms and attributes depending upon the way it (the Atma) allows itself to be associated with or influenced by numerous qualities, attributes and virtues pertaining to the world in which it lives, such as the different Vasanas and Vrittis (worldly passions, desires, wishes, yearnings etc. on the one hand, and the numerous variations in temperaments, nature, habits and inclinations on the other hand respectively), Gunas (e.g. the three Gunas of Sata, Raja and Tama as described in note to verse no. 49 of Canto 3), Ahankar (the element of ego, self pride, vanity leading to arrogance and haughtiness), Maya (delusions etc.) and so on and so forth depending upon the theory of Karma, or the deed done in the creature's previous life and its consequences that are carried over as spiritual baggage. These so-called elements then combine in numerous combinations with the Atma and give rise to so many forms of the same Atma that no two units are alike. The magical part is that the pristine nature of the Atma is lost in the process and completely forgotten, as the 'new Atma' is a transformed entity which has no resemblance to its parent. The creature whose 'true self' is the Atma forgets who he truly is as he gets cloaked in a veil of Maya or delusions, and the main

purpose of the scriptures in this context is to awaken him and enlighten him about his forgotten 'self'.

Let's take it another way. Even elementary knowledge of science tells us that the atom is the fundamental unit in creation that forms the basic building block of life and all things in creation in all their multifarious variations, whether animate or inanimate. The atom has the basic structure called the classical 'planetary' model in which the central core consists of the nucleus made up of electrically neutral neutrons and positively charged protons, and the surrounding cloud of moving negatively charged particles called the electrons. The atom derives its name from the Greek word 'atomos' meaning something that cannot be divided any further, much like the Atma or Brahm. The atom is the smallest unit into which matter can be divided and still retain its characteristic properties of an element. The atom is, left to its own account, neutral and inactive because its protons are neutralized by the electrons. But the same atom becomes positively or negatively charged by losing or gaining an electron, thereby producing enormous amount of energy. This energy is hidden in its bosom, and needs to be activated, and once done its potentials can be simply mind boggling in their reach and application as is amply evident when we consider the powerful energy released when an atom bomb is detonated. This energy can be used for destructive purposes as well as for constructive purposes as in the case of producing endless electricity with it. The characteristic of a particular element is determined by the number of protons present in the atom, the electrons determine its charge, and the neutrons decide the isotope. The isotope of an element is a form of an atom which has a different atomic weight from other forms of the same atom, but the same chemical structure.

Now this ideal atomic structure can be compared with the supreme Brahm. The various elements formed out of this single atom because of its different number of protons can be likened to the uncountable number of things and creatures that this single Brahm has produced. Each material thing in this creation has its unique molecular formula, and a molecular formula is based on the way the same basic entity known as the atom aligns itself with its various other incarnations or manifestations having slight variations in its basic structure to give rise to different elements which then combine together to produce a certain thing having its distinctive characteristic qualities, virtues and features which would have no resemblance to the parent atoms. This briefly explains how Brahm has revealed its single self in the form of this world of so much diversity and variations but still retaining its unique singular characteristic and making its presence felt as the Atma throughout the length and breadth of creation.

The individual Atma of a creature is like the individual atom present in a particular chemical compound or material thing, while the basic structure of the atom and its fundamental properties and characteristic attributes are like the ubiquitous supreme transcendental Brahm. The variations in individual nature and characteristic features can also be easily understood by this atomic model. The Atma in its various manifestations is almost like the same atom existing variously as different isotopes and molecular structures that give rise to so many variations and diversities in things in this world that no two things are exactly alike.

The hidden spiritual energy present in all living creatures can be compared to the vast reservoir of energy present in the atom, demanding to be tapped and used. Otherwise, it is like wasting away some precious and endless source of energy, strength and vitality inherent in all things that live in this creation. How this concealed reservoir of energy—which we shall call spiritual energy to draw a parallel with the atomic energy—is used depends upon one's own wisdom.

This 'ability to perceive, think, analyse, deduce and determine intelligently and consciously' is the factor which finally sets to rest the distinction between something as non-Atma and grossly material as the atom from that which is called the ethereal, sublime 'spirit' which is conscious and able to make intelligent decisions, something that the atom

can't do of its own. So, inspite of saying that the Atma and Brahm are like the Atom, one must be absolutely clear that this is just for the purpose of pictorial visualization and understanding the mysteries of the Atma and Brahm, and not an actual description of these two forms of Divinity because there is no comparison whatsoever.

Refer also to verse no. 41 of Canto 6 of this Upanishad.]

39. He (i.e. a person who has attained the exalted stature of being Videha Mukta) does not get trapped in philosophical debates as to 'this is the truth' and 'this is not the truth', or 'this exists' and 'this does not exist' which lead to unnecessary perplexities and doubts. [Refer verse no. 42 below.]

Similarly, he remains aloof from confusions and vexations that arise from doubting the axiomatic maxim of the scriptures 'I am Brahm personified'.

This attitude removes all causes of agitations and restlessness, and such an enlightened spiritual aspirant remains in a perpetual state of 'Satt' (truthfulness), 'Chetan' (spiritual wakefulness, enlightened consciousness) and 'Anand' (eternal bliss and joyous abandon) (39).

40. He does not allow his Atma to be tainted or affected by even a rudimentary form of doubt and confusion arising from any idea or notion that might rob him of his infinite peace and tranquility. He never allows such ideas or notions to ever come to him, in any form and in any circumstance.

He remains steady and firm in his well researched conviction about the truthfulness of the Atma (pure conscious soul), and does not regard anything other than the Atma as true. With this conviction firmly grouted in him, he becomes silent¹ (40).

[Note--¹That is, his mind and intellect stop searching for the 'spiritual truth' because this has been found. Such a man stops talking and discussing the subject with others once he has come to know the 'truth' because discussion and consultations would again lead to new and more confusion as each man has his own take on what constitutes the 'truth'. So it's better for him to become quiet. Besides this, useless chatter vexes his spirit.

It must be noted here that he talks and discusses spiritual truth till the time wisdom and enlightenment does not dawn on his mental horizon because after all knowledge has to be acquired through asking questions and getting answers for them. But once this purpose is served, the aspirant should not go to town boasting of his knowledge but turn inwards and become introspective and thoughtful. It has been wisely said "Knowledge speaks, but wisdom listens silently."]

41. The Parmatma (the supreme transcendental Soul of creation; the Supreme Being; the supreme Brahm, the Lord and Master of the entire creation) is beyond all 'Gunas', i.e. he cannot be limited to any set of attributes, characteristics, virtues and qualities no matter how profound, how glorious, how divine, how holy, how grand and magnificent they might be; they cannot define even one aspect of the Supreme Being comprehensively.

Parmatma is the Atma of all living beings¹. He is dear to all living creature (because 'life' is dear to all of us, and without the Atma or consciousness this body would be useless and has to be immediately cremated or buried as it would start decaying).

This supreme Soul of creation called Parmatma has no limitations, i.e. is not subjected to the limitations imposed by such factors as Kaal (time, era and circumstance), Vastu (things such as gross or light, small or big, useless or useful,

visible or invisible etc.), and Desh (country and other geographical demarcations). In other words, Parmatma is present in all the periods of time, in all the circumstances, in all the things and in all the places in a universal and uniform manner².

Therefore naturally the person's 'self' is also a place where this Parmatma lives, as there is no place, not a single place where 'he' does not live! (41).

[Note—¹*Parmatma* is the supreme transcendental Soul, while *Atma* is the individual soul of the creature. It is the 'Parmatma', the cosmic Soul at the macro level of the creation that has revealed or manifested itself as the individual soul of the creature as his *Atma* at the micro level of this creation. This can be visualised by a simple example—the drop of water in the tumbler is the *Atma* of the creature, while the body of water in the fathomless and measureless ocean is the *Parmatma*.

²There is not one place or thing in this existence where *Parmatma*, the cosmic 'Truth' and 'Consciousness', does not exist because the very fact that this place or thing has its truthful and verifiable existence is a proof in itself of the presence of that 'Truth' and 'Consciousness'. For instance, if there is rainfall then there must be an ocean and sun because without them the 'rain' cannot materialize, though only a learned man would know the science behind the entire process of rain formation and precipitation. It is the heat of the sun's rays that evaporates water of the ocean as water vapour that goes up to form the clouds that come down subsequently as rain.]

42. This *Parmatma* has no distinctions (based on *Kaal*, *Vastu* and *Desh*). He is not separated into different units or entities; he cannot be segregated into separated classes or societies based on any consideration of geography and place, time and era; he cannot be regarded as less important or more important; he cannot be treated as lower or higher in status on the basis of the different levels in which life exists in the ladder of evolution, etc. That is, the *Parmatma* is a divine non-dual cosmic conscious entity that is all-inclusive and all-pervading, and that transcends all known physical and material boundaries, limitations and definitions—which is a great axiomatic maxim of the philosophy of Advaita Vedanta.

The creature is influenced by the *Maya* (delusions) created by *Kaal* (various aspects of time and circumstance) and begins to erroneously have notions of my and yours, me and you. This is a fallacious conception, a distorted view of reality as all that exists is a manifestation of the same non-dual *Brahm*. [Refer verse no. 28 above.]

Therefore, there is no question of 'this' being different from 'that'. [Refer verse no. 39 above.]

In fact, the *Atma* and *Parmatma* are one and the same entity and much beyond the purview of delusions created by misplaced notion of what actually constitutes 'truth' (42).

43. [The following verses outline the glorious and unique virtues of the enigmatic *Atma*, the soul of the creature.]

The *Atma* is neutral and like the numeral zero; it is like the void of the sky and deep recesses of the universe¹. This *Atma* is most miniscule and sub-atomic in form; it is the subtlest element in creation. At the macro level of the world, this *Atma* of the individual has revealed itself as the *Atma* of the creatures in existence, making it all-pervading and omniscient. In spite of this, the *Atma* is free from the corrupting influences of the world².

This *Atma* is endowed with all the God-like glorious virtues and has manifested itself as various Gods. Like the mortal creatures in this creation, even the Gods have this same *Atma* in them; the Gods are the physical manifestation of the *Atma* at the subtle and macrocosmic level of creation just like the ordinary creature is

at the gross and microcosmic level. But the Atma is not limited to simply being Godly or being manifested in the form of divine beings called Gods, as it transcends them and their glorious virtues³.

This Atma is so exalted and highly placed that it deserves the highest honours. But it is impossible to measure its divine glories and magnificent virtues, its majesty and grandeur. It is impossible for anyone to assign epithets and other measuring yardsticks to qualify something that cannot be qualified and measured in any way (43).

[Note—¹The zero has no value of its own but when added to some other numeral it tends to enhance its value ten and thousand folds and goes on enhancing it with each shift in its position. The shape of the zero is like this cosmos—i.e. round like a ball, a sphere, a circle, a ring. This shape has no beginning or an end; it is a continuous and unbroken circle. Similarly, the Atma has no beginning or an end; it is continuous and eternal. It remains neutral itself but adds glory and magnificence to the creation by infusing it with a colourful factor of 'life and consciousness'.

Again, the Atma is fathomless and measureless like the sky and its deep cosmic void where no one knows how many universes are still lying in a nascent stage and how many are gasping their last breaths.

²In other words, though the Atma lives in all forms of bodies of various denominations and in as many countless forms as there are creatures in this vast world, it remains aloof from everything related to either the body or the world in which this body lives. This is because the Atma by nature and in its purest form is inherently wise, immaculate and incorruptible under any circumstance. It may be misled by the mind to get momentarily deluded, but in due course of time it is bound to recognise its true self and feel dismayed at its momentary waywardness. The Atma's graceful auspiciousness would rebound if it was not subjected to worldly fetters and delusions.

³In other words, the numerous Gods are simply manifestations of one or the other wonderful divine qualities of the Atma, and they would have no meaning, importance and significance if they do not have these qualities in them. They are honoured because they vividly display the divine qualities of the Atma. But none of these Gods are a complete definition of the Atma; at the most they display one, or more than one divine virtue of the Atma. The only difference between an ordinary creature and the God is that the former has a gross physical body which takes birth on this gross earth and has a greater propensity to be easily deluded and get trapped in the web cast by Maya which is the hallucinating effect of this artificial world of illusive charms. This body is a great limitation imposed on the Atma because it becomes mired and bogged down by its numerous constraints. The Gods on the other hand have a subtle existence not limited by any of the constraints imposed by a gross and physical body because they do not have a gross body in the first place. They have a comparatively longer life and a greater density of divine virtues in them as compared to the mortal creature. But the Gods are also subject to being deluded and fall prey to the magical effects of Maya, and the Purans are full of such anecdotes. So, in brief, the Atma cannot be limited to being likened to Gods simply because the word 'God' means some exalted, almighty, holy and divine entity. The Atma goes much beyond this meaning, and that is why there is even some entity known as a 'Parmatma'—some entity that is even beyond the normal concept of an Atma as being a God or a super God. Everything in existence, including the Gods and the individual Atma of the creature, are subordinate to this Parmatma.]

44. The Atma is free from all grossness, inertia and indolence. This Atma is a resident as the truthful inner-self of all the living beings in creation. It is free from all 'Sankalps', i.e. it does not make any vows and determinations, and neither does it make any promises and has any aspirations or volitions. [This is because it is a neutral

observer of everything and remains indifferent towards all. It desires nothing and needs not to please anyone.]

Indeed, a Videha Mukta person is of a firm conviction that his Atma is nothing but eternal pure consciousness (44).

45. A Videha Mukta person is of a firm conviction that—‘I am nothing but the supreme Soul of creation called the Parmatma, the Supreme Being, himself revealed in my form. I am nothing but an image of Gyan (truthful knowledge, wisdom, erudition and enlightenment). [In other words, ignorance and its attending delusions do not touch me.]

My truthful and real form is the Atma; it is my only authoritative and truthful identity. I do not have any fears in and from this world¹ (45).

[Note—¹When the self-realised person discovers that the true identity is the Atma and not the body, all causes of fears related to the latter’s interaction with the world are automatically dispelled. The world can make the body suffer, the body is subjected to cold and hot temperatures, the body has relations that take birth and die, the body does various deeds, whether good or bad and enjoys or suffers from their consequences, it is the body that takes birth and dies in this world, and it is the body that has friends and foes. So, once the enlightened person realises that the body is *not* his real and truthful ‘self’, but it is the Atma, all fears and uncertainties arising from the world vanish on their own.]

46. A truly self-realised, enlightened and Videha Mukta person does not allow himself to be entangled in the web created by numerous paths and innumerable doctrines, thereby getting bogged down in the swamp of confusions and perplexities caused in their wake. He does not wish to learn and get involved in endless search for the truth about such subjects as to who or what is a Jiva (a living creature), who is Ishwar (Lord God), what are such things as Vaani (speech and the spoken word), Vedas (scriptures), Shastras (the other scriptures such as the Purans and Ithihas etc., the different philosophies, various sciences and other bodies of knowledge), and many other factors in creation such as ‘Aham’ (or Ahankar—ego, pride, haughtiness and arrogance that prevents a reluctant creature from realising the level of ignorance he has vis-à-vis the world, preventing him from accepting his folly that he is pursuing something that is perishable, illusive and completely artificial in the hope of deriving permanent happiness from it at the cost of forgoing the truth and reality that can actually provide him with it)¹.

A truly self-realised and enlightened person knows only one certain thing, and it is this--‘The only thing that really matters in this world is the Truth, and it is pure consciousness manifested as the ‘self’, both at the individual level of the creature as well as the cosmic level of the creation at large. This consciousness is ‘I’. In other words, everything in this world that has any worth is consciousness, and since this is a fact it follows that ‘I’ too am consciousness personified; I am nothing but consciousness which is enlightened and self-illuminated² (46).

[Note—¹The simple meaning of this stanza is that a person who wishes to really free himself from all entanglements pertaining to this short-lived world of delusions and confusions, and instead find eternal peace and tranquility for which he would rather do anything and willingly go to any length to achieve it, should not get involved in avoidable superficial exercises and long drawn processes when the essence can be had much easily.

In other words, he does not wish to waste his spiritual energy and precious time, which is nevertheless very limited in this perishable world, in meandering through the endless maze of scriptures and the vast body of knowledge that exists in this world in

search of something that is self-evident and unanimously proclaimed by the all of these scriptures as their fundamental tenet and axiomatic maxim. It would be foolish not to accept the truth staring in the fact and going around on a wild goose chase to search for it in the dense forest of Vedas, Purans, etc. by pouring over the large tomes of religious scriptures, or letting one's sense of false pride and ego coming into the way of remaining quiet and aloof and not pretending to be a scholarly person by delving into thick tomes for years on end, or going to great teachers with queries to show that he is very intelligent and sincere in acquiring knowledge, or attending and engaging in metaphysical and theological debates to showcase one's mental agility, acumen, prowess and scholarship, and attain worldly acclaim. These exercises can give him worldly fame and wealth but would snatch from him his internal peace and calmness.

²Everything has value because of the presence of consciousness in it; no one would like a dead thing. Who would like to keep a dead body in his house? 'I am what I am because of this consciousness; otherwise I am of no value. My gross body and its organs, its beauty and strength, its relationships and ability to perform tasks are there because it has consciousness residing inside it; otherwise it would be a useless entity that decays rapidly and has to be cremated or buried outright.']

47. With this firm conviction that he is the self-illuminated and enlightened pure consciousness personified, a Videha Mukta person becomes absolutely neutral and indifferent to everything else. [Indifferent to what? To things enumerated in previous verse no. 46 above; to things that are *not* consciousness, things that are *not* truthful.] He becomes fulfilled and has deemed to have attained his spiritual objective of self-realisation of the pure conscious Atma. He remains perpetually engrossed in the thoughts of this Atma, and remains in a blissful state of existence (47).

48. A Videha Mukta person is one who exists in the form of the Atma which is endless, measureless and infinite. He treats everything, the minutest or the most colossus, equally and with equanimity. He has transcended the fourth state of existence called Turiya¹, and remains in an eternal state of an extreme blissful existence (48).

[Note—¹Turiya state is the state after the deep sleep state of existence, which is the third state of existence of the consciousness. Briefly it is the state in which the spiritual aspirant remains absolutely blissful. But there are two sub-divisions in it—the Turiya and the post-Turiya states. The latter is the climax of spiritual enlightenment and realisation of the eternally state of beatitude and felicity.]

49. A Videha Mukta person regards himself as having no name and form (because these notions are restricted to the physical body, whereas the Atma is the true self of the self-realised Videha Mukta person and it has no name and form; in fact the term 'Videha Mukta' itself implies this realisation). He treats himself as the Atma which is eternally and extremely blissful and joyous. It is beyond the touch and purview of such worldly criterions as something being auspicious and another being inauspicious, and artificial distinctions based on these perceptions. In fact, the Atma is perpetually in a state of 'Turiya-teet'—a state beyond the Turiya state. (Refer verse no. 11 and 48.) (49).

50. A Videha Mukta person regards himself as an Atma which has created or forged a temporary union with the body to be called the 'Yogatma', i.e. the Atma that is associated with something; here the reference is to the body by which the Yogi (an ascetic) is known in this world. This Atma remains in a perpetual state of Yoga which

implies that it rests eternally in a state of meditation and contemplation, which in turn are the qualities characteristic of a true ascetic¹.

Being an ethereal Spirit, the Atma is without any bondages and restrictions; it has no fetters and shackles attached to it. Therefore there is no question of it seeking and getting freedom from anything (simply because it is not bound in the first place).

The Atma is not tainted or affected by any of the Gunas (i.e. by any of the three qualities of Sata, Raja and Tama that invariably mould the character of all living beings in this creation depending upon the ratio in which they are present in any given individual). Similarly, it is also beyond the influences of Desha and Kaal (i.e. it remains unaffected by any place or circumstance, any era and time)². [Refer also verse no. 12 of this Canto.] (50).

[Note—¹In order to do Yoga in physical terms, the Atma would need the body. The Atma in its purest form is an ethereal Spirit without a physical body. Due to unfortunate past circumstances and ill chance, it has tumbled down from its high citadel onto this mortal world in which it had to assume a body in order to lift itself once again to its original habitat. Given the fact that the Atma is the truthful identity of the ascetic, its association with the body gives this ascetic his worldly identity and physical existence. It also gives him an opportunity to do meditation and contemplation to achieve higher latitude of spiritual growth that would enable his Spirit to go higher and higher and finally break free from the 'gravitational pull' of this deluding world. The various techniques of Yoga that describe so many exercises to arouse the latent energy in the person, to control the various vital winds by Pranayam and other vital wind-controlling exercises, to kindle the dormant energy of the Kundalini, and so many other aspects of Yoga such as Aasans and Mudras etc. are all aimed at helping this trapped Atma to sneak out of the body and lift it from the gross level of the body astride the vital wind called the Pran and set it free into the lighter and subtler space called the sky representing the cosmic ether, to finally merge with it once again. This would be the Atma's final liberation and deliverance.

²This is because the Atma is eternal, unchanging, uniform, steady and immaculate. Such things as various good or bad qualities, geographical settings and locations, and time factors such as past or future, favourable or unfavourable circumstances—none of them have any effect on the ethereal Spirit which is much beyond such mundane considerations.]

51. A Videha Mukta person is one who does not allow himself to be perplexed and entangled by getting involved in the debate of who a witness is and what he witnesses¹, what is there and what is not².

Therefore he does not bother himself whether or not everything around him is after all a 'Prapanch' (a motley assemblage of delusions, ignorance, illusions and deceit), or if it is the supreme Brahm (i.e. the eternal Truth and absolute Reality in creation) personified (51).

[Note—¹This relates to the metaphysical philosophy that the Atma, the pure conscious self of an individual, is merely a witness of all that is happening in this world. All confusions, vexations and consternations to the spirit arise when it is not certain of the truth, of its truthful identity, and is therefore misled into believing that it is the actual doer of deeds and a participant in the drama that is evolving every few moments in this world. This sense of involvement with the deeds and their results prevents it from remaining neutral and dispassionate. It forgets that all deeds are being done by the body and it is the body that is affected, either positively or negatively, by such deeds.

²Then there is one philosophy that says that everything in this world is false and mirage-like and therefore worthy of renunciation and abandonment, while there is another which says just the opposite that the world has a real existence and whatever

is seen is the actual truth that can stand the test of material science, logic and rationality, and therefore it should be enjoyed to the hilt. One philosophy says that there is life after death of the body as the Spirit never dies, while the other says that once the body is cremated or buried, there is no such thing.

So a truly wise, erudite and sagacious spiritual aspirant who wishes to obtain emancipation and salvation for his self, his Atma, his soul, should not enter this swampy ground and pick up the cudgel to prove what is true and what is false, as this debate has no end and would lead him down the dark vortex of confusions and perplexities instead of giving him peace and tranquility, and without peace and calmness of mind there is no scope of his ever attaining bliss for which he has set forth on his spiritual path in the first place. There are certain things about the Spirit that cannot be ascertained or deduced conclusively in material terms.]

52. A Videha Mukta person sees his true self as an entity that is self-illuminated, and he remains contented with this exalted and divine form of his pure conscious 'self' known as the Atma and enjoys his constant company with it.

His state of extreme blissfulness and ecstasy is so extreme that it cannot be assessed and described in words, and neither can the faculty of speech as well as the mind can ever narrate anything about his own 'truthful self' (52).

53. A person who remains aloof from everything in this world, from all notions, all emotions and all deluding influences—only such a person is deemed to be one who is Videha Mukta.

Though such a person remains indifferent to the various 'Chitta Vrittis', i.e. he is not influenced by any of the numerous tendencies and natural inclinations that the mind and the sub-conscious possesses and exhibits, he nevertheless provides light of consciousness, the 'illumination of conscience', that show the mind the way to proceed ahead¹ (53).

[Note--¹This is because he is dispassionate and neutral, and therefore clinically analyses everything and every given circumstance on its merit, and not under any duress and influence of either the emotional and sentimental influences of his heart, or the misconceived, misunderstood and erroneous advice given to him by his deluded mind. He is in total control of his own self and his organs, including the mind and heart.

His decisions are based on clinical examination of facts and not on assumptions and hearsay. The numerous worldly passions, desires and longings, the uncountable shades that his emotions and sentiments take, the various temperaments and attitudes that his decision making process has to encounter and cope with—none of them affects his decisions and determinations. He remains steady as a rock once the decision is made based on clinical analysis of available data and facts, and free from all extraneous considerations. He sticks to his decisions in spite of all things to the contrary.

The concept of 'Chitta Vrittis' has been described in Canto 3, verse no. 67 as well as in verse no. 54 below.]

54. A Videha Mukta person is one who is free from all 'Vrittis', i.e. he has no habits, tendencies, inclinations and impulses that normally form a part of a man's natural character, driving all his actions and determining his behavioural patterns and overall personality.

Since all these characteristic Vrittis are related to the body and not to the ethereal Spirit, the pure conscious Atma which is the truthful 'self' of the wise, self-realised and spiritually enlightened person, such a man is deemed to be Videha

Mukta—that is, he is a person who is free from all the fetters of ignorance and its attending delusions that pertain to the fallacious notion that the body is the true ‘self’ instead of the Atma (54).

[Note—The concept of *Vrittis* in the context of the sub-conscious mind called the Chitta has been explained in Canto 3, verse no. 67.]

55. As soon as one remembers anything related to this world, the body automatically comes into play because it is the medium of the Atma’s interaction with the physical world; it is the body that harbours the mind along with its astounding abilities to perceive and recognise things and then remember about them in the future. So, when an enlightened man allows himself to perceive, recognise and remember anything pertaining to this material world, his truthful identity as the ethereal Atma gets hidden behind his external façade of the gross body. That is why a Videha Mukta and a spiritually enlightened man abhors remembering anything at all. [This is because he has no need for anything related to the material world of sense objects. Hence, he would not need the mind to perceive and recognise anything of this world and then a memory for storing this data to be remembered and recalled in any future time if the need arises for them; he does not need them in the first place so there is no need to remember them. He does not wish to remember anything because such remembrance would drag him into the swampy quagmire of this world from which he is attempting to extricate himself.]

As long as the Atma is involved in this world by even remotely remembering of its existence, it forgets about its true nature as pure transcendental consciousness that is a fount of eternal and extreme blissfulness. [The world does not provide true and everlasting happiness and rest to the creature, and whatever semblance of happiness and rest it does provide is transient and perishable. They only act as a bait to trap the creature and ensure that he remains entangled in its web, instead of caring for his long term spiritual well being. The happiness and joys obtained from the world have no sustainability in comparison to the one obtained by being associated with the Atma, i.e. by being ‘self-realised’.] (55).

56. The supreme transcendental Atma is the object of study and research by all the scriptures called Vedanta or the Upanishads; it is through them that one can know about this Atma and learn about its true form and nature.

This eclectic knowledge thus obtained enables the Videha Mukta person to enjoy and exult in the delicious taste of the spiritual elixir known as ‘Brahm realisation’ which gives him a spiritual high and fills him with extreme ecstasy and unbound exhilaration of having tasted (experienced) the most delicious essence (nectar) in existence (56).

57. Having once tasted (experienced) this extremely addicting and ecstasy-providing elixir (nectar) of divine bliss and unbound joys, he himself becomes addicted to it and is infatuated with its bewitching charms. He drowns himself in it and soaks it so much that he loses his own individuality and paints himself in its colours. He remains oblivious of everything else so much intoxicated he is by the elixir of Brahm realisation. He begins to worship this state of Brahm realisation as the only truthful and auspicious state of existence that makes him equivalent to being Lord Shiva himself (57).

[Note—That is, the bliss of Brahm realisation is overwhelming for him so much so that he undergoes a metamorphosis by changing his earlier character of what ever he

was and now becomes a brand new person known as a spiritual 'drunk' who remains submerged in his state of extreme blissfulness obtained by drinking the spiritually rejuvenating and invigorating 'drink' of Brahm realisation.]

58. The Videha Mukta person derives extreme contentedness by drinking the elixir of Brahm realisation. He gets extreme satisfaction by experiencing the supreme sense of spiritual happiness and joy, of bliss and tranquility, of ecstasy and beatitude that come with Brahm realisation.

This beatitude and ecstasy obtained by Brahm realisation is most eclectic, auspicious and truthful. It is radiant with a divine glow that illuminates his inner self and radiates out in the form of a divine halo around him that appears like some diffused subtle light effusing from a self-illuminated and effervescent source. This 'source' is his Atma (58).

59. A Videha Mukta person remains engrossed and submerged in the extreme bliss and ecstasy of supreme transcendental state of Brahm realisation which is like a celestial source of eternal light for him (which can be compared to the sun in the sky). This light eternally illuminates not only his own self but the entire world for him. [That is, he sees and understands everything in the light of Brahm. He judges everything as to their worthiness and truthfulness in the context of their relevance to Brahm—if they are true and worthy, then surely they must be Brahm, otherwise they are better shunned as being untrue and worthless.]

This supreme transcendental Brahma-Anand (bliss and ecstasy of Brahm realisation) is what he is fond of drinking and eating. [That is, he derives his spiritual nourishment from it.]

Brahm is what constitutes his kith and kin, his family and friend. [That is, he knows no one else but Brahm, and just as anyone gets great comfort when surrounded by his family and friends, he gets the same degree of comfort and happiness when engrossed in thoughts of Brahm. Just as a family man identifies himself with his family name, a Brahm-realised man identifies himself with Brahm—indeed, Brahm becomes his surname, title and honour; Brahm becomes his identity; he belongs to Brahm; he is a member of the brotherhood of Brahm-realised persons. Even as a family man longs for his family when away from home, getting a sickening homesick feeling, even as he loves his family to the exclusion of all others who he treats as outsiders and strangers, a Brahm-realised person longs for Brahm and treats everything non-Brahm as not belonging to him. His entire life revolves around Brahm.] (59).

60. A Videha Mukta person remains firmly established in his state of extreme bliss and ecstasy obtained by Brahm realisation. It is a unique state of pure conscious and enlightened existence.

He establishes his affectionate relationships with it by remaining submerged in it and full of the divine bliss and happiness that it provides to him (60).

61. A Videha Mukta person treats the multitude of spiritual benefits obtained by Brahm realisation as the numerous favourable relationships that one develops in this world which come in handy in his day to day life and its orderly functioning, ensuring his all round well being¹.

He sees his own Atma in all other creatures in this creation (because he knows the maxim about the Atma being universal and uniformly all-pervading and

omnipresent). In fact, he does not see anything but the Atma anywhere; he does not pay heed to anything other than the Atma in this world (61).

[Note—¹A person develops so many relationships with so many people with whom he comes in contact during his day to day life in this world. Those relationships that are of any benefit for him, he retains them, while those that harm his interests are shunned and altogether disowned by him. Similarly, since the bliss obtained by Brahm realisation is conducive to his spiritual peace and health, he courts it, and he shuns all other enticements of happiness offered to him by this world that only get to trap him in their snare.]

62. A Videha Mukta person is one who is of a firm conviction and who is unwavering in his belief that 'I am that entity known as the Atma which is present as the conscious Spirit or soul of all living beings; I am this Atma which is a personification of the supreme cosmic Consciousness and the ethereal Spirit. This Atma is eternal and omnipresent. It is perpetually blissful and peaceful.' This connection marks the pinnacle of 'self-realisation' (62).

63. The Atma is complete and fulfilled in every respect. It is great and magnificent in every way. It is most dear and worthy of being endeared with. It is eternal, perpetual, immortal and permanent.

The Atma is all knowing and omniscient; it assumes all the forms in which all living beings are known to exist in this creation. It is pristine pure, most immaculate and absolutely uncorrupt in every possible way. It is subtle and sublime; it is ethereal and divine, having no attributes and characteristic features limiting its divinity, sublimity and subtlety (63).

64. The Atma is without any taints, faults and shortcomings of any kind. The pristine pure and immaculate Atma is an embodiment of peace, tranquility, serenity and calmness.

The Atma has a perpetually unchanging, steady and uniform existence, remaining calm, unruffled and stoic even during extremes of emotional storms, for it treats those circumstances creating peace as well as those creating turmoil in equal terms. This quality of profound equanimity, great composure and poise, calmness of demeanors and evenness of existence are the grand hallmarks of the Atma, and anything other than this is not the character of the Atma (64).

65. A Jiva Atma, i.e. the individual creature who has realised his true 'self', who possesses the above grand virtues and magnificent qualities is equivalent to the Parmatma, i.e. there is no difference between the self-realised and enlightened individual creature and the Supreme Being known as the Parmatma¹. With this heightened awareness about one's inherent divinity and inheritance of holy and glorious virtues that makes one an exalted and revered being, the individual should forsake all forms of worries, fears and consternations about his future and spiritual well being².

This Atma is eternally and infinitely 'Mukta', i.e. it is always liberated and emancipated, and therefore there is no question of its being bound and therefore seeking liberation, or it's having any fear of getting shackled and caged after leading an existence of freedom (65).

[Note--¹In other words, when the individual aspirant acquires the holistic divine virtues and grand qualities enumerated above and below in this Canto, he becomes as holy and reverend as the supreme Lord of creation. Taken differently it implies that a

man can become God-like, and truly speaking there is indeed no difference between him and Divinity, if he inculcates such noble and auspicious qualities as described in these verses. Given this fact, it follows that each one of us is inherently a potential divine being, but it is due to our own stupidity, folly and shortcomings that we push this divine element inherent in all of us to take a back seat and instead put the steering wheel of our lives in the hands of corrupt and pervert forces in the world to enable them to take control of our lives and steer it to degradation and towards a demeaning destination.

²When a man has realised that he is fundamentally divine and holy because his true identity is the Atma which is a treasury of divinity and holiness, he stops worrying for his spiritual welfare for now he is deemed to have reached a stage when external corrupting influences of the world would never have any affect on 'him'. This is because now his *true self* is the 'Atma' which is eternally incorruptible, holy, divine and immaculately pure, and not the 'body' which is an easy target for such denigrating influences. The only thing that he has to guard against now is to be careful not to be deluded by false charms and claims, and slip back into the slushy swamp from which he has been fortunate enough to extricate himself at present.]

66. Similarly, the Atma treats the concept of 'Bandha' and 'Moksha' equally, and is beyond the purview of such notions¹. [Refer Canto 5, verse nos. 44, 49.]

Likewise, the Atma is beyond the scope of such debates as to what is dual and what is non-dual, i.e. the idea of 'Advaita' and the 'Dvaitya' respectively, because it is eternally 'one' and has no duplicate or parallel which is its image or with which it can be likened and compared². [Refer Canto 5, verse no. 27.] (66).

[Note—¹*Moksha* is emancipation and salvation of the soul of the creature, while *Bandha* is the fetters that shackle the soul to this world. Since the Atma is eternally liberated, being an ethereal holy Spirit, there is no question of it seeking Moksha and neither of it having any kind of Bandha.

²In spiritual realm, Moksha/Mukti has different connotations for the two main schools of Hindu philosophy—the *Advaita* and the *Dvaitya*. The Advaita school of thought, as the name suggests, means 'non-duality' while Dvaitya means 'duality'.

The *Advaita school's* belief, inter alia, is that the soul of the creature is one with the supreme Soul called Brahm. This is an eternal, omniscient, omnipresent, omnipotent absolute entity. It is the ultimate truth and reality. Hence, Mukti in this context means the individual soul of the creature breaking free or being 'liberated' from the endless cycle of birth and death, and it getting 'delivered' from its temporary abode in the physical body of the creature. It being 'emancipated' means that its disability to break free has been overcome and it has been finally liberated, but this liberation or emancipation must logically end in the 'salvation' of the creature which means merging of the liberated soul with its primary source which is the Brahm. It is like pouring the cup of water back into the ocean. The main exponent of this philosophy was Sankaracharya.

The *Dvaitya school* believes in duality, i.e. that the supreme Lord (God) and the Jiva (creature) are two separate entities. For this school, there are four types of Muktis, viz (i) *Salokya* which refers to finding an abode in the supreme divine abode of the chosen deity of the seeker; (ii) *Sayujya* which refers to intimate union between the individual soul of the creature and the supreme Soul of creation which is the supreme transcendental Brahm manifested in the form of the Lord whom the aspirant worships has his patron deity or Lord God. It implies to become one with the Lord; to merge one's own identity with the Lord so that one becomes inseparable from his Lord; this form of salvation is very similar to the one that which comes under the definition of Kaivalya; it is also called the 'Param Pad' or supreme state of being one with the Lord. (iii) *Samipya* which refers to being able to reside near the Lord to serve him; and (iv) *Sarupya* which implies that the aspirant becomes one with the deity

whom he worships as his ideal. This last form of Mukti is almost similar to the 'Sayujya' type of Mukti and is very much like the *Kaivalya* form of Mukti which literally means 'the only one of its kind', thereby implying that there is no other forms of Mukti except the one when the Atma abandons the gross body which is like a shackle for it, and then inseparably and indistinguishably merging with the supreme transcendental Soul of the cosmos. This 'Kaivalya' Mukti is the ultimate, eclectic and holistic form of Mukti extolled by the Upanishads. This Mukti means the dissolution or merger of the individual soul with the parent supreme Soul. The realisation that the soul of the individual creature is the same as the cosmic Soul residing in all the creatures of this world, to see the supreme Brahm as a resident of the inner-self of the individual creature as its Atma, and identifying oneself with that Atma which is synonymous with that supreme Brahm, which in turn leads to the recognition of non-dual nature of the soul of the creature and the supreme Soul of the cosmos, realising therefore that there is no notion as 'duality' when dealing with divinity and the supreme transcendental being called 'Brahm' vis-à-vis the creature, and other such basic tenets of Vedanta are the foundation upon which Kaivalya Mukti rests. According to Yoga Upanishads, Kaivalya Mukti is achieved even when the creature is alive because it primarily involves total realisation and disassociation from the body and the world with which it has to interact. When the seeker dies, he simply abandons his mortal coil, the gross body consisting of the different sense organs, and merges his Pran or the Atma with the macrocosm outside. Since the word 'Kaivalya' means 'the only', this form of Mukti refers to the realisation of the one and the only spiritual Truth which is the absolute and irrefutable Reality in creation.

Since the Advaita school believes in only one end of the soul— its merger with the parent Soul— they emphasis 'Kaivalya Mukti' as the only form of salvation and emancipation. The word Kaivalya itself means 'only'.

The path to emancipation and salvation according to the Dvaitya school is through the medium of various mediation techniques such as— (i) Japa (repetition of the holy name of a chosen God), (ii) Huta (offering of rituals and sacrifices), (iii) Archana (roughly meaning worship and service), (iv) Puja (meaning adoration and worship of the chosen deity) and (v) Dhyana (concentrating on the various forms, activities and glorious stories associated with the deity). For the Advaita School, meditation emphasises control of the functions of the body through various exercises, restraints and concentrations, a process called Yoga.

Contemplation in the end, in both the cases, makes the seeker/aspirant realise the futility of the world and kindles in him an intense desire to search out the ultimate Truth and Reality. The Upanishads here act as a referee and guide. They advise the seeker/aspirant about the goal of life. What one contemplates with intensity is what one becomes. So, if one contemplates seriously on the 'Truth', he verily becomes the truth personified, and if he contemplates on the 'False', he verily becomes false himself.

The concept of *deliverance* has been encapsulated in the epic Mahabharat in these words:-- Who gets deliverance

सुखदुःखे समे यस्य लाभालाभौ जयाजयौ । इच्छाद्वे गौ भयाद्वे गौ सर्वथा मुक्त एव सः ॥
वलीपलितसंयोगे कार्यं वैवर्ण्यमेव च । कुब्जभावं च जरया यः पश्यति स मुच्यते ॥
पुंस्त्वोपघातं कालेन दर्शनोपरमं तथा । बाधिर्यं प्राणमन्दत्वं यः पश्यति स मुच्यते ॥

----- (महा० शान्ति० २८८/३७, ३९-४०) -----

He who is unmoved by and treats joys and happiness as well as sorrows, miseries, sufferings, troubles and misfortunes, gains as well as losses, victories as well as defeats equally, with equanimity and fortitude, whose desires, envies, ill-wills, hatreds, fears and agitations have been completely vanquished or eliminated— is the one who is truly liberated. When old age comes, the body develops wrinkles, becomes lean and decrepit, the hairs change colour to grey, the general appearance looses its sheen and attractiveness while the back tends to bend— one who constantly remains aware of these facts is truly liberated. When the time comes, manliness

declines, eyesight fails, the ears do not hear and the vital forces of life becomes weak and on the verge of collapse— one who is always aware these thing is truly liberated. (Mahabrt, Shanti Parva, 288/37, 39-40).]

67. This Atma appears to have assumed so many uncountable and myriad forms and shapes which are in consonance with the infinite varieties of creatures and innumerable life forms that exist in this creation. This is because all living beings have an Atma invariably residing in their bosom. But taken in its basic form, this Atma is one, uniform and universally non-dual, and therefore it has only one form and not the countless ones in which it appears to be.

While in the form of uncountable varieties of living creatures enjoying life to the hilt in all its glorious colours and deriving pleasures and comforts from the sense objects of this material world, the Atma appears to be the one that is actually enjoying and deriving pleasure and comfort in this world. But this is a misrepresentation of the true nature of the Atma; it is a misconception about its real form; it is misleading and totally fallacious. This is because it is the body that enjoys anything in this world, and the Atma has nothing to do with it¹ (67).

[Note--¹This erroneous view has cropped up because the deluded creature has begun to think that his true self is the body and not the Atma. This basic misconception sets off a chain reaction, leading up to all sorts of phantom images and hallucinations. All the misgivings about the Atma as listed in verse no. 65 onwards, such as the doubt as to whether it is Mukta or not, whether it is Bandha or not, whether it is Advaita or Dvaitya, whether or not it enjoys the world etc. have their genesis in this fallacy.

However, this Atma is accused of being the perpetrator of all deeds as well as the sufferer or enjoyer of their results for the simple reason that the Atma is the sovereign of the body of the creature and his truthful identity; the Atma is the 'true self' of the creature. Even as the King is morally responsible for whatever happens in his kingdom though he might not be directly involved in them and the Prime Minister is equally held morally responsible in a parliamentary form of democracy, the Atma cannot plead innocence and absolve itself of the responsibility of the deeds done by the body of the creature.]

68. A Videha Mukta person is one who has risen above the need of having or making any 'Sankalps', i.e. he does not have any desires and aspirations to fulfill, and therefore needs no determined push to fulfill them, or make a resolution of doing some yet undone task¹.

He is one with a divine and holy view about the Atma. This Atma is without any blemishes and taints. It is pure and immaculate, incorrupt and crystal clear. It is wise, erudite, sagacious and enlightened. It is an image of the Viraat Purush, the macrocosmic form of the supreme transcendental Divinity known as Brahm (68).

[Note—¹For example, he does not regard himself as 'bound in any shackle', and therefore there is no need to make any effort to find ways to unbind himself. He does not have anything to do with the body, and therefore need not bother about attending to its comforts and pleasures. He is already enlightened and wise, and therefore he need not study thick religious tomes to seek knowledge. And so on and so forth. Refer Canto 5, verse nos. 2, 5, 16, 63, 97.]

69. The Atma is neutral and totally dispassionate in its bearing and attitude, and therefore it does not enjoy anything nor does it ever feel the need or desire for any such enjoyments. The Atma is a wellspring of Amrit, the divine ambrosia of eternity and perpetual spiritual blissfulness.

Since the entire creation in all its many hues and having a vast genre of variations is a manifestation of the same universal Atma, an Atma which is uniform, eternal, infinite and imperishable in nature, the Atma which is the essential soul and life of all forms in which this creation has been revealed, it is deemed that this Atma covers the entire spectrum of creation in all the three planes or phases of Kaal¹. But since Kaal keeps on changing, the Atma is not within its ambit also; it is not affected by the changing dimensions of Kaal as the Atma is unchanging and constant by nature (69).

[Note—¹*Kaal* has many connotations, such as age, period, era, epoch; it refers to the time and circumstance which results in change of the present and determines the fate of the future.

There are three phases or planes in which the factor of time exists—the past, the present and the future. These factors constantly keep changing, and no two era or time is always the same or identical. But this variable nature of Kaal does not apply to the Atma as it remains the same in all the three phases of Kaal, i.e. it is today what it was a long time ago and would remain identically the same even in the distant future. Refer Canto 3, verse no. 49 and Canto 5, verse no. 17.]

70. The Atma which is cosmic Consciousness and uniformly present in the entire creation, being all-pervading and all-encompassing, is infinite and measureless like this creation, and it is the same Atma that resides in my own bosom. It cannot be measured and quantified; it has no specific attributes and characteristic qualities that can be weighed, compared with and measured against any given standard and then qualified or quantified by it. In fact, the Atma is a standard in its own self inasmuch as it determines whether or not anything is worthy to be accepted and honoured in this creation, whether or not one entity is to be regarded as truthful and worthy of paying attention. The Atma is a benchmark to judge the truthfulness and validity of all other entities in this creation; it is like the touchstone against which the purity of gold is measured; it is like the gold-standard of purity and immaculacy in creation.

The Atma is self-evident everywhere in this creation on a daily basis (because whatever that has life and essence in it is nothing but the Atma in that form; anything otherwise is not a conscious entity and is therefore worthless and useless). Its tangible existence and evident truthfulness, its glories and astounding virtues, its divinity and uniqueness, its sublimity and subtlety, are manifested in a tangible and visible manner regularly and every instant of existence, thereby removing all doubts about its authenticity and truthfulness¹ (70).

[Note—¹The very fact that life exists in a vibrant and pulsating form all around us, both in the animate form of unlimited number of species of animals, insects, worms and birds etc. as well as in an inanimate form of equally bewildering array of plants and other facets of creation such as the rainbow colour of the sky, the intriguing shades and forms that sound takes, the astounding and divine qualities of such a humble thing as water, the powerful force of the fire element, the most fascinating and absolutely enchanting geography of the earth, and the unknown recesses of the fathomless and mysterious cosmos—all conclusively establish that there is some force that is there, that makes all this happen, that sustains them and controls them. It is like the 'electricity' that drives modern life, though it is not visible in material terms but its existence is evident by inference. Nothing would be of any worth if there was no 'consciousness or life' in the person's body who beholds this world. The attractions of the material world would be meaningless if he would not be able to distinguish between what is charming and what is loathsome. Similarly, anything has worth for the creature only as long as it serves to provide him with some kind of comfort and pleasure as well as is conducive to his well being and welfare.

For example, no one would like to eat rotten apples. In this instance, the rotten apple has lost its essential goodness, or it has lost its 'Atma or soul', as the very fact that it is rotten indicates that its life force has been spent. We throw away such apples because they do not have the 'Atma' in them, and therefore are worthless for us though they are apples nonetheless!]

71. The Atma does not behave like any other entity (animate or inanimate) in creation, and neither does it have any of their characteristics. It is splendorous, self illuminated and self evident; its stupendous glories and magnificent divinity are self generated and self radiant. The Atma does not need a prop or support to support its self, and neither does it need another source of light to show it any kind of illumination, or another source to power its own light.

The Atma is beyond the purview of Vidya as well as Avidya, i.e. it cannot be known by hypothetical application of theoretical knowledge obtained by studying the scriptures without understanding their profound metaphysical and spiritual import and having a properly tuned mind to accept its profound glories, nor can it be disregarded outright as being false and inconsequential simply because it is beyond the comprehension and grasp of the mind out of ignorance of its profundity and truthfulness. In fact, the Atma can be accessed even without having knowledge of the scriptures, but ignorance about its divinity, holiness, magnificence and greatness is also counter productive because it can never be conducive to its realisation (71).

72. The Atma is free from such notions as something being 'Nitya', i.e. being eternal, immutable, invariable, unceasing, constant and steady in a perpetual way, and the other being the opposite of it, i.e. 'Anitya' or something that is perishable, temporary and transient¹. The Atma has no distinction between this world and the other world². [This is because the Atma is 'non-dual' and beyond any reproach by nature.]

The Atma does not trouble its self to acquire any of the so-called six divine assets such as 'Sham' etc.³ (because it is eternally contented and satisfied with its self and already possess all virtues in existence). It also does not desire to find liberation and deliverance (because it is already eternally liberated and never bound to anything from which it needs to be freed; refer verse no. 65-66 in this context) (72).

[Note—¹The Atma has all the qualities called *Nitya* and none of those called *Anitya*. So by saying that it is free from both it is meant here that if one tries to judge the essential nature and form of the Atma based on what he has read about it in the scriptures vis-à-vis what he observes in this physical world, it is bound to create an immense amount of vexation for him and bewilder him beyond measure. This is because the scriptures describe the Atma as *Nitya* and also emphasise the fact that the world is a manifestation of this Atma. But when one closely observes this world, he finds it to be *Anitya*. These two are contradictory phenomenon—one being eternal and the other being mortal. So this verse is meant to warn a spiritual aspirant from falling into such traps which have their genesis in half-baked knowledge or total ignorance. The world which is perishable is the 'gross part' of what is perceived by equally gross organs such as the eye or nose or ear or tongue or skin. The Atma is not a physical gross entity that these organs can perceive, as it is the subtlest and most sublime entity in existence, being ethereal and micro in nature, much lighter than the air, much subtler than the sky, and much smaller than the atom. Hence, one should not make any quick and perfunctory judgments about such a divine and ethereal entity off hand based on certain quirky, lopsided and impulsive criterions. Knee-jerk deductions and responses do not apply to the Atma.

²The ethereal and cosmic Consciousness known as the Atma is uniform and the same in all forms that life takes in this creation. It remains the same in all the

creatures; it remains the same even when it migrates from one body to another after the death of a particular creature.

³The six spiritual virtues or divine assets are the following--(a) Sham (self restraint, control) (b) Dam (forbearance, tolerance, patience), (c) Uprati (renunciation, detachment, dispassion), (d) Titiksha (endurance, sufferance, patience), (e) Samadhan (solution and answer to all confusions and doubts), and (f) Shraddha (faith, reverence, belief, conviction).]

73. The Atma is such an enigmatic, mysterious, mystical and esoteric entity that though it assumes a physical body but it has no gross body (consisting of the various organs of perceptions and action), no subtle body (consisting of the mind and intellect), and no causal body (which is said to be the 'cause' of the existence of the other bodies as well as the external world) of its own¹.

Similarly, the Atma even transcends the Turiya state of existence of the creature² (73).

[Note—¹In other words, the Atma cannot be measured and qualified by any of the yardsticks used to identify a creature's physical existence, such as his body and his mind etc. It is believed that the Atma lives in the subtle space of the heart inside the causal body giving the latter its name because the very existence of the creature is possible only due to the presence of this Atma inside the body.

Here the context is the description of a Videha Mukta person, and in this context this verse means that such a person sees his Atma as not a single unit located in his own body in the form of his soul but as the vast and all-incorporating cosmic Consciousness that goes much beyond such limiting definitions. The Atma only 'lives' inside the physical body as its temporary dwelling during its sojourn in this world, and it leaves it at the time of 'death' much like a snake discarding its old cuticle wriggling out effortlessly out of it, or a caged bird flying to its freedom when the cage is opened.

The physical body is one but it is hypothetically divided into three components for the purpose of metaphysical study and analyzing how it functions. These three components are the gross body, the subtle body and the causal body. The gross part is the exterior part consisting of the five organs of perception (ear, eye, nose, tongue and skin) and five organs of action (hand, leg, mouth, genitals and excretory); the subtle body consists of the mind-intellect complex; and the causal body harbours the pure consciousness of the creature.

²The Turiya state is the fourth state of existence of consciousness. A Videha Mukta person goes this state to reach the fifth state which is called the 'Turiya-teet' state in which he obtains eternal and permanent state of beatitude and felicity.]

74-75. The Videha Mukta person realises that the pure consciousness known as the Atma transcends the five sheaths into which this gross body is divided—such as the Anna Maye Kosh (the food sheath), the Pran Maye Kosh (the vital wind sheath), the Mano Maye Kosh (the mind sheath), the Vigyan Maye Kosh (the intellect sheath) (74), and the Anand Maye Kosh (the bliss sheath)¹.

The Atma is a unique entity that is one of its kind and non-dual. All other notions or concepts are not applicable to it even by a remote chance. The Atma has no alternatives and no parallels, and if any attempt to draw a parallel with it or find an alternative to it would be undermining its exalted existence and a futile exercise (75). [74-75.]

[Note—¹The five sheaths: refer also Sarwasaar Upanishad, verse no. 5 and its accompanying note. This Upanishad is Chapter 12 of this volume.]

76. The Atma remains aloof from and indifferent towards whatever enticing sights that are seen in this physical world, and neither is it tempted by any of the enamouring forms of sound that emanate from it¹.

The Atma remains in a perpetual state of Samadhi—a transcendental state of extreme detachment and dispassion when the creature has withdrawn himself from this world and even the awareness of his own body which leads to a great sense of perpetual bliss and contentedness, and in this state the creature is unaware of his surroundings and lives in a steady state of ecstasy and blissfulness. It is deemed to be in a state of complete void, an ethereal existential state of complete physical neutrality when nothing that is gross, material and physical matters, as if it does not exist at all. It is a state of perpetual meditation and contemplation.

This Atma has no beginning, no middle and no end (simply because it is constant, perpetual, eternal, infinite, imperishable, indestructible, indivisible and immutable) (76).

[Note—¹In other words, the Atma is not charmed by the rainbow colours of this fascinating world; it is not tempted to look at and get hooked to the beautiful sights of this magnificent world of enchanting sights. It is also not attracted by the sweet enchanting words that constitute such compositions as classical poetry, literature and legendary songs of various hues, or by the affectionate, sweet, and lovable uttering of one's beloved, or by the captivating and enchanting sound emanating as sweet melody from musical instruments, so on and so forth. This is because the Atma is beyond the purview of such enjoyments and it is not interested in any kind of gratification of sense organs.]

77. The Atma is such an exalted, wise and enlightened entity that it does not need to be constantly reminded about its divine, holy and supremely transcendental stature as a manifestation of the Supreme Being in the form of the ethereal cosmic Consciousness by making such enlightening spiritual statements as 'Aham Brahmasmi'—i.e. I am Brahm personified, 'Tattwa Masi'—i.e. That Brahm is you, 'Ayamaatma Brahm'—i.e. This Atma is Brahm, etc. (77).

78. Even the ethereal and most holy word of all words, i.e. OM which is regarded as being synonymous with and symbolic of the supreme transcendental Brahm, is also not the apt word for the Atma. In other words, no words, no signs, no symbols, no synonyms, no adjectives or nouns and any other part of speech, no aphorisms, no definitions, and no epithets can ever sufficiently and satisfactorily describe what Atma is in its true form.

The Atma is beyond the purview of the three states of existence of all living beings in this creation¹. The Atma is imperishable and immutable; it is not subject to decay and ruin. It is pure and divine consciousness itself personified (78).

[Note—¹The three states of existence of a creature are the waking state, the dreaming state, and the deep sleep state of its consciousness.]

79. The Atma cannot be ascertained by knowledge alone. It is an esoteric and enigmatic entity that can neither be positively described as having been fully realised or understood, or can be said to be beyond realisation and grasp. The only way to know the astounding magnificence and splendourous glories of the Atma first hand is to experience and witness its irrefutable presence as the splendour of cosmic Consciousness, the effervescent light of Divinity, and the glorious virtues and myriad other magnificent attributes that it displays in its numerous colourful manifestations in this world.

The Atma is such a mysterious entity that it cannot be perceived in the ordinary sense of the word. A person who is convinced about these stupendous virtues and glories of the Atma as his ‘true self’ is indeed said to be Videha Mukta. That is, he has freed himself from the ignorant view about himself as the body which has none of these divine and magnificent virtues possessed by the Atma (79).

80. Oh Shadaan (Kartikya)! View the Atma constantly everywhere; enlighten yourself about the Atma. Enjoy the divinity and stupendous glories of the Atma and be firmly established in it (80).

81. Let your own self be fully contented and feel fulfilled by realisation of the magnificence and divine glories of the pure conscious Atma, and let yourself be perpetually in its company, constantly enjoying it and remaining engrossed in its thoughts.

This ecstatic and blissful state of existence upon the realisation of the Atma would make you Videha Mukta. That is, you would be free from the delusions and pains caused to you by your body as you would have realised the fact that you are not the body but the Atma, and this Atma is naturally endowed with divinity and holiness which the body lacks. This realisation would be tantamount to being liberated and delivered from the fetters of ignorance pertaining to the truth of existence in this world, the ignorance of which leads to all sorts of spiritual problems and physical miseries that rob the creature of all mental peace that he so much yearns for. Once he becomes aware of the ‘truth’ about the pure conscious Atma being his glorious ‘self’ and his divine and ethereal form, he gains eternal peace and beatitude’.

Verily, this is what this Upanishad says (81).

Thus ends Canto 4

Canto 5

[Canto 5 is a revelation of the divine and eclectic virtues of the Atma, the pure consciousness, along with the factors which distinguishes it from anything that is regarded as ‘non-Atma’. This subject is comprehensibly described by the learned sage Ribhu when asked to elaborate upon it by his disciple Nidagh. The entire Canto 3 and almost half of Canto 4 of this Upanishad are dedicated to the theme of the Atma. Hence, they ought to be read along with this present Canto. Whereas the earlier discourse was given by Lord Shiva for the benefit of Kartikya, the present one is expounded by sage Ribhu for the spiritual good of Nidagh.]

1. Once, sage Nidagh approached the great seer Ribhu¹ and asked him—‘Oh Lord! What is Atma, and what is Anaatma (the opposite of Atma)! Please enlighten me about it in a holistic way’.

Ribhu began his discourse about the Atma—‘The Atma is synonymous with the supreme transcendental Consciousness and the eternal cosmic Divinity known as Brahm. It is the measurement and the last frontier of creation, and as such it has many unique characteristics and eclectic virtues which would now be enumerated for you. It is, inter alia, an all-inclusive and all-incorporating entity (just like the common noun or pronoun in grammar) that alone stands for everything in existence; it is a synonym

for each and every unit of creation, from the most miniscule to the most colossus, the animate as well as the inanimate, whether it is visible or not. It is like the Guru (a wise and learned moral preceptor, guide and teacher) who dispels all the worries and perplexities of his disciple, ward or student².

The Atma is the cause and reason for everything happening in this world, but there is nothing that can be called the cause or reason for the Atma to be what it is; there is no cause or reason for the Atma coming into being³ (1).

[Note—¹A brief and interesting introduction to the two great sages Ribhu and his disciple Nidagh is included in Varaaha Upanishad, Chapter 30 of this volume.

²In other words, the person who has come in direct contact with the Atma by becoming self-realised has nothing to worry for his spiritual well being any longer.

³This is because the Atma is eternal, immutable, infinite and imperishable cosmic Consciousness that has no beginning and end, and therefore there is no cause for its coming into being or having any form of existence in this creation. In fact, the rest of the creation is here because there was an Atma in the beginning which caused this creation to come into being; the creation is here in all its multifarious hues because the Atma lives in it and makes its existence possible. And when the creation would have lived its full length of life till its natural end, it would finally collapse and merge into this Atma from which it has emerged. This Atma is like the ocean from which the water molecules evaporate to form the clouds, and when rain falls, the same water flows down to merge with the primary source, the ocean.]

2. The Atma has no 'Sankalps', i.e. it is free from having any determinations and resolutions, it makes no vows and promises that have to be kept and would require efforts to fulfill, it makes no volitions and takes no decisions in this regard¹.

It has manifested itself as the cosmic Naad which is the primary source and primordial activity that set forth the process of creation².

The Atma is Shiva personified. [That is, it is the most auspicious, eternal, holy and divine entity in creation, and like Lord Shiva, it is enlightened and wise, detached and dispassionate towards everything in this material world. The entire Canto 3 of this Upanishad is based on this eclectic spiritual philosophy. Refer Canto 3, verse no. 1.]

It is nothing but pure and immaculate consciousness personified. It is an embodiment of beatitude and felicity; it is ever blissful, ecstatic, happy and joyous (2).

[Note--¹This is because the Atma is self-fulfilled and ever contented. Whatever it desires to do, it does spontaneously and does not have to make any pre-determined bid for its realisation. It is almighty and omnipotent in this regard. Refer Canto 3, verse no. 67; Canto 5, verse nos. 16, 63, 97-98.

²The *Naad* is the ethereal background reverberating sound energy in Nature which is said to be the primary source of energy that provided the vital spark to set off the chain reaction in the primordial cosmic gel from which the rest of the creation eventually evolved. The Naad has been envisioned by ancient sages and seers as the cosmic sound having its genesis in the form of waves in the cosmic ether, the waves which overlapped and coalesced with each other to generate sufficient energy that produced the background sound which traveled in the sky and was heard by them during their meditative sessions which lasted for extended periods of time. Now once having heard it, they devised a word to encapsulate its fundamental notes and tones, and they came up with the word OM to capture the essential mode in which this cosmic Naad was heard by them. When they revealed this secret to their disciples, it was through the word OM, and they went on to analyse this sound and deciphered its components as the basic letters that constitute it, i.e. A, O, U and M.

Refer also Canto 1, verse no. 6 of this Upanishad.

Since the primordial cosmic gel was a neutral and static entity, this energy generated by the sound waves was the first to create some sort of activity in it—like subtly and imperceptibly stirring it from within. This energy multiplied itself manifold and in due course of time the different elements present earlier in the homogenous cosmic gel separated from one another to give it a heterogeneous character, the heavier ones settling at the bottom and the lighter ones going upwards to float on the surface. While this process was progressing, the elements captured or soaked energy according to their capacity much like sponge soaks water or earth attracts anything by its gravitational pull.

This is how basically the earth and other elements such as the water and air took up their respective places in creation, with the heavier earth solidifying at the lower level and the lighter water floating on its outer surface and the air going still higher into the space of the sky. The fire element however required a medium to hide itself in because the water and air were inimical to its existence; the water would douse it and the wind would blow it out of existence. Therefore it hid inside the bowls of the earth and entered subtly into things originating from earth. That is why it is present even under the vast reservoir of water known as the ocean, and at the same time lives subtly inside everything that grows on earth, such as food. The creator is so wise that he has this tremendous source of life, energy and vitality in the earth because he knew that if life is to be made sustainable it would need a viable source of self-sustenance in the form of an inexhaustible source of energy. Finally, the grossest element known as the earth also solidified into its present shape.

Since the Atma is the only conscious factor in creation showing basic elements of the existence of life in any of its myriad forms, and the Naad is also the first sign of primordial activity in the cosmos, it naturally follows that the Atma, the ‘soul or life’ of all that exists in Nature, and the Naad, the primary source from which the entire creation is said to have evolved and derived its energy, are synonymous with each other. This cosmic Naad is still hearable when one closes one’s ears when one hears the roaring sound of the blood flowing through the veins and arteries inside the body.

The Naad Bindu Upanishad of the Rig Veda tradition describes this Naad in great detail. Refer also to Canto 3, verse no. 43.]

3. The Atma is self-illuminated and self-radiant in its own splendid glories, grand virtues and transcendental divinity. It is a synonym of Naad (as explained above) and an embodiment of ecstasy and bliss.

It is neutral to all worldly perceptions and does not experience any emotional feelings pertaining to anything¹. It is self evident and self present, needing no effort to remind one of its existence by doing Dhyan (meditation and contemplation)² (3).

[Note—¹This is because the Atma is eternally dispassionate and detached from everything in existence, just like the emperor of the realm who does not allow himself to get emotionally and sentimentally involved in petty things in his empire, but at the same time is closely concerned about the general welfare of the subjects and intricately involved with the running of his administration though appearing to be unconcerned and unduly perturbed with its day to day functioning and instead rolling in the comforts and pleasures of his palace. After all, which great emperor has left his name in history who has not cared for the welfare of his subjects and tended to the prosperity of his empire?

²In other words, a self-realised spiritual aspirant need not observe a specific routine of daily meditation or contemplation in order to witness the bliss generated during these spiritual activities because he has come in direct contact with the Atma and remains in its constant contact so that he enjoys this bliss and ecstasy on a perpetual basis. Once this high state of existence is reached, there is no further need

of doing Dhyān or meditation and contemplation because the purpose has been served.]

4. The Atma is a composite; it is one whole entity that is immutable, indivisible and non-dual. It is not something that can be hypothetically divided into various fractions, sections or parts to study or for any other purpose like it is usually done with the Naad and its Kalaas. That is, the Atma is not definable by the terms Naad¹ or Kalaa².

A self-realised man thinks in the terms that 'This Atma is 'me''. The Atma is imperishable; it does not get diminutive or decays in the least.

A wise, erudite and enlightened person is one who does not fall in the trap of debating what is the Atma and what is not the Atma, and what is the difference between the two, because this would vex him no end, with no light at the end of the dark tunnel as it were. So it is wiser for him to abandon such doubts and banish such thoughts from his mind (4).

[Note—¹Naad has been visualised in the form of the cosmic sound pronounced as OM. In order to understand the cosmic genesis of this word OM, it has been further broken up in its constituent sound elements represented by the various letters and sound syllables such as A, U, O and M. These alphabets represent the basic forms in which sound exists in this creation. Then each was further analysed and assigned symbolisms—such as the letter 'A' for example was envisioned to represent the appearance of the first signs of creation, the letter 'U' for its evolvment, development and growth, and 'M' for its conclusion. Then a geometrical or pictorial symbol was devised to physically depict this word OM, and it is 'ॐ'.

Sound has its own classifications which are used in the field of learning music. For instance, in the Indian classical system of music there are seven notes such as Sa, Re, Ga, Ma, Pa, Dha and Ni. But the Atma is such a unique and magnificent entity that even though it has been said that it is like the cosmic sound called the Naad but it is only to emphasise the fact that like the Naad (refer verse no. 2 above) it too is a cosmic and enigmatic phenomenon, but this observation should not be treated too literally because the Atma is much superior to the Naad and does not qualify to be treated at par with any physical phenomenon like the Naad. The Naad is actually heard by ascetics who have risen above certain level in their meditation like the Atma which is also experienced by all spiritually enlightened aspirants who have progressed to a certain level of self-realisation, but the comparison ends there for the Atma cannot be analysed and classified and mastered like the sound element is done by an expert musician who plays around with it to create masterpieces of music, or by teachers of metaphysics and theology who try to explain the creation by using the word OM as some form of model in a scientific laboratory to explain fundamentals. The concept of Naad has been explained above in verse no. 2.

²The word *Kalaa* means the different shapes, forms, divisions, phases, fractions or parts in which any particular thing exists. For example, the changing phases of the moon are called its 'Kalaas'. It also refers to the various inherent subtle qualities that are present in all the creatures that determine their characters and behavioural patterns. But it must be remembered here that anything that has Kalaa is deemed to be changeable like the moon which is never alike on any two consecutive nights, and is therefore said to be a typical example of an entity having Kalaas. But since the Atma is unchanging and uniform, since it always remains steady and constant, the word Kalaa does not apply to it. Similarly, the word Naad cannot be applied to the Atma because its word OM has been broken up into letters and it is represented by the symbol 'ॐ'. This classification is not possible for an ethereal entity such as the Atma.]

5. The Atma is beyond the purview of such notions as something being peaceful and calm and something being not¹. It has no end. It is like the cosmic Naad which is eternal and imperishable; it is the light of consciousness that is ever present in the bosom of all creatures; it is an image of light and illumination that is eternal and infinite

It is the essential meaning of the great sayings of the scriptures called the Maha Vakyas; these axiomatic maxims have this Atma as their object and point towards it in their proclamations². One such Maha Vakya is 'Aham Brahmasmi' or I am Brahman personified. But the Atma is such a great and enigmatic entity that merely this statement is insufficient to completely describe it; it is only one of the ways to look at it, and not the complete and comprehensive narration of its truthful being as there are other Maha Vakyas too in this direction and none of them can individually describe the Atma fully (5).

[Note—¹This situation arises in the case of an entity that changes, that is emotionally and mentally unsteady and impressionable, that is exposed to external influences which affect it emotionally and sentimentally. Only such entity can be upset one moment, getting agitated and perplexed under one given situation, and become calm and quiet the other moment under different situation. The Atma is eternally stable and steady, not at all influenced by external impulses of any kind, and therefore such emotional criterion as being calm, peaceful, tranquil and serene, or being restless, agitated and fidgety does not apply to it.

²The Maha Vakyas are enumerated in Shuk Rahasya Upanishad of this volume.]

6. The Atma cannot be described in words; the faculty of speech is ineffectual and incompetent to even outline its magnificence and glories. It cannot be limited to or delineated by too literal a meaning of the great sayings.

It has no end and there is no reason why it should be subjected to such debates as whether or not it is perishable and decayable. It is like the cosmic Naad which is eternal and imperishable; it is the light of consciousness that is ever present in the bosom of all creatures; it is an image of light and illumination that is eternal and infinite (6).

7. The Atma is immutable, indivisible and steady; it is uniform and universal. That Atma is me and therefore I am an embodiment of eternal bliss and happiness that are the characteristic qualities of the Atma. Everything else is barred from me; nothing else applies to me; I am nothing but that Atma.

The Atma is beyond all definitions and all descriptions; it transcends all emotions and sentiments; it is beyond the purview of all ideas, all feelings, all meanings, all designs and intentions that can be expressed in words and even imagined or visualised. It is like the cosmic Naad which is eternal and imperishable; it is the light of consciousness that is ever present in the bosom of all creatures; it is an image of light and illumination that is eternal and infinite (7).

8. The Atma has no words (because it is very subtle and sublime consciousness that has no physical mouth with which to speak), and it cannot be described in words¹.

That Atma is nothing but eternal beatitude and felicity personified, and anything that does not possess these eclectic virtues is not the Atma. Indeed the Atma is 'Sanaatan'—that is, it is eternal, perpetual, infinite, everlasting, primary, primeval, most ancient, traditional and universal. [Refer Canto 5, verse no. 62.] (8).

[Note—¹In other words, the Atma is such an enigmatic, esoteric and mysterious divine entity that to restrict its profundity and infinity in a circle of words, to

encapsulate its stupendous glories and ethereal magnificence in too literal an interpretation of the meaning of various axiomatic statements or tenets of the scriptures which are nothing but a cluster of letters and phrases having their own limitations, is like an attempt to cover the sky with a blanket as it were. Even an attempt is most incredulous, and the thought to bring the Atma within the ambit of words is most outrageous and preposterous.]

9. The Atma is impossible to be described, and its grand virtues and profound divinity cannot be enumerated and restricted by the Vedas in their words¹.

There is nothing outside it, and it is not possible to conclusively say what is inside it² (9).

[Note--¹That is, though the Vedas can be an instrument in getting to learn about the Atma, but to think that the Atma is limited by what they say is a fallacious idea for the simple reason that the Atma's glories, virtues and divinity cannot be described in words as already asserted in verse no. 8 above, and the Vedas use words and phrases to describe it. So, this narration of the Atma in the Vedas cannot be comprehensive, it is at the best only indicative of what it actually is like, but much remains to be known and yet to be realised. That it why it is emphasised that the best way to know what the Atma is, is to meditate and contemplate upon its greatness as directed by the great tenets of the Vedas, and then witness and experience its profundity first hand. Merely attempting to seek the Atma in the words of the scriptures is a stupid exercise. The scriptures can give directions and advice, but the walking has to be done by the spiritual aspirant himself much like a parent can show the child the correct path but not change his destiny.

²The entire cosmos or creation is pervaded by the cosmic Consciousness called by the name of Atma. Nothing exists outside of it—this is certain. But what and how much exists in this creation is impossible to determine as the cosmos is fathomless and infinite, has been in existence from time immemorial, and is still evolving and expanding. Numerous and diverse universes are known to have been born and have died, numerous are in a nascent stage of their development, and still more are yet to emerge in the never-ending process of creation and destruction. So it is impossible for anyone to say with definite certainty what and how much exists in this creation.]

10. There is no iota of doubt in the fact that the Atma is the supreme transcendental Brahm, the cosmic Consciousness that has no body, and therefore no organs having any tangible gross shape and form in the physical sense of the word. This Atma has no physical gross existence like the earth or other elements, nor is it like the mortal creatures that have a physical body and subject to all the defects associated with it and the elements that constitute this body (10).

11. The Atma has no name and form. It is neither something that can be consumed nor is it something to be enjoyed. It is beyond the purview of discussion as to whether or not it is truthful and real (because such debates are applicable to things that are doubtful and not to those that are irrefutable and unequivocally truthful). It is equally beyond doubt that it is imperishable and not subject to decay and ruin (11).

12. The Atma has no specific Gunas (qualities, attributes and virtues), either good or bad. This is because it is a neutral entity that has an equitable bearing and treats everything with equanimity. It behaves in a uniform manner under diverse circumstances, and shows no preferences based on its natural inclinations influenced and guided by the dominance of one or the other Gunas¹. There is no doubt about it.

There is no word to describe it or define it. It therefore cannot be heard of nor can it be pondered on and thought about² (12).

[Note—¹There are three natural qualities in this world such as Sata, Raja and Tama. The Sata is the noblest quality and the Tama is the meanest, while Raja occupies a middle path. The creature's habits and natural inclinations are guided by these Gunas. If the Sata is in excess, the creature is said to be more inclined towards being righteous and noble, having a religious bent of mind, whereas a predominance of Tama would have the opposite effect on his behaviour and character for now he would be pervert and sinful in his emotional setup. The Raja would make him a man of the world, tending to be attracted by its charms and having a desire to live life to its hilt.

Since the Atma is above such mundane considerations and changing attributes, since it is immaculate and beyond any hint of corruption, it follows that it remains steady in its path of neutrality and equanimity towards everything that is happening around it in this world. Such attributes as righteousness and auspiciousness, or sinfulness and perversions do not concern it. Refer also to Canto 3, verse no. 49.

²Since words cannot describe or define it, one cannot learn about it merely by means of studying books or hearing religious discourses on it because both means reliance on letters, words and phrases as a vehicle of expression. The Atma cannot be expressed in words, thereby precluding its knowledge by the use of words.]

13. The Atma is uniform and universal, having no distinction as one of its manifestations being a Guru (a teacher) and the other being his disciple¹. In a similar vein, the Atma is the same in the Gods as well as the Asurs (non-Gods). This is the holistic view of the cosmic Atma.

The notions of something being in accordance with the tenets of Dharma (righteousness, probity and propriety) and the other being not, the idea of something being pure and the other being impure are also artificial and illusive (13).

[Note—¹The Atma lives in a body, and as such there are worldly relationships that it appears to exhibit such as someone being a senior and learned person occupying the position of a teacher and the other less wise and known as the student of the first. In fact, these segregation are merely based on the physical conception of the body as the identity of the Atma which is in itself a fallacious idea as the Atma is neither senior nor junior, it is neither a learner or learned one. The pure consciousness Atma is omniscient and all-knowing, so it need not learn anything in the first place, and since this Atma is the same inside the body of both the teacher and the student, such distinctions based on worldly relationships are artificial and an erroneous depiction of the truth of the Atma to say the least. Refer also to Canto 4, verse no. 16, and Canto 5, verse no. 21.]

14. The Atma is beyond the purview of such notions as good times or bad times ('Kaal' and 'Akaal'), something being certain and another being uncertain, some group of letters having divine powers entitling them to be called Mantras while others lacking such authority and sanction, some body of knowledge being classified as having great value and therefore called Vidya and the other being denigrated and ridiculed as being lacking any value and thus called Avidya (14).

[Note—The Atma transcends all definitions and shines unilaterally, uniformly and unaided like the brilliant Sun in the sky. Even as the Sun is not at all affected by any of the pollutions of the earth, the Atma is also not at all affected by any of the tainting effects that mire the surroundings of the creature's existential life on earth. But the Sun *appears* to be dim when its shine is obscured by the haze caused by city pollution or when it is completely blocked from view by banks of dark clouds in the sky. The Sun *appears* to be dark during a solar eclipse though this is only an optical illusion.

Similarly, the pristine glory of the Atma *appears* to be tainted when the creature allows himself to be affected by the numerous delusions and faults of the world in which he lives. The inherently eternal Atma *appears* to die when the creature dies.

The awareness that the Atma is pure and incorruptible is Gyan, while to think that the Atma has become tainted and corrupted is Agyan.]

15. The Atma is beyond the trilogy consisting of the seer, the object seen, and the process of seeing¹. The Atma stays in such a sterilized environ so to speak that such measures of judging the authenticity of any entity's existence that are normally applied to things of this world do not apply to it and never corrupt it. The Atma is neither the Mana (mind and heart—i.e. the subtle aspect of the body) of the creature. In fact, the Atma is the pure and truthful 'self'² (15).

[Note—¹This trilogy applies to the visible world which is gross and has a physical body. In this world, anything that can be actually seen and observed by the eyes is regarded as truthful, and the rest merely hearsay and based on imagination. The Atma is a very subtle and an infinitely sublime entity that cannot be physically seen in the ordinary sense of the term 'seeing and observing' as it is applicable to other material things of this physical world. But merely the fact that it cannot be physically seen by anyone does not exclude its being in existence just like the fact that no one has seen an atom or the air element, but no one can deny their existence at the same time.

²The Atma is such an enigmatic and mystical entity that it cannot be subjected to any standard yardstick or fixed criterion; it cannot be confined within the parameters of definitions and connotations expressed in words. It cannot be said to this or that, or even denied to be not this or that—for it is everything all at once. This is what makes the Atma such a paradoxical entity and unique. If anything exists, it must be certainly the Atma much like the case of golden ornaments compulsorily having gold in them if they are to be called 'golden'.]

16. When everything that is not Atma ('Anatma')—that is, which has no truthful existence and no essence, something that is like a mirage and merely a magical illusion—is eliminated from consideration, then at that time what remains is the Atma. Be certain about it. [Refer Canto 5, verse no. 37.]

This Atma is devoid of having any Sankalps—that is, it does not make any determinations and resolves (refer also verse no. 2). It does not get involved in doing any worldly deeds (as it remains totally detached and dispassionate towards everything in this material world) (16).

17. Whatever is there is nothing but the supreme transcendental Brahm manifested in that form. This is an absolute certainty. [Here, Brahm is replaced for the Atma to indicate that there is no basic difference between the two.]

The Atma has nothing to do with the concept of three bodies that the creature possesses¹, and neither does it have to do anything with the three phases of Kaal² (17).

[Note—¹The three bodies of the creature are the gross body, the subtle body and the causal body. Refer Canto 3, verse no. 49.

²The three phases of Kaal are the past, the present and the future. The Atma is an eternal and constant entity that does not change with time, remaining steady and unwavering under all planes of existence. It was in the past what it is now and would be in the future. Refer Canto 3, verse no. 49 and Canto 4, verse no. 69.]

18. The Atma does not possess the three Gunas¹ that all the creatures have as their integral character, and neither is it affected by the three Taaps² that torment them.

The Atma has no separate existence in the three Lokas³, for it is a non-dual universal entity which is uniform everywhere (much like the sky or air element). The Atma is the all-pervading, all-encompassing, all-incorporating, omnipresent and almighty Authority (18).

[Note—¹The three Gunas are Sata, Raja and Tama. Refer Canto 3, verse no. 49 and Canto 5, verse no. 12.

²They are the fears or torments arising from the following--Adhi-bhautik—related to terrestrial creatures such as enemies, cruel kings and wild animals; Adhi-daivik—related to unfavourable Gods and malignant stars; Adhi-daihiik—related to the body such as diseases and horrors of old age etc. Refer Canto 3, verse no. 46 also.

³The Lokas are the terrestrial, the celestial and nether worlds.]

19. The Atma has no physical brain (like the gross body has), and therefore it does not remain engrossed in thinking, studying, contemplating and reflecting (like the gross body of the creature does). Since it does not have a physical body, there is no question of it becoming old and infirm.

Without the physical body it is natural that it has no legs, so it does not move and go from place to place. Similarly, it has no hands and therefore it does not accept or catch hold of anything (19).

20. The Atma has no birth, and therefore it has no death. It has no mind, and therefore it has no feelings of sorrows and miseries or happiness and joys. It does not feel or think.

The Atma does not distinguish between any two given entities, and therefore it has no conception of anything being especially classified as Dharma (righteous, auspicious, noble and proper) and Shuchi (pure, immaculate and uncorrupt)¹. With all these eclectic qualities, the Atma has no fears whatsoever from any quarter² (20).

[Note-¹The notion of something being right and the other being bad arises only when one begins to see a distinction between the two. But the Atma is like a small child who is so pure in its heart that it just does not know the difference between a rotten piece of apple and one which is succulent and ripe; the infant would catch hold of a live snake with the same cheerfulness as it would a harmless length of rope.

²The Atma does not have to fear from enemies and bodily sufferings, or from old age and death, because it has no body; it does not have to worry about the future and regret about the past because it is the same in all frames of time; it need not go for pilgrimage to purify itself or do religious deeds to accumulate good credit because it is eternally pure and holy. Refer verse no. 53 herein below of the present Canto 5.

In short, all these things do not apply to the Atma for one simple reason, and that is it is a divine and holy ethereal Spirit and not something as gross as the body of the creature.]

21. The Atma cannot be ascertained by hearing words being spoken (such as religious discourses and chanting of Mantras or hymns of the scriptures). The Atma has no distinctions as one person being a Guru (a teacher) and the other being a Shishya (a disciple). [This is because the conscious Atma is the same in both the persons. Refer Canto 4, verse no. 16, and Canto 5, verse no. 13.]

If the Atma is deemed to be non-dual, one, immutable and indivisible whole that is uniform and universal, there cannot be two separate entities having the same name and identity as the Atma. The Atma has no image and no second one that is of its kind (21).

22. The Atma is consciousness, and therefore it is truthful, real and not imaginary. That which is truthful cannot be false and imaginary, and vice versa (22).

23. The Atma is auspicious and holy, and therefore it cannot be inauspicious and unholy, because these two concepts are not compatible with each other.

If there was fear, then there would have been something as being fearless. When there is no concept of fear in the Atma, the question of it being fearless or it being fearful does not arise at all. [In other words, the Atma is eternally fearless.] (23).

24. If there was some kind of fetter or bondage, there would have been the need of getting liberation and deliverance from it. But when there is no such concept of any bondage or shackle, there is no question of seeking any kind of liberation and deliverance from it. [Refer verse nos. 38, 44 of this present Canto 5.]

If there is death, there can be birth. If there is birth, there is bound to be death. This is an endless cycle. [So, if there is no birth for the Atma, it cannot die, and vice versa.] (24).

25. Hence, the Atma has none of the characters and attributes mentioned above.

Since the Atma is an ethereal entity which is all-pervading, all-incorporating and all-encompassing, being non-dual, one, immutable, uniform, universal and constant everywhere in this creation, there is no scope of concepts such as 'Twam' or 'you', and 'Aham' or 'me' having any pith and substance. In other words, since the same Atma resides in both 'you' and 'me' as our soul and pure consciousness, there is actually no difference between the two of us though we both have different and separate bodies.

Similarly, there is no question of there being two separate existences or two different forms of life, such as one being a mortal creature and the other being an immortal Spirit. That is, there is no such notion as one being 'Idam' or 'this', and the other being 'Tada' or 'that'. In other words, there is no such thing as 'this' and 'that' because the same Atma is here as well as there, the same Atma is present in 'this' as well as in 'that'. [Refer verse nos. 48-49, 51-53 of this present Canto 5.] (25).

26. If there was the notion of 'Asti' or 'is', there would have been something as 'Naasti' or 'not'¹. If there was a 'Karya' or 'an action', there would have been the notion of 'Karaan' or 'the cause of that action'. [The Atma has none. Refer Canto 1, verse no. 48, and Canto 5, verse no. 33.] (26).

[Note--¹That is, for example, if the world existed then there would have a debate whether or not this existence is real and truthful, whether it is an illusion and mirage-like or physical and tangible reality. If it did not exist, then again the same doubt would have arisen—how can one possibly deny the visible world when one can actually see and witness its existence. The Atma is above such confusions.]

27. If there was the notion of 'Dwait' or 'duality', then there would have been something as 'Advait' or 'non-duality'. Since there is no notion of duality in the Atma, there is also no corresponding notion of non-duality in it. [Refer Canto 4, verse no. 66, and Canto 5, verse no. 37.]

If there was something worth seeing, something real that could be possibly seen or observed, then there would have been the need for the faculty of sight and the organ of the eye. Since there is no such need for the Atma since it does not have to see

anything and there is nothing worthy for it to see, it does not need this faculty and its corresponding organ (27).

28. If there was some notion of 'inside', then there would have been an 'outside'. None exists in the Atma. Similarly, if there was some concept of 'full and complete', then there would have been its opposite concept of 'unfulfilled and incomplete'. None of these two concepts apply to the Atma (28).

29. None of these attributes and characteristics is applicable to the Atma. The concepts of 'you and me', 'this and that', 'something actually visible and something that is cited as an example though it is not presently visible'—none of them are applicable to the Atma. This Atma is an irrefutable and unequivocal Truth; it has no birth (as it is eternal, infinite and imperishable) (29).

30. The mind that thinks 'I am the supreme transcendental Brahm' is also not there in the Atma (refer verse no. 19-20 of the present Canto 5), and therefore this notion (that I am Brahm) is fundamentally fallacious¹.

The fact is that this entire world is Brahm personified, and nothing other than that. Therefore, it is implied that both 'you' and 'me' are Brahm personified (30).

[Note—¹Since the Atma is supposed to be neutral, highly enlightened and omniscient, having a high degree of equanimity and uniformity of view, it is to be expected from it that it sees no distinction between 'me' and 'you', and therefore the supreme Divinity and cosmic Consciousness known as Brahm is not an exclusive domain of 'me', and neither is it limited in 'me', which implies that it is not in 'you'! All confusions and the need to remove them arise because of the fact that the mind is doubtful and it has the propensity to debate and analyse things in various perspectives and then make certain conclusions, whether right or wrong, of its own. In the case of the Atma, this situation does not arise as it is most wise and highly enlightened. It sees Brahm as inherent in everything; it sees itself as a manifestation of Brahm. So it need not repeatedly assert or affirm that it is Brahm personified.]

For example, a boy need not go shouting at the top of his voice in the town to say that he is a boy and not a girl. That is ridiculous and most insane thing to do. Then why is this fact repeated in this Upanishad? This is done for the purpose of teaching and driving home the point and not meant for those who have already understood it. Basically the Upanishad was revealed when either Kariteya or Nidagh had asked a question—which means that they were not aware of this fact and therefore had to be repeatedly reminded of this eclectic Truth so that it gets firmly engrained in their mind. On the contrary, wise and already self-realised sage or seer was fully aware of this fact, and therefore he did not need to reaffirm or reassert that he—i.e. his Atma, his 'true self'—is Brahm personified.]

31. A wise man should think that this deluding and illusionary world is not 'me' (i.e. is not the conscious Atma which is the true 'self' of all living beings). In fact, my 'true self' is the pure conscious Atma. One should be certain about it.

This vast world has no substance, pith and essence in it; it is without any truth and reality; it is deceitful and illusionary in nature. It neither had an origin or birth, nor does it end or die¹ (31).

[Note—¹Anything that has an existence would have a beginning, and anything that has a beginning is finite and can have an end. Since there is no reality in this world as it is merely an imagination of the mind, it does not have either a beginning or an end. The world exists only because of the mind that thinks it to be there as is proved by the fact that something lying just in front does not exist for us if our mind does not

register its presence, whereas most incredible things seem real for us if our mind is convinced that they do exist.]

32. The delusions and deceptions that exist in the form of this world do so because of the mind and its power to imagine and convince itself of its existence. This it does out of its own volitions.

Actually such things do not exist. There is no such thing as worldly ‘Prapanch’ (worldly deceptions, delusions, conceit, deceit and falsehoods). The pure consciousness or the Atma has no mind that indulges in such imaginary things and get deluded in the process¹. The pure conscious Atma has no notion of ‘Ahankar’ (ego, false pride, haughtiness, arrogance and hypocrisy). These notions of having Ahankar and getting entangled in Prapanch are the characteristics of ‘Jivas’, or ordinary mortal creatures having a gross body and ignorant of the truth about themselves (32).

[Note—¹The simple way at looking at this observation is this—since the world is an imaginary entity created by the imaginative abilities of the mind, it is not real but an illusion. Since it is not real, it follows that there is nothing that can be described as ‘Prapanch’ or falsehood. This is because the question whether anything is worthy or not arises only when it has some form of existence when one needs to find out its worth and utility. When the world has no existence in the first place, then to debate whether or not it is false, deceitful and illusive is an exercise in futility much like daydreaming or debating endlessly what would happen ten days from now when no one is certain even of the next moment. Refer also to verse no. 75 of this present Canto 5.]

33. The Atma has no ‘Maya’, or delusions, deceit and falsehoods in it, and neither is it affected by it at all. The Atma is not involved in any of the activities of this Maya, and therefore there is no fear in it due to any of the activities of Maya¹.

The Atma does not get involved in doing any deeds or taking any actions, and therefore it is not a ‘doer’ of any deed. [Refer verse no. 26]. It does not hear anything and therefore it does not have to ponder over or remember anything. [Refer verse no. 46, Canto 3; verse no. 20, Canto 4; and verse no. 12, Canto 5.] (33).

[Note—¹The concept of *Maya* : Briefly it refers to something that is based on delusions and deceit. The magical world created by a magician is a world of Maya. The trap that this charming deception creates for the creature making it believe that what it sees is for real is called the ‘Maya Jaal’ or the net of delusions which entangle the creature like a bird getting caught in a bird catcher’s snare. When one sees a magic show he gets so engrossed in its illusions that for the time being the person forgets that what he thinks is so life-like and real has no substance and pith. He thinks that what he sees is real and true. The same basic concept is applied in metaphysics to explain the concept of delusions vis-à-vis this world. The deluded creature begins to get involved in this magical world, and does so many things as if walking in a dream. But a wise man realises that the truth is above this illusive world and does not allow himself to be misled by any cajoling by the magician; he simply laughs at it and waves away all attempts by the latter to entice him to participate in the show. He just watches the magic show dispassionately and does not get emotionally involved in it. Similarly, a wise man does not allow himself to be involved in this deluding world, and remains a dispassionate observer, not a participant in the activity of the world.]

34. The Atma is beyond the purview of the two types of Samadhis¹, and neither can it be measured by any yardstick nor can any criterions be made applicable to it.

The Atma is such an exalted and omniscient entity that it is outside the jurisdiction of such concepts as 'Agyan' (ignorance) and 'Avivek' (lack of wisdom)² (34).

[Note--¹The term *Samadhi* is derived from the Sanskrit root 'Dha' which means to put or to place. To this root are added prefixes 'Sam' (well) and 'Aa' (fully). Thus the word *Samadhi* means 'putting or placing the mind fully well'. In Vedanta, *Samadhi* means the knowledge that identifies the Atma with Brahm. It is commonly used to mean 'absorption or meditation'. The state of *Samadhi* is free from the dual defects (faults) of duality (that the creature and Brahm are separate) and effort (diligence in deeds and actions aimed towards the goal). That is, during the state of *Samadhi*, the creature loses its self independent identity and no effort is then required to experience the bliss of the supreme realisation of the absolute Truth— which is the Atma and Brahm are the same, are infinite and eternal.

There are two types of *Samadhis*—(i) *Savikalpa Samadhi* (absorption characterised by the perception of division, distinction or difference) and (ii) *Nirvikalpa Samadhi* (absorption free from division, distinction or difference). The *Savikalpa Samadhi* is reached after long practice of the tenet 'I am Brahm' (i.e. there is no difference between me and Brahm). Unlike this practice wherein the seeker had to exert himself to maintain the thought that 'I am Brahm', during the *Savikalpa Samadhi* there is an effortless thought of 'I am Brahm'. This *Samadhi* is characterised by the perception of the distinction of the triumvirate consisting of (a) Meditator (Dhyatr), (b) Meditated object (Dheya) and (c) Meditation process (Dhyan). Though the Meditator has withdrawn his mind from all thoughts and maintains a continuous flow of a single pointed thought that 'I am Brahm', he still continues to have the distinction between (a) I, the Meditator, (b) the Object, that I am Brahm and (c) the very physical act of meditation. Nevertheless, by virtue of the strength of knowledge that 'he is Brahm', the triumvirate becomes illusionary or imaginary just like the perception of various shapes of water— such as whirlpool, wave, bubble, foam/froth etc. are nothing else but water, or the water in a cup, a glass, a jar, a tray, a pond, a lake, a river, and ocean may have different names and contours but are water nonetheless.

Sri Sankaracharya has cited the example of a clay elephant (Sarva Vedanta Siddhanta Saar Sangraha, verse nos. 821-822) to say that the elephant form does appear inspite of the knowledge that it is, after all, clay. Similarly, inspite of the knowledge that everything is Brahm, the triumvirate does exist in *Savikalpa Samadhi*. *Nirvikalpa Samadhi*— during this state, the ideal that I am the all-pervading Brahm takes firm root and it puts an end to all ignorance. The term means 'no division or distinction or difference'. Here the seeker has no distinction between the triad of meditator or meditated object and the process of meditation.

The main difference between these two *Samadhis* is that in the former there is the 'knowledge or awareness' that I am Brahm while in the latter it is the 'being' of I am Brahm. The difference of knowing and being is quite evident. It is one thing to theoretically 'know' that I am Brahm and quite different to 'be' Brahm. When the thought I am Brahm becomes effortless and complete, the meditator loses the distinction between himself, the object (Brahm) and the process (meditation)— all merge into one entity. In this *Nirvikalpa Samadhi*, the meditator loses the distinction between himself (I) and the object (Brahm). As a result, the ego that 'I am meditating upon Brahm' is vanished, and with it, the triad. By extension, it means 'there is no experience of distinction between the knower (meditator) and the known (Brahm)'.

In *Savikalpa Samadhi*, the thought 'I am Brahm' is available for perception while in *Nirvikalpa Samadhi*, the same thought is not available for perception. A lump of salt floating in water will be seen as distinct from water (*Savikalpa Samadhi*) but when that lump of salt dissolves in water, no one can see it; there is no distinction between the water and the salt (*Nirvikalpa Samadhi*).

The Nirvikalpa Samadhi is the plunging of the consciousness into the ocean of bliss encapsulated inside the causal body of the creature. All ignorance pertaining to the world is dispelled and therefore the world comes to an end simply because it exists only due to ignorance. Age, caste, position, opinion—none of these is a bar in entering the chamber of the self during Samadhi. It is open to all who seek it.

Refer also to Canto 1, verse nos. 37-42.

²This is because the Atma is eternally wise and enlightened, being the supreme consciousness from which everything has emerged, including all forms of knowledge and wisdom. It is like a treasury of Gyan—knowledge, and Vivek—wisdom and erudition. So there is no question of it being ignorant and stupid.]

35. The four ‘Anubandhs’¹, the three ‘Sambandhs’², the holy river Ganges, the pilgrim sites such as Gaya (where descendents of departed souls perform rituals for their peace in afterlife), the ‘Setubandh’ (the bridge said to have been built by Lord Ram across the ocean to reach Lanka as narrated in the epic Ramayan, and where he consecrated one of the holy Lingams of Lord Shiva), and the different ‘Bhuts’ or living creatures of all species in existence—none of them have any importance, none of them have any substance and truth. [In other words, if one does not understand the fundamental meaning of the scriptures and their axiomatic maxims, and attempts to see Divinity and Godhead in any of these sites, then he is on the wrong boat, and as such he would not reach his destination which is the final realisation of the ultimate Truth; he cannot hope to achieve real emancipation and salvation of the soul. Refer verse no. 42,] (35).

[Note—¹The word *Anubandh* means connection and attachment to anything. For example, the life long union of two persons by marriage, or the connection between them which is purely friendly. The word refers to those factors that bind or connect, or those that bind the system into one connected whole. In the cited example, the institution of marriage, or the mutual trust between two persons that bind them together is the Anubandh between them. It is a sort of contract or agreement that binds them together.

In the philosophy of Vedanta, there are four such Anubandhs. They are the following—(1) Adhikaari—a person who is competent to study and practice the science; (2) Vishaya—the subject matter dealt with in the treatises studied; (3) Prayojan—the intention and utility of such study and the gains from it and its practice; and (4) Sambandh—the relationship or connection between the text of study and the science itself, or between the text and the benefits that it promises.

In the context of the study of the Atma vis-à-vis the external world, this word Anubandh can be extended to include the study of the contact that the Atma has with the outside world through the organs of perception, the organs of action, the mind and the intellect, and its consequences. This contact results in the Atma developing the following four characteristic emotional patterns—(1) it begins to have ‘Kaam’—i.e. it develops desires and passions for enjoying the sense objects of this world, (2) it acquires ‘Krodh’—i.e. it begins to get angry and wrathful when its desires are not met and some hurdle is created in the fulfillment of its wishes, (3) it begins to have ‘Lobh’—i.e. it gets greedy and rapacious about the material things of the world and develops strong yearning for them, and (4) it gets entangled in their snare, called ‘Moha’—i.e. it gets emotionally and sentimentally attached to the world and its material sense objects in the hope of deriving pleasure and comfort from them. The net result is that it gets bound to this world and its consequential delusions. The seemingly innocuous contact with this world sets off a chain of events which slip out of control and trap the Atma, which is essentially unattached and free from any bondage. The contact is the beginning of a chain of events that have grave consequences for the freedom of the Atma, and the world then hooks its self to the

Atma as its appendage, with its attendant delusions and ignorance adding to the complexity of the situation. These delusions and misleading conceptions of the world attach themselves to the Atma and the latter, in its ignorance, agrees to this partnership, thereby willingly allowing itself to be tainted.

²The word *Sambandh* means relationship, alliance, connection, affinity, link and contact. In the sphere of metaphysics, it is the study of the three relationships that exist between (1) the Atma and Brahm, (2) the creature and the world, and (3) the religious rituals and the science or knowledge behind it.]

36. The pure conscious Atma is not restricted to any one of the elements such as the earth, the water, the fire, the wind or air, and the sky. It is also not limited to the Gods, the Dikpals (the legendary supporters of the world from all its corners), the Vedas (scriptures) and the Guru (moral preceptor, teacher and guide) (36).

[Note—In other words, it would be wrong to assume that the Atma can be compared with any of the above entities, singly or jointly, because the Atma is much superior to them and much more divine and magnificent than all of them put together. That is why it is called transcendental and supreme. None of these entities would have any value if there was no Atma or soul in them; the inherent virtues and qualities present in them which give them their due place in this creation is due to the conscious factor present in them as their integral qualities and virtues that lend them their divine hue. For instance, who would like to worship and praise the fire element if it only burnt and created havoc all around? It is the fire's inherent life-injecting, life-sustaining and life-fostering virtues that make it so valuable for creation. Life would be extinct without fire element. This logic can be extended to all other entities as well.]

37. The Atma has no notion of far and near, of an end or a middle. The concepts of duality and non-duality do not apply to it (refer verse no. 27), and neither does it fall within the ambit of discussions or debates of what is true and what is not, or what is this and what is that. [Refer verse no. 16, 28-30.] (37).

38. The Atma has nothing to do with such conceptions as freedom and bondage (refer verse no. 24 and 44 of the present Canto 5), truth and non-truth, comforts and happiness, caste, clan, class and race, destiny and fate etc. that are the domineering factors in this world. In fact, as far as the Atma is concerned, there is no such entity as the physical world (because the world is an imagination of the fertile mind, and as soon as the mind decides that a particular thing is not to its liking, it immediately diverts its attention away from it, not allowing the various faculties to register the existence of that thing in the world altogether, and without the mind registering anything, the creature is unable to see, hear, taste, speak about and feel its presence—refer verse no. 31-33 of this Canto 5) (38).

39. Everything in existence is nothing but Brahm in those myriad forms, and nothing that exists which is not Brahm has any real and truthful existence. Similarly, everything that shows signs of life is consciousness, and nothing can be said of anything that has no consciousness in it (because it would be lifeless). [Refer Canto 1, verse no. 17, 23, 34; and Canto 2, verse nos. 2-43.] (39).

40. Sometimes doubts and confusions arise on this matter, but it is only due to lack of correct interpretation and truthful knowledge of the tenets of the scriptures and the wrong context in which they are quoted or interpreted.

For instance, the axiomatic maxims that 'I am Brahm personified' and 'I am eternally and always pure and immaculate' are often misinterpreted to mean an entity

that can speak, has a mind that thinks and has emotions. That is, there is body which is Brahm personified. Nothing is farther from the truth—for it is not the body but the Atma which is being referred to here. [Refer verse no. 29-32 of the present Canto 5.] (40).

41. This esoteric, enigmatic and mysterious entity known as the Atma cannot be determined by the application of the intellect and its logics and rationality, and neither can it be known by the application of the mind (as is very evident even by having a cursory reading of this Upanishad).

The Atma has no such concepts as a Yogi (an ascetic) and Yoga (meditation; bringing about a union between two entities). It is always uniform and immutable so there is no question of bringing about a union or fusion between two separate entities by the means of mediation¹ (41).

[Note—¹The basic idea here is that the main purpose of Yoga is to bring the soul of the individual creature close to the cosmic Soul so that they unite and fuse together. But this can only happen when they are separate from one another, when the soul of the individual is distinct from the cosmic Soul of the creation. Since this is not the ideal case because the creature's soul or Atma and the cosmic Soul or Brahm are one and the same entity, the question of bringing about their union and fusion does not arise. Refer verse no. 27.]

42. The Atma remains one and the same, whether it is the night or the day. It does not need to perform such purifying deeds as taking ritualistic baths or doing meditation and contemplation. [Refer verse no. 20 and 35 of the present Canto 5.]

It is certain that it is not mired by perplexities and vexations that arise out of various confusions and doubts about what is true and what is not (42).

43. If nothing in existence is true except its own 'self' as far as the Atma is concerned, then obviously for it the Vedas, the Purans, the Shastras (i.e. all the voluminous religious tomes) have no use and value, and they become redundant (because the Atma is all-knowing and enlightened, and when the main purpose of these scriptures to enlighten the creature about its exalted and auspicious heritage is achieved when the creature becomes aware of this 'true self' as the pure conscious Atma, then the scriptures become redundant). [Refer Canto 1, verse no. 15.]

The Atma does not do anything, and therefore it is not the cause of any deed being done and their consequences. [These deeds are done by the body and not the Atma.] This visible material world, the mortal creatures that inhabit it—they are all non-truths; they are all illusive. Be certain of it (43).

44. Likewise, all other erroneous notions about the true nature and reality of the Atma are equally not applicable to its exalted, immaculate, independent and supreme stature which is divine and holy.

Some of these fallacious notions are the concepts of 'Bandh' and 'Moksha' (i.e. to be in bondage and therefore requiring freedom from it—refer verse nos. 24, 38 of the present Canto 5), or of 'Sukha' and 'Dukha' (i.e. comforts and pleasures or miseries and pains—refer verse no. 49 of this Canto 5, and verse no. 66 of Canto 4). These notions arise due to the presence of the mind and its basic nature to pay attention to such things, interpret them and then register them in its memory bank. But when the Atma is de-linked from the mind, these notions vanish from existence. There is no God and no Demon; the Atma is neutral to both notions¹.

In such an eclectic state of exalted existence, nothing matters as all situations and circumstances are equal and have no affect on the Atma. Therefore, there is no such conception as something being important, the other being more important, and something else being not important at all. There is neither falsehood nor truthfulness. There is no doubt it (44).

[Note—¹A creature becomes *God-like* when he exhibits godly characteristics and qualities which are broadly classified as Sata Guna—i.e. the noblest and most auspicious qualities in existence. On the other hand, the same creature can show *Demon-like* attributes if the Tama Guna—i.e. the meanest and lowest of qualities, plays a dominant role in moulding his character. But, as it is observed constantly in this Upanishad, the Atma is beyond such considerations as it is not at all affected by any worldly attributes and characteristics that might have any bearing upon its pristine, immaculate and uncorrupt nature. Since a wise and enlightened creature treats everyone alike because he sees the same divine Atma in all of them, he does not see a ‘demon’ in the other person, but sees the divine god-like Atma residing in the body of that so-called demon. It is the gross body, and not the pure and holy Atma, that exhibits demon-like characteristics such as cruelty, lack of compassion, selfishness, propensity for committing evil and sins, perversions and misdemeanors of all sorts etc.]

45. That which is said or narrated by the faculty of speech, that imaginary thing for which a creature has a desire and then makes firm resolutions to successfully obtain it, and all other things about which the agile and overactive mind constantly thinks and imagines about their existence—verily, all of them are figments of the imagination as they have no substance and pith because they are all based on imaginations (45).

[Note—The creature describes even things it has not seen, and he does so based on what he has learnt by hearing about it from others. In other words, even a most lucid and vivid description of certain event might not be the whole and absolute truth; it might be completely false. Further, the narrator chooses his own words to describe a particular thing, and he might not hit at the correct word for it, and even if he managed to do so then these words would mean different things to different people, and when these people pass on this information to the next generation of listeners, the original more often than not gets distorted beyond redemption. This is what is meant by saying that the faculty of speech cannot describe the truth. This is also the reason why the truthfulness of the Atma is best understood by experiencing and witnessing it first hand rather than basing it on words, whether heard or read.]

46-47. The facts stated above have been arrived at by application of intelligent mind and its ability to think and critically analyse anything. These facts have been established elsewhere in the scriptures also.

Whatever is seen by the eyes in this deluding and imaginary world of falsehood and deceit (46), whatever is heard by the ears or any other forms of perceptions, are all deluding and misplaced. Listen carefully! The organs of the body such as the eye and the ear, along with the body itself, are all non-existent and misconceived; they are false and illusionary. [Refer verse nos. 19-21, 33-34 etc. of this present Canto 5.] (47). [46-47.]

48-49. All that which is thought to have an existence by the use of the words such as ‘Idam’ (this is), and the relationships created between ‘this’ seemingly real and truthful entity and ‘Twam’ (you), ‘Aham’ (me or I), ‘Tada’ (that), and all other such linking factors (48), that try to establish a link between any two entities in this world—all are imaginary and do not have any substance in them. All relationships, all

desires, all volitions and all resolutions that are based on these erroneous assumptions are indeed false and misleading¹. This is the truth. [Refer verse nos. 25-31 of the present Canto 5.]

Verily, they are like treating a harmless and lifeless length of rope as a live snake. There is nothing secret about it. There is no enjoyment or sufferings (called 'Bhog') because this world and the body have no reality as far as the Atma is concerned, and the Atma never suffers and enjoys anything. [In other words, the very concept of suffering and enjoyments is misplaced. Refer verse no. 44 of the present Canto 5.] (49).

[Note—¹All along it has been emphasised that the world has an imaginary existence and it is the creation of a fertile and imaginative mind. This body is equally not real. The only thing that matters for reality is the pure consciousness which cannot be seen and felt in physical terms, it cannot be limited to the notion of 'this' and 'that' because it is omnipresent and all-pervading in equal intensity and quantum everywhere without exception; it is an universally uniform and immutable entity that has no bounded or quantified existence. So to restrict such a sublime and subtle as well as all-pervading and all-encompassing entity that is supremely holy and divine besides being most enigmatic and esoteric to specific physical objects and limitations imposed by such words as 'this' and 'that', or parameters of space such as 'here' and 'there', or of size such as 'big' and 'small' etc. are basically erroneous conceptions and misinterpretation of facts. There is no difference between 'you' and 'me/I' because the same Atma resides in both of us. There is no such thing as 'this' and 'that' in this world because of the same reason, as also due to the fact that the visible world where these notions of 'this' and 'that', 'here' and 'there', 'big' and 'small' apply has no existence itself in the first place as noted in verse no. 32 herein above of this Canto 5.]

50. All the faults associated with this existential world¹ are equally imaginary (because of the basic premise that the world is imaginary and the body of the creature is not his true self. [Refer verse no. 33 of the present Canto 5 which deals with Maya.]

Thus, the very concept of me and mine, you and your—all are fallacious and misconceived (50).

[Note—¹The faults associated with this world are being enumerated in detail below. The terms used to describe the various faults or shortcomings have been described at the end of this listing and marked by **.

(a) The *six faults* or shortcomings of the body are the problems associated with this gross world that has a physical origin, takes a birth and ultimately ends or dies. Naturally they are not applicable to the supreme Lord who does not take birth and does not die. These so-called 'Vikars' are the following—(1) problems associated with birth, (2) problems associated with growth, (3) problems associated with consequences of deeds done and actions taken by a creature in this world, (4) problems associated with gradual decay and decline of the body and its functions, (5) problems associated with old age and its attendant horrors, and (6) problems associated with the ultimate destruction and end of everything that relates to the creature. One will observe that the life of a creature is a continuous graph of sorrows, sufferings and pains of one or the other kind. It is only when the creature realises the truth of existence and who he really is that he begins to disassociate himself from the body and the world, and thus is able to break free from this seemingly interminable cycle of horrors. Refer *Mudgal Upanishad*, Canto 4, verse no. 6 of Rig Veda tradition as well as *Adhyatma Ramayan* of Veda Vyas, Lanka Kand, Canto 3, verse no. 29.

According to the *Varaaha Upanishad*, canto 1 of the Krishna Yajur Veda tradition, there are *six urmis* or faults associated with a creature. They are the

following—Ashanaaye, Pipasa, Shoka, Moha, Jaraa and Mritu—refer also *Mudgal Upanishad*, Canto 4, verse no. 7 of Rig Veda tradition.

There also *other six faults* that are considered as *enemies* of a man—Kaam, Krodh, Lobh, Moha, Mada and Matsarya—refer *Mudgal Upanishad*, Canto 4, verse no. 4 of Rig Veda tradition.

(b) The *five faults* or shortcomings of the body—According to *Mandal Brahmin Upanishad* of Shukla Yajur Veda tradition, Brahmin 1, section 2, verse nos.1-2, there are following—viz. (1) Kaam, (2) Krodh, (3) Asthma or obstruction of breath, (4) Bhaya, and (5) Nidra (verse no. 1). Their remedy are respectively the following—(1) to be without any desires whatsoever, (2) to be forgiving and tolerant, (3) to eat less and moderately, (4) to be strong, brave and courageous, and (5) to constantly devote time and energy in contemplation and meditating upon the essential nature of things called Tattwa (i.e. to keep the mind from lying idle and instead keep it occupied in introspection and deep thoughts) (verse no. 2).

According to *Ram Charit Manas* by Saint Tulsidas, Aranya Kand, Doha 39, Chaupai 2/1, there are *five shortcomings* in a creature and they are the following—Krodh, Kaam, Lobh, Mada, and Maya.

(c) The *four faults* that are associated with a creature's temperament and natural inclination and mental bearing have been described in detail in *Ram Charit Manas* by Saint Tulsidas, the greatest epic ever penned in the realm of devotional literature which is suffused and soaked in the philosophy of the Upanishads at the same time. This great treatise has the following take on the four faults or shortcomings that afflict all the creatures in this creation—(1) Baal Kand, Doha 285, Chaupai 1/2 states that the four faults are Mada, Moha, Krodh, and Bhram. (2) Doha 43, Chaupai 3/1 says that they are Kaam, Krodh, Mada and Moha. (3) Baal Kand, Doha 112, enumerates them as Shok, Moha, Sandeha, and Bhram. (4) Baal Kand, Doha 128 says that they are Moha, Matsarya, Mada, and Maan. (5) Aranya Kand, Doha 43 lists these four faults as Kaam, Krodh, Lobh and Mada. (6) Aranya Kand Doha 44, Chaupai 2/1 enumerates the four faults as follows--Kaam, Krodh, Mada and Matsarya.

(d) The *three faults* that afflict the creature, according to *Ram Charit Manas* by Saint Tulsidas, Aranya Kand, Doha 38/A, are the following—Kaam, Krodh and Lobh.

(e) The *two faults* associated with the creature that prove his great *enemies* are the following according to *Ram Charit Manas* by Saint Tulsidas, Aranya Kand, Doha 43, Chaupai 5/1—Kaam and Krodh.

(f) The greatest fault however is *one*, and it is 'Moha' (delusions and its attendant attractions towards this world and its charms, leading to attachments, infatuations and a sense of belonging to it). This Moha is compared to the dark night in *Ram Charit Manas* by Saint Tulsidas, Baal Kand, Doha 116, Chaupai 3/1, and Aranya Kand, Doha 93, Chaupai 1/2; it is like a moral disease that afflict all creatures and eat them up like cancer—Uttar Kand, Doha 121, Chaupai 15/1; Moha makes everyone blind—Uttar Kand, Doha 70, Chaupai 4/1.

****The terms used to above to describe the various faults associated with the creature's character and mental bearing are briefly summarises as the follows—Kaam** (worldly desires, lust, passions etc. and the attending greed, yearnings and aspirations that they create in their wake); **Krodh** (anger, indignation, wrathfulness and a sense of vengeance when desired results are not obtained and aspirations are not fulfilled); **Lobh** (greed, rapacity and yearnings); **Moha** (delusions that create a sense of attachment, infatuation and belonging with this world and attractions towards the material charm that its sense objects offer, along with their pleasures and comforts); **Matsarya** (envy, jealousy, malice); **Mada** (arrogance, false pride, hypocrisy and haughtiness); **Maan** (self pride and ego); **Maya** (ignorance based delusions, illusions, misconceptions and their attending hallucinations); **Bhram** (confusion and doubts caused by ignorance of the actual truth, which lead to perplexities and vexations);

Shoka (the feeling of regret, contrition, grief, sufferings, torments, miseries and sorrows); *Ashanaaye* (hunger); *Pipasa* (thirst); *Jaraa* (old age and weakness); *Mritu* (death); *Bhaya* (fear of any kind, such as physical harm); *Nidra* (sleep, lethargy, indolence, drowsiness, sluggishness and lack of alertness especially when doing some important or dangerous work requiring concentration of mind, vigilance and alertness of the faculties); *Sandeha* (doubts, skepticism and lack of confidence in some truth such as doubting the authority of the scriptures and their tenets and maxims).]

51-53. 'I am', 'You are', 'it is for me' and 'that is for you'—all these notions are completely baseless and fallacious, founded on erroneous conceptions and are fruitless exercises. [Refer verse nos. 25-31, 48-49 of the present Canto 5 also.]

Similarly, the sustainer and protector Vishnu, the creator Brahma (51), the concluder Shiva—all of them have no real meaning and have an untruthful existence. In other words, they have a pseudo existence and have been conceptualised by the mind to give vent to its creative instincts. [Refer Canto 2, verse nos. 24-30; and Canto 5, verse no. 72.]

Likewise, ritualistic baths, doing Japa (repetition of certain Mantras which are letters, syllables, words or phrase having mystical powers), Tapa (severe austerity and penance, suffering hardship for certain noble or religious cause), Hom (fire sacrifices), Swaadhyaye (self study of the scriptures), worship of Gods (52), using various Mantras for occult worship employing magical charms called Tantras, keeping company of good people where religious subjects are discussed and where one can determine what constitutes good and what is bad—all of them are superficial and perfunctory for a self-realised soul, none of them are of any importance for a self-realised and enlightened spiritual aspirant who has understood the fundamental truth enunciated and unanimously extolled by all the scriptures, and which is about the essential element in creation called the pure conscious Atma which indeed possesses all the numerous divine virtues and glorious qualities enumerated in this Upanishad.

In fact, all such thoughts and emotions that arise in the mind and heart of the creature are due to ignorance and lack of proper knowledge about the real and actual truth behind these numerous religious concepts¹. There is no doubt about it. [Refer verse no. 34 of the present Canto 5.] (53). [51-53.]

[Note—¹The main idea of all religious activities is to provide the aspirant liberation and deliverance from all worldly delusions and provide his soul with emancipation and final salvation. If this aim is not achieved then all lengthy exercises become vain. What is the use of studying the scriptures if their basic ideas are not understood; what is the function served by doing elaborate sacrifices if the fundamental aim for which they are done and the meaning of the Mantras used during such rituals are not grasped? It is like a student of medicine learning thick medical books by heart to pass his graduation exam without even knowing how to hold a syringe or diagnose a disease based on symptoms of the patient, and then what medicine to prescribe him. What good is such a degree, and what good is such a medical doctor is to the society?

In the present context we see that the main thrust of this Upanishad is to highlight the exalted and divine stature of the Atma as the only spiritual essence and the absolute truth in creation, to show the spiritual aspirant that this Atma is inside his own self as his consciousness and no where outside in this vast world, that this Atma is as much in him as it is in the rest of the vast creation because there is no life without consciousness, and that this Atma possesses all the umpteen glorious virtues possessed by the supreme transcendental Divinity known as Brahm because it is nothing but Brahm personified in its form.

This Atma lives in one's own bosom as pure consciousness even as it does so as the essence and soul of all that exists in this creation, in all forms and all variations. If

this fundamental fact is understood properly, then the rest of the religious doctrines fall into place and the intricate details automatically become redundant and perfunctory. This is because the main objective of all religious activities is to provide for the spiritual wellbeing of the aspirant by removing ignorance and its attending delusions. If this is not achieved, if the soul does not find its eternal peace and bliss by self-realisation, if it continues to suffer the horrors of birth and death due to lack of knowledge and correct guidance, if it does not find liberation and deliverance from the fetters that shackle it to this body and the deluding world, if emancipation and salvation is not actually obtained but appears to be a distant dream which the creature pursues relentlessly by doing this and that religious duty, performing endless rituals, and observing numerous sacraments, then what is the purpose served by doing these elaborate exercises in the first place; what function do they serve if the goal is not achieved?

Without proper and honest guidance, the creature thinks that by doing such and such religious activity he would be doing some holy act which would be a guarantee of his spiritual wellbeing; rather he is under false belief of obtaining redemption by spending money and time on such activities by erroneously thinking that money and time can buy him emancipation and salvation. But in the process he forgets the basic thing that these activities create their own set of entanglements and trap him in their own web. This is because when a creature does one so-called holy act, he has some hidden desire for its rewards, and then if that reward is not available to his satisfaction he does something more or new. This is like entering a labyrinthine catacomb of rituals and deeds which lead to no where. Till the time the real cause of the disease is not diagnosed, the treatment becomes merely palliative and perfunctory. The real disease is 'ignorance and delusion' about one's true self, about the divinity bubbling all around him in the form of consciousness, of the futility of elaborate rituals and exercises in the name of religion, and unless this is addressed, no real spiritual happiness and peace is obtainable. Refer verse no. 20 and its note herein above.

If the fundamentals are not grasped, then elaborate religious activities such as doing Japa, repeating Mantras, performing fire sacrifices, going on pilgrims and taking holy baths, reading scriptural tomes, hearing discourses and finding out what is good and what is not would be like a wild goose chase, and more like getting lost in the mango orchard in search of the illusive mango!

In this context, refer Sam Veda's Maitreyu-panishad, Canto 2, verse nos. 21, 26; Jabal Darshan Upanishad, Canto 4, verse nos. 50-59; Sanyaso-panishad, Canto 2, verse nos. 74-75, 97; and the present Krishna Yajur Veda's Tejobindu Upanishad, Canto 6, verse nos. 21-24.]

54. In the same vein, numerous universes are also not real. This is certain¹. All statements made by experts from all fields and from all directions of the world are equally useless until one actually understands them and benefits from them. There is no doubt in it² (54).

[Note--¹It is futile wasting time trying to learn about the numerous far flung universes, and it is proving oneself equally stupid pursuing them when one is not able to fully know and understand about one's own planet, the Earth. Likewise, it is easy to know about one's own self as the 'self' is so near and close that it does not need any hypothetical conjectures, and it can be easily verified and its truthfulness witnessed and experienced first hand. So, instead of understanding this close-at-hand 'self' if one spends his lifetime in trying to understand what is 'God' and 'where is heaven', obviously he is a deluded man who neglects what is ready at hand in search of an illusive target. Its like going on a wild goose chase for a piece of gold which is in one's own breast pocket while one turns the house upside down in search of it.

²There are thousands of books and preachers. What purpose do they serve if the student cannot grasp the subject well?]

55. The visible world and whatever is seen or observed in it, whatever seems to be present now—all are illusive and non-real (because, as has been repeatedly said, this world itself is unreal and has its existence due to the mind's proactive imagination that makes the unreal look real just like the conditioned mind begins to see water in a mirage in a dry desert and a charming scene during a magician's performance). None of them have any real existence. [Refer Canto 3, verse nos. 53-59.] (55).

56-58. Whatever that can be said or described in words (as being good, noble, righteous, holy and auspicious), whatever that is deduced and determined by someone as being of some grand quality, whatever that is approved, sanctioned, praised or encouraged by anyone for such values and virtues, whatever is inspired by such notions and conferred such honours, whatever deeds that are glorified as holy, auspicious and noble or decried as ignoble, inauspicious and unholy—all of them are worthless and go in vain if one does not have knowledge of the reality and truth. In other words, all such notions appear to be truthful because the world is regarded to be real, but once the 'real truth' of it is known, everything appears to be hollow and false. This is a certainty.

You must free yourself of all such notions of hearing this and that and getting confused and perplexed, of oscillating between doing one deed and then chucking it for some other because the first was less holy than the second, of swinging between praise and honour on the one hand, and ignominy and derision on the other, and remaining drowned in a swamp of words praising this as true and that as false.

You must realise the fact that you are a personification of the supreme Lord known as 'Parmatma' because you are nothing but supreme transcendental Divinity and cosmic Consciousness, known as Brahm, personified. [Refer Canto 3, verse nos. 61-74; Canto 6, verse nos. 2-107.]

You are your own supreme 'Guru', i.e. you must try to find out who you truly are by cultivating 'self knowledge' and endeavouring to realise your true potentials and divinity by contemplation and understanding the essence of all religious treatises leading to self-realisation, instead of getting entangled in web of words and roaming here and there in search of this truth from other persons who call themselves 'Gurus' but do not know who they themselves are. How can anyone who does not know the truth himself show it to others? Therefore you must look for the Truth within yourself (56-58).

[Note—The pronoun 'you' is being used here for Nidagh who is being preached by sage Ribhu just like the pronoun 'I' was being used to indicate Kartikeya earlier in Cantos 2-4 when he was being preached by Shiva. But from a broader perspective, they apply to any spiritual aspirant who reads and contemplates upon this Upanishad. Actually, the teacher is addressing the 'soul' or the 'Atma' of the disciple because that is his true self.]

59. You are like the sky (i.e. your Atma possesses the virtues of the sky in being vast, fathomless, measureless, infinite, eternal, without any taints and faults, all-pervading, all-encompassing etc.). You as your Atma are so subtle and sublime that no one can physically verify or see you in the form of your true self (which is like the vast and colourless space of the sky which cannot be seen or caught hold of). [Refer Canto 6, verse no. 2.]

There is no doubt that you represent all that is present in this creation inasmuch as you are Brahm himself personified¹. [Refer Canto 3, verse nos. 61-74; and Canto 6, verse nos. 2-107.] (59).

[Note--¹Since everything in this creation has been created by the Supreme Being known as Brahm, since nothing in this creation is real that is not Brahm, since Brahm uniformly pervades throughout this creation as the elements that constitute it, and since your true self is the pure consciousness, the Atma, which is Brahm personified, it follows that whatever that exists in creation is because of you. In other words, if you decide that this world does not exist, it would cease to do so. Therefore, you do not have to seek renunciation by doing some great sacrifice and making yourself a sacrificial goat by suffering extreme hardships if you sincerely wish to renounce this world and its delusions, because they have their origin in you and no where else. If you neglect this world on the mental plane, then it is as good as renouncing it in physical terms. This is the real intention of 'renouncing' the world, and merely running away from it to a forest is not.]

60. You (as your true self known as the pure conscious Atma—) are such a mysterious and enigmatic entity that you represent Kaal and, at the same time, remain beyond its reach and are not to be misunderstood as Kaal itself. You represent Kaal, you are Kaal, but this is not your correct description as you aren't Kaal and you should not be confused with it¹. You are pure consciousness and Brahm personified.

You are present in all the forms in which this creation has unfolded itself, and you are a treasury of knowledge, wisdom and enlightenment. [This is because the Atma is eternally all-knowing, enlightened, wise and omniscient. Refer Canto 3, verse no. 31.] (60).

[Note—¹The word *Kaal* usually refers, inter alia, to the concept of the different planes of time and its different phases such as the past, the present and the future as well as its effect on the individual life of a creature or creation as a whole, thereby creating newer forms of life and extinguishing older ones in creation. Kaal refers to any circumstance that influences life and creation; it refers to an epoch or period, the fate of an individual and the creation as a whole. It refers to the past, the present and the future; it means the different phases and eras in history and the varying circumstances that keep on changing every other day.

The factor of 'death' is also called Kaal because it is death that determines the end of one cycle of creation and destruction, and leads to another new one; it is death that brings to an end the present and paves the way for the new future.

Thus we observe that Kaal is a vast concept that incorporates the entire cycle of creation and destruction in its ambit. Therefore it would not be an exaggeration to like it with Brahm which also controls this cycle. In fact, according to *Adhyatma Ramayan* of Veda Vyas, this Kaal in its personified form is said to be the eldest son of Brahm who had manifested in the form of Lord Rama. [Refer Uttar Kand, Canto 8, verse nos. 22-29.]

Now, in the present context, the spiritual aspirant is being exhorted to realise his great potentials which are not unlike this supreme power called Kaal which spares none and which overrides all other factors. With this overriding authority, Kaal is Brahm personified. Since the Atma of the individual is also Brahm personified, it represents Kaal and possesses all the latter's authority and potentials. For example, if the Atma wants, this world would cease to exist as the latter's existence solely depends upon the mind that consciously thinks that this world along with its charms and attractive objects does exist. Once the Atma instructs its assistant mind to banish such thoughts, the world would immediately cease to exist.

The Atma, at the same time, remains uniform and steady in all times, it is eternal and imperishable, it is not affected by any circumstance or era, and therefore it is

beyond the purview of Kaal which changes every now and then and kills everything when their time is up. That is, the Atma uniformly lives in all the planes of time such as the past, the present and the future as the non-changing, uniform, immutable, eternal and imperishable conscious entity referred here as 'you'; it is not affected by the vagaries of time and influenced by circumstances. The external features of the Atma such as the body of the creature might undergo change, it might become old and infirm, but basically it does not affect and bring about any change in the nature of the Atma. Death known as Kaal does not devour the Atma, nor does it take any birth in any era and then have to die at the end of its tenure.

Refer also Canto 1, verse no. 24 and Canto 4, verse no. 69.]

61. [The following verses enumerate the various virtues of the exalted Atma, the pure conscious self of the creature.]

It (the Atma) is 'Satya' (truthful); it is 'Siddha' (acclaimed and fulfilled in every respect); it is 'Sanaatan' (eternal, perpetual, infinite, everlasting, primary, primeval, most ancient, traditional, universal); it is eternally 'Mukta' (liberated from all bondages and not bound by any fetters); it has obtained 'Moksha' (emancipation and salvation); it is full of 'Muda' (it is perpetually happy and joyous, blissful and cheerful); it is 'Amrit' (it is like the elixir of beatitude and felicity, the ambrosia that bestows eternal life).

It is a personification of godly characters and virtues, and hence God like. It is 'Shaantaa' (peaceful, tranquil, calm and serene). It is 'Niramaye' (healthy and without any moral or physical ailments or tainting affects that are like a disease that might afflict a person's spiritual well beings). It is indeed Brahm personified as it is complete and without a fraction, it is fulfilled and wholesome, it is supreme, ethereal and transcendental (61).

62. It (the Atma) is 'Samaan' (uniform, steady, unmoving and universal); it is 'Saccha' (truthful and real); it is 'Sanaatan' (eternal, perpetual, infinite, everlasting, primary, primeval, most ancient, traditional, universal); it is indicated by the truthful tenets and axiomatic maxims of the scriptures, called the 'Satya Vakyas' or the truthful sayings; it is 'Pratibodh' (a personification of knowledge, awakening, enlightenment and vigil about the truth).

It is without any physical body but it is perpetually present everywhere at all times. It has manifested as the three Gods such as Brahma the creator, Indra the king of Gods and Lord of all organs of the body of the creatures, and Rudra the concluder¹ (62).

[Note—¹The significance of these three Gods must be understood here. *Brahma* is the creator, and therefore is like the supreme Brahm himself because the entire creation has come into being due to Brahm's wish. He is the eldest one in creation and considered as the wise patriarch who is most wise and knowledgeable as he created the four Vedas, the fountainhead of all knowledge in creation. He has four heads indicating that he is ever vigilant and alert about everything that is happening anywhere. He is the great arbiter for the Gods and they approach him first whenever they face any problem because he knows the correct answer and the way out. Looking closely, the Atma too has these virtues.

Indra is the Lord of all the Gods who are represented by the various forces of Nature and is also the Lord of the creature as he is the Lord of his organs. The word Indra is derived from the root 'Indri' meaning 'organs of the body' such as the five organs of perception and five organs of action. He is the Lord of rains indicating his prominence as the Lord of life, fertility and vibrancy because the rains and clouds bring life to this world. He has the vital wind force as his comrade-in-arm, indicating

his control over all forms of activity and movement that characteristic life in this world. He enjoys the best things in heaven, being the king of Gods. He is very powerful and holds the thunderbolt in his hands to subdue his enemies. The Atma also exhibits these virtues.

Shiva or *Rudra* is not only the concluder but the Lord of renunciates and ascetics. He is considered wise, enlightened, dispassionate and ever engrossed in meditation and contemplation, remaining detached from all allurements of this material world. Literally, Rudra refers to the angry and ruthless form of Shiva. So when the otherwise calm and peaceful Lord Shiva who is always meditating decides to conclude the creation, he assumes a ruthless form of Rudra who is ferocious and unforgiving.

The basic idea here is to emphasise the fact that the Atma is no ordinary entity but possesses the best qualities that exist in creation. In more senses than one it is better than the best because it combines in its self the virtues of all these three divine Gods in one place; it represents the divine qualities and virtues for which these Gods are so revered and praised as it represents them all at once, and it simultaneously has the stupendous magnificence and astounding glory of all these Gods that they possess separately.]

63. You (the Atma) are free from all ‘Prapanch’ (deceptions, deceits, falsehoods and delusions) and ‘Bhram’ (confusion and doubts caused by ignorance of the actual truth, which lead to perplexities and vexations). They do not influence and affect you at all.

You appear as all the living creatures and other forms of life in this creation. [This is because notwithstanding their physical bodies which create a sense of astounding degree of physical variation and diversity, the fundamental consciousness present in all things living is the same Atma.]

You appear everywhere. You have no ‘Sankalps’, i.e. the Atma does not make any vows and resolutions vis-à-vis the world; it remains totally dispassionate and detached from everything inspite of the fact that it is present everywhere and in all forms. [Refer Canto 3, verse no. 67; and Canto 5, verse nos. 2, 16, 97-98.]

You are known as the essence of the tenets and maxims of all the Vedas (scriptures) and can be known only by understanding their essence (63).

64. You (the Atma) are always and under all circumstances perpetually contented, fulfilled, happy, cheerful, joyous and blissful.

You do not waver and sway from your chosen path and remain ever steady and constant; you do not move and do anything. [In other words, you do not wonder aimlessly here and there in search of the truth about yourself, as it is known to you. Wherever you go you find the same consciousness, and so you have decided to stay calmly at one place for all times. You are not fickle and fidgety; you are not restless and edgy.]

You cannot be visibly seen because of your subtle and sublime form which is most miniscule and ethereal.

You are the objective of all spiritual efforts made even by the exalted Gods, including Vishnu the sustainer and protector of creation¹ (64).

[Note—¹This stanza establishes that the entity which is being addressed by the pronoun ‘you’ is not an ordinary creature or his individual Atma but the Supreme Being who is known as Brahm. Vishnu is one of the numerous Gods and manifestations of this Brahm. Vishnu represents one facet of Brahm, and that is Brahm’s function of sustaining and protecting the creation that he has created himself, and in this scenario Vishnu is only one small facet of Brahm representing only one of the numerous responsibilities, and not Brahm in its entirety. This fact is reinforced and reiterated in the following verses.]

65. Your true form is truthful and eternal enlightenment and consciousness. You are independent of all.

You are established as the Atma which is marked by being without any of the attributes and qualities that define the rest of this creation, as it is neutral and ethereal in nature. [That is, the Atma is devoid of any of the characteristic features that mark the rest of the mortal creation.] (65).

66. You (the Atma) are an embodiment of ‘Anand’ (happiness, joys, bliss and ecstasy). You are a supreme transcendental entity. In fact, you are unique and one of your kind.

You are an image of eternal consciousness and bliss; you are complete and fulfilled, lacking nothing and wanting nothing (66).

67. You (the Atma) are truthful; you are wise, omniscient and knowledgeable; you observe and inspect everything and are the Judge and Adjudicator.

You are an image of eternal and truthful beatitude and felicity; you personify these glorious and divine virtues in creation.

In fact, you are that supreme Lord of creation known as Vasudeo (one of the names of Vishnu; literally the Lord of all ‘Vasus’ which are the symbolic assets created by the supreme Brahm for the sustenance of creation, such as gold and other material wealth, besides fire, water and other elements etc.) (67).

68. You (the Atma) are ‘Amrit’, i.e. you are a treasury of all those divine and eclectic virtues possessed by the ambrosia and elixir that are lauded and sought after even by the Gods for their divine qualities. You are ‘Vibho’, i.e. you are the one who is omniscient, omnipresent, all-pervading, magnanimous, eternal, almighty, omnipotent, majestic and powerful Lord of all¹.

You show unique abilities of being ‘Chanchal’ and ‘A-chanchal’ at the same time. That is, in one instant you appear to be agile, restless, unsteady, energetic, active, volatile, mobile and playful, and in another instant you exhibit just the opposite qualities². In fact, you possess all the virtues that exist in this creation, virtues that determine the characteristic features of this creation, but at the same time you remain free from their influences and detached from them³.

That is why you are calm and peaceful on the one hand (because you are not involved in the day to day functioning of this world and its attending weariness), but are also actively involved in it on the other hand (because if you stop your activity the world would cease to be active and show signs of life), and hence you show restlessness and fickleness so characteristic of this world (68).

[Note—¹*Vibho* is an epithet usually used to describe the virtues of Lord Vishnu who is regarded as being synonymous with both Brahm, the attributeless and infinite Supreme Being who had manifested as Narayan, as well as the Viraat Purush, the macrocosmic gross body of this creation. He is also called the ‘Chief Purush’.

‘Vibho’ also refers to Brahm, while the word ‘Purush’ usually refers to Lord Vishnu in the form of Viraat Purush. It depends upon the context in which the word is used. It is due to the joint efforts of Brahm and the Viraat Purush that this creation has come into being.

The *Atma* is called the Vibho for it possesses and exhibits all the glorious virtues of Brahm. Earlier, verse no. 67 of this Canto calls the Atma as a manifestation of Vasudeo, one of the names of Vishnu. When these two verses are read together, the inference becomes obvious—that is, the word is applicable to any entity that exhibits

the divine and glorious virtues that characterize the supreme transcendental Brahm, the Supreme Being and Lord of creation. Here, both the Atma as well as Vishnu are honoured by the title of Vibho.

Canto 2 of this Upanishad unequivocally asserts that the Atma is 'Chinmaya'—i.e. it is eternally enlightened, wise and awakened as well as pure consciousness personified. It is the Lord of creation, hence it is Vibho.

²This is quite easily understandable when we closely observe the world around us. Since all life forms are said to have the Atma inherently present in them, they are always of the move because anything that has life would show movement. The constant shaking of the leaves on a huge banyan tree, the constant movement of the wind and the flow of the water of the river, the incessant hustle and bustle of a busy city life or movement of the clouds in the sky, the constant rotation of the earth, the rising of the day in one part of the earth and the advent of the night in the other—all are clear indications of the fact that the world which has the Atma in it would constantly remain on the move, it would be for ever active and restless. This is one aspect of the astounding manifestation of the Atma.

The other aspect is as stunning, for on the other hand we have the mountain, the tree, the rock and the surface of the earth, we have the deeply meditating ascetic and the embryo lying motionless in the mother's womb—they too are part of this world but they show no emotions and restlessness; they are immobile. But this does not mean that they do not have the Atma in them. Anything that exists is certainly 'true', and anything can be 'true' only if it has the Atma. This is the uniqueness of the Atma—that it shows opposite characteristics that defy logic and explanation.

Let us take another example. A renunciate monk is unruffled by the charms of this glamorous world, he remain steady in his path of monk-hood, while the city dweller rarely finds time to rest and find peace for himself, he has one after another goals to accomplish. Both have the same Atma; one is eternally rested while the other is never at peace with himself. Thus we see that the Atma can be restful and restless at the same time.

³The Atma in its vast macrocosmic form as Brahm indeed possesses all the virtues conceivable in creation for the simple reason that it is not only the creator of this creation but permeates throughout it, weaving itself intricately in its texture, warping and wefting uniformly in it, intimately involved in the working of this creation. The Atma cannot remain aloof from this world if it has to control it from both the outside as well as the inside. That is why the Atma is said to encompass the entire creation, enclosing and submerging it from all sides, while at the same time permeating throughout it uniformly from its inside much like a piece of sponge is soaked in water. The Atma is therefore fully 'involved' in this creation.

But this is only half the picture, for the Atma possesses the unique ability to remain detached from all this at the same time of its involvement. This is because it possesses such eclectic virtues as dispassion, detachment, renunciation, indifference, non-involvement, non-commitment etc.]

69. You (the Atma) are the supreme Authority that is self radiant and self illuminated. You illuminate this world in the form of consciousness. Or in other words, you manifest your authoritative presence in the form of the divine light that effuses from you and which lights (enlightens and activates) the world by injecting life and consciousness in it¹. Indeed, your authority is not an ordinary one, but it is supreme and transcendental, it is inviolable and unchallenged. You possess and personify all the powers and authorities that exist in this creation.

You represent the citadel of all achievements and successes, you are eternally fulfilled, fully successful in achieving all acclaim, and are well endowed with all imaginable mystical powers and potentials. But at the same time you are much beyond these achievements and remain indifferent to such acclaims and honours; they

do not influence you, and your potentials, powers and authority cannot be measured by these successes and achievements (69).

[Note--¹That is, the Atma does not require some other source to show it light and give it its authority. It generates its own power and has its own potentials which it exercises under its own will and authority. Here the word 'light' refers to the Atma's wisdom and enlightenment as well as the halo of its divinity that effuses from it and shows the world its light much like the sun in the sky which is self illuminated and lights up the entire world by its bright light.]

70. You (the Atma) are the Lord who is most ethereal, sublime and subtle in nature. But to compare you with the atom would be wrong, because you are smaller and subtler than it. Being so miniscule and microcosmic in form, you do not apparently seem to have an existence, but the miracle is nothing exists without you (70).

71. You (the Atma) do not have any physical attributes, characteristic features and definable qualities, and therefore you cannot be visualised, seen or observed in the physical sense in this world. You are 'Nirvikar', i.e. have no faults and taints; you are 'Niraamaye', i.e. you are spiritually healthy and without any moral or physical ailments or tainting affects that are like a disease that might afflict a person's spiritual well being.

You are invariably present in an imperceptible form but as an integral part of the cosmic 'Naad' from which all forms of sound have come into being. But at the same time, you do not pulsate and oscillate like the sound element which moves in the form of waves from one place to another. You are not limited to any one place or direction from where the sound appears to come from, for you are omnipresent and all-pervading in a uniform and universal manner (71).

72. You (the Atma) should see yourself as distinct from Brahma the creator, Vishnu the sustainer and protector, and Ishan (Shiva) the concluder¹. [Refer Canto 5, verse nos. 51-52; Canto 6, verse no. 17.]

You should see your 'true self' which remains after all such divine forms of your 'self' (such as Brahma, Vishnu and Shiva) are removed from consideration. With this self-realisation, you would be filled with extreme ecstasy and happiness (because you would become the eternal, transcendental and supreme Lord of everything that exists, including these three Gods of the Trinity). You should enjoy this enlightened view of your exalted 'self' and remain submerged in it; you should bathe in it, soak in its glory and drench yourself in its exhilarating euphoria (72).

[Note—¹These three Gods of the Trinity have specific functions, and though they represent the supreme Brahm their role is limited by their respective functions. For example, Brahma is assigned the job of creation, Vishnu sustains and protects, and Shiva deals with ending what has come into being when its time is up. In contrast, the Atma has been treated as being equivalent to the supreme Brahm himself, and obviously it is far more superior to these three Gods individually. Further, these Gods have been depicted as having one or the other form in the Purans, but the Atma has no features and forms whatsoever.]

73. You (the Atma) should live with all dignity and honour in your own kingdom (i.e. you should remain like a King, being ever contented with yourself and your divine inheritance, and not bother yourself at peeping here and there in some other king's kingdom to determine who is superior!). But you should not be proud of your divine qualities; you should not let yourself feel superior to others because of your exalted

and divine stature. You should be very modest and sober, very polite, gentle and cultured in your demeanors. You must see and ensure that your reputation as the one who has realised his 'true self' must not be tarnished by any of your actions and deeds; see who you 'truly' are and behave accordingly (73).

74. Be certain that you move yourself, you make your own efforts. [That is, there is no one to motivate you and make you do or not do anything. You decide for yourself; you make efforts to accomplish your wishes out of your own free will.]

Your true form (as the Atma, the pure cosmic Consciousness) is infinite and measureless as you are eternal and without an end. 'I or Me'—this term applies to your true self; this is your real form. Be certain about it (74).

75. All the numerous 'Prapanch'¹ of the world have no pith and substance in them. They are all deluding and false in nature. Therefore, all that is seen in this world as well as the seer who sees these scenes and believes them to be for real—both of them do not have any truth in them².

They are like the non-existent horns of a rabbit³ (75).

[Note--¹All the things that are done, seen and observed in this world which are fundamentally fallacious, artificial and deluding in nature are categorised as *Prapanch*. Since this world itself has no real existence and is nevertheless transient and perishable, these things and the deeds done by the creature should not bother the Atma which should be more concerned with things of higher value and focus its attention on things that are real and have true substance in them. The word *Prapanch* covers all worldly deceptions, delusions, tricks, mischief, maverism, cunning, deceit, conceit, fraud, artificiality, illusions, deceptions, falsehoods and concealments. Refer Canto 5, verse no. 33 in this context.

²The scene is false because the world does not exist, and the person who sees them and believes them to be true is deluded and is hallucinating like a thirsty man who begins to see real water in a mirage in the hot desert sand.

³The rabbit has no horns, but when it raises its ears they appear to be like horns when viewed from a distance.]

76. [In the context of what has been said above, the spiritual aspirant is exhorted to treat the entire creation as false and illusive. The long list in the following verse nos. 76-88 ½ enumerate such individual entities that constitute this creation and which should be regarded as illusive and not of any spiritual importance.]

The principal elements such as earth, water, fire, wind/air, sky/space, Mana (mind), Buddhi (intellect), Ahankar (the sense of false pride, egoism and arrogance), Tej (energy), Bhuvan Mandals (all the different 14 worlds and their respective ecosystems; the universes; the entire cosmos); (76).

77. The ruin or destruction, birth or coming back to life, what appears to be true (but is actually not), the concept of Punya and Paap (that which is good and auspicious as well as bad and inauspicious respectively), Jaya (victory) and its opposite (defeat), Raag (attachment and infatuations), Kaam (worldly desires, lust and passions), Krodh (anger, indignation, wrathfulness), Lobh (greed, rapacity and yearning), Dhyan (remembrance; contemplation and memory; to ponder and think deeply), Dhyeya (the object of contemplation; the target or aim of any enterprise), Gunas (virtues and qualities; the 3 basic qualities in all the creatures—such as Sata, Raja and Tama), Param (something that is the best and most exalted; something which is superior as compared to others); (77).

78. The Guru (the teacher and moral preceptor), Shishya (disciple; student), Updesh (discourses and instructions), the notion of 'Adi and Anta' (a beginning and an end respectively), Shamam (serenity, peace and tranquility), Shubham (auspiciousness and holiness), the concept of Bhut, Vartaman and Bhavishya (the past, the present and the future respectively), the Lakshya and Lakshan (what is aimed for and what are its characteristic distinguishing features respectively), the concept of Dwaye and Advaye (duality and non-duality respectively); (78).

79. The concept of Sham (control over the senses), Vichar (thoughts and contemplation), Snantosh (satisfaction and contentedness in whatever is available, without desiring more), Bhokta and Bhojya (the consumer who consumes some material thing; the sufferer who suffers from something; the one who enjoys something of enjoyment), Yam and other such eight branches of Yoga¹, the notion of Gaman and Aagaman (departure and arrival; going and coming respectively) as well as none of them (i.e. remaining at a place without showing any movement; to be steady and unwavering); (79).

[Note—¹The eight limbs or branches of Yoga are the following-- According to Patanjali who is considered to be the greatest exponent of Yoga, the latter consists of 8-fold path. These are briefly the following—(1) 'Yam' or self restraint of the senses; (2) 'Niyam' or observance of certain sacrosanct rules; (3) 'Aasan' or postures for meditation; (4) 'Pranyam' or breath control exercises for purification of the body and mind; (5) 'Pratyahar' or withdrawal of the mind and its control; (6) 'Dhaarna' or having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path; (7) 'Dhyan' or contemplation and concentration of the faculties of the mind and intellect; and (8) 'Samadhi' or a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation. These eight fold path of Yoga have been listed in *Varaaha Upanishad*, canto 5, verse no. 12—12 ½ of the Krishana Yajur Veda tradition.

The *Mandal Brahmin Upanishad* of the Shukla Yajur Veda tradition describes these terms in detail in its Brahmin (canto) 1, section 1, verse nos. 3-10.]

80. The concept of Adi and Anta (beginning and end respectively), Antarang (something that is inward looking; the inner self of the creature), the notion of Graahya and Tajya (something worth accepting and the other worth rejecting or leaving alone respectively), the Gods Hari (Vishnu), Shiva, Indra and his companion Mana (here referring to the different organs of the creature which are controlled by the mind), the three states of existence¹; (80).

[Note—¹The three states of existence of the consciousness are the waking state, the dreaming state and the deep sleep state. It also might mean the three phases in the life of a creature such as birth, the entire span of life and death, or past, present and future.]

81. All the twenty four Tattwas (elements in creation)¹, the four Saadhans (spiritual means)², the notion that distinction exists between two category of peoples, one belonging to one's own race, class, caste or clan and therefore treated as one's kith, kin and compatriot, while the other category of peoples are treated as aliens and strangers who are looked upon with distrust, suspicion and skepticism, the impression that there is a difference between the different types of worlds³ in existence; (81).

[Note—¹The *twenty four Tattwas* are the following—According to Harvansha Puran, 14840, and Mahabharat, xii, 11242, there are twenty-four basic elements or Tattwas. These twenty-four fundamental Elements or Tattwas are the essential ingredients

which go in to make up the body of a creature, and they are—(a) Prakriti (nature, inherent tendencies and inclinations, the fundamental truth about anything that decide its character and existential mode); (b) Buddhi (intellect, wisdom, discrimination); (c) Ahankar (pride, ego, arrogance, haughtiness); (d) the eleven organs (five organs of perceptions—eye, ear, nose, skin and tongue; five organs of action—hands, legs, mouth, genitals and excretory; one organ of intelligence—mind); and (e) the five vital Prans (the vital winds that regulate life in a creature—Pran or the life giving breath, Apaana or the wind which passes down the intestines and regulates digestion and excretion, Samaana or the wind that helps in even distribution of nourishment in the body, Vyana or the wind that maintains equilibrium in the body, and Udaana or the wind that helps to rise); and (f) the five perceptions (sight, touch, smell, taste and hearing) bringing the total to $= 1+1+1+1+5+5 = 24$.

²The *four Saadhans* are called 'Saadhan Chatushtya' and the term refers to the four fold spiritual disciplines in the philosophy of Advaita Vedanta. They are the following—(1) Vivek (wisdom and discrimination; intelligent interpretation of given set of information to arrive at the optimum solution; the best use of the faculty of thinking and contemplation to separate the grain from the chaff. (2) Vairagya (total renunciation and dispassion; a sense of complete detachment and non-involvement. (3) Sam-drishtak (the group of six spiritual disciplines having six steps such as Sam or tranquility and calmness, Dama or self restraint or self control, Uparati or the ability of the external sense organs to refrain from involvement in and pursuit of the sense objects in this material world, Titiksha or forbearance and tolerance, Shraddha or unwavering faith, conviction and belief in one's spiritual path, and Samaadhaan or concentration and finding of solutions to vexing spiritual problems by focusing of the faculty of mind and intellect to remove doubts and confusions). And, (4) Mumuksha (desire for liberation and deliverance of the soul; seeking the soul's emancipation and salvation).

³There are said to be *fourteen worlds* according to the Padma Puran. These are the following—(a) The upper worlds called Urdhava Lokas are seven in number— (i) Bhu, (ii) Bhuvha, (iii) Swaha, (iv) Maha, (v) Janaha, (vi) Tapaha, and (vii) Satyam. (b) The seven nether worlds called Adhaha Loka— (i) Atal, (ii) Vital, (iii) Satal, (iv) Rasaatal, (v) Talaatal, (vi) Mahaatal, and (vii) Paataal. The total number of Lokas is, therefore, fourteen.]

82. All the Varnas (the four classes in which the society has been divided by ancients for the purpose of delegation of powers and smooth functioning of the society)¹, the Ashrams (the four phases in which the entire life span of a man is divided by the ancients)², along with their respective codes of conduct, all the Mantras and Tantras (letters, words and phrases etc. used as magical formulae in spiritual practices along with the magical charms and mystical instruments used for occult worship), all manifestations and forms that Vidya (knowledge, skills, expertise and erudition) and its opposite counterpart called the Avidya (lack of these virtues), all the Vedas, all that exist in the form mobile creatures and immobile things; (82).

[Note—¹The *four Varnas*—The Hindu society has been divided into four sections or classes by ancient sages to regulate its functioning by delegation of authority and clearly specifying the jobs each section is supposed to do to maintain order and system in the world, to prevent overlapping of functions and avoid anarchy and chaos. These four sections are— (a) Brahmins*—the learned and teaching class; a wise one well-versed in the knowledge of the ultimate Truth about the supernatural Being called Brahm. They also presided over religious functions as priests, because these functions were central to life in the Vedic period; (b) Kshatriyas—they were the warrior, fighting, kingly class. They were assigned the job of giving protection to the society, dispensing justice and maintaining general law and order. (c) Vaishyas—they were the trading and farming class responsible for commerce and wealth generation.

They provided for the necessities for a comfortable life. And finally (d) the Shudras—the service class of people whose main function was to free the other three classes from the humdrums of daily chores and concentrate their energies to the particular jobs assigned to those classes to which they belonged.

*The salient features of Brahmins are the following—they should possess these noble qualities—(1) ‘Riju’-be expert in the Rig and the Yajur Vedas, (2) ‘Tapa’-should be involved in doing penances, observing austerities and enduring sufferings for the welfare of the soul and the society, (3) ‘Santosh’-be contented and satisfied, (4) ‘Kshamaa’-to be forgiving and tolerant, (5) ‘Sheel’-to have such virtues as good character, dignity, decorum and virtuousness, (6) ‘Jitendriya’-to have self control over the sense organs, (7) ‘Data’-to be a giver, one who sacrifices his own interests for the benefit of others, (8) ‘Gyani’-one who is well learned, wise, enlightened and erudite, (9) ‘Dayaalu’-to be merciful and compassionate. [Shatpath Brahmin.] An entire Upanishad called Vajra-shuchiko-panishad, belonging to the Sam Veda tradition is devoted to the subject.

These four classes of the human race were created from the single father, the Viraat or Brahma. Their origins are indicative of the different jobs that they were assigned so as to enable the creator perform the task of governance just like a king assigns separate jobs to his different ministers. But it must be clearly understood here that each class of the human race was like a part of the body of the Supreme Being, and even as a man feels disfigured and handicapped as well as feels the pain equally if his leg is cut off from the rest of his body as he feels when his arm or head is severed, the Lord feels betrayed and hurt when even one of his sons is subjected to humiliation and pain. The four classes had specific jobs cut for them so that the society could function smoothly.

The Brahmins have their origin from the mouth of Brahma the creator. Since the mouth is used to give advice and teach others, the primary job of the Brahmins was to act as moral guide to their brethren. The four Vedas, which are repository of all knowledge that exist, were also created from the mouth of Brahma; hence these Brahmins were considered most wise and learned. The arms are metaphors for strength and powers; they are used to protect and help others. Hence, the Kshatriyas, who were created from the arms of Brahma, were those sons of his who would give the needed protection and security to their other brethren. In order to feed his creation, Brahma had to toil and labour to provide for the maintenance and financial and material well being of the society for merely teaching and protecting would not suffice without some one to take care of the other necessities of life. So he created the Vaishyas from his thighs, symbolising labour, to pick up the mantle of mundane affairs of life. But there must be someone who would do the daily chores, such as tilling the fields, doing the harvesting, washing and cleaning, and all other such odd jobs. This was assigned to the Shudras created from Brahma’s feet symbolising service.

None of these classes were meant to be inferior or superior to one another; they were all parts of the body of the same Brahma. In fact, the leg bears the burden of the body; just imagine what would have happened if Brahma had not created anyone from his legs? How would the Brahmin walk, how would the Kshatriya fight, and how would the Vaishya do his commercial activities if he could not walk? Similar arguments can be applied to other classes. See also Brihad Aranyak Upanishad, 1/4/11-15, and Aitereyo-panishad, 1/1/4.

²The *four Ashrams*—The life of a Hindu man is divided into four segments or Ashrams—(a) Brahmacharya—this is the 1st phase of life in which a person studies the scriptures under the tutelage of a wise teacher. This phase of life is marked by austerities, keeping of vows, observing celibacy, abstinence and continence as well as leading a regimental life style, (b) Grihasta—when a person has studied and prepared himself to face the world, he comes back to his house and enters the 2nd phase called

Grihasta Ashram which is a householder life. He marries, raises a family, produces wealth and helps to carry forward the cycle of creation. This is the most important and enjoyable phase as well as the most tough one because on the one hand there are the comforts and pleasure of the world to be enjoyed, and on the other hand there are the various tribulations and miseries of a family life and dealings with this deceptive world with all their accompanying horrifying problems, (c) Vanprastha—this is the 3rd phase when a man hands over the responsibilities of the world to his heirs and renounces his attachments to the house as well as the world, and heads for the forest, leaving the home for his next generation. It is now that he goes on pilgrimage and prepares for the final stage of his life, and (d) Sanyas—this is the 4th and last stage of life when there is complete cutting off of all the ties with the world, spending time in contemplation and meditation, living a life of total renunciation and begging for food, and single mindedly aiming for emancipation and salvation. This phase of Sanyas also has many stages depending upon the spiritual elevation and accomplishments of the aspirant, viz. Kutichak, Bahudak, Hansa, Paramhans, Turiyatit and Avadhut.

These four Ashrams, their characteristic features and virtues are described in detail in an Upanishad called ‘Ashramo-panishad’ belonging to the Atharva Veda tradition.]

83. The concept of Bandha (to be tied in fetters; to be shackled) and its opposite counterpart, the concept of Moksha (liberation and deliverance; emancipation and salvation of the soul), the concept of Gyan (knowledge, wisdom and enlightenment; erudition and sagacity) and its superior counterpart known as Vigyan (the concept of putting this knowledge to test and verifying its truth and effectiveness), the concept of Bodha (awareness of anything, especially spiritual truths and self realisation) and its opposite concept of Abodha (ignorance and lack of awareness; lack of intelligence; stupidity), the concept of Dvaita (duality) and its opposite concept of Advaita (non-duality) and all that is said and debated about such concepts; (83).

84. All the tenets and doctrines of the Vedas, all the conclusions drawn by the numerous Purans, all the different theories propounded by numerous people and deductions arrived at by them; (84).

85. All things that are remembered and are the subject matter of thought and memory, all things about which the creature and his mind makes resolutions and vows to accomplish them, all things that the intellect rationalizes, deduces and decides about, all that is heard and learnt upon being told by one’s Guru (teacher and advisor); (85).

86. All that about which anything is said or elucidated upon, all that which has been preached by the learned teacher or taught by him, all that which can be perceived or known by the means of the sense organs of the body, all that which has been thought of; (86).

87. All that which can be determined by the application of philosophical aspects of Law as well as the great Vedas, all that exists in this vast creation sustained and protected by Vishnu and extinguished by Shiva; (87).

88. All that is created by Brahma in this world, all the different things and concepts that are ever visualised or conceptualised in this world, all the varying deeds and actions in this creation starting from the very beginning, all the deductions and affirmations made by the Purans; (88).

89. All the philosophies of the Upanishads and their essential meanings—verily, all of them (from verse nos. 76 to 89) are like the illusive horns of a rabbit¹ (88 ½) .

‘I am the body (i.e. my true self is the body; my true identity is the physical body and I am known by it)’—this conception is merely an imagination of the mind. It is the mind that determines arbitrarily that the creature’s true self is the body and then prevails upon the intellect and the creature to belief this erroneous idea that is imposed on the unsuspecting creature (89).

[Note—¹The non-existent horn of a rabbit is used brilliantly as a metaphor to describe the falsehood and the illusionary nature of the world in Canto 6, verse nos. 74, 90 also.]

90. [Verse nos. 90-96 highlight the metaphysical truth that the root cause of all miseries that torment a creature is his misplaced belief that his gross physical body is his true identity instead of the pure conscious soul known as the Atma.]

The erroneous concept of ‘I am the body’, or that ‘my true self and my identity is the physical body (and not the pure conscious Atma or soul)’ is the root cause of all the great delusions associated with this vast artificial world and its attending problems. This fallacious and misconceived deduction of the mind that this world is ‘I or me’ is at the base of all perplexities, vexations, doubts and confusions that mire the creature’s spiritual freedom and result in trapping him into a snare (90).

91. This determination, this belief that the ‘I am the body’ is the cause of all sorrows, miseries, pains and grief that overwhelm all the creatures in this world. This erroneous conception that ‘I am the body’ is the path that leads one to hell (i.e. it leads him to a perpetual life of miseries and torments that never seem to come to an end) (91).

92. This erroneous conception of the creature that ‘I am the body’ is the root cause of the creation of this vast and wild world of so many uncountable delusions. This misplaced notion that ‘I am the body’ is the reason why all the knots that appear as gnarls upon the subtle heart exist (92).

93. The false knowledge and misconceived awareness of the existence of the self as the body (and not as the pure conscious soul or Atma) is known as Agyan or lack of truthful knowledge and predominance of ignorance. ‘I am the body’—this fallacious idea is totally wrong, ill-conceived, unwarranted and misplaced (93).

94. ‘I am the body’—the intellect that thinks in this erroneous way is the cause of all ignorance and delusions that the creature suffers from¹.

This ignorance, that the body is one’s true self, gives rise to the sense of duality in this world² (94).

[Note--¹This is because the intellect is supposed to be the wise council for the creature, and when this supposedly wise advisor is himself deluded, it is natural that the advice it gives to its principal, the creature, would be not up to the mark of erudition and sagacity that is expected of it.]

²This is because the person begins to see distinction between two individuals having different bodies, instead of realising the spiritual truth behind this illusive appearance. This ignorant person forgets that, one, both these two individuals have the same Atma in them, and second, the body is, in any case, perishable and gross, and therefore it cannot be the eternal consciousness that has been described as the

‘pure self’ and so much lauded by the scriptures. This distinction between two entities that are fundamentally one and inseparable from one another is called Duality, or the philosophy of ‘Dwaitya’.]

95. The firm belief that the body is the true self of the creature is called Agyan or lack of truthful knowledge or ignorance of the reality. It is a limited knowledge about the creature which is detached from the truth¹ (95).

[Note—¹This knowledge is ‘limited’ and ‘detached from the truth’ because the word creature or any living being for that matter includes the body in its meaning as no one can have a physical presence in this world without a body. In fact the Atma, which is regarded as the ‘true’ self and identity of the creature, finds its dwelling inside this physical gross body; without the body the Atma would be an ethereal spirit and not known as the creature in the usual sense the word is used. So the body is as much an identity of the living being as his soul, the only misconception is to treat this body as the ‘true self’ instead of the Atma being given this honour.]

96. ‘I am the body’—this great delusion and misconception is the greatest cause of all sins because it pulls the creature away from the truth. ‘I am the body’—this thought is like the darkness of night that creates so many phantoms in the form of worldly desires, passions, rapacity and yearnings (96).

97. Whatever kind of Sankalp¹ there is in this world is a harbinger and herald of all the types of worldly miseries and torments, called the ‘Traitap’², from which the creature suffers. This Sankalp creates in its wake all sorts of problems for the creature—such as Kaam (desires, lust, passions and yearnings), Krodh (anger, indignation), Bandhan (literally meaning fetters and shackles; to get bogged down in the marshy swamp represented by worldly delusions as well as the various emotions and sentiments that continue to heave like waves in the ocean, and getting tied to the artificial world inspite of being aware of its horrendous consequences) and all other types of Dukha (sorrows, miseries, torments, pains, sufferings and grief). It is also the genesis of all types of faults and errors that one develops in one’s perception of the world, and they act like a Kaal or death-trap for the creature (because they prevent his liberation and deliverance from all the miseries and torments that are so typical of this world, and instead keeps him chained to this deluding and artificial world for a long time)³ (97).

[Note—¹The word *Sankalp* refers to the various ambitions, desires and aspirations that a creature has, and his decision, his volition, his firm determination, the strong vows and resolutions that he makes in order to be successful in fulfilling them. All these are all collectively called Sankalp. It is under the influence of delusions and erroneous conception of the ‘truth’ about the world and its material objects as well as about his own self and the real goal of life and spiritual well being that one makes numerous ambitions and have so many aspirations that impels him to make so many resolutions and vows, and then these decisions drive him to do so many things in the hope of achieving that illusive success in obtaining eternal well being and peace for himself which he so eagerly yearns for. These different Sankalps are therefore motivated and driven by delusions and erroneous conception of the ‘truth’. This concept is described in detail in Chandogya Upanishad, canto 7, section 4.

The various desires and aspirations that a creature has in relation to this material world creates in its wake a chain of problems because the creature makes so many efforts to be successful in his endeavour to fulfill these desires and aspirations which prove very illusive for him. Even if they are somehow successfully accomplished, they are very transient and the creature has to make fresh efforts to retain them. The

charm and taste of success inspires him to achieve more and more, and thus he keeps on running behind the illusive mirage of artificial world for eternity. Nothing satisfies him and nothing that he has already acquired lasts for any sustainable time. He spends his entire life-span in pursuit of a mirage, dies yearning for success and acclaim, but they evade him. So he takes another birth and undergoes another round of miseries and torments associated with the cycle of birth and death along with the perpetual mental and bodily agonies that he has to suffer in this world. His basic spiritual requirement of acquiring eternal rest, peace, tranquility, succour and solace are never fulfilled. On the other hand, these Sankalps make him fall into a pit of slushy delusions that keep him bogged down for a long time till he wakes up to the reality and discovers the truth about the falsehood of this futile worldly pursuit. He realises that eternal and truthful peace and tranquility, eternal and truthful beatitude and felicity, eternal and truthful happiness and joy, eternal and truthful well being and welfare are only available when he shuns making and having all worldly Sankalps. Refer also to Canto 3, verse no. 67; Canto 5, verse nos. 2, 5, 16, 63.

²The *Traitaps* are the fears or torments arising from the following:--(a) Adhi-bhautik—related to terrestrial creatures such as enemies, cruel kings and wild animals; (b) Adhi-daivik—related to unfavourable Gods and malignant stars; and (c) Adhi-daihik—related to the body such as diseases and horrors of old age etc.

³It is but obvious that when one's desires (Kaam) are not fulfilled, when he is not able to achieve success in his pursuit of certain objective in the way he wants, he is filled with anger (Krodh), vehemence and frustration. He begins to treat everything that appear to him as obstacles in his dream realisation with utter contempt and disdain. This creates an atmosphere of ill-will and distrust, leading to perpetual sense of insecurity and agitation. They create a lot of miseries and pains for the creature and rob him of his peace and happiness (Dukha). All these act as fetters that bind the creature to this world (Bandhan) of endless desires and efforts to fulfill them, creating newer desires and newer efforts to retain whatever has already been successfully acquired. These are like numerous fetters of this deluding world (Vishwa Bandh and Dosh) that trap him in their vice-like grip for seemingly a perpetual life of death and birth (Kaal).]

98. All the different Sankalps are created by the Mana¹ (i.e. by the mind and heart because these are the two entities in a creature's body that make him have desires and then yearn for their fulfillment). Therefore, this Mana is the creator of the entire web known as this deluding and artificial world which is the fountainhead of all miseries from which the creature suffers. Hence, this Mana is his greatest enemy.

Mana not only represents the immediate world of the creature but even the distant ones in the future² (98).

[Note—¹The word *Mana* has a broad meaning, covering the combined apparatus of the subjective mind and the heart that has emotions and sentiments. This is because they both work in conjunction. Mana refers to the various emotions and thoughts; the dispositions and inclinations; the intentions, ideas and purpose of the mind; the wishes, attractions and desires of the heart; the attractions that tempt the mind, causing it to fix its attention in these attractions, thereby also dragging the heart along which begins to love and get attached to these attractions. All these factors have a composite effect on the sub-conscious.[Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39; the concept has been elaborately described in Chandogya Upanishad, canto 7, section 3.]

Heart is the center where all types of emotions and sentiments have their origin. On the other hand, the subjective mind and the objective intellect are the two components which are like the two limbs of the brain and they work in close cooperation with each other, being the controlling center where all sorts of thoughts and decisions made by a creature are centered.

It is the mind that perceives this world, receives its inputs by way of stimuli and perceptions, processes them, stores them for future referral, instructs the organs of action to act, gives the intellect its feedback of what it has made of the world, thereby helping the intellect to make deductions and take decisions. Under ordinary circumstances, the mind and intellect work in close coordination and in a systematic and analytical manner if left to their own accord, but in practice the heart with its own baggage of emotions and sentiments not only interferes with their functioning but also influences their actions. The resultant effect is that the action of the creature is a composite of these three units—viz. the mind, the intellect and the heart. So though the Mana is technically the mind according to the strict dictionary meaning, in practice the three units are to be taken together if we are to truthfully understand how the Mana works.

For instance, the process of learning anything is the strict prerogative of the mind, then why do we say 'learn by heart'? It is because if the heart is not included in the process of learning, the mind alone would not be able to sufficiently concentrate and sustain this concentration to learn anything.

The Mana plays a pivotal role in the creature falling into the trap of worldly delusions or being liberated and delivered from it. Further, all Mantras have had their origin in the mind and heart of ancient sages and seers when they contemplated upon any aspect of Divinity and arrived at some profound spiritual Truth in this creation. The great Maha Vakyas were then 'revealed' to them in their meditative trance. Hence the importance and primary source of everything in this creation as the Mana cannot be neglected or even over-emphasised.

²This is because when one has the notion of something existing in some distant point in time then he would desire it and then set about making long term efforts which would bear fruits in some distant time. One plans for his future, accumulates wealth and provides for his future, little realising that one is not certain of the next moment so what to talk of something that is simply imaginary and like a castle in the air. The concept of 'future' is a very hypothetical notion because, for one, it is uncertain and like the dark and bottomless void of the space; it is like a black hole in the cosmos for it is very easy to plunge into it but impossible to get out of it. Who can ever delineate the boundary of what constitutes 'future'? It is a very vague term, pointing to something that is indefinable, uncertain and imaginary. The 'next moment' is as much a 'future' as a time which is a hundred years from now because nothing is certain.]

99. It is the Mana (as described in verse no. 98) that is the fountainhead of greatest sorrows, miseries, torments and pains that afflict the creature. Mana is the cause of old age and infirmity, Mana is the cause of death (Kaal) and all the worldly taints and faults (Dosh) that trouble the creature (99).

[Note—It has often been proved that people who have become old by the body can achieve greatest of things during this particular period of life that they failed to achieve while in their prime of youth and health. Numerous examples exist when old people have produced the greatest of literary outputs, made the greatest of contribution to the society as well as to the philosophical and scientific thinking in their twilight years. It is often asserted that it is the man's mind that makes him old and not his body. Positively thinking people are as productive in old age as they were in their youth. Therefore, it is the Mana that decides what a man makes of his life. It is the Mana that makes or breaks the life of a man.]

100. It is the Mana (mind and heart) of the creature that makes all Sankalps (resolutions and volitions)¹. It is the Mana that produces the Chitta (attention, memory and thoughts; the sub-conscious)², and it is the Mana that produces Ahankar (sense of false self importance, pride and ego leading to arrogance)³ (100).

[Note--¹That is, the Atma, which is the true identity of the creature, does not make any Sankalps, and neither does the gross body. Rather, it is the Mana consisting of the complex of mind and heart which is the real culprits. First the heart begins to develop a desire and longing for something, and then the mind sits up to please the heart by planning how to successfully fulfill the heart's desires. On the other hand, it was the mind in the first place that had made the heart aware of the presence of certain things in this world by perceiving them and then deciding or determining whether or not they are good for the creature. It is the Mana that decides if the given thing would seem attractive to the creature, leading the creature to become sufficiently infatuated with it and start yearning for it. It is a symbiotic relationship in which both the mind and the heart play in concert for their own selfish ends without bothering about the long term welfare of the creature. That is why a wise creature should not see them as his friend but as an enemy number one.]

²The mind harbours the faculty of memory and thinking, and the heart keeps the mind engrossed in pursuing its objects, because if the heart loses interest in anything it would stop inspiring the mind from pursuing any objective with perseverance and diligence. The disillusioned and disinterested heart would pull the mind away from things it does not like, and instead divert its attention towards things it longs for. So, everything in this world exists and has value for the creature only as long as there is the existence of the Mana.

³When one has an active Mana, he develops so many Sankalps and the ability to fulfill them. He is proud of himself that he can think this and that and then go about achieving them. Only an able man can have any worthwhile Sankalps; for others it is an exercise in day-dreaming which has no real pith and substance. For instance, suppose a pauper's Mana makes a Sankalp to enjoy the comforts of king, can he ever do so? Such impossible and unattainable Sankalps made by the Mana lead to depression and a sense of inferiority complex in the creature. So a man who has an active Mana making achievable Sankalps becomes proud of his abilities and his prowess because he would be actually implement his Sankalps which would make him exult in his success. He develops ego and a sense of self importance. This is Ahankar.]

101-102. It is the Mana that is like the fetter represented by this world of artificiality and delusions. [This is because it is the Mana that not only makes a creature aware of the numerous attractions of the world but also makes the creature enchanted by them, and then get hooked to them.]

The mind and heart collectively called the Mana forms the so-called 'Antahakaran', literally the inner self of a creature¹.

The entire visible world is created by this Mana. So, it is the creator of the earth, the water (101); the Tej (fire and its energy), the subtle air and its moving counterpart called the wind element, the sky and its vast realm called the space along with the sound that fills this space of the sky (both in the cosmic form as the Naad as well as the general cacophony of worldly noise including the chatter of the individual words spoken by an individual on this planet) (102). [101-102.]

[Note—¹The mind controls the creature's thoughts and intellect, while his heart controls his emotions and sentiments. The Mana forms the subtle body of the creature, and hence it is called the inner being or *Antahakaran* of the creature. The other two components of the creature's existence are the physical body which is gross and consist of the external organs, and the causal body consisting of the bliss sheath enclosing the Atma, the pure consciousness. The body does not have any of the characteristic features of independent thinking and action like the Mana. In fact, the body is under the control of the Mana; it would do what the Mana wishes it to do. The Atma on the other hand is not concerned with any of the mundane things about the

world which the other two indulge in. The Atma does not think and longs for anything; it just sort of subtly empowers the whole structure of the creature's existence, consisting of his gross body and subtle body, to carry on with their respective functions as per the destiny reserved for them. The Atma is neutral and dispassionate, and therefore it is not the Mana which is fully submerged in having numerous Sankalps.

The word *Antahakaran* literally means the 'inner instrument' of the creature by which his mind works and receives the world. The word has two components—viz. 'Antha' meaning 'inner', and 'Karan' meaning 'instrument that causes the mind to work'. The external organs of the body such as the eye, ear, nose, tongue and skin which are the organs of perception physically receive the inputs from the external world, but their actual functioning is due to this Antahakaran or the inner instrument of the subtle body consisting of the mind and intellect complex because if the latter malfunctions the former are useless.

Out of the three states of existence of the creature, viz. the waking, the dreaming and the deep sleep states, the mind is active in the first two states only, and therefore the Antahakaran is related to only the first two states of existence.

The Antahakaran functions in four different ways and gets four different names according to these four functions. (1) It is called Chitta or sub-conscious mind and its ability to receive information and remember while performing the function of reception and retention. (2) It is called Mana or logical mind when it performs the function of questioning, doubting and willing. (3) It is called Buddhi or intellect when deducing, deciding and determining. And (4) it is called Ahankar or ego, self pride, arrogance of knowledge when it identifies itself with each of these functions—when it thinks that it has the ability to remember, to question and debate, to decide and will.

The word would therefore briefly mean the inner self of the creature consisting of the subtle body rather than the outer self consisting of the gross body. It is said to be one of the 19 Tattwas or essential elements that came into being at the very commencement of creation.

Antahakaran is variously described as having two, four or five components. The term Antahakaran has been described in Shaarirako-panishad of Krishna Yajur Veda tradition, in its verse no. 4 as having four parts or dimensions. The Antahakaran with five dimensions or aspects have been described in Paingalo-panishad of Shukla Yajur Veda, in its Canto 1, verse no. 9, and in Canto 2, verse no. 3.]

103. It is the Mana that creates the awareness of the different sense perceptions for a creature, such as the sense of feeling that comes by touching something (which is done by the skin), the different visions and sights that are seen by the creature (which is done by the eye), the various tastes tasted by the creature (which is the job of the tongue), and the numerous aromas and fragrances that a creature smells (which is the function of the nose).

The existence of the body having the so-called 'Pancha Kosha' (the five sheaths)¹ is also due to the Mana. Likewise, the various states of existence such as Jagrat (waking), Swapna (dreaming), Shushupta (deep sleep) etc. are also due to the Mana (103).

[Note—¹The physical body of the creature has been divided into five components as follows--'Annamaye Kosh' or the food sheath, 'Pranmaye Kosh' or the vital wind sheath, 'Manomaye Kosh' or the mental sheath, 'Vigyanmaye Kosh' or the intellect sheath, and 'Anandmaye Kosh' or the bliss sheath. These sheaths cover the Atma or pure conscious self like various coverings or shrouds wrapping any object.]

104. Since the Mana has been already said to be the arbitrary creator of all that exists, it is natural therefore that even the different Dikpals (mythical Gods who support the

world from all corners), the Vasus (patron Gods of various assets needed in creation to sustain it), the Rudra (Lord Shiva), and Aditya (the Sun God)—all of them owe their existence to the Mana.

Likewise, all that is visible in this world as movable or immovable (such as mobile creatures, and immobile plants and trees), all perplexities, confusions and vexations created by such diverse things and apparently paradoxical situations—all of them are due to the effect of ignorance that envelops the Mana from all sides (and prevents it from realising and becoming aware of the reality and truth) (104).

105. Hence, whatever is established in this world by the virtue of the Mana having a Sankalp about it, i.e. whatever exists in this world because the mind has decided that it does exist in spite of the fact that it is not the real thing, are all illusive and imaginary; they are false and non-truths; they are misleading and erroneous.

The wise and learned teacher warns his dear disciple that all that is said about the existence of this world—that the world is true because it can be actually felt, seen, heard, smelt and tasted by the sense organs—is a deception and complete falsehood; nothing is true, nothing is true indeed! [The word ‘nothing’ is repeated twice to emphasise the negativity and the gravity of this observation as well as to point out the sincerity and finality with which this assertion is made. Everything is false because it is an imaginative creation of the Mana that has determined for itself that the world exists. Should the Mana decide one fine morning that the world does not exist for it, the world would actually stop bothering the creature. For instance, when the Mana decides that some music is attractive and good for the ears, the creature wishes to hear it. But the same Mana decides it is not so when it is under great emotional stress or when the body is physically uncomfortable due to a day’s hard work or when the man is sick. In this case, the same piece of music appears to be a nuisance and causes irritation to the ear.]

Verily, this is what this Upanishad affirms and asserts (105).

Canto 6

[This Canto reasserts what has already been said in earlier Cantos of this Upanishad. This is probably done to reaffirm and reiterate the metaphysical maxims and axioms said earlier, as well as to emphasise their significance and importance. Perhaps this was done by sage Ribhu to teach another bunch of disciples who were not present during his earlier discourse so that they could also benefit from what he had taught Nidagh. This Canto finally sums up the divine and glorious virtues of the supreme transcendental Divinity known as Brahm, as well as its representative the pure conscious Atma. This Canto employs the unique methodology of establishing the falsehood of this world by citing countless instances of highly incredulous things and saying that if such highly absurd things can be true then the world could also be true. Refer verse nos. 73-99 of this Canto. Another unique feature of this Canto is the use of the negation process called ‘Neti-Neti’, i.e. ‘not this, not this’—refer verse nos. 5-29 to eliminate all false conceptions that might cause confusions in the mind of the aspirant, and once his inner self is cleansed of all sorts of ideas as to what constitutes the ‘truth’ and what is ‘not the truth’, it then goes on to describe assertively ‘what *is*’ the truth known in metaphysical terms as the supreme transcendental universal cosmic

Consciousness called Brahm, and its counterpart that is known as the Atma of the creature—refer verse nos. 30-72.]

1. Sage Ribhu[#] continued with his preaching thus—‘You should treat everything and everyone of any real spiritual worth and tangible metaphysical value in this creation as being ‘Chinmaya’ (pure conscious Spirit that is self enlightened, wise and almighty). [Refer Canto 2 of this Upanishad.]

All such entities are an embodiment of ‘Sat, Chit and Anand’, i.e. they invariably possess such divine and eclectic virtues as being truthful (Sat), as being pure consciousness that is intelligent, wise, discriminating and most erudite (Chit), and as having the characteristic inherent qualities that are collectively called Anand—i.e. eternal and wholesome ecstasy, exhilaration, bliss, beatitude, felicity, happiness, joy, pleasure, cheerfulness, gaiety, and a sense of delight and merriment¹.

This divine and holy entity that is possessed of this unique and eclectic virtue of being Sat, Chit and Anand personified is indeed called ‘Advaita’ or non-dual (because it is one of its kind, having no equal or parallel)². [Refer Canto 2, verse nos. 2-23.] (1).

[Note--¹In other words, anything that has any ‘real value and worth’ in this world for the creature must have these qualities inherent in it. Otherwise, it is worthless. A creature should pursue something that is worthy of the effort made to acquire it, for otherwise it would be an effort spent in vain like running behind a mirage in search of water in a hot desert.

Everything that ‘lives’ must have ‘consciousness’ to be truly alive, and anything that is ‘true’ has tangible value and essence that gives real satisfaction and a sense of fulfillment. It would not vanish in thin air even without giving a notice like the mirage of the desert.

²In other words, if anything is ‘true’ then it must be irrefutably so because there should be no factor of doubt if anything is to be really ‘true’, and if anything is ‘not true’ then it must be ‘false’. Truth can be only one and not two, for then doubt arises as to which of the two is the real thing. It is either of the two, and not something mid-way. Therefore, the entity possessing the unique virtues of being Chinmaya and Sat-Chit-Anand is only one and not two. And this is known as the truthful Atma of the creation.

#A brief and interesting introduction to the two great sages Ribhu and his disciple Nidagh is included in Varaaha Upanishad, Chapter 30 of this volume.]

2. The eclectic and divine entity having the virtues of Sat, Chit and Anand (as described in verse no. 1) is only one and unique of its kind, and nothing else has this wholesome and eternal quality of being Sat, Chit and Anand at the same time.

Think that ‘I am an embodiment of Sat, Chit and Anand’, and all that comes under the ambit of the word ‘Kham¹’ is also Sat, Chit and Anand. [Refer Canto 6, verse no. 49.] (2).

[Note—¹The word *Kham* refers to the sky; the void of space; the heaven; the organs of perceptions in the body; the dot called Anuswar; a slit or door or exit point of the body which are nine in number—viz. mouth, two ears, two eyes, two nostrils, anus and genitals; mica; deeds; Gyan or knowledge; Brahma the creator. Refer page no. 321 of Sanskrit-Hindi Dictionary published by Chaukhamba Vidyabhavan, Varanasi.

In the metaphysical context, this observation means that the Atma of the spiritual aspirant possesses all the eclectic virtues and qualities that are possessed by the sky element—such as the fact that the sky is endless, vast, infinite, measureless, fathomless, taintless, all-pervading, all-encompassing and indescribable.

Refer Canto 5, verse no. 59 in this context.]

3. You are an embodiment of Sat, Chit and Anand, and I am too an embodiment of Sat, Chit and Anand (3).

4. Everything is Brahm; neither you nor I nor anyone else is anything but Brahm. [In other words, you and all other living beings in this creation are Brahm personified.] Indeed, nothing is true except Brahm; it is everywhere and in every point of time (as this divine and supreme transcendental entity is omnipresent, all-incorporating, all-pervading and all-encompassing in Nature). [Refer Canto 1, verse no. 17; Canto 3, verse nos. 60-74; Canto 6, verse nos. 31, 66.]

This Brahm is such a mysterious, enigmatic and esoteric supreme cosmic Authority that it cannot be known with the help of mere lifeless letters, words, phrases or sentences that are used to craft the tenets and axiomatic maxims of the Vedas and their doctrinal teachings¹. It is not something that is as lifeless as these letters, and the words and statements that these letters or words form (4).

[Note—¹That is, an attempt at knowing the supreme transcendental Being by merely searching him out in the letters and statements of the scriptures or their too literal a translation is an exercise in futility. These statements only indicate the general characteristic of Brahm, but it requires more to gain access to him than just plain reading of the text. A wise person is one who sees all the possible nuances and connotations of a given text and in the correct context in which they are said or written. He must be able to interpret and understand them correctly, and only such a man can give correct advice to others and himself lead a righteous and exemplary life. The correct and intelligent interpretation of the hidden meaning in any philosophy is of paramount importance, for otherwise it does more harm than good. For example, eating food is as integral to life as breathing fresh air, but simply gorging on unhealthy food just for the sake of its taste without paying heed to its nutritional value would be disastrous for the body.]

5. [Now, this supreme Brahm is said to be manifested as the divine Atma or pure consciousness of the creature, and lives as such not only in the creature's bosom but everywhere else in this creation, both in the visible as well as the invisible spectrum, right from the minuscule to the most colossus. In the following verses this Brahm in the form of the Atma is being described by the process of negation or elimination called 'Neti Neti', which is the standard adopted by the Vedas. This is a unique approach to say something authoritatively and conclusively about an entity to prove its authenticity and truthfulness by eliminating all possible individual ways in which it is usually perceived to be in existence to emphasise the point that the entity being described is much beyond the limited scope of how it is understood, and its truthful description is much beyond what is known about it till now.

Words cannot define Divinity and ethereal concepts. At the most, each epithet or honour that is given to this divine entity deals with one or the other facet of that wholesome entity, but it is a very narrow view of something that needs a holistic and 360⁰ approach to be fully understood. Assigning attributes, virtues, qualities and characteristics to Brahm or the Atma is not doing justice to them for they are much beyond the limitations imposed by the use of descriptive words. That is why 'Neti-Neti' is used in the scriptures to deny all possible ways one tries to bound in or hedge in the entity that cannot be bound in or hedged in.

Besides this point, Brahm is an entity that defies conventional ways of understanding anything, ways which are the standard norm in analyzing a thing in an empirical and logical fashion in this world. There are certain aspects of life that

cannot be contained in a glass vessel to be displayed to students in a laboratory of a college. These things cannot be explained in literal words; they cannot be physically demonstrated to prove that they are indeed a reality and not a figment of mere imagination.

Brahm is one such mysterious, enigmatic and esoteric Supreme Being who is best understood by first eliminating all possible criterions normally employed to define and judge anything in this world, because all the logics and arguments just aren't sufficient and potent enough instruments to completely and wholesomely describe Brahm, and then realise the latter's presence and existence by the best method to know him, and it is 'experience and witnessing him first hand in this entire creation'. It is easy said than done. This is the miracle of 'Advaita Vedanta' which says in essence that everything in this creation is Brahm and nothing but Brahm. It appears on the face of it that this axiom implies that even 'falsehood' is Brahm. It is not the case, because anything that is '*not truth*' is *not* Brahm, and since falsehood is 'non-truth' it cannot be Brahm!

Brahm is an entity that goes beyond the imagination and conception of the mind. All descriptions and all adjectives use words, and these words are totally incompetent, inapt and insufficient to describe something that goes beyond the wildest of imaginations of the man. Words cannot restrict an unrestricted entity within the parameter of their meanings and connotations and interpretations. Words have their limitations, but Brahm defies limitations. This is one reason why Brahm is compared to the sky element—refer verse no. 2 of this Canto. Refer also Canto 5, verse nos. 6, 9.]

It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) has no middle, no beginning and no end (as it is eternal and infinite). It is not merely a simple statement of truth but is 'truth' personified. It has no fetters that shackle it to anything (for it is eternally free and independent).

It is therefore beyond the scope and purview of such notions as Dukh (sorrows and miseries), Sukh (comforts and pleasures), Maya (delusory effects) and Prakriti (nature and temperaments that differ from creature to creature, because the Atma is uniform and non-changing as well as unaffected by the vagaries of various factors of creation) (5).

6. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is neither the gross body and its organs such as the mouth, the nose, the tongue, the palate, the teeth, the forehead, the inhaled breath or the exhaled breath (or Apan and Pran winds respectively) (6).

7. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is neither the gross body of the creature consisting of the sweat pores or skin, the bones, the flesh, the blood, and urine or fluid content of the physical body, nor is it some other form of body that is different from this. It is neither far away or near. In fact, it has no physical body with an abdomen and a head or crown. [Refer Canto 4, verse no. 2; Canto 5, verse nos. 90-96.] (7).

8. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not the body having a hand that does any deed or the leg that moves and goes to places.

It is neither the different laws that govern existential behaviour in this creation, nor is it any text that promulgates such laws¹.

In other words, it is not possible for anyone to find or know the supreme Authority merely by reading the various Shastras or scriptural texts.

It is also not limited to any of the various states of existences in which the creature's consciousness exists, such as Jagrat (waking), Swapna (dreaming), Sushupta (deep sleep) states of existence (8).

[Note--¹In other words, it is not possible to pass any judgment about the nature of this Atma by observing the behaviour of any individual creature. For example, by seeing a man who acts wildly we cannot say that his 'Atma' is also wild just because his external behaviour is unconventional. Actually the enlightened view is that it is the deluded mind that makes the creature act wildly, but the Atma is neutral to such activities of the body. The two should not be confused with each other.]

9. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is also not to be found in the fourth state of existence called Turiya as well as the fifth state that transcends it (i.e. the Tuiryateet state).

In fact, this supreme transcendental Being characterised by the virtues of truthful enlightenment and consciousness is to be found in all the planes of existence as it is omnipresent and all-incorporating in this creation. And it is indeed, therefore, in you as well.

It is such an esoteric, mysterious and enigmatic entity that to say that it is merely the exclusive domain of Adhyatmic study or spiritualism would be as fallacious a statement as delineating and confining it to the sphere of Adhibhautic or those things that are related to this world dominated by mortal creatures, and Adhidaivic or those that pertain to the heavenly Gods.

The Atma or Brahm is not deceitful and illusive like the delusions that have created this world. [In other words, the Atma is beyond the reach and definition of Maya.] (9).

10. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) cannot be exclusively defined by the three states of creation both at the microcosmic level as well as at the macrocosmic level. Therefore, it is not creation in any of its forms at the microcosmic level such as the Vishwa (the visible world as seen and experienced by the individual gross body of the creature which interacts with it), the Taijas (the subtle world that exists when the creature is in the dreaming state of existence), and the Pragya (the knowledge and enlightenment that exists within the causal body of the individual creature)¹.

Similarly, at the macrocosmic level of the creation, the Atma is not the Viraat (the sum total of all the gross bodies in creation), and neither is it the Sutra Atma (or Hiranyagarbha which is the sum total of all the subtle bodies in this creation) and the Ishwar (the sum total of all the causal bodies of creation).

In other words, the Atma cannot be subjected to any specific definitions or delineated by or confined to any specific areas of creation.

It does not go or move anywhere, and neither does it comes from anywhere.

It does not make any efforts because there is no reason why it should do so², and neither does it decay and come to an end (because it is eternal and imperishable)³ (10).

[Note—¹This is because the supreme transcendental Being is an ethereal Divinity having no physical body which has these three divisions. Even if it is assumed that the Atma has the unique virtue of Pragya which is awareness, knowledge and enlightenment personified, it still cannot be confined within this definitions because it is much more than simply being Pragya. For example, what good is any knowledge if

it has no practical value and applicability? To become 'Pragya', the creature need the help of the mind-intellect (called the subtle body) as well as the organs of the gross body such as the ears so that he can hear and be taught, and the eye so that he can read the scriptures and see things for himself.

²The Atma, left to its own self, does not desire anything; it is perpetually contented and fulfilled; it is eternally dispassionate and detached from all the delusions that surround it from all sides. So it does not need to do anything or make any effort in order to fulfill its aspirations and acquire success in any enterprise; it does not even need to attempt to free itself because it was never bound in the first place. Refer Canto 4.

³In other words, it is steady and everlasting, it is perpetual and eternal, neither going anywhere after the death of the body, nor coming back into this world from any outer space. It does not make any efforts, and neither does it decay and come to an end because it is eternal and imperishable.]

11. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not something that can be abandoned or accepted at will (because it uniformly and universally pervades throughout the creation in an imperceptible manner, and cannot be picked and chosen by anyone at his whim).

It is free from all corruptions, shortcomings and faults associated with this world. It is one, wholesome, immutable and an indivisible entity that cannot be fractioned or partitioned or segmented or broken up or divided into parts. It cannot be decapitated in any manner (like a sacrificial animal¹).

It is neither domineering, dense, grave, gross, fatty, corpulent, large, voluminous or heavy ('Peen'), nor is it thin, weak, fragile, skinny, slim, small, inconsequential or light ('Krish'). [Or, in other words, it is neither colossus nor minuscule; it is neither huge nor small; it is neither overbearing nor awe-inspiring, nor is it submissive, diminutive and inconsequential.]

It is not slimy, sweaty, sticky, damp or in any way showing the existence of life in the form of moisture oozing from its surface (like the terrestrial animals and humans who have a skin which sweats, or the aquatic animals like fish etc. which have a slimy and slippery body, nor even like the plants that breath moisture or ooze sap through their outer epidermis).

It cannot be described and limited by terms 'Kaal' (time, era, circumstance and death) or 'Desh' (country, place such as pilgrim centers etc.). [Refer Canto 4, verse no. 12; Canto 5, verse nos. 14, 16.] (11).

[Note--¹When an animal is sacrificed, it is decapitated because its head is usually severed from its body. Now if one were to regard Brahm as being present in that animal as well for the simple reason that nothing exists without Brahm, one would argue that this 'Brahm' (as the sacrificial animal) has been decapitated; its head severed from its body. This is far from the truth, because the body of the animal is *not* Brahm, it is its Atma that is Brahm, and Atma cannot be sacrificed or decapitated in any way because it is an ethereal Spirit!]

12. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not of any kind from which one has any sort of fear. [That is, it is not some overbearing tyrannical Emperor who is feared by his subjects.]

It is not a dual entity that can be delineated or marked categorically as a tree or a mountain. It is not to be found in Dhyan (meditation and contemplation) and Yoga (physical exercises of meditation such as various Aasans—sitting postures, Pranayam—breath control exercises, etc.). [These limbs of Yoga—e.g. Dhyan, Pranayam, Aasans etc.—are only instruments that can help the aspirant to obtain

control over his Pran (vital life giving winds present inside the body). These leads to his experiencing a sense of liberation from the limitations imposed by the grossness of the physical body, and consequentially enjoy bliss that comes with freedom and self-control. But these units of Yoga are not an end in themselves—they are not the target of doing Yoga, but only aids in its successful completion. That is, if one thinks for example that ‘Dhyan’ is tantamount to Brahm-realisation then he is of course living in a fool’s paradise.]

It is not achieved or attained either by acquiring any Siddhis (mystical and occult powers)¹. [These Siddhis are a natural accoutrement of success in Yoga, but they should not be used to gain worldly fame and honour that that would be like bartering gold for brass. Instead, a wise person should employ these mystical powers to further his prospects in the spiritual sphere and speed up his path to spiritual enlightenment by overcoming any remnants of obstacles that remain. The Yogtattva Upanishad of the Krishna Yajur Veda, in its verse nos. 76-78 clearly asserts that a wise ascetic should not allow the successful accomplishment of the Siddhis to go into his head and make him proud and arrogant. He should keep them secret and not divulge them to anyone, because the people with selfish interests would surround him seeking his intervention to help them with their worldly problems, but this would cause unnecessary obstacle in the path of the ascetic’s spiritual progress.]

It is not defined in terms of the three upper classes in which the society has been divided by ancient sages, such as Brahmins, Kshatriyas and Vaishyas. [That is, it would be wrong to say that Brahmins are respected because they represent Brahm, for Brahm is equally present or is represented by all the classes and members of the society in even proportion. No one is greater or junior in this respect.] (12).

[Note--¹The word *Siddhi* refers to various mystical and occult powers that a spiritual aspirant acquires as a result of certain ritualistic practices.

There are eight *Siddhis* which are divine mystical powers which enables the person to accomplishment astounding feats. They are the following—(i) ‘Anima’ means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) ‘Mahima’ is to have majesty, glory and fame; to be honoured and acknowledged for one’s achievements, knowledge and skills; (iii) ‘Garima’ is to have weight, stature, dignity, decorum, gravity and significance, (iv) ‘Laghima’ is to have simplicity and humility; (v) ‘Praapti’ is to be able to attain or obtain anything wished or desired; (vi) ‘Prakramya’ is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) ‘Ishwatwa’ is to be able to have lordship or sway over others; and (viii) ‘Vashitwa’ is to be able to control and subdue others.]

13. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not any creature with a physical body such as the air borne bird or the land bound animal.

It has none of the faults usually associated with the creatures of this creation, such as Lobh (greed, rapacity and yearning), Moha (delusory attractions and attachments), Mada (arrogance and haughtiness about one’s powers and abilities), Matsarya (envy, jealousy, malice), Kaam (worldly passions, lust, yearnings and desires), and Krodh (anger, indignation, wrathfulness) (13).

14. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not even restricted to such artificial classifications such as a woman, a Shudra (the fourth class in the society meant to serve the other three classes referred in verse no. 12), or even a cat (‘Vidaal’).

It is neither the one who eats nor the thing that is eaten.

It does not have any kind of dearth or lack in depth in maturity of thought, wisdom, erudition, knowledge and enlightenment.

It cannot be subjected to debates and discussions ('Vaartaa') (14).

15. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not something that can be measured by or subjected to any worldly yardsticks or criteria.

It is not something that can be proved or its truthfulness established by the use of the faculty of sight which can see it in physical terms to be convinced of its existence.

It is not clever enough like a business man, or a stupid and dull entity like a blockhead.

It is not the consumer of things like ordinary mortal creatures; it is not the one who suffers from or enjoys the things of this world.

It is not the one who eats, or the food eaten. It is not the drink drunk, or the pot in which this drink is kept (15).

16. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) has no relations of its own, nor can it be seen in any form of relationships that creatures develop in this world. That is, it is neither of the following—It is not the enemy, it is not the friend, it is not the son, it is not the mother, it is not the father¹.

The notion of birth, death, old age etc. are based on an absolutely fallacious idea that there is something real called the body (because it is the body that is subjected to birth, growing up, old age, decay and death etc., but not the Atma which is eternally uniform, unchangeable and imperishable² (16).

[Note—¹This is because all these relationships are centered around the body and not pivoted on the Atma which is the same in all these external forms that the Atma has assumed in this world. The Atma of an enemy, a friend, a father, a mother, a son etc. are all the same entity; it is only their individual bodies that are different and separate. But it must be remembered that the body is not their 'true identity', and it is merely a habitat for the Atma which is in fact their 'true self' or 'true identity'. Therefore, actually and truthfully speaking, there is no real difference between a friend and a foe; this is the considered view of the wise and enlightened man.

²In fact, the body has no real existence bereft of the Atma. The body is inane and a lifeless bundle of flesh, muscles, veins, bones and marrow, and had it not been for the Atma in this basket it would not show any of the grand signs of life that makes it so unique and miraculous in this creation.]

17. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is neither a void (i.e. it is not something that is vacant, pith-less, light weight, without any substance or gravity; something that is inconsequential and meaningless), nor something that is the opposite of it (i.e. something that is gross, dense, heavy and grave; something that is consequential and meaningful).

It is not the cause of this artificial physical world in which the creature finds itself (because this world has its origin in the imagination of the creative mind).

It is not the day or the night. It is not Brahma the creator, Hari (Vishnu) the sustainer and protector, or Shiva the concluder. [Refer Canto 5, verse no. 72.] (17).

18. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not defined by any time frames as Vaar (day of the week), Paksha (the bright and dark fortnights of the moon), Maas (month), and Samwtsar (year). All of them are ever changing; they become old and a part of history by every passing moment, but 'it' (i.e. the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is unchangeable and steady.

It is not to be found in the Brahma-Loka (the abode of Brahma the creator), or in the Vaikunth (the abode of Vishnu the sustainer) and on the mountainous abode of Kailash (the abode of Shiva the concluder). For that matter, it is not to be found in any other specific place (for the simple reason that it is omnipresent, all-pervading, all-encompassing, and all-permeating, and hence not limited to one or the other place but present equally, in equal intensity and measure everywhere in this creation, here as well as there) (18).

19. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is similarly (like stated in verse no. 18) not limited to be dwelling in Swarga, the heavens, or in the abode of Indra, the king of Gods, called Indra Loka. It is not exclusively located in the Agni Loka, the abode of the Fire God, as the almighty Fire God himself.

It does not reside in the Yam Loka, the abode of Yam, the God of death, as Yam himself. Nor is it to be found in the abode where the Lokpals, the custodians of this world, live, in the form of these Lokpals themselves (19).

20. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not to be found in the terrestrial world known as Bhu, or in the sky known as Bhuvaha, or the heavens known as Swarga, or in the nether world known as Patal, or on the surface of the earth as plants and animals or under the surface in its aquatic life.

It does not come under the purview and definition of such concepts as Vidya (knowledge and skills) or Avidya (the opposite of Vidya; ignorance and lack of knowledge), or of Maya (delusory effects) and Prakriti (Nature) consisting of both the animate as well as the inanimate creation (20).

21. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not to be defined as something which is both stable and permanent, remaining for ever in one form or state, or something that is momentary and transient, something that comes to ruin and ends one day.

It is not something that never moves, or something that always remains on the move.

It cannot be known by and be the subject matter of Dhyan (deep contemplation and pondering, meditation and focus of attention and mind), because it cannot be accessed by it and brought under its ambit. Therefore, no Mantras, which are mystical formulae and words used in religious practices especially for the purpose of meditation and doing Japa (repetition of Mantras), can ever confine 'it' (Brahm in the form of the Atma) within their restricted sphere of meaning and influence. They cannot comprehensively define and delineate 'it' and say conclusively that 'this is what *it* is' or 'this is *it*' (21).

22. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not to be found in any material thing that is worshipped as a symbol of

Divinity and Supreme Being (such as idols, portraits, books and other symbols), and neither 'it' is to be found in any of the things used for such worship.

Therefore, it (i.e. the supreme transcendental Being known as the Brahm in the form of the Atma) is not accessed by Pooja (ritualistic worship), or by Abhishek (ritualistic bathing of idols by some consecrated water or other liquid such as milk etc.), or by Archanaa (offering of flowers, garlands etc. as a mark of showing respect and adoration for the chosen deity to which ceremonial worship is being done), and any other method of showing respect or honour such as offering flowers, fruits, leaves of holy plants (such as Tulsi—Basil leaves etc.), fragrances, incense and any other thing used during formal ritualistic forms of physical worship (22).

[Note—In short, the supreme transcendental Authority cannot be pleased or accessed by such ritualistic forms of worship. They are not needed to honour and show respect to the Supreme Being. They are perfunctory and artificial in nature. Similar ideas have been expressed by St. Mark in his Gospel in the Holy Bible, 7/2-16.]

23. Similarly, it (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not honoured by chanting or singing any Stotras (devotional hymns), or by Namaskar (bowing humbly with palms joined together as a gesture of submission and humility), or by Pradakshina (circumambulation) of the altar where the deity is kept, or by Prarthanaa (offering of prayers)¹, or by prostrating flat on the ground in front of the deity, or by offering things to the fire during the ritual of fire sacrifice, or by any other method of adoring and praising the deity (23).

24. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is also not worshipped and honoured by doing Hom (fire sacrifices)¹. It is not found by doing good deeds either².

It cannot be described or defined by good speech using appropriate words, and neither can poor description or use of improper words ever tarnish its exalted and divine nature*.

*[This stanza can be read as follows also—'It is not insulted or derided by the use of insulting and derogatory words, and neither is it praised by adulatory words used to sing its laurels'.]

It cannot be accessed or known by merely repeating the Gayatri Mantra three times a day when two time zones meet each other, such as at dawn (when the night meets the day), noon (when the morning meets the afternoon hours) and dusk (when the day and night meet).

It remains calm, tranquil, unruffled, steady and unwavering inspite of the conflicting states in which the mind of the creature sometimes finds itself. [These conflicting states of the mind arise due to so many worldly confusions and diversities which create perplexity and confoundedness for the creature, but in the midst of all this turmoil the Atma does not lose its poise and composure.] (24).

[Note—¹Verse nos. 21-24 should be interpreted correctly and in the correct perspective. Their intention is not to deride the practice of formal worship, but to highlight that one must understand the meaning behind what is intended by such worship. Merely a formality of doing a mechanical form of ritualistic worship by hiring professional priests is like asking someone else to eat some sweet on one's own behalf. Will the man who has paid for the sweets taste the succulent sweet-dish if it is eaten by some proxy on his behalf? The same thing applies to Brahm-realisation, and more so because it is not such easy as eating sweets by paying for it.

The formal forms of worships are done by the physical body of the worshipper, and the object of worship is usually also an idol having a fixed form and shape. Both

are contrary to what is said about the real identity of the worshipper or the Divinity that he worships. In the former case, it is not the body but the Atma which is the real identity of the worshipper, and in the latter case it is the Supreme Being known as Brahm who is being worshipped, and this Brahm has no form and shape and neither is it something as gross as a stone idol. Besides this, the Atma is a manifestation of this Brahm, so how can the Atma (the worshipper) worship its own self (in the form of the deity made of some gross material thing which is worshipped in lieu of Brahm)?

The problem with idol worship is that the idol is not treated as an 'image', 'symbol' or 'representative' of the deity or Godhead being honoured or worshipped, but as the deity or Godhead *himself*. Ignorant devotees are misled to have this belief because vested interests wish to keep this myth alive for their own financial gains. This is because the offerings made to this idol are misappropriated by them in the name of Godhead. The Lord is the giver of all things to the entire world, and he lacks nothing, so it is nonsense to give him money, gold and other material assets. The Lord is self-contented and self-sufficient; he is the treasury of everything. What the Lord actually needs is the devotee's soul and love—but this fact is never divulged to the innocent devotee because if it is made known to them the petty vested interests would lose their firm grip on the humble devotee's purse strings!

A wise and enlightened person should realise that the Lord whom he is searching in idols, shrines, pilgrim places etc. is comfortably ensconced in his own heart, in his own bosom, in his own inner self as his Atma. The Lord is so near to him that no one needs to search the Lord outside anywhere—this is the profound message of the Upanishads. But rarely anyone pays heed to it. The Upanishads are unequivocal in their prohibition of idol worship and go on to emphasise that this is counter-productive for their spiritual welfare.

This prohibition of worship of idols made of material things such as wood, stone, metals etc. or symbol worship, or for that matter any kind of external worship is expressly mentioned in the following Upanishads of the Sam Veda tradition—Maitreyu-panishad, Canto 2, verse no. 21, 26; Jabal Darshan Upanishad, Canto 4, verse nos. 50-59; and Sanyaso-panishad, Canto 2, verse no. 74-75, 97. The Advaitar Upanishad of Shukla Yajur Veda, in its verse nos. 5, 10, 13, stresses that real Mukti or spiritual liberation is obtained when the aspirant turns inwards and searches eternal peace and bliss inside his own self rather somewhere outside. Similar ideas have been expressed in the Holy Bible, Gospel of St. Matthew, 23/3-28; St. Mark, 7/2-13, 15; Acts, 17/22-29, 19/26; 1 Corinthians, 12/1-2, 10/14, 28. Refer also to the Holy Koran, xxvi/70-82; xxix/16-17.

²By the same count, the deeds which are done by the body cannot be of any value for the Atma or its 'self-realisation', because the Atma does no deeds as it is the ethereal Spirit and not the gross entity like the physical body of the creature.]

25. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not to be confused with the physical bodies of creatures having bad intentions or evil hopes, who are evil, sadistic, pervert, deceitful and rascals, who are lowly and known by the names of Chandals (low caste people who are ostracized by the society and live outside from villages, making their living by performing last rites of dead people) and Paulkas (demonic and evil mongers).

It (the supreme transcendental Brahm) is also not such lowly people as Kirat (a tribal people who hunt) and Ketav (a demon; referring to people with demonic tendency). Such people are difficult to cope with, and have a natural affinity to evil and harsh talk (25).

[Note—This is because here the external body of these people is being referred to and not their Atma which is their pure conscious soul. This soul is immaculate and

untainted by the physical body and its features and characters. Refer Canto 6, verse nos. 17-20.]

26. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) does not take sides with anyone or is more marked in one alternative than the other. It is equal in both the instances, and is an undivided uniformity that prevails in both the sides and alternatives in equal measure. It does not take a partisan view of anything.

It is not some material wealth in the form of gems or other forms of jewels that can be stolen by robbers.

It is not a deceitful person or the deceit that he indulges in.

It is neither present in excess nor is short in any person (obviously because the pure conscious Atma known as the soul cannot be fractioned into a small or big portion)¹ (26).

[Note—¹The meaning of this stanza is that no one can be called ‘small’ or ‘big’ because of the fact that the Atma is the same in all living beings. The notion of one living creature being ‘big’ (powerful, wealthy, resourceful, influential, huge in size, honourable, renowned, having fame and good name, etc.), and the other being ‘small’ (having characters that are opposite to the one who is defined as ‘big’) is a man-made classification, and has nothing to do with the actual measure of the importance or status of the Atma which is beyond reproach and classifications of any kind. No one can be classified as a king or a pauper in terms of their real identity as the Atma.]

27. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not confined to being one, or two or three etc. [It cannot be quantified and measured in numbers or delineated by volumes, physical counts and various definable qualities, quantities and attributes.]

It is neither restricted to the state of existence called Turiya nor to the state higher than it called the state of Mahattva (literally importance and significance). It is similarly not describable by saying simply that it is grand or great, or the opposite of it such as being insignificant and of no importance.

It is neither complete and unbreakable, nor fractioned and divided into parts.

It is not restricted to such so-called holy pilgrim sites as Kashi (Varanasi), or accessible only by keeping fasts and stern religious vows, or doing Tapa (austerity and penance) (27).

28. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) has no family lineage, no heritage, no class, no clan, no race (Gotra and Kul), and no source from which its origin can be traced (Sutra).

It is not void like the space of the fathomless sky or valueless like the numeral zero (Shunya), nor is it most grand, almighty, overbearing and powerful as to dominate the entire creation with its authority (Vibhu)¹.

It is not only in the form of a woman, a maid, an old lady or the virgin girl (Kanyaa).

Getting embroiled in such useless and endless retrogressive arguments (as to what or where is Brahm and what or where it is not) is getting bogged down in worthless controversies, and it is like the stringed musical instrument of which the string has been broken (Vitantu)² (28).

[Note—¹Brahm in the form of the pure Atma is neutral in its self like the *zero*, but lends other entities their value. Similarly, it is not a tyrannical emperor who instills fear of death in his subjects, but is the king and supreme ruler of the entire creation

who prefers to remain docile, compassionate, accommodating and quiet while exercising his control over the world as its ultimate Lord and Authority. So inspite of his being *Vibho*, he does not appear to be so as he is present even amongst the humblest and the meekest.

²This is a very significant observation. It emphasises the point that one should not enter into endless arguments about what constitutes Divinity and Brahm by quoting scriptures, because each quote would find another which counters it. This intellectual exercise is like mental gymnastic and sounds hollow for those who are sincerely interested in realising their true self and their divine heritage. Such people should not enter into such futile and pith-less debates as whether or not Brahm is to be found in a woman or a girl, and old lady or a maid. Brahm cannot be understood by arguments and counter-arguments. One should endeavour to move ahead instead of remaining stuck in olden retrogressive ways and thoughts that had dominated his mind and intellect before wisdom and enlightenment dawned on the person by studying the Upanishad and other eclectic scriptures.]

29. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not touched or tainted by such concepts as ‘Sutak’ that accompanies ‘Jaatak’ (defilements or impurities which a Hindu considers to be caused from the birth of a son or death in the family). It does not take any birth and therefore there is no question of it having any ‘Jaatak’ (birth). [Refer Canto 6, verse no. 63.]

It is not to be found exclusively by turning inwards in self-contemplation and meditating upon the self as the fountainhead of Divinity.

Let there be no doubt, no confusion, no error of conception and perception, and no deception about the supreme transcendental Divinity known as Brahm. Let there be no apprehensions and anxiety about Brahm.

It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is not restricted to the great saying of the scriptures known as the ‘Maha Vakya’¹, nor is it characterised and defined by any of the great mystical powers such as Anima² etc. that someone who is powerful and mighty in creation possesses (29).

[Note—¹The great Maha Vakyas are described in Shuk Rahasya Upanishad.

²There are eight mystical powers known as Siddhis. For details refer note to verse no. 12 of this Canto.]

[Now, after using the negation process of ‘not this not that’, this Upanishad goes on to say what indeed is Brahm! This Canto is very scientifically devised. The negation process of elimination by saying ‘Neti-Neti’—or ‘not this; not this’, ‘neither this nor that’—empties the mind of the spiritual aspirant of all preconceived ideas and notions. It helps to cleanse it and purge all sorts of doubts about Brahm and Atma because it tells him that whatever he had previously thought Brahm and Atma *is*, is *not* the truth. So, he now becomes ready to accept what is being taught afresh. Only an empty box can accommodate any thing, so this emptying was practical and necessary. This purging and elimination is symbolically equivalent to the ‘Rechak’ phase of Pranayam (breath control exercise of Yoga) whereby the old and impurity-laden wind is exhaled out of the body. The imbibing of new knowledge of Brahm and the Atma is like the ‘Purak’ phase of Pranayam wherein fresh air is breathed in. The reverse order would have not helped because the mind was already pre-conditioned that Brahm and Atma are this and that as enumerated in verse nos. 1-29 of this Canto. Now that the mind is empty, it can accept and imbibe fresh ideas of Brahm and the Atma as laid down in verse nos. 30-106. This knowledge fills him and is soaked by his inner self as the vital energy of the fresh air is done during the ‘Kumbhak’ phase of Pranayam

wherein the oxygen-rich air is given sufficient time to get absorbed in the tissues and blood and oxidize, re-energize and revitalize the organs and cells of the body. This leads the aspirant to exclaim that he is indeed Brahm personified as done in verse no. 107.

The negation process was to put to rest the restless mind and fill it with positive and certain ideas of what Brahm indeed *is* by discarding the ideas of what Brahm *is not*. This positive approach of ‘auto-suggestion’ has a great psychological effect on the aspirant, and it helps him to overcome depression and low spirits. When one thinks that he is great and can do anything, he is easily able to overcome worldly blues and failures in life; he develops fresh hopes and is spurred on with new vigour and energy. So, inspite of being surrounded by worldly miseries and grief, he never loses hopes of salvation and emancipation; inspite of being surrounded by pain and sorrow, he always remains happy and cheerful. Refer Canto 3, verse nos. 60-74.]

30. It (the supreme transcendental cosmic Consciousness known as Brahm in the form of the Atma) is eternally in the form ‘Chaitanya’, i.e. one that is pure consciousness and enlightenment personified. Therefore it has no taints, faults and shortcomings associated with this mortal world. [Refer Canto 6, verse no. 43.]

Everything in this creation which has any truthfulness and worth is in the form of the Atma that is immaculate and pristine pure as well as all-pervading and all-encompassing in the world. It (Atma) is nothing but ‘Chidaanand’, i.e. an eternal and infinite fount of beatitude and felicity, of ecstasy and exhilaration, of pure consciousness and enlightenment. [Refer Canto 6, verse nos. 1-2.] (30).

31. Indeed, everything is Brahm. There is nothing that is not Brahm, i.e. everything is Brahm. Indeed, I (the Atma) am that Brahm too. I am Sanaatan, i.e. I am eternal, perpetual, infinite, everlasting, primary, primeval, most ancient, traditional and universal. [Refer Canto 6, verse no. 66.] (31).

32. I am a personification of Brahm¹—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I am not an ordinary mortal worldly creature.

I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I am not simply the Mana (the subjective mind and the emotional heart)² as I am not limited by its meaning and scope (32).

[Note—¹This concept *I am Brahm* as proclaimed in verse nos. 32-72 of this Canto 6 has appeared repeatedly in this Upanishad, e.g. Canto 3, verse no. 8-51, 61-74. This statement ‘I am Brahm’ is one of the Maha Vakyas or great sayings of the Vedas. Refer Shuk Rahasya Upanishad, verse no. 2/22.

²The concept of *Mana* has been elaborately explained in Canto 5, verse no. 89-105 of this Upanishad.]

33. I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I am not the gross body.

I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I am not something gross

enough to be seen or observed by the organ of the eye and perceived by the sense of sight.

I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I am not the ordinary mortal creature (who has a gross body and who does so many deeds with it in this world as a result of which accumulates so many reactions that become the cause of its taking birth again, and consequentially undergoing all the horrors of the previous life in a modified form).

I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore there is no distinction between my various forms in which the cosmic consciousness has revealed itself in this world (33).

[Note—Refer the Holy Bible, 1 Corinthians, 12/3-26.]

34. I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I am not gross and lifeless.

I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I do not die or come to an end at any stage.

I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I am not the entity called Pran (the vital wind force that sustains life in all living creatures; the vital wind is one of the five principal elements in creation—I am not restricted to this meaning).

I am a personification of Brahm—the Supreme Being, the supreme transcendental eternal and all-pervading cosmic Consciousness manifested as the pure conscious Atma which is my true self—and therefore I am 'Paraatpar', i.e. I cannot be exclusively called some entity that is only supreme and transcendental because I go much beyond such simple definitions and parameters; I cannot be restricted by attributes and qualities; I cannot be quantified and qualified¹ (34).

[Note—¹The word *Paraatpar* refers to some entity that is supreme and transcendental and beyond reach. Here the self-realised spiritual aspirant who has understood the real meaning of the word Brahm and Atma concludes that this Brahm is not to be thought of as some high God who is beyond the reach of an ordinary man because he remains ensconced in some high citadel inside some celestial palace in the heavens. This is because this Brahm has revealed himself in even the humblest of creature in this creation; it is equally present as the Atma of even the wild animals of the forest as much as he is in the form of the soul of the wise sage who lives in the same forest to do meditation. Since an entity that is supreme cannot be humble, Brahm should not be given any title whatsoever. This is also the reason why ancient self-realised and Brahm-realised sages, seers, hermits and ascetics could live fearlessly and alone in dense forests, mountain caves etc. which were infested with wild animals. They had no fear from them and neither did these animals fear them.]

35. This is Brahm, here is Brahm. That is Brahm, there is Brahm. Truth is Brahm, the Supreme Being is Brahm.

Kaal (the three planes of time such as the past, the present and the future; the different eras till the conclusion of creation; circumstances that keep on changing) is Brahm, and so are the changing faces of Kaal, called Kalaa. [Refer Canto 6, verse no. 63.]

Brahm is manifested in all types of notions that come under the ambit of the word Sukh, i.e. happiness and joy, comforts and pleasures, as well as Brahm is all those things that are the cause of Sukh because Brahm is beatitude and felicity personified.

Brahm is self-illuminated and self-radiant (like the celestial Sun and the burning fire) (35).

36. Brahm is one (non-dual) as well as two (dual). [It depends upon how one perceives the existence of Brahm, but there is no denying of the fact that Brahm is indeed there, whether as 'one' or as 'two'.]

Moha (worldly attachments and infatuations towards its charms) is also due to the presence of Brahm¹.

Similarly, such virtues as Sham (self control of sense organs) which are opposites of Moha are also Brahm. [This is because nothing that exists is anything but Brahm; or everything that exists is Brahm.]

Therefore, all the imaginable Gunas (good virtues, attributes and qualities) as well as the Doshas (bad qualities, faults, taints, shortcomings and blemishes) are manifestation of one or the other qualities of Brahm².

Brahm is characterised by the virtues of Dam (tolerance, fortitude, forbearance) and Shaant (peaceful, calm, tranquil and quietude).

Brahm is the supreme transcendental Lord of creation, the Supreme Being known as Vibho (one who is omniscient, omnipresent, all-pervading, magnanimous, eternal, almighty, omnipotent, majestic and powerful Lord of all), and Prabhu (the Lord and Master of all that exists) (36).

[Note—¹Though this observation seems most preposterous and incredulous on the face of it, but on close examination we find it to be true. If everything is Brahm, then the person who gets deluded is also Brahm as is the thing that is attractive enough to draw his attention and become an object of his adoration. Beauty is divine, and anything can be called truly beautiful if it has an element of divine consciousness in it, sufficient enough to charm the Atma and attract it towards itself. It is indeed Brahm's face. Therefore, it is not the fault of the observer who falls in love with this beautiful world full of fascination and mystic. The only precaution that should be taken by the Atma is highlighted in the word 'Moha' itself—that is, one must be wary of falling into the trap of attachments to and indulgences in the material charms of the world because they are basically deluding and illusive by nature, lasting only for a short time, because like the world they too are perishable and transient. Anything that is not permanent is not pursued by a wise man because the comfort and pleasure it gives is temporary and has no pith and depth in it; it is not sustainable. But a wise man need not run away from the world for 'true enlightenment' envisions that one is able to remain completely detached from everything even while being surrounded by opulence and grandeur. This is the correct attitude of a spiritually realised person. Refer Canto 4, verse no. 19.

²This creation is not a one-sided picture; the other side also exists. Like coin to be of any value, there must be the other side of it. The two qualities of 'good' and 'bad' act as counter-balancing force of sorts in Nature. They are like the two opposing poles of the magnet which must be present in any piece of lodestone to give it its unique properties which are identified and classified as magnetism. Otherwise that piece of rock material extracted from the bowls of earth as lodestone would be

anything else but a magnet. Likewise, if the creation is to exhibit its unique mysterious qualities and characters, it must have the presence of the two opposing factors of creation—viz. the good and the bad.

After all, too much of sweet is as much unpalatable as too much of salty food, no matter how delicious they might individually be. A judicious combination of the two is what makes one enjoy both the dishes as a satisfying meal. Taken from another angle, the succulence of the sweet dish is enhanced by the presence of the tangy and salty snack. Similarly, the presence of Gunas or good qualities is made more prominent and conspicuous when they are contrasted against the various Doshas in creation.

While we are at the instance of the 'coin', we must realise that a wise man is he who is able to differentiate between what is worth and what is not. Jesus Christ has cited this very instance of the coin to bring home this eclectic spiritual point in the Holy Bible, St. Matthew, 22/19-22 when he says—"Shew me the tribute money. And they brought unto him a penny. And he saith unto them, Whose is this image and superscription? They say unto him, Caesar's. Then saith he unto them, Render therefore unto Caesar the things which are Caesar's; and unto God the things that are God's. When they had heard these words, they marveled, and left him, and went their way."]

37. This visible world is Brahm personified and so are the Guru (the moral preceptor, guide and teacher) and his Shishya (disciple and student). [Refer Canto 3, verse no. 31.]

Indeed, Brahm has manifested himself as 'Sadaa Shiv'—the eternal, truthful and auspicious Lord of creation*. [Refer Canto 3, verse no. 51; Canto 6, verse no. 64.]

[*This stanza can be read as follows also—Brahm is also known as Sadaa Shiv because he possesses such eclectic and divine virtues as being eternal, truthful and auspicious.]

Brahm was present even prior to this creation coming into being as he is eternal and infinite. Therefore, the divine entity known as Brahm is supreme as it transcends everything in existence, outliving and outlasting it, as well as preceding it.

Brahm is absolutely pure and immaculate, untainted and uncorrupted. It is most auspicious, holy and divine (37).

38. All the living beings in this creation are as much a manifestation of the truthful and blissful Brahm as I am. This is a universal and eternal reality and truth which cannot be refuted.

Verily, everything is Brahm (revealed in that form). In fact, the entire world is a manifestation of Brahm; it is a revelation of the magnificent and fantastic attributes and virtues of Brahm (38).

39. I am myself Brahm personified. There is nothing in existence that is not Brahm. There is no iota of doubt about it.

This pure and immaculate Atma is present in everything in this world that is worthwhile. It is universally and uniformly present everywhere. It is non-dual and entirely pure consciousness that is self enlightened and illuminated (39).

40. Everything is nothing but the Atma which possesses eclectic and divine virtues such as being Nitya (eternal and perpetual) and Nirmal (immaculate, pristine pure and clean, uncorrupt and untainted). It is the Atma that is also present in me, and nothing other than it.

Whatever is seen in this world here is the Atma though it is so microscopic in nature that it cannot be physically verified in tangible form (40).

41. Everything in this world that has a body has the Atma imperceptibly present in it as its atomic ingredient¹. This is the basic truth which is irrefutable and as fundamental to the existence of the world as the presence of the Atom in everything in this world.

So the essential element or fundamental ingredient that should be researched and meditated upon by spiritual aspirants is the Atma (just like a chemistry student looks for the atomic make up of any chemical compound). That which has no atomic Atma² in it is not worthy of any contemplation and deep research (41).

[Note—¹This is a very scientifically sustainable statement. Science has shown that everything that exists consists of atoms and their combination called the molecules. We see the external feature of any substance, say iron or gold or water and firewood, but we can't see their atoms. The fact that these things have a verifiable and visible existence proves that the atom is invariably present in all of them. The same atom has revealed its presence as different things because of the different ways it combines to form molecules that shape the structure of the visible thing. Similarly, the same Atma is present in all the creatures in this world as well as in the plants and other inanimate things, but it is the way it has revealed itself that decides the form and characteristic features of the individual entities in creation.

²This concept of the Atma being like the atom has been elaborately explained in note to verse no. 38 of Canto 4 of this Upanishad.]

42. Brahm is everything and there is nothing that goes beyond its purview. Brahm is eternally and infinitely nothing but 'Chinmaya', i.e. it is the pure conscious ethereal Spirit that is self enlightened, wise and almighty. [Refer Canto 2, verse nos. 24-43.]

This world existing in three forms, known as the 'Triloki' (the terrestrial world, the celestial world, and the nether world) is nothing but Brahm personified.

Brahm is Anand (beatitude and felicity, happiness, joys, pleasures and comforts) personified. In fact, it is more than simple Anand, it is an embodiment of a supreme category of Anand. It is nothing but Anand. [Refer Canto 6, verse nos. 59, 65, 68.] (42).

43. Brahm is nothing but 'Chaitanya' (pure consciousness), and as such it is also 'me or I' (i.e. the spiritual aspirant who has become self-realised and treats his 'self' as the conscious Atma which is this cosmic Spirit residing in his gross body). This Brahm has been visualised to have the name of 'Omkar' (symbolised by the word OM), the ethereal cosmic sound that envelops the entire cosmos which is soaked in its energy. [This all-inclusive and all-incorporating Brahm is the ethereal cosmic Spirit called by the name of Omkar.]

Brahm being all-pervading and all-encompassing in this world, Brahm being the cosmic consciousness that pulsates throughout this creation, and Brahm being revealed as this Atma, it is indeed an irrefutable and unequivocal fact that I too am Brahm personified. Not only that, this entire world is also my manifestation (refer verse no. 45)¹.

Indeed, this realisation has made it possible for me to achieve that stature of existence which is called 'Param Pad', the state of highest self and Brahm realisation². [Refer Canto 6, verse no. 67.] (43).

[Note—¹This is a logical conclusion of what has been said here. First, the entire world has its value and worth because of it having consciousness in it, for who would

like to deal with a lifeless and inane creature which has no conscious factor in its body. This 'consciousness' is universal and uniform, and it exists in the form of the Atma that lives in the body of all living beings just like the atom which is at the core of all existing things in this world. These things have uncountable external features and characteristic qualities, but fundamentally they are manifestations of the numerous magical properties of this atom. Likewise, the same entity known as the Atma lives in all the creatures in this creation without exception, including the person who is making this declaration as mentioned in this verse. Therefore, it is indeed true when it is proclaimed that 'I am the world; this entire world is my manifestation'. Here the word 'my' comes out of the mouth of a wise, enlightened, self-realised and Brahm-realised person, and not from a deceitful imposter and cunning fraudster who is proud of himself that he has conquered the world and it therefore belongs to him; it is his.

²This *Param Pad* is the ultimate citadel of spiritual achievement that any aspirant strives for. This is the culmination of his spiritual quest and the end of his spiritual journey. Briefly, when he has reached this state of existence, he is deemed to have removed and eliminated all distinctions and artificial demarcations that are supposed to exist for an ordinary creature between the 'self' and the supreme Brahm. He has merged his Atma, which is his pure and truthful 'self', with the cosmic Truth known as Brahm. He has realised that 'consciousness' and 'truth' are always and indisputably 'one' and non-dual, and therefore there cannot be any distinction between himself and Brahm. Since the entire existence has its origin in this Brahm, and since his own 'self' is Brahm personified, it follows that there is no distinction between his own self and the rest of the creatures in this creation. This mystical, eclectic and divine realisation of the ultimate and paramount spiritual truth of existence removes all causes of consternations, perplexities and vexations in him that confound all the creatures in this world. Such an enlightened and truly realised person becomes calm, quiet, peaceful, tranquil and serene, for he has found the elixir of eternal beatitude and felicity which leaves nothing more to be sought. That is, he has reached the citadel of spiritual realisation which makes him liberated and delivered from the fetters of ignorance-based delusions that shackle all his other brethren to this world of artificiality and perpetual restlessness. All creatures strive to reach some 'Pad' or acquire some good designation, stature, honour, fame and name for themselves, and this 'Param Pad' is the highest of any designations, statures and honours that is attainable by a creature because it provides him with eternal happiness and peace.

Seen from a different angle, the 'Param Pad' is a stature in which a creature reaches the supreme Lord and merges his own individual Atma with the Atma of the Supreme Being. The word 'Param' means the most exalted, supreme, greatest and the ultimate, while 'Pad' means feet, state, stature, honour, title etc. That is, the creature is honoured with the highest title obtainable in this creation in the form of salvation and emancipation of his soul. It also refers to achieving the goal of being near to his Lord. Param Pad is equivalent to spiritual utopia. It is the most exalted state of 'self-realisation' when nothing more is left to be attained or realised.

This destination is the supreme state which a spiritual aspirant aspires to achieve. It is not any physical place known as 'heaven' as such, but it is a symbolic destination whereby the soul of the individual creature reaches the citadel of spiritualism where the soul becomes one with its primary source, the supreme cosmic Soul, by merging with it. This is its final destination, and is called emancipation and salvation. This is called the 'Kaivalya Mukti'—the liberation and deliverance which is one of its only kind as it is absolute and final emancipation and salvation for the aspirant's soul. There is no falling back or retrogression from this exalted stature.

The devotee reaches the destination which he aspires for. For example, devotees of Vishnu find an abode where that Lord resides, and that abode is called Vaikunth. Those who worship Viraat Purush as a manifestation of the supreme Brahm reach

Brahma Loka. But this abode is a symbolic heaven, for the worshippers of Brahm there is no return to this mundane world as they would have merged their souls with the cosmic Soul known as Brahm. For ascetics this would mean their Pran has emerged from the limiting parameters of the physical gross body to merge with the air or wind element present outside the body and the latter disintegrating into its constituent elements such as the earth, water, fire or energy and sky, leaving no trace of its earlier form.]

44. I (as the pure conscious Atma) am that supreme transcendental Brahm which is beyond the purview and definition of the various Gunas (qualities, virtues and attributes) in creation. I am that Brahm which is supreme and transcendental Divinity¹.

I (as the pure conscious Atma) am that supreme transcendental Brahm; I am the best Guru (moral preceptor and teacher)². [Refer Canto 6, verse no. 51.] (44).

[Note--¹That is, *Brahm* has no definable qualities and it has no attributes. It cannot be restricted to certain definitions and ascertained by certain attributes. It is not measurable and quantifiable in any manner. It cannot be judged by and weighed against some precedent and neither can it be debunked as inconsequential in the absence of any criterion. For, if that happens, Brahm would cease to be called 'supreme and transcendental Divinity'.

²The word *Guru* has two parts—viz. 'Gu' meaning darkness, and 'Ru' meaning light. Hence the combined word indicates a person who can remove the darkness of ignorance of his follower by showing him the light of knowledge; he is the person who is both the moral preceptor as well as the spiritual guide of his disciple. He is supposed to act as a neutral advisor to his ward in all matters temporal and spiritual; the disciple is expected to confide in him his greatest of secrets without the fear of betrayal. He is the one who is expected to have risen above self vested interests and keeps the welfare of the disciple as his main objective. He is the one who has transcended the mundane and has acquired sublime awareness of the supreme Reality, because only those who are themselves aware of anything can hope to tell others about it.

A true Guru is treated as being equivalent to the 'Trinity Gods'—(1) Brahma, the creator, because he creates or helps to take birth good virtues and noble qualities in his disciple; (2) Vishnu, the sustainer, because he nourishes, sustains and helps to inculcate and develop wisdom and enlightenment in his disciple and leads him on the truthful path; and (3) Shiva, the concluder, because he helps to end, conclude and eliminate ignorance and negative traits in his disciple. He is 'God like' because he functions in all these capacities at the same time, besides being exalted in all knowledge, being virtuous, of high moral character and beyond reproach, being a source of unbound spiritual energy, being self realised and enlightened, and being eternal in the sense that what he advises to his disciple, the path he shows, the light that he lights in the dark heart of the creature, makes him immortal. Therefore, a Guru is honoured for the divine virtues that he represents and embodies, that he teaches and implements in his life, for the divinity, for the Lord and for the personification of the great teachings of the scriptures that he exemplifies. It is not his physical body that is of any value for veneration, for the soul and not the body is venerable.

The *Advai Tarak Upanishad*, verse no. 14-18 of the Shukla Yajur Veda tradition elaborately describes the virtues that a true Guru should possess. These verses are being quoted here for ready reference—

There is a minor Upanishad called *Dwayo-panishad* which describes the chief characteristics of a true Guru. It has only seven Mantras. This Upanishad is being cited here verse by verse to clearly highlight the main features of a Guru:---

'(a) Verse nos.1-2= A person is called a Guru if he is endowed with enlightenment and wisdom making him well versed and skilled in the Vedas, both in their literal

knowledge as well as in the profound wisdom and the ethereal and eclectic metaphysical and spiritual philosophy they contain, who is an ardent devotee and sincere follower of Lord Vishnu, who is free from such negative traits as jealousy, envy and malice, who is well versed and skilled in the various holy and divine Mantras, their usage, their ethereal importance and spiritual significance as well as all other matters related with them, who is sincerity devoted to those Mantras and has firm belief, conviction and faith in them, who seeks the shelter and refuge of those Mantras, who is pure and immaculate, uncorrupt and unpolluted in any form, who is devoted and dedicated to his own Guru, and who is well versed and skilled not only in all the Purans but all other scriptures as well.

(b) Verse no.3= A person is called a Guru who has a comprehensive and holistic knowledge and understanding of all the scriptures, and who not only preaches righteousness, probity and propriety as well as nobility of thoughts and actions but also lives them and implements them in their letter and spirit in his personal life.

(c) Verse no. 4= The letter 'Gu' means darkness, while the letter 'Ru' means that which remove that darkness. Hence, Guru is one who removes the darkness representing ignorance and delusions that are so typically associated with this deluding world.

(d) Verse no.5= A true Guru is equivalent to the supreme and transcendental Brahm; he is the ultimate destination for a seeker; he is a fount of the supreme knowledge and the source of the best of such knowledge; he is deemed to be the best and the greatest asset for a man.

(e) Verse no.6= A Guru is the best thing a wise seeker seeks and searches for, he is the best and the supreme place for seeking refuge and shelter with, and he being a dispenser of the profoundest of wisdom and knowledge is deemed to be a person who is the most important, who has the highest standards of greatness and magnificence, who is most dignified and meritorious, who is most weighty and significant, and who is most distinct and outstanding in all aspects.

(f) Verse no.7= Pronouncing the word 'Guru' even once enables the aspirant to access liberation and deliverance from this entrapping and deluding world. All his efforts are deemed to have been successful by simply saying this powerful word sincerely. Such a man does never come back (enters the cycle of birth and death) in this world again—verily, this is the truth. Those who understand this fact correctly get the desired fruit.'

In the present context, the spiritually enlightened person who is asserting that he is his own Guru is not being haughty and arrogant or egoist, because of the simple fact that he is 'enlightened and wise and self-realised'. Such negative notions of arrogance, haughtiness or self pride are not expected from such a man. What actually he means is the fact that he has achieved the main objective for which one approaches and makes a Guru in the first place, i.e. he has realised the truth about Brahm and his own Atma. He needs no further discourses and guidance. No one can show him this truth better than his own self because self realisation, self witnessing and experiencing something first hand is more convincing and authoritatively ascertained than merely hearing about it from someone else.

Refer also Shukla Yajur Veda's Advai Tarak Upanishad, verse no. 14-18; Shatyayani Upanishad, verse no. 39; Krishna Yajur Veda's Yogshikha Upanishad, Canto 5, verse nos. 56-59; Shuk Rahasya Upanishad, verse no. 21.]

45. I (as the pure consciousness) am the support and foundation of all that exists (because anything that is not conscious has no worth in this world).

I (as the pure conscious Atma) am an embodiment of immense Sukh (pleasures, comforts and happiness). [This is because I lack nothing and yearn for nothing as I am wholesome and fulfilled. As such, there is no reason for me getting

restless and feeling deprived of anything due to which I might feel unhappy and miserable.]

The entire infinite and wide world is my form or manifestation (because Brahm has revealed itself as this world, and this Brahm and my Atma are the same pure conscious entity—refer verse no. 43). There is nothing in this wide and vast world which is not my Atma.

Similarly, this Atma of mine is a fountainhead of infinite and measureless Sukh; it is Sukh unbound. [Refer Canto 6, verse no. 48.] (45).

46. There is no destination for a spiritual aspirant other than the realisation of the truth of the pure conscious Atma (refer verse no.43 which calls this as the Param Pad). In fact, the world is an image of this conscious factor known as the Atma (for the simple fact that it ‘lives’ and ‘consciously’ suffers from or enjoys the things present in it).

This Atma is present even in the inconsequential and humble blade of grass or weed. In other words, the blade of grass or stalk of weed are nothing but a form of the Atma (because all that lives in this world has this Atma, the pure conscious spark of life that is present in all life forms, and since the grass and weed are a member of the plant kingdom, they have the Atma in them as much as the huge tree). [Refer also verse no. 50 below.] (46).

47. Nothing is of any consequence in this world except the Atma. This whole world is an image of the Atma; it reveals the magnificent and mystical qualities and virtues of the Atma.

All this is nothing but Brahm. Brahm is the only primary element perceived in this entire world. [Refer Canto 6, verse no. 31.] (47).

48. All the scriptures and the knowledge that they contain are indicative of Brahm; they deal with Brahm; they teach about Brahm—and nothing else.

This mystical divine entity known as Brahm encircles everything in its embrace. Brahm is the only essence that provides Sukh (pleasures, comforts and happiness) to the creature. [Refer Canto 6, verse no. 45.] (48).

49. Brahm is like the eternal sky element called ‘Chidakash’ because it is eternal, fathomless, infinite, unfractionable and imperishable. [Refer Canto 6, verse no. 70.]

Brahm is called ‘Sachidanand’ because it is an embodiment of truthful and eternal bliss and happiness. [Refer Canto 6, verse nos. 1-2, 58, 63, 71.]

Brahm is ‘Avyaya’ because it does not diminish, does not decay, is infinite and has no beginning or end.

There is nothing which is not Brahm. This world devoid of Brahm has no existence and substance. [Refer Canto 6, verse no. 31.] (49).

50. There is nobody except Brahm. There is no reward or fruit except Brahm. Even the humble and inconsequential grass or weed is also Brahm (refer verse no. 46). There is no exalted stature or life time achievement worth its name that does not have Brahm in it¹ (50).

[Note—¹*Brahm* stands for grand, eclectic and divine virtues in creation; it is eternal, infinite and of perpetual value; it is the Absolute Truth and Reality personified; it is the essential ingredient that renders something important and worthwhile. Therefore anything that is of some enduring value is deemed to be Brahm in that form. For example, ‘golden’ jewelry is of value only if it truly has ‘gold’ in it, and not merely some substitute that resembles gold but isn’t gold.]

51. There is no Guru (moral preceptor, guide and teacher) other than the supreme transcendental Brahm, and there is no one like him. [Refer Canto 6, verse no. 44.]

There is no one more endearing than that Brahm (who is the best and most enlightened teacher for all the living beings)¹ (51).

[Note—¹Brahm represents pure consciousness and supreme enlightenment. A wise teacher is also expected to be enlightened and conscious of his moral obligations towards his ward to take care of his long term spiritual welfare and enlightenment as much as Brahm has towards this creation, for the supreme creator takes care of his creation like a loving father and arranges for the necessary things that each individual creature would need for its existence in this world. Except for Brahm, the rest of the creation is very selfish and self-centered.]

52. A wise, erudite and enlightened person should treat his own 'self' as Brahm personified. As such, there is nothing of any worth besides the 'self' (because this 'self' is Brahm, the supreme transcendental Truth and cosmic Consciousness in creation).

Whatever is seen in this world, whatever is heard in this world, is all illusionary and deceptive in nature, and not real like the Truth known as Brahm. [That is, if anything is *not* Brahm then it cannot be true.] (52).

53. Similarly, whatever is enjoyed or suffered are also illusive and deceptive in nature.

Likewise, the concept of being a 'doer of deeds' is as much a delusion as the concept of the 'actual deed done' and the different interpretations about its cause¹.

Similarly, there is no distinction between two types of Gunas (qualities and virtues) as far as the Atma is concerned (because it shows an exemplary degree of equanimity and fortitude), and neither is there any sense of taste in the Atma (because taste is a function of the taste buds located in the organ known as the tongue of the gross body, and not of the Atma which does not taste anything and neither does it have any organ of its own like the ones possessed by the gross body) (53).

[Note—¹This is because the actual conscious being that can do something is the Atma which is the true identity of the creature, and this Atma remains neutral and non-involved in anything done by the gross body in which it lives. It is at best a neutral observer and just dispassionately watches what the body does. This is the enlightened view of a wise person. But it is not always so every time. What actually happens is that the person, under the influence of ignorance and delusions, thinks that he is doing the deed which is actually being done by his physical gross body and not the Atma. Therefore, the notion of doing the deed because of this or that reason is as erroneous and misplaced as the illusive concept of being a doer of any deed.]

54. There is no fundamental difference or distinction between any given two creatures having separate bodies. This is because both have the same supreme transcendental Lord (known as Brahm who) residing in all the creatures (as their individual Atma) as their 'truthful self', though their bodies are different in form and look.

This eclectic and holistic view of Divinity fills the enlightened person with profound happiness and bliss¹.

Extended further, this unity and universality as well as supremacy of the final 'truth' about one dignified Principal Divinity that is the ultimate Truth in this whole world establishes that there is no dichotomy between two Kaals (periods of time, era and circumstances), Desh (country and place) and Vastu (material things)².

Similarly, there is no difference between victory and defeat³ (54).

[Note—¹This is because all causes for disharmony, ill-will, jealousy and animosity are removed at once when a person begins to see everyone with eyes of equality and equanimity. There would be no enemy and no competitor from whom to fear and strive to protect one's self interest from being violated. This would result in universal brotherhood and creation of a fraternity of loving people who would love others as much as they would love themselves. This is one of the great commandants of Jesus Christ—St. Mark, 12/31 which exhorts one to love one's neighbour as one would love one's own self. We observe here that more than anything else, the philosophy of Advaita Vedanta is of the greatest practical application in today's world torn asunder by strife, malice, jealousy etc., with man suspecting another of plotting against him.

²This is because the factor of 'truth' will always remain the same no matter when it is applied or recalled. For instance, if anything has happened in a particular way say a century back, then it would not change even if we re-write and twist the facts of history to suit our vested interests. We can at most distort history but we cannot erase the truth about that happening a century ago. All empirical principles of science and mathematics are universally applicable in all planes of time, era and circumstances. Even as modern science relies on 'truth', metaphysical science too relies on 'truth' albeit called 'spiritual truth' instead of 'material truth'.

³Victory and defeat are obtained by the efforts done by the body or those made by the mind. As far as the Atma is concerned, both are irrelevant because it is an ethereal Spirit that neither does anything nor expects to reap any benefit from such action. Besides this, victory is obtained against an enemy by defeating him. When all are alike for the enlightened person, there is no question of his having to fight anyone to obtain victory over him or suffering a defeat at his hands.]

55. Indeed there is no distinction or difference between any two things in this world when one has developed an eclectic and holistic view about the supreme transcendental Brahm as being all-pervading, all-encompassing, all-incorporating and omnipresent in creation, and that whatever exists in this world, from the minutes to the grandest, is a manifestation of this single, non-dual and unequivocally truthful divinity known as Brahm.

With this ethereal and holistic view of Divinity one realises that all the concepts that are associated with physical existence of the body of the creature, such as the 'Antahakaran' (i.e. the mind and heart along with their natural qualities of thinking, having emotions and sentiments etc.) and the Indriyas (sense organs of the body), are all non-truths as far as the creature's true self (the Atma or pure consciousness) is concerned (55).

56. Once the falsehood of the gross, perishable and vulnerable body vis-à-vis the truthful, eternal and ethereal Atma is clear, all other things which work in close coordination with each other and which together make up this gross body, and are then also responsible for its existence and maintenance, are also deemed to be falsehoods.

Thus, the Pran (vital winds that sustain the body), the Panch Kosha¹ (the five so-called sheaths which surround the Atma), and the five patron Gods called the Panch Devas (Brahma the creator, Vishnu the sustainer and protector, Shiva the concluder, Aditya the Sun God, and Ganesh the son of Shiva and the God who is worshipped before all other Gods in the Hindu pantheon of Gods), are all falsehoods and non-existent (56).

[Note—¹The concept of *Panch Kosha* has been described in Canto 4, verse no. 74-75 and Canto 5, verse no. 103.]

57. The six ‘Vikars’ or faults associated with this existence which are like the various enemies that the creature has¹, the concept of six seasons² and the six tastes³—all of them are illusive and imaginary in nature (57).

[Note—¹The six *Vikars* are the shortcomings or faults that are like the *enemies* of the creature. They are the problems associated with this gross world that has a physical origin, takes a birth and ultimately ends or dies. Naturally they are not applicable to the supreme Lord who does not take birth and does not die. These so-called ‘Vikars’ are the following—(1) problems associated with birth, (2) problems associated with growth, (3) problems associated with consequences of deeds done and actions taken by a creature in this world, (4) problems associated with gradual decay and decline of the body and its functions, (5) problems associated with old age and its attendant horrors, and (6) problems associated with the ultimate destruction and end of everything that relates to the creature. One will observe that the life of a creature is a continuous graph of sorrows, sufferings and pains of one or the other kind. It is only when the creature realises the truth of existence and who he really is that he begins to disassociate himself from the body and the world, and thus is able to break free from this seemingly interminable cycle of horrors. Refer *Mudgal Upanishad*, Canto 4, verse no. 6 of Rig Veda tradition as well as *Adhyatma Ramayan* of Veda Vyas, Lanka Kand, Canto 3, verse no. 29.

According to the *Varaha Upanishad*, canto 1 of the Krishna Yajur Veda tradition, there are *six urmis* or faults associated with a creature. They are the following—Ashanaaye (hunger), Pipasa (thirst), Shoka (grief and sorrows), Moha (delusions), Jara (old age) and Mritu (death)—refer also *Mudgal Upanishad*, Canto 4, verse no. 7 of Rig Veda tradition.

There also *other six faults* that are considered as *enemies* of a man—Kaam (worldly passions, lust, desires and yearning), Krodh (anger, indignation and wrathfulness), Lobh (greed and rapacity), Moha (ignorance based delusions, worldly infatuations, attractions and attachments), Mada (egoism, arrogance, haughtiness and hypocrisy) and Matsarya (envy, jealousy, malice and ill-will)—refer *Mudgal Upanishad*, Canto 4, verse no. 4 of Rig Veda tradition.

²The *six seasons* are the following—winter (Nov.-Dec.), late winter or the season of snowfall (Jan.-Feb.), spring (March-April), summer (May-June), rainy (July-August) and autumn or fall (Sept.-Oct.).

³The *six tastes* are the following flavours—sweet, salty, sour, bitter, pungent or hot, and astringent. Sometimes acidic (vinegar) and bland are also regarded as separate category of tastes. Refer *Garbho-panishad*, verse no. 1 of Krishna Yajur Veda tradition.]

58. I (the pure conscious Atma, the true self of the creature) am nothing but ‘Sachiddaanand’, i.e. am an embodiment and image of beatitude and felicity that is eternal, truthful and infinite. [Refer Canto 6, verse nos. 1-2, 49, 63.]

I do not have any birth (as I am eternal and imperishable). I am also not this world or a part of it (because this world takes a birth and comes to an end). [Refer Canto 6, verse nos. 63, 71.]

Indeed, I am that Atma which is the supreme Truth personified. Everything else visible in this deluding world of diversities and myriad confusions has no existence and truth in them (58).

59. I (the pure conscious Atma, the true self of the creature) am an image of truthful bliss; I am an image of truth *and* bliss. I am image of eternal consciousness and enlightenment besides embodying bliss.

Indeed, I am an embodiment of supreme bliss and happiness. I am the most exalted and the Supreme Being personified. [Refer Canto 6, verse nos. 42, 65, 68.] (59).

60. I (the pure conscious Atma, the true self of the creature) am an image and fountainhead of complete Gyan, i.e. knowledge that is eternal, ethereal and divine, knowledge that is enlightening and liberating¹.

When the light of Gyan is lit in my heart, the latter (heart) is illuminated with the divine light of consciousness where no darkness representing delusions and misconceptions can ever hope to survive. This fills the heart with immense contentedness and blissfulness. It effuses out of my being and forms a halo of a divine glow around me. As a result, I become an embodiment of light myself. [That is, this light of 'Gyan' completely lights up my inner and outer self, and it radiates out of my heart like the light coming out of the wick of a lighted lamp.]

I represent all the hues and shades of thoughts and emotions that exist in this creation² (60).

[Note—¹Gyan is the truthful knowledge of what constitutes the absolute, eternal, universal, incontrovertible and irrefutable Reality and Truth in this creation. 'Gyan' is truthful knowledge about the reality; knowledge in all its sublime connotations; knowledge in all its glorious forms; a comprehensive knowledge which does not leave anything to be known; knowledge that can help the seeker obtain liberation and deliverance for his soul from the fetters have been shackling it to ignorance and delusions.

Therefore, Gyan in terms of metaphysics is spiritual awareness and enlightenment which makes a man have an access to that knowledge about the great Truth of existence that is eternal, ethereal and divine in nature. This knowledge and awareness leaves nothing more to be learnt and pursued by a spiritual aspirant. It is the culmination of his journey of quest of the Truth about himself and about the rest of the creation.

²This is because thoughts and emotions arise in something that is conscious and alive, and not in something that is inert and lifeless. The Atma is the conscious factor in the creature's body, and therefore all thoughts and emotions that the creature possesses is because of the presence of this Atma in its body.]

61. I am always enlightened and conscious, and therefore I have a truthful existence. [I am not false and illusive.] Similarly, you too are an embodiment of the supreme transcendental Brahm. You too are an embodiment of eternal enlightenment and knowledge as well as of beatitude and felicity (61).

62. I am of an eternal and infinite form. I am like the eternal and infinite sky which cannot be measured. I am the divine Being who is eternally happy and contented.

I am the Atma, the pure consciousness, and therefore I am not false and illusive. I am known and honoured by the title of 'Kutastha' because I am the one who occupies an exalted place or possess a high stature in existence; I am unchanging, unalterable and immutable; I am subtle and sublime; I am hidden and secret; I am steady, constant and immovable. Being such an exalted being, I am the great Guru¹, the supreme One who removes all darkness of ignorance and delusions by the virtue of his self-originating illumination that takes the form of the light of enlightenment which lights up the entire world for the creature (62).

[Note—¹The concept of Guru has been explained in detail in note of verse no. 44 of this Canto no. 6. The term has been referred repeatedly in this Upanishad, for instance in Canto 2, verse no. 52, and Canto 5, verse nos. 1, 58 etc.]

63. I (the pure conscious Atma, the true self of the creature) am nothing but 'Sachiddaanand', i.e. am an embodiment and image of beatitude and felicity that is eternal, truthful and infinite. [Refer Canto 6, verse nos. 1-2, 49, 58.]

I do not have any birth (as I am eternal and imperishable). I am also not this world or a part of it (because this world takes a birth and comes to an end). [Refer Canto 6, verse nos. 29, 58.]

The concept of Kaal (ever changing time and circumstances; death of the present life and end of one era) does not apply to me. [This is because I am steady and unchanging; because I am eternal and imperishable. Refer Canto 6, verse no. 35; Canto 1, verse no. 24; Canto 4, verse no. 69.]

This artificial world of delusions also does not exist for all practical purposes for me as it is a creation of Maya (delusions, deceptions and falsehoods). [Refer Canto 5, verse no. 33.] (63).

64. I (the pure conscious and enlightened Atma as a manifestation of the ethereal Spirit and the Supreme Being), in my cosmic form, am the Lord known as Hari (Vishnu, the sustainer and protector of creation). Similarly, I am a personification of Sadaa Shiva (the eternal Lord who is known for his enlightenment, wisdom, truthfulness, sense of dispassion and detachment towards everything worldly and perishable etc.). [Refer Canto 3, verse no. 51; Canto 6, verse no. 37.]

Indeed, I am nothing but pure and unadulterated consciousness and enlightenment. I possess all the holy, divine and eclectic virtues in creation; I personify them (64).

65. I am non-dual and an embodiment of Anand (blissfulness). [Or, I am an embodiment of beatitude and felicity that has no parallel, that is unique and without a second. Refer Canto 6, verse nos. 59, 68.]

I am a fountainhead of pure consciousness and enlightenment.

Verily, there is Brahm everywhere; there is nothing but eternal and infinite Brahm everywhere. Everything is Brahm; there is nothing that is not Brahm (65).

[Note—It should be clear that this statement is being made by a man who is deemed to be self realised and one who has experienced and witnessed this mysterious 'truth' of creation first hand. Though on the face of it there appears to be dichotomy in the two statements about this world—one saying that it is false, and other saying that it is true because it is Brahm—but on close analysis we find that both are correct in their own spheres.

The first statement that the world is 'false' is true because it is made up of gross and artificial things that take a birth and therefore are bound to come to an end. Anything that comes to an end is never an eternal and infinite Truth because anything with these attributes of being 'eternal and infinity' must not die.

Similarly the second statement is also true because if anything exists and shows signs of life, if it thinks and exhibits emotions, then it must have consciousness in it, as lifeless things do not show any signs of life and neither do they think or have emotions. In this case, the wise man is not referring to the gross physical world consisting of the perishable body and the deeds done by it when he says that this world is Brahm, but he is referring to the hidden consciousness, the pure consciousness, the immaculate Atma concealed inside that gross body which is being called as Brahm, and which indeed it is.]

66. Brahm is present everywhere; everything is Brahm. Brahm is eternal and universal consciousness. [Refer Canto 6, verse nos. 4, 31; Canto 3, verse nos. 60-74; Canto 1, verse no. 17.]

I am a personification of that all-pervading and all-encompassing ever-present Brahm, and therefore I am the one, as pure conscious Atma, who resides in the bosom of all living beings.

This subtle and sublime form of mine as the omnipresent Atma is a witness to all and everything in this world (and therefore nothing is hidden from me) (66).

[Note—This is not merely loud-mouthed bragging and hypocrisy. In ancient times, sages and seers were known to possess mystical powers that enabled them to learn the inner feelings and thoughts of others. This power to read the mind of others and know their thoughts and emotions are still possessed by some mystics in this modern age, but it has become a rarity in this age of skepticism and cynicism.]

67. The supreme transcendental Lord of creation is like the fount of splendorous light, a source from which the glow of eternal divinity effuses and radiates out in every direction to illuminate this creation. That supreme Lord (known as Brahm) is the highest citadel and the final destination for all creatures where they yearn and strive to go. It is the ultimate destination and resting place for the soul where it can find its final peace and rest. This is called the Param Pad. [Refer Canto 6, verse no. 43.]

This is the final conclusion of all the Vedas; it is determined by all the scriptures. I, as the Atma which is an embodiment of that supreme transcendental Lord and pure conscious ethereal Spirit, am ‘that’ destination¹ (67).

[Note—¹The emphasise here is on ‘self realisation’. When the enlightened person makes this assertion, he knows that he is talking about the supreme transcendental Brahm who is ‘non-dual’ and present inside his own bosom as his Atma. For such a believer in the philosophy of non-duality, there is no such thing as a heaven located somewhere high in the sky. It is located inside his own self where the Atma lives.]

68. I (the pure conscious Atma) am a personification of the ecstasy and bliss obtained by doing Yoga (meditation and contemplation).

I am an embodiment of the grandest forms of Anand (beatitude and felicity; ecstasy and exhilaration). [Refer Canto 6, verse nos. 42, 59, 65, 72.]

I am a fountainhead of a divine light representing comprehensive knowledge of the Truth that shine in me as eternal source of wisdom and enlightenment. I am an embodiment of Vigyan (knowledge that can be empirically proved and logically and intelligently applied). [This concept of the Atma being Vigyan personified and what is Vigyan itself is explained in Canto 2, verse no. 31 and the note appended to it.] (68).

69. I (the pure conscious Atma) am like the ethereal divine glow that is witnessed in the highest stage of meditation, the stage known as Turiya. In fact, I am a personification of that light known as Divinity. But I am not to be limited to this exclusive domain of Turiya because I am present in other states of existence also.

I am eternal and imperishable. I am truthful. I am Vasudeo (Lord Vishnu), the Lord who is imperishable, who does not grow old, and who is eternal (69).

70. I (the pure conscious Atma) am a personification of Brahm who is like the ‘Chidakash’—the sky which is eternal and infinite, which is pure and uncorrupt, which is ethereal and uniform. [Refer Canto 6, verse no. 49.]

I am Brahm which is ‘Nitya’—perpetual, eternal and ever-present. I am Brahm which is ‘Niranjan’—the supreme One having no defects, faults, taints,

blemishes, shortcomings and scars of any kind; one who is absolutely immaculate and pristine pure; an epithet applied to Lord Vishnu, the sustainer and protector of creation. one whose sublime, subtle, esoteric and mystical form is so microscopic and diffused that it cannot be seen by the naked eyes of the physical gross body, but which can only be perceived by the eye of wisdom, erudition and enlightenment. [Refer Canto 3, verse no. 42.]

I am that Brahm which is 'Shudh'—pure, uncorrupt, untarnished and immaculate. I am that Brahm which is 'Buddha'—wise, realised, awakened and enlightened. I am always 'Mukta'—i.e. I am eternally liberated and emancipated. I do not have a name and physical form (because I am an ethereal and disembodied Spirit) (70).

[Note—In other words, I am that enlightened being who possesses all these divine and eclectic virtues in him as his integral character-determining qualities.]

71. I (the pure conscious Atma, the true self of the creature) am nothing but 'Sachiddeenand', i.e. am an embodiment and image of beatitude and felicity that is eternal, truthful and infinite. [Refer Canto 6, verse nos. 1-2, 58, 63, 72.]

I do not have any birth (as I am eternal and imperishable). I am also not this world or a part of it (because this world takes a birth and comes to an end). [Refer Canto 6, verse nos. 58, 63.]

Truth is the only entity that is not false; all the rest that is 'non-truth' is obviously falsehood, deceptive and illusive. The world has no truthful existence; it has no reality¹. Therefore, all the different Sankalps² that a creature makes vis-à-vis this world are also false and deceptive in nature (71).

[Note—¹The *world* is an imaginative creation of the creative mind. Anything based on imagination and fantasy is not true. The genesis of creation also asserts that the creator had 'decided' to create this visible world inhabited by 'mortal' creatures, and all decisions are taken by the mind. Once the mind was programmed to imagine the type of world that the creator envisaged to create, the maverick and all-powerful mind, with this brief from the creator, set off to work and set in motion its own expert faculty of imaginative thinking and creative craftsmanship to craft, virtually out of nothing, this artificial but most charming and fascinating world that we see around us. Then it filled it with creatures who were designated the title of 'mortal' because the creator knew that since this world is only imaginative it is bound to come to an end sooner or later; the world had no substance and pith in it, and was only like a mirage in the hot desert or a city of dreams created by an expert magician, a city that can vanish in a flash.

On the other hand, the Atma, which is the subject matter of this Upanishad, is not imaginative, because it is eternal Consciousness, the Absolute Truth and ethereal cosmic Spirit. It is not gross and subject to decay and perishability. The world presents a sharp contrast to this Atma because the latter is gross, transient and perishable.

²That is, the various *Sankalps*, or ambitions, desires and aspirations that a creature has, and his decision, his volition, his firm determination, the strong vows and resolutions that he makes in order to be successful in fulfilling them are all deluding for him because the basic premise that this world is not the truth precludes any scope of getting success in getting long-lasting peace and comfort by making any such Sankalps about anything in that is related to this artificial and transient world.

Refer Canto 3, verse no. 67; Canto 5, verse nos. 2, 5, 16, 63, 98 etc.]

72. I (the pure conscious Atma) am that Brahm who is the only¹ embodiment of eternal and perpetual 'Anand' (beatitude and felicity; ecstasy and exhilaration; happiness and joys).

I am 'Anant' (without an end; eternal and infinite). I am 'Avyaya' (That which does not diminish, which does not decay, which is infinite and which has no beginning or end).

I am 'Shaant' (peaceful, tranquil, calm, serene and quiet). I have a non-dual existence, having only one ethereal form which has no name and any physical gross form (which can be felt and seen in conventional terms) (72).

[Note--¹In other words, if one were to search for the real source of Anand then one need not go anywhere except Brahm because the latter is the only point where eternal and imperishable bliss and happiness can be found. If one says that he has found Anand in some other thing of this world, and given that there might be some other source of bliss and happiness other than Brahm in this world, then it is an erroneous conception of a deluded mind that is hallucinating under misconceptions and misplaced understanding of the real meaning of Anand. The bliss, pleasures, happiness and comforts that are derived from the material things of the world are temporary, deluding and like a snare spread by a bird catcher to catch the bird. They are not the eternal and pristine pure Anand which is of top notch quality and which is an accoutrement of spiritual liberation, emancipation and deliverance. This 'false Anand' which is derived from the world is as illusive and deluding as the world itself; it is misleading and like a mirage seen in a desert; it is but a copycat of the original and can never replace the ecstasy of eternal bliss obtained by Brahm-realisation.]

73. If anything is said to exist other than 'I or me' (as the pure consciousness and the ethereal Spirit known as the Atma, the 'truthful self'), then all such existential states and things are false and deluding like the mirage seen in a hot desert.

Is anyone ever scared by threatening words of a man who is himself in captivity and tied firmly in shackles?¹ (73).

[Note--¹Obviously, the threats of a captive man are made by him out of frustration and they do not have any substance in them; they are vain words; they are inconsequential and should be laughed away. There is no cause of fear from any threats from a man who is held in bondage as he is unable to give effect to his threats. Likewise, there is no real substance and truth in any of the things said to be true and real in this world by a person who is himself under delusions and ignorant of the truth, for this man is also a captive of ignorance and delusions. To follow the advice given by such a man is like taking the threats of a captive man seriously. They are hollow and inconsequential, and therefore should be neglected outright.]

74. The colossus elephant is never killed when attacked by the humble rabbit even if the latter tries to goad the former with the rudimentary vestiges of its horns.

Similarly, the water in the distant mirage in the hot sand of the desert never quenches anyone's thirst (74).

75. No one is killed or harmed by the vestige of the horn present on the head of a man¹. Likewise, no real world exists in the land of Gandharvas² (75).

[Note—¹The *man* and the *rabbit* do not have prominent horns like the cows or other members of the animal kingdom. So if they think that they can harm anyone by attacking their enemies by emulating the other horned animals, they are being stupid.

²The *Gandharvas* are mentioned in Yajur Veda, 18/38. The word refers to their special characteristic of being very merry and joyous, and fond of sweet fragrances (Jaimini Upanishad Brahmin, 3/5/6/4). They are very lustful, lascivious, passionate and promiscuous; they love being in the company of females, such as celestial

damsels called Apsaraas (Shatpath Brahmin, 9/4/1/4; 3/2/4/3). They have been assigned the duty of protection of Som, the divine drink of the Gods and the liquid that is sanctified and offered to the sacred fire during fire sacrifices (Shatpath Brahmin, 3/6/2/9).

Amongst the Vedas, they find their name appearing in Yajur Veda 18/38 and Atharva Veda 2/2.

They are said to be the sons of Kashyap Prajaapati and his wife Arishta. Their chief is called 'Chitra Rath'. The Apsaraas are said to be their wives. Some of the Gandharvas are the following—Tumbru, Haa-haa, Huu-huu, Vishvaa-vasu, Chitrasena, Vidyaa-dhar, Paraa-vasu, and Viraadha. They are controlled by Varun.

The Gandharvas have two categories according to the Upanishads and Brahmins—viz. the 'Dev-Gandharvas' and 'Manushya-Gandharvas'. The former are the entertainers of the Gods and live in the heaven, while the latter live on earth and are regarded as professional singers and dancers. The 'Dev' category of Gandharvas have a long life equivalent to the life of Gods and regarded as 'immortal' in a relative sense when compared to their human or 'Manushya' counterparts who have a very short life-span and therefore called mortal.

According to Taittiriya Aaranyaka, (i, 9, 3), there are eleven sub-classes of Gandharvas. But according to Agni Puran, the Gandharvas have twelve sub-classes, and they are Abhrajya, Andhaari, Rambhaari, Suryavarchaa, Kridhu, Hasta, Suhasta, Swun/Swan, Murdahwaan, Mahaamanaa, Vishwaa-vasu, and Krishaanu.

The Gandharvas are celestial performers of dance and music. Even in the world, those who adopt dancing and singing as their profession are called Gandharvas. They are always flamboyantly dressed, wear a make up that creates an illusion of beauty and charm, and create a fascinating magical set for their dance and music performances. They live a life that is colourful and flamboyant externally, their dwellings are also equally well-decorated, charming and colourful, creating an illusion of well being and prosperity, but this is not the reality as they are regarded as being of a lowly category in the hierarchy of celestial beings in the heaven or even amongst other men in this world, and are usually treated as creatures of a low moral such as whores and pimps. The stages or platforms they create while presenting their skills are very illusive and deceptive like the world of dreams created on stage by a magician. They are short-term and last as long as the play lasts, for soon afterwards they are dismantled and tucked away for storage. In short, what these Gandharvas present on the face of it is far away from the reality, and should never be taken at its face value. If one believes in a Gandharva and keeps his company then it is certain that he would fall from grace and be abhorred by the rest of the civilised and cultured society for keeping bad company, of being pervert and of a low moral.

They are celestial musicians who belong to a class of lower rung semi-Gods who lived in the company of celestial damsels, called Apsaraas, who danced for the entertainment of the Gods, who guarded the ambrosia of eternity and bliss, called Amrit, who were experts in treating various diseases, who were able to exercise mystical control over women and held them under their spell and charm, who sometimes tormented humans in the guise of some evil spirit, and who were great experts in the art and skill of playing music of all kinds. The word has other connotations also—it refers to those Gods who had the face of a horse or a deer; that Atma which has left one body and acquired another one; a tribe whose are professional singers and whose girls are professional prostitutes; the second husband of a widow who has remarried.

The Gandharvas are mythological musicians of the Gods. They live in decorated cities and also deck themselves up in all finery like stage players in a theatre company. They conjure up fascinating scenes to entertain the Gods. Therefore, they are used as a metaphor to describe anything that is not real but looks very charming and attractive from the outside nevertheless because they create magic spell of unimaginable beauty when they perform in the heaven. All their creation are

temporary and last only till the time the theatre is being played; as soon as the show is over, they wind up everything and vanish from sight. So, philosophically, this body and the world are compared to them and their cities because of the similarity of attractiveness of the illusions created and the transience of both.

The word also refers to those bards, minstrels and people who are professional singers. They flock to an exalted person of the stature of the one who has attained enlightenment by realising the Atma, and they sing his glories and achievements. This helps to spread his fame far and wide in all the corners of the world because these singers go everywhere and sing hymns highlighting the glories and achievements of such exalted people from one generation to another. For example, the great poet saints of India have spread the glories of the Lord by the means of singing devotional hymns called 'Bhajans' in the honour of their patron deity. Similarly, royal bards and minstrels employed by great kings had composed verses honouring and lauding their patron king.]

76. If the sky is really blue as it appears to be, then this world would be true¹! Similarly, if there is real silver in the shimmering of the oyster shell, then there would be truth in this world². Is it possible to make real-time silvery jewelry from this shimmering oyster shell? (76).

[Note—¹Everyone knows that the sky is basically colourless and the bluish hue in it is due to the scattering of sunlight in the atmosphere of the earth. That is why the outer space beyond the earth's atmosphere appears to be completely dark and void. So if anyone thinks that the basically colourless sky has any colour, blue or otherwise, he is ignorant of the fact. Similarly, if any one says that this world is true because he can see it and feel it and witness it first hand, then he is also ignorant of the real truth.

²The oyster shell looks glazed from the inside when put out in the sunlight. It appears to be coated with a thin layer of silver foil. But this is an illusion as there is no silver in an oyster shell. Likewise, this world is not what it appears to be. Visuals are often misleading as proved by these two citations here.]

77. The erroneous belief that a harmless length of rope is a snake does not make the rope bite anyone. The world is also as imaginary as this snake in the rope. Similarly, a polished and brilliantly shining golden arrow that glints in the rays of the sun does not spew fire that can burn anything though its glint might resemble the spark from a burning fire. The world is also as imaginary as the presence of fire in this arrow (77).

[Note—This verse can be read as follows also—"Even as a harmless length of rope imagined to be a snake does not bite, and an ordinary arrow of gold does not spew fire, this world too does not exist.".]

78. If there is even a remote possibility that sweetened rice can be grown in the rocky soil of the barren stretch of Vindhya mountainous region (which is an incredulous thing to even imagine because rice does not grow on dry and hardened rocks), then this world might be true! Similarly, if there is even a remote possibility that the wet stem of the plantain tree can be used to light a fire that can be used to cook food (which is again an impossible thing), then there is a possibility that this world may be true! (78).

[Note—This verse can be read as follows also—"Even as sweet rice cannot be grown in a rocky and barren region such as the one called the 'Vindhaya', and the soft, damp and moist stem of the plantain tree cannot be used as firewood to light a fire to cook meals, this world also cannot be imagined to be true".]

79. If there is even a remote possibility that an infant girl child can properly cook food (which is highly hilarious and incredulous to even think about), then this world could

be true! Similarly, if there is even a remote possibility that darkness can be removed by the picture of a lighted lamp, then this world can have a chance of being true! (79).

[Note—This verse can be read as follows also—“Even as an infant girl child cannot cook food, and darkness cannot be removed by the picture of a lighted lamp hanging on the wall, this world also cannot be imagined to be true”.]

80. If there is even a remote possibility that a man who has died a month back can be revived or brought back to life, then this word might become true! Similarly, if there is even a remote possibility that milk can be extracted from curd or yogurt (which is impossible), then this world might be called true! (80).

[Note—This verse can be read as follows also—“Even as a man who had died a month back cannot be brought back to life and milk extracted from curd or yogurt, this world also cannot be imagined to be true”.]

81. If there is even a remote possibility that the milk that has been taken out of a cow’s udder can be put back into it, then this world might be called true! Similarly, if there is even a remote possibility that a dust storm might arise from the ocean, then this world might be called true! (81).

[Note—This verse can be read as follows also—“Even as it is impossible to put the milk back into a cow’s udder and a dust storm to arise from an ocean, this world also cannot be imagined to be true”.]

82. If there is even a remote possibility that an elephant can be tied by the hair present on the body of a humble tortoise, then it might be possible to imagine that the world exists! Similarly, if there is even a remote possibility that Mt. Meru (the great and biggest mountain where Gods live) can be girdled and shackled by the stem of a lotus flower, then one can imagine that the world might be true! (82).

[Note—This verse can be read as follows also—“Even as an elephant cannot be tied by the minute hairs on the body of a humble tortoise, and Mt. Meru cannot be girdled and tied by the stem of a lotus flower, this world also cannot be imagined to be true”.]

83. If there is even a remote possibility that the mighty ocean can be tied by its waves, then it might be possible to imagine that the world exists! Similarly, if there is even a remote possibility that frigid conditions prevail under a ferociously burning fire, then one can imagine that the world might be true! (83).

[Note—This verse can be read as follows also—“Even as it is impossible to tie the ocean with its waves and frigid conditions to exist underneath a ferocious fire, this world also cannot be imagined to be true”.]

84. If there is even a remote possibility that the leaping flames of a ferociously burning fire are soothing and comforting (which is simply impossible), then this world might be true! Similarly, if there is even a remote possibility that a lotus flower blooms in such a fire (which is again an impossible thing), then there is a possibility that this world may be true! (84).

[Note—This verse can be read as follows also—“Even as a leaping flame of a ferociously burning fire cannot be soothing, and equally preposterous is to think that a lotus flower can grow and bloom in it, this world also cannot be imagined to be true”.]

85. If there is even a remote possibility that one can actually see a mountain of Indra Neel Mani (which is a mystical blue gem worn by Indra, the king of Gods) which is an incredulous thing to even imagine, then this world might be true! Similarly, if there

is even a remote possibility that the greatest mountain called Mt. Meru can be uprooted from its location and re-established in the iris of the eye which is again an impossible proposition, then there is a possibility that this world may be true! (85).

[Note—This verse can be read as follows also—“Even as a mountain of blue gems known as Indra Neel Mani do not exist, and equally preposterous is to think that Mt. Meru can be uprooted and transplanted in the iris of one’s eye, this world also cannot be imagined to be true”.]

86. If there is even a remote possibility that a bumble bee can gobble up Mt. Meru (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a mosquito might kill a lion (which is again an impossible proposition to imagine), then there is a possibility that this world may be true! (86).

[Note—This verse can be read as follows also—“Even as a bumble bee cannot eat the great mountain called Meru, and the mosquito cannot kill a lion, this world also cannot be imagined to be true”.]

87. If there is even a remote possibility that the three worlds called Triloki¹ can sink in the hollow created by scooping out a little part of a tiny dust particle (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a fire made from a blade of grass can be kept alight for eternity (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (87).

[Note—This verse can be read as follows also—“Even as the three worlds called Triloki cannot be accommodated in the hollow scooped out from a dust particle, and a sustainable fire cannot be lit from a single stalk of weed or grass, this world also cannot be imagined to be true”.

The three worlds are the terrestrial, nether and heavenly.]

88. If there is even a remote possibility that the world seen in a dream can actually be seen in the waking state (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that the currents of a river are static (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (88).

[Note—This verse can be read as follows also—“Even as the world of dreams have no sustainable and tangible existence in the waking world, and the currents of a swiftly moving river and its rapids cannot be made hemmed in and made immobile, this world also cannot be imagined to be true”.]

89. If there is even a remote possibility that a hungry man would quench his hunger by eating fire (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a blind man can judge the quality of a precious gem (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (89).

[Note—This verse can be read as follows also—“Even as a hungry man would never even attempt to eat fire to satisfy his hunger (because this is ridiculous and absurd), and a blind man can never be able to judge the quality and value of a gem no matter how hard he tries, this world also cannot be imagined to be true”.]

90. If there is even a remote possibility that a sexually neutral man, i.e. a eunuch, can ever hope to enjoy sexual union with a woman (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility

that a chariot can be yoked to the horns of a rabbit (which is again a preposterous proposition because the rabbit does not have a horn), then there is a possibility that this world may be true! (90).

[Note—This verse can be read as follows also—“Even as a sexually impotent man cannot enjoy sex, and a chariot cannot be tied to the non-existent horns of a rabbit, this world also cannot be imagined to be true”.]

91. If there is even a remote possibility that a newly born girl child can be sexually enjoyed (which is an incredulous, pervert and savage thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a poor slave woman can enjoy the pleasures and satisfaction of pregnancy (which is again a preposterous proposition because she would not be allowed to rest and get proper nourishment needed in such situations), then there is a possibility that this world may be true! (91).

[Note—This verse can be read as follows also—“Even as a newly born girl cannot be sexually enjoyed and a slave woman cannot enjoy her pregnancy, this world cannot be imagined to be true”.]

92. If there is even a remote possibility that the crow can walk majestically like a swan (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a donkey would fight a lion and win (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (92).

[Note—This verse can be read as follows also—“Even as a crow cannot walk majestically as a swan, and a donkey fight with a lion and win, this world also cannot be imagined to be true”.]

93. If there is even a remote possibility that a donkey can walk as majestically as the elephant (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that the full moon become as brilliant and fiery as the sun (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (93).

[Note—This verse can be read as follows also—“Even as the donkey cannot walk with a magnificent gait with which an elephant does, and a full moon cannot be fiery and dazzlingly brilliant as the sun, this world also cannot be imagined to be true”.]

94. If there is even a remote possibility that Rahu can be sighted along with the moon and the sun¹ (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that the roasted seed can produce a new sprout (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (94).

[Note--¹No one can see the Rahu, the mythical severed head of the demon which is believed to gobble up the moon and the sun during the respective eclipses. As soon as the mythical Rahu sees these two gods he gobbles them immediately, so it is impossible that they cohabit peacefully. Besides this, Rahu represents a dark shadow while the brilliantly lit disc of the moon and the sun symbolise light. Darkness and light cannot live together. Hence, if there was a possibility to see this Rahu along with the seeing of the sun and the moon then there would have been a possibility of this world as being true!

Similarly, a roasted seed cannot produce sprouts, and likewise this world cannot have an existence.]

95. If there is even a remote possibility that a pauper can enjoy the pleasures and comforts that are enjoyed by a rich man (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a dog can win a fight with a lion (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (95).

[Note—This verse can be read as follows also—“Even as a pauper cannot have the comforts and pleasures enjoyed by a rich man, and a dog cannot fight with a lion and win, this world also cannot be imagined to be true”.]

96. If there is even a remote possibility that a wise man’s heart (and mind) becomes overcome with ignorance and delusions (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a dog can drink the whole ocean (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (96).

[Note—This verse can be read as follows also—“Even as a wise man cannot be overcome with ignorance and delusions and led astray by them, and a dog cannot drink the ocean entirely, this world also cannot be imagined to be true”.]

97. If there is even a remote possibility that the sky falls upon a man and kills him (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a flower falls down upon this earth from the sky and its fragrance spreads far and wide (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (97).

[Note—This verse can be read as follows also—“Even as it is impossible that the sky would fall down and kill a man, and a flower would descend upon the earth from the heavens and fill its corners with its fragrance, this world also cannot be imagined to be true”.]

98. If there is even a remote possibility that the sky moves (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that a broken mirror or one which has only a blank frame can ever produce an image (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true! (98).

[Note—This verse can be read as follows also—“Even as the sky can never move, and the blank frame of a mirror or a broken mirror can never reflect an image, this world also cannot be imagined to be true”.]

99. If there is even a remote possibility that the world can be accommodated in the abdomen of a goat (which is an incredulous thing to even imagine), then this world might be true! Similarly, if there is even a remote possibility that this vast world could be lodged in a man’s abdomen (which is again a preposterous proposition to imagine), then there is a possibility that this world may be true¹!

In fact, such incredibly fallacious and horribly erroneous conceptions about the world and things seen in it arise because of lack of knowledge about the reality and the fundamental truth in creation. Such absurd misconceptions arise due to confusions as to what is the ‘real and actual truth’ which is one and irrefutable, and what is an ‘apparent truth’ which is misleading like seeing water in a mirage, and which is not the reality.

The dichotomy and confusion created by the notion of duality and non-duality is misplaced and totally unwarranted because ‘truth’ can be one and not two (99).

[Note—¹This stanza can be read as follows also—“Even as the vast world cannot be accommodated in a goat’s or a man’s abdomen, this world also cannot be imagined to be true”.]

100. Such sense of confusion between what is true and what is not, the confusion that creates differences of opinion and dichotomy is due to the presence of delusions created by ignorance, a concept called the prevalence of ‘Maya’ in this world. So a wise man should have one steady belief in the supremacy of Brahm that is only ‘one’ (non-dual).

The delusory concept that this body exists as my true self (instead of my Atma, the pure consciousness, as being my true self) is the root cause of all miseries, torments, grief and sorrows from which all the creatures suffer in this world (because the world would exist only when the sense organs of perceptions in the body would perceive it and then enable the mind to process this information to become convinced about its existence).

So to overcome such painful delusion one must be convinced that there is only one Brahm and nothing else, and that Brahm is I or me (as my Atma, my pure conscious self, my ‘true self’, my ‘truthful indentity’) (100).

101. The firm belief that ‘I am Brahm personified’ is potent enough to rupture and untie all the knots of misleading concepts that tie the heart into a tangle of delusions. Once one is firmly convinced about this axiomatic maxim propounded by the scriptures, all doubts and confusions are automatically dispelled (101).

102. The unreal gross world and equally unreal gross body are non-truths, while the Atma, the pure consciousness, is like the real priceless gem. These two, the world and the body, are like thieves who are out to cheat the simple-hearted man of his precious gem. So a wise man be on his guard and strive to protect this gem from these thieves¹.

Brahm is the only embodiment of eternal and perpetual Anand (beatitude and felicity; bliss and ecstasy). [Refer Canto 6, verse nos. 1-2, 58, 63, 71-72.]

It is manifested as the true ‘self’ of the creature (as its Atma) (102).

[Note—The Atma is compared to a priceless gem because it is the only worthwhile thing as far as the man is concerned. The Atma would give him eternal peace and bliss, whereas the other two entities, the body and the world, would be only a cause of his endless miseries. For example, the body is subject to numerous problems right from birth, such as various diseases, hunger, thirst, the pains of growing up and getting old, and finally dying. Similarly, the world creates its own hoard of problems for the creature once it jumps into its ocean of uncertainties—such as endless desires and ambitions, greed and lust, hopes and expectations, and such other things that never seem to come to an end. Then there are fears from enemies and thieves, grief of separation from one’s dear ones, never ending chain of material needs and the necessity of protecting them once they are successfully attained, the desire to excel and achieve success, the strivings and their accompanying blues of frustrations and depressions at failures or highs of exultations and joys at success etc.—in short the never-ending buffeting affects of the world which keep the creature tossing helplessly and haplessly in its deep troughs and high crests.]

103. The absolute truth about this eclectic, unique, mystical, holy, divine, supreme and transcendental entity known as Brahm can be rationally deduced with the help of all the logics, arguments and illustrations as cited above as well as by studying and delving deep into the scriptures.

This Brahm is all-prevailing and omnipresent in all the different worlds of every conceivable name and form, of every denomination. In fact, all the names that these various worlds have, along with their resident creatures and other ingredients or components are all the various names of one single Divinity known as Brahm. [This is the basic philosophy of Advaita Vedanta.] (103).

104. When one is convinced that he is indeed Brahm, all notions of 'Ahankar' (sense of false pride, ego, arrogance and haughtiness) vanish immediately. [This is because such negative ideas associated with the gross body cannot exist with something which is pure and holy, which is sublime and subtle, such as the divine and ethereal entity known as Brahm.]

When this realisation dawns upon the mental horizon of the spiritual aspirant, the world ceases to have any importance and significance. The world of endless diversities and dichotomies dissolve into nothingness, and only one truthful form of Brahm remains just like a flower falls off the hand of a sleeping man without his even being aware of it¹ (104).

[Note—¹A man holds a flower in his hand and goes to sleep, but as soon as he falls asleep this flower drops off his hand as his body loses all awareness of this flower and the man is unable to resist its falling. Similarly, when one trains ones self to become oblivious of the existence of this world even while living in it, this world would cease to exist for him for all practical purposes. He will no longer have to make any conscious effort to forget or get rid of the world; it would drop off him by its own accord even without his being aware of it.]

105. A wise and enlightened man should be aware of the fact that there is no truth and substance in the notion of the existence of a physical body, and hence no real existence of deeds (because deeds are done by the physical body and when there is no physical body there is no question of any deed being done by it). Therefore, only Brahm remains (as the pure conscious and truthful Atma which is the ethereal, all-pervading, universal and eternal Spirit).

As a result of this conviction, it is established that there is no existence of any entity known as a mortal creature, and therefore of any deed done by them (as all deeds are done by the body, and without the body there is no question of any deed being done by the creature)¹.

Again, since there is no 'body', the four states of its existence also do not arise² (105).

[Note—¹This is because all creatures are recognised by the virtue of their possessing a gross body and the deeds done by them. A wise man does not recognise the existence of any such gross body because he sees beyond the covering of the body to recognise the concealed Atma in that body, the Atma which is the same in all living creatures. This Atma is immortal as compared to the perishable body. Since the existence of the gross body is already discounted, the existence of deed is also discounted along with it.

²There are two connotations of these four states of existence of the body. (1) The first interpretation refers to the four stages in the life of a man, such as birth, adolescence, adulthood and old age. (2) The second interpretation refers to the four basic states of existence in which all creatures have their consciousness, such as the waking state, the dreaming state, the deep sleep state, and the Turiya state.]

106. Brahm is established by all the three methods employed to establish the veracity of anything—such as personally witnessing and experiencing it, hearing about it from

someone else, and reading about it in the scriptures. All these three methods establish beyond doubt that the only truthful existence in this world is of Brahm.

Therefore, one should abandon getting involved in anything other than pursuing this eclectic Truth; one should stop getting distracted by numerous paths that only create confusion and vexation, and instead remain firmly established in one Absolute Truth in existence, and that is known as Brahm (106).

107. One should not doubt the eclectic truth of the maxim 'I am Brahm personified'; 'I am that Brahm who is consciousness personified'. 'I am nothing but an image of truthfulness and of eternal bliss and happiness'. One should be certain about this truthful statement and never abandon it (107).

108. This profound Upanishad propounded and enunciated by Lord Shiva who is its chief exponent should not be told or taught to unworthy subjects (disciples or students) who is an apostate, a non-believer and a heretic, to those who are ungrateful and deceitful, to those who are pervert, corrupt and evil at heart, to those who are generally sinful (because they would only mock it, ridicule it, deride it, instead of attempting to understanding its great truth having enormous import on one's spiritual well being) (108).

109. The knowledge of this Upanishad should be given to someone who is devoted to his Guru (teacher and moral preceptor), to someone who is of pure and uncorrupt heart and mind, and to someone who is generally of higher spiritual inclinations.

Before someone is initiated into its secrets, he should be examined as to his eligibility, competency, aptitude and proficiency to be able to acquire this grand knowledge based on general eligibility criteria fixed for such knowledge. It should be not hurried through, but taught and understood gradually over a period of, say, one or six months or even a full year (depending upon the competency and intelligence of the student) (109).

110. One should practice and study this Upanishad to the exclusion of all other texts (because it is like the citadel of philosophy revolving around Brahm and the Atma). This Tejobindu Upanishad can provide immense spiritual happiness and bliss to the wise aspirant and spiritual seeker (110).

111. It is so potent and effective that after studying it properly and understanding its meaning correctly, if its tenets are applied even once in practice by any spiritual seeker who aspires to become Brahm-realised, then he is indeed successful in it. Such a wise and enlightened aspirant not only becomes an image of Brahm himself but everything in existence becomes Brahm for him. Indeed, this is the great and truthful teaching of this Upanishad. Amen! (111).

Thus ends Canto 6

-----Shanti Paath-----

-----*****-----*****-----

Chapter 15

Dhyan Bindu Upanishad/Dhyanbindu-panishad

The Dhyan Bindu Upanishad deals with two important concepts of metaphysics—viz. OM and Yoga. It analyses the various components of the divine Mantra OM which is the word representation of the supreme transcendental cosmic Consciousness known as Brahm, and then goes on to describe how it symbolically stands for the entire creation right from its conception, through its various stages of evolution and development, until its final dissolution (verse nos. 1-19). It then advises that Yoga is the best means of attaining the exalted stature of spiritual enlightenment and experiencing the eclectic bliss and beatitude obtainable by self and Brahm realisation. The different components of Yoga are described in this context (verse no. 20-93). This leads the spiritual aspirant to the citadel of self-realisation when he can witness the presence of the cosmic Consciousness within his own self and obtain Mukti, or spiritual liberation and deliverance (verse nos. 94-106).

To enable this to happen, it is necessary to have diligence, singularity of purpose, steadfastness, persistence, consistence, concentration and focus. These are the qualities which give this Upanishad its name *Dhyan Bindu*. The word 'Dhyan' means to focus one's attention on a single target without getting distracted, and 'Bindu' means a point upon which the aspirant focuses his attention—much like an archer who steadily sees the target to strike the bull's eye with his arrow (verse no. 14-15). This Upanishad therefore extols the importance of 'Dhyan' as a means of self and Brahm realisation. Dhyan is a metaphor for Yoga or meditation and contemplation. It literally refers to the concentration of the stupendous powers of the faculties of the mind to deeply contemplate and fixedly ponder on the great spiritual truths of existence as envisioned by the scriptures to unravel their enigmatic secrets. This is done by fixing the powerful forces of the mind which are aided by the physical contribution of the body in the form of various meditative exercises upon a spot called the 'Bindu', literally the point source of spiritual energy located in the heart as the 'Atma or soul' of the creature, as well as in the symbolic triangle formed at the spot in the forehead between the two eyebrows and the root of the nose. It is from here that the great mystical secrets of existence and creation are known.

This Upanishad prescribes the use of various Yoga techniques to contemplate and meditate upon the various aspects of spiritualism with the objective of unfolding the magnificent treasure of spiritual energy lying hidden inside one's own self and untapped till now. Yoga helps to unleash this astounding mystical power and help the aspirant to witness the cosmic Consciousness within his self as his Atma, leading to self and Brahm realisation, and to the awakening of the universal powers of the Spirit. He experiences profound bliss and ecstasy when he successfully reaches his spiritual goal.

While dealing with Yoga, it describes its different concepts such as Pranayam (breath control), Aasans and Mudras of Yoga (sitting postures), Shadanga Yoga (the following of the six-fold path for spiritual enlightenment and salvation), the various Chakras (subtle energy centers in the body), Prans (vital winds), Hans Vidya (acquisition of truthful knowledge pertaining to universal Spirit that resides in the individual creature's heart in the form of a symbolic Swan or Hans), Kundalini (the coiled dynamic but subtle energy center located at the base of the spine), and Naad

(the all-pervading cosmic background cosmic vibrations or sound represented by the word OM).

The eternal metaphysical question ‘why does the immaculate and uncorrupt Atma appear to be corrupted and tainted while it lives in a gross body of the creature and interacts with the world’ has been explained beautifully in verse nos. 93/1-93/15.

Some of the other relevant Upanishads of the Krishna Yajur Veda are Amrit Naad, Tejobindu, Brahm Vidya, Brahm Bindu, Yogshikha, Yogtattva, Yogkundalini etc.

-----Shanti Paath-----

ॐ सह नावतु । सह नौ भुनक्तु । सह वीर्यं करवावहै । तेजसि नावधीतमस्तु । मा विद्विषावहै ।
-----ॐ शान्तिः । शान्तिः । शान्तिः ।!!!

The meaning of this Shanti Paath is given in appendix no. 1.

1. Even if one has accumulated so much sins (over numerous lives) that they resemble a huge mountain extending to many miles, it is still possible to destroy them and overcome their horrendous consequences by following the path of ‘Dhyan Yoga’¹ (1).

[Note—¹The word *Dhyan* literally means ‘to think or to cogitate’. It is profound and abstract meditation that revolves around reflection and thoughts that are focused on the Divinity said to be concealed inside the bosom of all the creatures as their pure consciousness that in turn is the supreme cosmic power in creation known as Brahm. Usually the energy of this cosmic Consciousness is lying latent and unused in the own body of the creature simply because it is in a dormant form and un-ignited much like the fire lying dormant in the firewood or coal and needing some prodding to leap back into life with all its glorious potentials and splendour. Dhyan envisages the concentration of the stupendous powers of the faculties of the mind to deeply contemplate and fixedly ponder on the great spiritual truths of creation as envisioned by the scriptures to unravel their enigmatic secrets. This is done by fixing the powerful forces of the mind, which is aided by the physical contribution of the body in this auspicious endeavour in the form of various meditative exercises, onto a spot called the ‘Bindu’, literally the point source of spiritual energy located in the heart as the ‘Atma or soul’ of the creature, as also in the centre of the eyebrows as ‘awareness and enlightenment’, from where the great mystical dynamic powers in creation spring out and spread into the outside world. It envisions the use of various Yoga techniques to contemplate and meditate upon the various aspects of spiritualism with the objective of unfolding the magnificent treasure of spiritual enlightenment and unleashing of the astounding mystical powers that are inherently present in the Atma but were hitherto concealed in it, leading to self and Brahm realisation as well as to the awakening of the universal powers and potentials of the Spirit.

Dhyan means both contemplation as well as meditation. The word also means ‘attention; focus’. So this word is generally understood in common parlance to be similar to contemplation and meditation, concentration and focusing of the conscious mind. It covers both the terms in its ambit.

The appropriate word for contemplation in Sanskrit would be ‘Manan and Chintan’ which will roughly mean ‘deep thought, reflection, pondering and application of mind’. The Upanishads stress on this ‘Chintan-manan’ aspect of the mind-intellect when it talks about ‘Dhyan’. Greatest of scientific discoveries were

made more by intuition than anything else. That is why intuition is closely related to the so-called 'sixth sense' in a man, i.e. a state when the intuitive man knows what is the correct path to choose from a variety of options, and more often than not, he is correct. We can say that this 'intuition' is the guidance provided by the subtle soul/Atma of the creature. Not everybody is equally intuitive by nature; this is because some persons, by virtue of their past actions and deeds have a thicker layer of Vasanas and Vrittis surrounding their Atma while others have a thinner layer so that the voice coming out of the Atma is easily heard in the latter case while it is muzzled and suppressed in the former case.

The great exponent of Yoga, sage Patanjali, in his magnum opus 'Yog sutra' has described 'Dhyan' as concentration. Dhyan is that state in which the inner mind tries to see the reality behind things. This 'thinking' process links it with contemplation while concentration function links it with meditation. According to Agni Puran, contemplation with a calm mind is Dhyan while Garud Puran has defined it as concentration on the Brahm. Dhyan, therefore, leads to enlightenment. Woodworth, in his book 'Psychology', writes that the mind concentrates on one impulse at a time and neglects others. So, Dhyan in this context means 'to become alert and activated for doing a work or seeing an object exclusively'. Dhyan is momentary in the beginning, but it becomes permanent later on with practice. Sidney Smith defines Dhyan as 'to forget everything else except the main objective'. Charles Dickens views Dhyan as 'useful, harmless, definite and a beneficial process of the mind'. According to Bergansa, 'suppression of external distractions is essential for the deepening expansion of Dhyan'. Edgar Casey says that 'Dhyan brings to the fore the latent powers of creativity in a person. This creativity improves and enriches his physical, mental and spiritual aspects'. John White in his renowned work 'The meeting of science and spirit' has enumerated many benefits of Dhyan— promotion of physical health, reduction of tension, anxiety and aggressiveness, it leads to self realisation and self improvement and development. He further says that the benefit of meditation are the following— feeling of tranquility, freedom, reduction of tiredness and depression, relief from pains, increase in positive traits such as sympathy and empathy for others, believe in divinity and purity of self etc. Michael Murphy and Steven Donovan, in their research work titled 'The physical and psychological effects of meditation' have mentioned that meditation/Dhyan helps to regulate and control electrical and chemical activity of the brain, the rhythm of the heart, regulates blood pressure, the skin's ability to resist infection and it regulates general metabolism.

The great philosopher sage Sankaracharya has explained that the many Vedic rituals such as sacrifices had been transformed as mental concepts for contemplation and meditation by Chandogya Upanishad because any defect in the performance of a ritual according to the Vedas, however small and inconsequential, could devalue and derail the whole process. Further, elaborate rituals required huge preparation and expenditure. So he prescribed that meditation was far better, safer and surer means of attaining the same benefits that elaborate sacrifices offered. Contemplation and meditation are equally efficient in spiritual pursuit of the aspirant. Nevertheless, the former (contemplation) has intellect and mind as its main focus while the latter (meditation) concentrates on the mind and body to be effective. Sacrifices, as compared to them, are merely physical rituals.

As is evident, the chariot moves in the proper direction when all the horses are controlled simultaneously. So a holistic and an all-inclusive, well synchronised and homogenous approach is needed by a seeker/aspirant to attain success in his endeavour to get liberation and deliverance from the horrible torments agitating him as well as to attain emancipation and salvation for its soul from this world.

The concept of Dhyan has been described in detail in Chandogya Upanishad, Canto 7, section 6 and 18 of the Sam Veda tradition. Refer also to Tejobindu Upanishad of Krishna Yajur Veda, Canto 1, verse no. 36 which is Chapter 14 of this volume.]

2. The primary monosyllable word OM represents and incorporates in its ambit the entire gamut of creation—right from its conception and initial stages, to its unfolding and its final conclusion¹. Beyond it is the ‘Naad’² (the cosmic background vibrations in ether that resembles the sound made by the distant rumbling of clouds or running of a train). This Naad is visualised as a crescent-shaped moon or concave bowl. The focal point of this crescent-shaped Naad is known as the ‘Bindu’³. This is the point or the Bindu where the practitioner of Yoga can hear the cosmic ethereal sound (because it is here that the sound waves originating in the cosmos are focused). This reverberating cosmic sound resonates through the entire being of the aspirant when it is heard by him (during the practice of Yoga or meditation and contemplation), and at a certain point of his practice this resonance reaches such a crescendo that the practitioner’s entire being is drowned in its vibrations so much so that he hears nothing else; his entire being is completely submerged and overwhelmed by it⁴.

This is the abstract stage of ‘no sound’ (because he hears nothing else except this Naad and therefore stays in a state of void as far as the hearing of the numerous sounds that have their origin in this gross world are concerned). This is the state of supreme bliss which is obtained when one rises above the mundane and reaches the citadel of spiritual enlightenment⁵ (2).

[Note—¹The concept of OM : Refer also Tejobindu Upanishad, Canto 1, verse nos. 1, 6. The symbol of this word OM resembles the vowel ‘Ooo’ or ‘Uo’ (pronounced as ‘noose’) of the Sanskrit language, with a crescent-shaped moon or a shallow bowl shaped sign on its top such that the hollow end points above. This sign is called the ²Naad because it represents the bowl of the cosmos in which the cosmic ether was present. It was in this bowl-shaped container that the primordial cosmic reactions took place leading to the cosmic explosion which provided the energy and created the raw materials from which the rest of the vast visible cosmos evolved and got moulded. Further, a bowl with parabolic shape is able to concentrate beams of sound at a point, called the focal point, where all the energy in the generated sound is concentrated. It would be so great that it might be ear-rupturing if one is not careful. This phenomenon is used to construct music halls with properly controlled acoustics so that echo and resonances do not occur. It is to be noted that in some buildings built to specific acoustic criterions, if one sits at the focal point in it he would be clearly able to hear what is being said even at a distant point of the building.

From the Yoga point of view, the focal point where all the ethereal cosmic sound energy is concentrated is represented by the ³Bindu or the dot or the point which is said to be located at the tri-junction formed in the forehead at the midpoint between the eyebrows and the root of the nose. It is here that the practitioner of Yoga focuses his attention to obtain the deep insight into the secrets of creation and existence because it is here that he accesses great mystical powers and potentials.

Iconographically, this Bindu is depicted as a ‘dot’ placed on the crescent-shaped or concave sign of Naad which is located on the head of the symbol of OM in such a way that it dangles in mid air just at the geometrical focal point of this concave surface to indicate the ‘focal point of cosmic energy’. The symbolic depiction of this Bindu, Naad and OM is the following sign—ॐ.

An example from modern life would easily help to understand this phenomenon. The ‘satellite dish antenna’ which is seen on the roof top of every modern home resembles this Naad and Bindu apparatus. The parabolic surface of the dish antenna is the crescent shaped bowl on the top of OM, and the electronic device called the SMPS held at the focal point of this antenna dish to collect the electronic waves transmitted by some remote satellite or television broadcasting station and collected by the parabolic dish to be focused or concentrated at this point is equivalent to the Bindu placed on OM. The set-top box or the electronic receiver in this setup is the

meditator's brain itself which intercepts and then interprets the electronic signals and converts them into different pictures of the world that the individual sees just like the TV monitor that depicts the images that are collected by the dish antenna.

⁴How the cosmic sound of Naad sniffs out all other sounds and virtually drowns the person doing Dhyan Yoga, or concentrating his attention during meditation and contemplation can be experienced by even a layman. When one closes one's ears with the fingers, one hears a deep roaring sound in the ears. This sound resembles the distant roar of the ocean or the rumbling of the cloud or the trundling of the train. No other sound emanating from the outside world is audible now. This is what is meant in this verse here. When the practitioner of Yoga repeats the Mantra OM and focuses his attention on the sound components of this divine word, a stage is reached when the cosmic Naad represented by OM so much resonates in his head that it eliminates all other sounds, and the practitioner's nerves begin to vibrate with its resonance just like the tuning fork or the strings of a musical instrument that begin to vibrate when they are struck. This reverberating sound kind of massages the nerves and makes them numb to all other sounds as well as impulses. This is the state of blissfulness and ecstasy because the aspirant feels not only calmed down but also titillated. This makes him oblivious of all pain and worries of this mundane life; all the torments of the world are forgotten and dumped. This is also like a tired man who is sleeping soundly when he is completely immune to all sounds and all thoughts that were ruffling his senses while he was awake, making him rested and rejuvenated when he wakes up from his sleep.

⁵That is, all his sensory perceptions are dulled and numbed to the extent that he hears nothing. This is not some hypothetical imagination of the fertile mind, as even modern science has established that the ear of different animal species can hear different sounds depending upon their wave lengths and frequencies. Sound outside certain fixed acoustic limits is not heard by humans but can be heard by other animals, say for example dogs, cats, bats and birds. In the present case, the reverberations of Naad make all the sensory nerves in the brain numb to the extent that they become oblivious to all sorts of impulses impinging on the mind's sense receptors.

Yoga Upanishad assert that the ascetic is able to hear the Naad when his Kundalini is activated and the vital winds forces of life present inside the body are controlled. At the same time as experiencing the dripping of nectar of extreme bliss and ecstasy, called the Bindu, the Yoga practitioner would also hear the Naad which is a subtle roar of the vibration present in the cosmic ether that is now reverberating in his entire inner being. This happens because the body has the subtle sky element present inside it as much as the presence of this element outside of it. This Naad resembles a roar of the ocean, or the rumbling of clouds, or a train trundling away in a distance. In fact, Naad more closely resembles the roar of a fiercely burning fire—which is symbolic of the fact that the subtle fire element which was hitherto dormant and only smoldering inside the body of the practitioner has now been kindled and activated by the practice of Yoga and its attendant activation of the Kundalini by stoking it with the powerful vital winds such as Pran, Apan, Samaan, Vyan and Udaan. Thus, the cosmic dynamic energy that is inherently present in the body of all living beings, but unfortunately had become dormant and inactive, is now re-ignited into its finest form. The Naad is therefore the sound of the raging fire element present inside the body. So when a practitioner of Yoga hears the Naad he feels certain that his Kundalini as well as the latent energy of his body has been activated and the internal fire is burning vigorously. The Varaaha Upanishad of Krishna Yajur Veda tradition, in its Canto 5, verse no. 52 mentions how this Naad is heard and the dripping of Bindu experienced by the practitioner of Yoga when his Kundalini is activated. Refer also Mandal Brahmin Upanishad of Shukla Yajur Veda tradition, Brahmin 2, section 2, verse no. 2. The Hanso-panishad of Shukla Yajur Veda

tradition, in its verse nos. 16-17 describes the sound emanating from this Naad, while its verse nos. 18-20 describes its effect on the body.

The word *Bindu* literally means a drop of some liquid, for instance a drop of nectar. At an advanced stage of Yoga when the practitioner is able to activate the Kundalini, control his vital winds and successfully implement other aids of Yoga such as correctly and persistently doing various Asanas, Mudras and Bandhas for a prolonged period, he would automatically experience rewards inherent to the practice of Yoga. Therefore, he would experience extreme bliss and ecstasy that would appear to drip upon his inner self and overwhelm him. His mind and heart would be submerged in enjoying this nectar that would drip drop by drop like honey effusing from a ripe and full honeycomb. This concept of Bindu in association with Naad has been used to name a special Upanishad called the 'Naad Bindu' Upanishad. Other Upanishads also deal with this subject, e.g. Amrit Bindu and Amrit Naad Upanishads etc.

There are other Upanishads which describe the concept of Naad in detail, such as for example Yogchudamani of Sam Veda, Brahm Vidya and Ekakchar of Krishna Yajur Veda amongst others.]

3. This apparently self-created cosmic sound is called 'Anaahat'¹ (so called because it was generated on its own without any cause such as two entities striking one another which is the usual cause of generation of sound in this world; it resembles the distant rumbling of clouds or a train trundling along on its track).

There is an entity which transcends this plane and exists beyond it, and it is on its inspiration that this Anaahat sound is generated in the ether of the cosmos. 'That' supreme, self-existent, non-describable and transcendental Authority is known as Brahm. When the ascetic (i.e. the practitioner of meditation and contemplation) is able to have access to this Brahm, the ultimate frontier of spiritual endeavours so to say, nothing remains to be known, nothing remains to be accessed (3).

[Note--¹ The word *Anahat Naad* refers to the apparently self-created cosmic sound called 'Naad'. It is called 'Anahat' because it was generated on its own without any apparent cause such as striking of two entities with one another which is the usual cause of generation of sound in this world. It resembles the distant rumbling of clouds or a train trundling along on its track. The *Naad Bindu Upanishad* of the Rig Veda tradition describes this Naad in great detail.

From the point of view of genesis according to the Tantra Shastra which believes that everything in existence originated from Shiva and Shakti (the cosmic male and female elements), a very interesting depiction is given as to how the cosmic Naad came into being and how the rest of creation was revealed from it. Its basic scene is as follows-- According to the philosophy of Tantra Shastra dedicated to the worship of divinity in the form of Shiva and Shakti, the process of creation took the following initial steps. Before anything came into being, Brahm, the supreme consciousness and the ultimate truth of creation, known as Shiva, was established in his own radiant effulgence or self-illumination symbolising his splendid glory, majesty and divinity. Hence he was called 'Prakash', literally meaning light. When he decided to deliberate and actually started the process of deliberation in order to start the process of creation, there was a subtle 'spandan' or a slight throb or imperceptible movement which transformed into a vibration. The waves generated by this initial vibration developed in the cosmic ether and gradually coalesced with each other to give rise to higher waves of higher amplitudes. This produced the cosmic sound called the Naad. Since the creation was conceived in the bowl of the cosmic ether, the energy of the initial sound was focused at a central point, called the focal point or the dot or 'Bindu'. This Bindu contained the combined powers of both the male Shiva and the female Shakti like a dicotyledonous seed which produced the two separate entities called Shiva and Shakti. The union of these two resulted in the unfolding of the rest

of the creation. Thus it will be observed that whatever exists in this creation can be traced back to this primeval Naad. Hence, the latter is called 'Shabda Brahm', or the Brahm as sound. Therefore it is very natural to assume that all Mantras dedicated to any divine entity and consisting of the sound element (because Mantra consist of letters and words, and are chanted or repeated to make them effective) has its origin in this Shabda Brahm and gets its powers and energy from this Shabda Brahm. In other words, the Manta contains in itself the essential meaning, form and spirit of the deity whose Mantra it is and which is being worshipped and invoked. Constant repetition of the Mantra generates so much energy in due course of time that the deity being worshipped is revealed. This is because the sound has great powers and energy as is evident when reverberation of sound waves and the resonance created by them are so powerful and forceful that they can shatter sheet glass in windows when an explosion occurs near a building.

Thus we observe that the Naad is the ethereal background reverberating sound energy in Nature which is said to be the primary source of energy that provided the vital spark to set off the chain reaction in the primordial cosmic gel from which the rest of the creation eventually evolved. The Naad has been envisioned in the form of waves in the cosmic ether, the waves which overlapped and coalesced with each other to generate sufficient energy that produces sound which traveled in the sky and was heard by ancient sages and seers who devised the word OM to capture its fundamental tones and notes in the constituent letters or syllables of this OM. Since the primordial cosmic gel was a neutral and static entity, this energy of sound waves was the first to create some sort of activity in it—like subtly and imperceptibly stirring it from within. This energy multiplies itself manifold and in due course of time the different elements separated from one another, the heavier ones settling at the bottom and the lighter ones going upwards to float on the surface. This is how basically the earth and other elements such as the water and air took up their places in creation, with the heavier earth solidifying at the lower level and the lighter water floating on its outer surface and the air going still higher into the space of the sky. The fire element however remained trapped in the bowls of the earth as the world gradually crystallized into its present shape.

Since the Atma is the only conscious factor in creation showing basic elements of the existence of conscious life in any of its myriad forms, and the Naad is also the first sign of creative primary subtle activity in the cosmos that ultimately led to the unfolding of this incomprehensibly vast and miraculous creation, it naturally follows that the Atma, the fundamental essence of life, or the soul of all that exists as truthful life forms in Nature, and the Naad, the primary source from which the entire creation is said to have evolved, are synonymous with each other. This fact has been endorsed by Tejobindu Upanishad, Canto 5, verse 3 which says that the Atma is synonymous with the Naad.]

4. If the tip of the hair is split into one hundred thousand parts (then one such part would be called the Jiva—the living being in the cosmic scheme of things), if one such part is then again split into one hundred thousand parts (then one such resultant part would be equivalent to the symbolic dimension of the Ishwar or the Lord of creation who is subtler, lighter and finer than the creature who is much grosser, heavier and denser than Ishwar), and if one such part is further split into fifty thousand parts then a situation is reached when no further divisions are feasible and no measurements can be made of the resultant entity. It is the finest of the fine, the most micro-fine entity in existence, and most microscopic of all those things so fine and microscopic that they cannot be measured or qualified. This entity is the symbolic form and subtle existential nature of the ultimate supreme Authority in creation which has no quantifiable attributes and definable qualities that can ever taint its immaculate

nature and form. In other words, it is metaphorically fine and pure even at the atomic and the sub-atomic levels also; nothing can corrupt it; nothing can taint it (4).

5-6. Even as sweet fragrance is an integral part of the flower, butter is inherently present in pure and un-skimmed milk, oil is imperceptibly present in seeds, and gold is present in the ore of the gold mines located in the deep bosom of the earth, though none of these entities are visible to the naked eyes, the existence of the Atma (pure consciousness) in all living beings too is an unequivocal and irrefutable truth which cannot be denied though this Atma is not visible to the naked eye (like the gross body which is visible).

Those who are of a stable mind and intellect, being wise, erudite and enlightened about the truthful essence of Brahm (i.e. who understand that whatever spiritually important or valuable entity that exist in this creation is nothing but consciousness, that this consciousness is Brahm personified, and that it permeates uniformly and universally in the entire creation so much so that if it is removed from the latter, nothing of substance is left behind), realise that this Atma is like the concealed thread which holds the beads of this world-like rosary or garland together in their place and prevents their scattering about¹.

Thus, the wise ascetic realises the universality of the Atma and its omnipresent and all-pervading nature much like that of Brahm (i.e. he treats the Atma with the same spiritual value as that possessed by Brahm)² (5-6).

[Note--¹That is, had there been no consciousness in this world, there would have been no signs of life on this planet. Earth without life would be a barren stretch of land. There are uncountable number of species of living beings—both mobile such as the members of the animal kingdom, and the immobile such as the member of the plant kingdom. No two members or samples have identical bodies or genes. But the common denominator that binds them together is the factor of 'life'. All living beings are so called because they have 'life' which is a metaphor for Pran and consciousness. This universal and all-pervading factor is called Brahm.

But merely being alive does not make the creature a 'true personification' of Brahm because the latter has certain eclectic virtues characteristic to it—such as being noble, auspicious, righteous, wise, sagacious, enlightened and all-knowing. So being 'conscientious', inter alia, is also necessary to be fully and truly a personification of Brahm. Had the creatures no sense of 'conscience' in them, the fabric of morality would have fallen apart and become tattered; all the forms of noble and civilized way of life would cease to exist, and the entire world would become one big forest filled with wild animals that have no conscience in them though each one of them is alive and have a soul.

²A wise person sees the hidden Atma or pure consciousness that prevails uniformly and universally in everything living as the true manifestation of Brahm rather than seeing Brahm only in the external façade of this world. This highly eclectic, most enlightened and metaphysically evolved view of 'what is Brahm' would also address the doubts that one might have in one's mind when he considers the doctrine expounded in the Upanishads that says on the one hand that this world is falsehood and deluding, while saying on the other hand that it is a manifestation of Brahm. Does this mean that Brahm is false and deluding? Or does it mean that this statement that the entire world is a manifestation of Brahm is itself wrong? None of it—for a wise man sees Brahm not in the external features of the world but in the Atma that lives in this world. The external body of the world is the habitat of the Atma just like a man has a house to live in. For all practical purposes, the address of the house becomes the man's location and it helps to identify him in a cluster of similar houses; it becomes his de facto identity. The house is identified with the person living inside it—we say that this house is John's or Smith's. Similarly, the

world becomes one with Brahm because the latter is a resident of this world as the Atma; this world was conceived and built by Brahm, and it belongs to him and no body else.

A Brahm-realised man finds a firm foothold and gets established in this knowledge when he realises this fundamental truth. Then he would not have to search Brahm anywhere else, and neither would he be misled by fake identities going by the name of Brahm, for then he would be wise enough to expose such imposters. When one has found what he is searching or has set out to achieve, it is obvious that he would find peace and rest of mind.

This phrase ‘finding firm foothold and getting established’ can be understood in another way also. When one puts his foot on some new ground—such as the man’s landing on the surface of the moon—he would feel the ground under his feet, whether it is solid and hard enough to support him, or whether it is slippery and soft like swampy bog that would just swallow him up if he puts his entire weight on it. So, when the spiritual aspirant has had firm knowledge of Brahm and the Atma, he becomes rest assured that he has indeed found the ultimate Truth of existence, and this is ‘solid ground’ upon which he can rest and find his final peace. In other words, when a wise and enlightened man has witnessed the presence of the pure consciousness upon successful completion of Yoga as described in the verses of this Upanishad, he would have found his peace and bliss that is permanent and eternal. This is metaphorically said by asserting that he has found a firm foothold and got established.]

7. Even as oil is imperceptibly but integrally present in the oil-bearing seeds of the sesame plant, and fragrance or aroma are inseparable part of the flower, the Atma is also present in an inexplicable but unequivocal form in the body of all living creatures in this creation as their pure consciousness which prevails inside this body as well as the cosmic Spirit that prevails outside their bodies. This Atma is the same both inside as well as outside the gross body, and it is the true identity of all living creatures¹ (7).

[Note—¹This concept can be easily visualised by imagining a clay pitcher filled with water and dipped in an ocean. It is obvious that the water inside the body of the pitcher and outside of it is the same. The Atma present inside the gross body of the creature is like the water inside the pitcher, and the cosmic Consciousness known as Brahm is like the ocean present outside the pitcher. Suppose the clay pitcher is broken while it is still submerged in the ocean water—what would happen? The water inside the pitcher would imperceptibly and automatically merge with the water of the ocean even without leaving a trace and with no fuss. In fact, it is not even possible to keep these two waters separate once the pitcher is broken. This is what is called ‘Kaivalya Mukti’ in the language of Yoga (verse no. 103-106 of the present Dhyani Bindu Upanishad; and Paingalo-panishad of Shukla Yajur Veda, in its Canto 4, verse nos. 7 and 15 for instance), or ‘Videha Mukti’ in the metaphysical parlance (e.g. Tejobindu Upanishad, Canto 4, verse nos. 33-81; Sarwasaro-panishad, verse no. 2; Akchu Upanishad, Canto 2, verse nos. 32-40). It envisages that the spiritual aspirant would be able to shed his mortal gross body and merge his ‘self’, which is the pure conscious Atma, with the cosmic Consciousness known as Brahm that is present everywhere in existence.]

8. Just like a huge tree has a physical gross form which is most vibrant and colourful, being liberally endowed with green branches of various sizes and shapes, and laden with tender green leaves, beautiful aromatic flowers and succulent ripe fruits, but its shadow is only a silhouette of this magnificent tree, being a lifeless, colourless and dull neutral outline of the original tree and having none of its vibrant and colourful charms, the Atma is also present like the shadow (of the original cosmic

Consciousness) cast across the length and width of this creation. Again, even as the shadow does not distinguish between the object over which it falls, the Atma too has no preferences for its existence in any particular form of the body of the creature¹ (8).

[Note--¹That is, even as the shadow uniformly falls upon the ground below the tree, whether it is smooth or rough, whether it is dry or wet, whether a holy man is meditating in its cover or someone is planning a crime sitting under the tree, whether there are chirping birds or colourful flowers or fragrant fruits on the tree or not, the Atma is universally and uniformly present in the creation notwithstanding the auspiciousness or otherwise of the latter. Even as the shadow is not at all affected, influenced or tainted by the nature of the ground or the object upon which it falls, the Atma too remains completely immune to any of the tainting affects or degrading influences of this materialistic and deluding world in which it lives.]

9-13. [Verse nos. 9-13 describe the different mystical interpretations of the three letters that constitute the divine ethereal word OM to emphasise the point that everything in existence has its origin in one single-point source of cosmic proportions, and it is known as Brahm or Pranav. It is from this Brahm that this vast, multifarious and colourful creation has sprouted, unfolded and spread out like the petals of a lotus flower or the rays of the sun radiating out from one single source. When the time comes, they would converge into that one single point from which they had branched out in the beginning. The Brahm Vidya Upanishad expounds upon the various metaphysical connotations of the different components of the ethereal word OM in its verse nos. 2-12. It is Chapter 16 of this volume.]

The supreme transcendental Divinity known as Brahm is represented by the monosyllabic ethereal word OM. This Brahm has always been the aim (destination; objective) of all those who seek emancipation and salvation for themselves. OM is the all-encompassing and all-incorporating monosyllabic word representing that Brahm. [In other words, the profound glory and astounding greatness of Brahm can be metaphorically understood if one understands the divine sublimity and greatness, the mystical meaning and the magnificent spiritual import of this single ethereal word OM.]

The first letter 'A' of the divine, ethereal, cosmic word OM is deemed to include and encompass in its reach and import the earth, the fire, the Rig Veda, the Vyahriti 'Bhu' (which is the first primary word pronounced by the creator Brahma at the beginning of creation), and Brahma himself. They form an integral and inseparable part of OM representing the supreme transcendental Brahm, the cosmic Divinity in creation, just like the letter 'A' without which the word OM cannot be existent. The letter 'A' represents the basis of creation, the foundation of creation. At the time of conclusion of the creation, these five primary aspects of creation (viz. earth, fire, Rig Veda, Bhu and Brahma) would withdraw and take rest in the first component of OM. [In other words, the letter 'A' of the three-lettered word OM represents the 'initiation and unfolding of the creation' as all these entities listed in this paragraph are the symbolic bricks upon which the entire edifice of this visible conscious world have been founded.]

The second letter 'U' of the divine, ethereal, cosmic word OM is deemed to include and encompass in its reach and import the Antariksha (the sky above the surface of the earth), the Yajur Veda, the wind or air element, the Vyahriti 'Bhuvaha' (which is the second primary word pronounced by the creator Brahma at the beginning of creation), and the sustainer and protector of creation, Lord Vishnu. They form an integral and inseparable part of OM representing the supreme transcendental Brahm, the cosmic Divinity in creation, just like the letter 'U' without which the word

OM cannot be existent. The letter 'U' represents the middle part of the creation, viz. its development, growth and spread. At the time of conclusion of the creation, these five primary aspects of creation (viz. sky, air, Yajur Veda, Bhuvaha and Vishnu) would withdraw and take rest in the second component of OM. [In other words, the letter 'U' of the three-lettered word OM represents the 'development, growth and spread of creation' earlier initiated by the letter A. This is because when we pronounce the letter 'U' we cup our lips to resemble the shape of the electric loudspeaker or a sound amplifier which is a metaphoric way of announcing that life has indeed come into being and it is spreading its wings. This letter 'U' virtually proclaims to the world that the supreme creator has already launched the world in the form of the letter 'A', and it is now evolving and developing continuously. Since the entire creation has the genes of Brahm in it in the form of the Atma or pure consciousness, it follows that 'U' announces that the Lord is living here amongst us and no one need to search him anywhere else but in 'U'. There is an interesting twist to this symbolism. When the letter 'U' is pronounced, it indicates the spiritual aspirant himself because it is similar in sound to the word 'you'—i.e. Brahm is 'you'! Incidentally, this is also one of the great sayings of the Vedas—'Twam-Brahmasi'—thou art Brahm (refer Paingalo-panishad, 3/2 of the Shukla Yajur Veda).

The third letter 'M' of the divine, ethereal, cosmic word OM is deemed to include and encompass in its reach and import the Du-loka (the heavens; the deep recesses of the cosmos), the Sun, the Sam Veda, the Vyahriti 'Swaha' (which is the third primary word pronounced by the creator Brahma at the beginning of creation), and the concluder of creation known as Maheshwar (i.e. Lord Shiva, the great Ishwar or Lord). They form an integral and inseparable part of OM representing the supreme transcendental Brahm, the cosmic Divinity in creation, just like the letter 'M' without which the word OM cannot be existent. The letter 'M' represents the concluding part of the creation when what had emerged at the beginning of creation and is symbolically represented by the letter 'A', had then subsequently evolved, developed and spread in the form of this myriad colourful world as represented by the word 'U', would eventually come to rest as represented by this third letter 'M'. At the time of conclusion of the creation, these five primary aspects of creation (viz. heavens or the vast fathomless cosmos, the splendourous and bright sun, the Sam Veda, Swaha and even the Lord of this concluding phase of creation, i.e. Lord Shiva or Maheshwar) would withdraw and take rest in the third component of OM. [In other words, the letter 'M' of the three-lettered word OM represents the 'conclusion and final rest of creation' whose earlier initiation is represented by the letter A, and development by the letter U. This is because when we pronounce the letter M, we have to close our mouth, and this is indicative of 'taking rest and withdrawing one's external existence within one's own self'. The letter 'M' symbolises silence because we have to close our mouth (lips) when we pronounce it. So, if the word OM represents the entire gamut of creation starting from its very beginning that is represented by the letter 'A' which can only be pronounced by opening the mouth symbolising life as only living beings speak and not dead entities, followed by its growth and spread as indicated by the second letter 'U', then it is very obvious that its conclusion or end would be best depicted by 'M' and no other letter because 'M' is the only letter which requires the closing of the mouth symbolising death or end.]

The first letter 'A' is symbolically of a yellow colour and represents the predominance of the 'Raja Guna' in this creation. The second letter 'U' is symbolically of a white or grey hue and represents the predominance of 'Sata Guna'

in this creation. Finally, the third letter 'M' is symbolically of a dark colour and represents the predominance of the 'Tama Guna' in predominance¹.

In this way, the divine, ethereal and sublime word OM has eight parts or facets², four legs³, three eyes⁴, and five patron deities or Gods called the Devtas⁵ (9-13).

[Note—¹The three Gunas are the basic characteristics present in this creation in various proportions that decide the character traits and qualities of all the creatures in existence. *Raja Guna* is the quality and virtue that favours creation, and therefore the letter 'A' has been depicted to have this Guna. The colour yellow is the symbolic colour for any auspicious and constructive activity such as the initiation of the cosmos and the exercise of creation of the tangible, visible and colourful world. Yellow is the colour of fire and energy which were needed to kick-start the cosmic process of creation.

Similarly, the *Sata Guna* is considered as the best of all qualities which enable the creature to perform his duties in a selfless and non-attached manner. Its representative colour is white. White is the colour of the sunlight from which all other shades of colour, viz. violet, indigo, blue, green, yellow, orange and red have come into being. White is the colour of purity and immaculacy of the highest degree, and it indicates non-involvement and selflessness. In other words, once the creation has come into being, it is expected that the creature should perform all his destined duties diligently and faithfully, but remain totally detached from them and emotionally non-involved with them. This would ensure that he remains as pure as the colour 'white' which is the colour of purity and immaculacy. The creature, in order to retain his pristine pure form as the pure conscious Soul representing the supreme Brahm, should remain as untainted, untarnished and without a speck on his character as the pristine pure colour 'white'.

The third quality is *Tama Guna* which is the lowest form of these three Gunas in creation, and it a symbol of ignorance and darkness. It represents 'sleep' in the sense that during sleep a man is unaware of what is happening outside, i.e. he remains ignorant and oblivious of everything happening around him though he might be physically present in that place. In other words, a man with a predominance of Tama Guna would not know what actually the truth is behind the façade of falsehood and delusions. Since ignorance of the reality is tantamount to 'darkness', the colour of Tama Guna is also dark. In the present context it means that when the creature dies, he thinks that his 'life has come to an end', which is a misnomer and not the reality. The life of the soul never comes to an end, and the soul is the true 'self' of the creature, and not his body which has died. Besides this, at the time of this apparent 'death', what actually has happened is that all the elements of creation have simply retracted into their primary source, the supreme Brahm, from where they would re-emerge at the appropriate time. This creation and its life is like a pendulum or a bouncing ball—for it continues to oscillate to and fro unless it is purposefully stopped. This is exactly the aim of spiritual endeavour—to first make the creature wisened about the facts and then telling him how to stop this oscillation of taking a birth and dying only to be reborn again, and stop getting entangled in worldly delusions and its horrific consequences.

This cycle of birth and death is metaphorically depicted by repeating the Mantra OM wherein the mouth has to be repeatedly opened and closed. The final emancipation and salvation is symbolised by being silent when the aspirant is so engrossed in meditation that he is not even aware that he has to repeat the Mantra—i.e. when his mouth is closed for good after the last time he had pronounced OM. This is the eclectic state of Samadhi or the Turiya state; it is tantamount to being freed from the fetters that shackle a creature to this world of material objects. When this becomes permanent, it is the Turiyateet state. It is marked by complete internal silence just like the one that prevails in the deep recesses of the cosmos. It is then that

the entire being of the spiritual aspirant is filled with the vibrations of Naad because the latter fills the space of the cosmos where there is no other noise, where there is profound and deep silence. This is the successful culmination of Yoga when the dissolution of the consciousness is complete. Refer Tejobindu Upanishad, Canto 1, verse nos. 15, 22, and verse nos. 103-106 of the present Dhyana Bindu Upanishad.

²The *eight parts or facets of OM* are the following—the letters A, U, M, Naad, Bindu, Kalaa, Kalaa-teet and Param.

Now let us briefly examine what each of these facets mean. The metaphysical importance and spiritual significance of the three letters A, U and M have been explained in verse no. 9-13 above, while the concept of Naad and Bindu have already been explained in detail in verse no. 2 and its note earlier in this Upanishad.

The word ‘Kalaa’ means the various subtle qualities that are present in all the creatures of the visible creation in varying proportions. There are variously said to be sixteen, eight, five or three in number, and collectively determine the behavioral patterns and thought processes of all the creatures. Brahm is said to have sixty four Kalaas that encompass all imaginable connotations of the existential world. The word also relates to the changing shapes of the moon and is used in the context of OM to indicate the changing frequencies and tone of sound that resonates in the cosmos, starting from a low level to rise and reach a crescendo and then gradually subsiding to a low murmur and finally stopping altogether, only to remerge after some time—the symbolic representation of the evolution and conclusion of the creation.

Now let us examine these Kalaas in all their possible nuances. (a) *The 16 Kalaas of a man*—In the context of the man, the word Kalaa represents the special qualities, art, craft, skills, expertise, attributes etc. that one must possess if he were to successfully reach his target in life. These different qualities and virtues present in a man symbolically make him perfect; they represent his various strengths and potentials, and they are said to be sixteen in number corresponding to and symbolised by the sixteen phases of the moon. Since a man is an exact replica of the ‘Viraat Purush’, who in turn is a subtle manifestation of the sublime Brahm, these sixteen qualities or attributes of a man refer to the sixteen qualities of Brahm himself that made him the Lord of creation. The presence of all these divine attributes makes a man complete and very powerful. Hence, these sixteen Kalaas represent all the magnificent good qualities that are present in this creation which enable a man to overcome all adversities, hurdles and ill circumstances. Since Brahm is the creature’s only sincere well wisher and succour in times of distress and dismay, and since Brahm possesses all the exemplary qualities grouped under the single word Kalaa, a man who is blessed with them is regarded as being equivalent to Brahm. Or in other words, he personifies Brahm with all his dignified virtues that are needed by a man to complete and get across the cycle of birth and death without hurdles.

These sixteen Kalaas of creation that are present in a man refer to the sixteen elements or primary components that form the basis of a man’s very existence and his nature and temperament. These are the fundamental building blocks of his subtle and gross body, its characteristic qualities as well as the world surrounding him and how the man lives in and interacts with it.

These sixteen Kalaas or aspects of creation are the following—(i) Shraddha (faith, believe, conviction, reverence, respect, devotion), (ii) Pran (life; the very essence of creation; the vibrations of life; the rhythm and essential functions pertaining to life), (iii) Akash (the all-pervading, all-encompassing sky or space element), (iv) Vayu (wind, air element), (v) Tej (energy, splendour, radiance, glory, might, majesty and fire element), (vi) Apaha (water element which is the all-important ingredient for life), (vii) Prithivi (earth element which is the base or foundation for all mortal creation), (viii) Indriya (the organs of the body, both the organs of perception as well as of action), (ix) Mana (the mind and heart complex and their stupendous potentials), (x) Anna (food, the element without which life is simply not imaginable because it provides it with the basic nourishment and energy), (xi)

Virya (semen, sperms, standing for courage, valour, potency, vitality and prowess), (xii) Tapa (austerity and penance, tolerance of hardship as a means of penitence, forbearance as well as carrying out strict religious vows in order to purify one's self) (xiii) Mantra (the key or formula to achieve success in any enterprise; it also refers to the ability to give good advice; the power to contemplate and think, concentrate and focus, and then logically arrive at a conclusion), (xiv) Karma (taking actions and doing deeds), (xv) Loka (worldly interactions, conduct and behaviour), and (xvi) Naam (good name, fame, reputation, honour and glory). Reference—Chandogya Upanishad, 6/7/1-6 of Sam Veda tradition.

In simple terms it means that a person's total composite personality, his characteristic attributes and individuality, his vitality and stamina, his prowess, powers and strength, his drive and vigour et al can be divided into sixteen parts.

The Kalisantarana Upanishad of Krishna Yajur Veda, in its verse no. 2 says that these sixteen Kalaas are like sheaths or veils covering the Atma or 'self' of the man, and he can realise this glorious divinity residing in his bosom only when these Kalaas which are like impediments or hurdles in self and Brahm realisation are removed. When this Upanishad describes them as 'hurdles or impediments' in realising the glory of the 'self' it implies that although all these sixteen qualities are related to achieving glory and majesty in the world, they have nothing to do with 'self-realisation' and 'Brahm-realisation' which is possible only by abandoning everything related to this world as well as the body both in its gross part and its subtle part.

(b) *The 8 Kalaas of a man*—The eight Kalaa of a man are the eight characteristic features by which all men are classified in this world. All men are classified into one or the other type depending on one or more of these eight attributes. These eight apparent criterions used for classification of all humans are the following—his name, caste, complexion, birth or family, race, nationality, Ashram (one of the four phases in life, such as Brahmacharya, Grihastha, Vanaprastha and Sanyas), and Varna (class of society such as Brahmin, Kshatriya, Vaishya, Shudra and Nishad or Chandal). [Ref. Saraswati Rahasya Upanishad, verse no. 25 of Krishna Yajur Veda.]

(c) *The 5 Kalaas of a man*—From the metaphysical point of view, the five Kalaas in a man are the following sheaths that surround his Atma or pure consciousness—the Anna Maye Kosh or the food sheath, the Pran Maye Kosh or the vital wind or air sheath, the Mano Maye Kosh or the mental sheath, the Vigyan Maye Kosh or the intellect sheath, and the Anand Maye Kosh or the bliss sheath. These sheaths cover the Atma and determine the Atma's temperament, nature, inclinations and behavioral patterns in this world.

(d) *The 5 Kalaas of Pran*—There is another connotation of the phrase five Kalaas of a man in the context of the word Pran. Hence, there are *five Kalaas of the Pran*. The Pran is the vital wind or air element that sustains life in a man. The chief form of this air element that sustains life in the body is called 'Pran', and the term is usually applied to the breath. But besides this, there are four other types of main Prans such as Apaana, Samaana, Udaana and Vyana. These are the names given to the vital wind in order to distinguish between the various functions or roles that it performs inside the body in order to study this air or wind element in a comprehensive way just like we classify any given subject into various streams to facilitate study and analysis. Therefore, hypothetically, the Pran is divided into five main Kalaas. Thus, there is the main Pran and its four Kalaas as follows—(i) The 'Pran' is the wind element which, as breath, is exhaled as well as inhaled and is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without life no other wind would be of any significance to the creature. (ii) The 'Apaana' is the wind that passes down the intestines and is responsible for digestion of the food taken by the creature and its excretion through the anus and urinary organs (kidneys). (iii) The 'Samaana' is the wind that is responsible for equal distribution of nourishment throughout the body, as well as in circulation of blood. (iv) The 'Udaana' is the wind that helps the body to rise and move about, it also helps the body to expel toxic waste

gases in the body through the nostrils and mouth in the form of exhalation and cough. (v) And finally the 'Vyan' is the wind that helps in maintaining equilibrium and pressure within the body, and it also controls the functioning of the other winds.

(e) *The 3 Kalaas of a man*—Besides the above, some humans are said to possess three other special qualities which make certain people very unique and different from others. These are the following:—(i) *Atishaayani Kalaa*—this enables a person to successfully accomplish certain tasks very quickly and in a very short period of time which would be unthinkable to be completed even in the entire lifetime by an ordinary man. Such people are born prodigies and are said to be gifted with certain eclectic qualities and characters that are not normal. For example, the Adi Shankacharya, the great philosopher and exponent of Advaitya Vedanta and the person who had written matchless and unbeatable commentaries on the principle Upanishads besides establishing the four great pilgrim sites in the four corners of India, had completed in a young age of just ten-twelve years what would take an entire life to do. (ii) *Viprinaamini Kalaa*—this entitles the man to acquire the eight mystical powers called the Siddhis (such as Anima, Garima, Mahima, Laghima, Praapti, Praakramye, Ishwatwa and Vashistha) and show magical powers to become small or big, light or heavy, or even enter the body of another person or assume any shape or form he wants. (iii) *Sankaamini Kalaa*—this enables a person to transfer and install his own stupendous divine and mystical powers in another person and the second person can perform deeds that he would not be able to do himself and is even stunned at his own achievements. We have the example of this in Swami Vivekanand in whom his Guru revered Ramkrishna had established some divine spark which enabled the great swami to leave an indelible mark on the pages of history and religion by his landmark achievements and conquering the world by his speeches in America where he established the foundation of Vedanta.

(f) *The 8 Kalaas of the Gods*—The eight Kalaas of the Gods and their incarnations or manifestations—Since there are said to be a total of sixteen Kalaas and the ordinary man can possess the maximum of these five Kalaas with those who are especially gifted having an additional three as narrated above (bringing the total Kalaas possessed by human beings to $5 + 3 = 8$), the remaining eight ($16 - 8$) belong to the Gods or their incarnations or manifestations. These are the following—(i) *Prabhvi*—this is that magical and divine power possessed by the entity that enables it to make possible things that are impossible. For example we have the manifestation of Lord Narsingh (half man and half lion incarnation of Lord Vishnu from a stone pillar to protect his devotee Prahalad from being killed by his own demon father). (ii) *Kunthini*—this enables the entity to neutralize the any of the effects of the five elements of creation, including their bad effects. For example we have Lord Shiva who drunk the horrible poison called Halaahal that emerged as a result of the churning of the ocean without letting that corroding and very potent poison from harming him. (iii) *Vikaasini Kalaa*—the ability to develop, grow, expand or increase to any size, in any form and in any way one wishes. For example we have Lord Vaaman, the dwarf mendicant, who had measured the entire world in his three steps. (iv) *Maryaadini*—this is the character, attribute or quality which forces the God-head to observe and exhibit exemplary virtues of righteousness, probity and propriety inspite of his ability of doing anything it wants. It virtually ties him down or restricts him to following a strict and exemplary code of conduct that he successfully implements; these codes are difficult even for the Gods to implement. For example we have Lord Ram who led an exemplary life of righteousness, auspiciousness, probity and propriety as well as observe all the character traits and attributes that are so common with all the human beings inspite of the fact that he was an incarnation of Lord Vishnu, the almighty, omniscient, omnipotent, omnipresent and all-incorporating Viraat Purush who is a manifestation of the Supreme Being. (v) *Sanghridini*—this enables the God-head to supersede or overrule the laws of Nature and perform miracles that even defy its laws. For example, Lord Krishna had created

flowers and fruits even without season. (vi) Aalhaadini Kalaa—this enables one to physically remain away but spiritually be constantly near one's object of devotion or contemplation and serve him or her. This is the way Radha was able to enchant Lord Krishna in spite of not remaining with him at all times. (vii) Paripurna—this word itself implies something that is wholesome and complete in all respects. It can therefore exhibit all the sixteen qualities or Kalaas in one go, or is the entity that embodies all these qualities in its self. Amongst the incarnations of Lord Vishnu, Ram and Krishna are said to be Paripurna. The supreme Brahm is 'Paripurna' because nothing is missing from him; it is wholesome and complete. And finally, (viii) Swarupaa-wasthiti—this means the ability to withdraw or collect all the Kalaas exhibited by an entity and revert to its original and primary form when it is so wished by it. For example, at the end of the Dwapar Yuga, Lord Krishna had withdrawn all his Kalaas into himself before bringing to close his sojourn on this earth.

(g) The *Kalaas in other creatures*—Now we come to other creatures who are neither humans nor Gods. The living world consists of both the animals as well as the plants. The basic life forms have one or two Kalaas to start with, and then it progresses to the level of humans and Gods having five and more Kalaas. The creatures in the living world have been classified into four categories and their respective Kalaas are as follows—(i) Udbhij—these are those life forms that are born from seeds, such as members of the plant kingdom. These have only one Kalaa called Anna Maye Kalaa. In other words, they depend on food and become food for others higher up in the evolutionary ladder. (ii) Swadej—they are those which are born from dampness and sweat, such as fungi, algae, bacteria, germs, mosquito, lice, flies etc. They have two Kalaas, viz. Anna Maye and Pran Maye. That is, they are formed from food, they live for food and they die as food. Besides this, they also exhibit signs of life, e.g. the mosquito and lice have life like any other member of the animal kingdom. (iii) Andaj—they are placed higher up in the evolutionary ladder, and are born from eggs, whether inside the mother's womb or outside. Such birds as pigeon, sparrow, parrot, peacock etc. come under this category. They have three Kalaas which are Anna Maye, Pran Maye and Mano-maye. The last Kalaa refers to the fact that such creatures have a mind and heart which enables them to think, albeit in a primitive level. (iv) Jaraayuj—these are the creatures that are born as embryo that develops inside the mother's womb. Under this class come the animals such as horses, cows, dogs, elephants etc. They have four Kalaas, such as Anna Maye, Pran Maye, Mano-maye and Vigyan Maye. The last Kalaa refers to their ability to have a higher level of thinking ability called intelligence. The human being comes under this last category with the added benefit of having five Kalaas. Besides the four Kalaas mentioned above in other creatures of this category, the man has the fifth one and it called the Anand Maye Kosh. It is only possessed by a man and not by other creatures in the sense that the man can realise the true meaning of the terms 'bliss and happiness that is eternal and substantial' by the virtue of his attaining higher level of intelligence and his ability to delve into the secrets of the concept of truth itself and then realising that kind of happiness and bliss that is not superficial and which is not limited to enjoyment of the sensual pleasures of the body and the material comforts of the world, but which has a holistic and all-inclusive dimension that incorporates the spirit or the soul.

(h) The *16 Kalaas of the Moon*—This refers to each of the sixteenth part of the moon's diameter/disc, or one of the various phases of the moon. The moon waxes and wanes in a fourteen day phase—each day it is different from the other. Thus we have fourteen Kalaas of the moon. Added to this is the full moon and the dark moon—i.e. two more Kalaas. Therefore the total Kalaas of the moon are $14 + 2 = 16$. These fourteen Kalaas have the following names—Amritaa, Maanadaa, Pushaa, Tushti, Pushti, Rati, Dhriti, Shashini, Chandrika, Kanti, Jyotsnaa, Sri, Pritirangaa, Purnaa and Swarajaa.

That is why lord Krishna is said to belong to the Moon race because he possessed sixteen Kalaas. The symbolism is very stark.

(i) *The 12 Kalaas of the Sun*—This refers to each of the twelfth part in which the sun's diameter/disc has been divided. They are called 'Dwaadash Aditya', meaning the twelve forms in which the Sun God is known. They are the following—Tapini, Taapini, Dhumraa, Jwaalini, Ruchi, Shushumna, Bhogadaa, Vishwaa, Bodhini, Dhaarini and Kshamaa.

That is why lord Ram was said to belong to the Solar race because he had twelve Kalaas possessed by the Sun. There is an obvious parallel here.

(j) *Other forms of Kalaas*—Other connotations of the word are the following:-- (i) the division of time equivalent to about eight seconds; (ii) one degree out of the three hundred and sixty degrees. So when this term 'Kalaa' is applied to that supreme Truth, also known as the supreme Brahm which is complete and wholesome, it implies that what is being referred to is but only one or more fraction of the whole, and therefore this one or more fraction cannot be a complete definition of the whole. At the best, it can give a rough idea of the principal, but not the exact idea of what constitute *Brahm*. This Brahm is an entity so wholesome and grand, so majestic, so magnificent, so stupendous and astounding that it transcends the definitions or parameters set by this particular word. That Truth or Brahm is beyond their reach and dimension; these various connotations of the word cannot either be applied to that Truth or Brahm nor can they define it in its entirety in any way.

(k) *The 64 Kalaas of Brahm*—It is said that the complete Brahm has sixty four Kalaas. If these are divided into four quarters or quadrants or aspects or symbolic legs of Brahm, three-fourths is in the realm of the unknown (heaven) and only one-fourth is in the form of the visible creation (world). Therefore, if Brahm is a complete cycle of sixty four Kalaas, then the known physical world has $64/4 = 16$ Kalaas. It is a quadrant of Brahm. (Rig Veda, 10/90/4).

It is said that Brahm has four 'Paads' or legs which symbolise the four corners of creation. That is, Brahm surrounds this entire creation from all sides. Out of these four legs, the visible world represents one. The rest of the creation stands for the remaining three legs. According to another theory, Brahm is said to have sixty four Kalaas or aspects or levels. Out of these, the known world is represents Brahm's sixteen Kalaas, i.e. this world is only one fourth aspect of the entire Brahm—a fact metaphorically depicted by saying that Brahm can measure this world in one step. The rest is the invisible macrocosmic aspect of Brahm which is beyond imagination and comprehension. This is obvious because if one fourth is so difficult to understand, one can easily understand the astounding nature and stupendity of the remaining three fourths.

(l) *The Kalaa in the context of OM*—In the geometrical symbol of Brahm which is pronounced as 'OM', these three Naad, Bindu and Kalaa appear as a crescent moon or a shallow bowl with a dot at the center placed on the top of the symbol for OM. This Naad is like a big trough and represents the cosmic bowl or crucible in which the primary cosmic gel was placed to initiate the process of creation. The Bindu appears to indicate the pin-point source of heat, radiation or any other activating source placed just above this crucible to inject sufficient energy in to the primary fluid and activate it. It acts like a source of energy directed at the crucible (Naad) set off the chain reaction that would ultimately culminate in the creation. The Kalaa which refers to the various phases of the moon would indicate the different stages through which the entire process passed from the initial stages of creation to its complete closure. But even as the parents of a child do not undergo any apparent change while the embryo develops in the mother's womb, the Supreme Being remained the same all the while the creation developed and unfolded in the cosmic womb represented by Mother Nature. Another example to explain is the moon's disc which appears to change every single day but all know that it remains the same, and the apparent

change in its shape is only due to the angle with which its lighted or dark surface is viewed from the earth.

Next facet of OM is called *Kalaa-teet*—i.e. the entity that is beyond the ambit of the concept of Kalaa; that is beyond the tangible and the visible spectrum of creation. The word ‘Kalaa’ has been defined above, and ‘Teet’ is used as a suffix to indicate something that is beyond its meaning or ambit; something that surpasses it. So if Kalaa means the world whose attributes and characteristics are changeable, for instance the changing shape of the moon every night which is called the moon’s Kalaa, then something that is non-changeable, something that is immutable and steady, something that cannot be seen to change would be called Kalaa-teet. If Kalaa is regarded as the visible world in which the creature lives, then Kalaa-teet would mean the invisible world which is far beyond the inhabited world. Similarly, if Kalaa refers to the characteristics and qualities of the creature which are clearly exhibited by him, then Kalaa-teet would mean his hidden traits, temperaments, nature and thoughts.

The word Kalaa-teet in the present context of OM implies the macrocosmic aspects of creation which are not immediately visible and verifiable by the sensory organs of the body but are nevertheless true and existent. It refers to the vast invisible world beyond the known visible world where we live and which comes under the ambit of the word Kalaa as described above. The realm of Kalaa-teet is beyond the purview of this known world. It is like the Turiyateet state of Yoga which is the transcendental state of extreme blissfulness which surpasses and is superior to the Turiya state which is a preliminary state before Turiyateet state is reached.

Finally, there is the eighth component called the ‘Param’—literally that which is supreme and ultimate, that which is Absolute and beyond which there is nothing; that which encircles even the outer periphery of creation. This Param is known as Brahm. In a sense it has no boundaries and definitions. It is the equivalent to the final dissolution of the creation into nothing from where there is no return. It represents the supreme transcendental Brahm as opposed to the creature and the visible creation which are metaphorically represented by word ‘Kalaa’, and the vast fathomless cosmos which is represented by the word ‘Kalaa-teet’.

The eight facets or parts of OM also represent the four states of consciousness in which the entire creation consisting of the microcosmic world at the individual level and the vast fathomless world of the cosmos at the macrocosmic level exists. These four states at each level of existence multiplied by the two levels of existences (micro and macro) gives the figure of eight ($4 \times 2 = 8$). The four states are described below in the paragraph ‘four limbs of OM’.

³The *four limbs of OM* are the four states in which the consciousness exists in this creation. They are the following—the waking state or Jagrat state of consciousness, the dreaming state or Swapna state of consciousness, the deep sleep state or Sushupta state of consciousness, and the Turiya state of consciousness which is the transcendental state of existence.

⁴The *three eyes of OM* symbolically refer to so-called ‘Triad’ of creation—(a) such as the Trinity Gods named Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder; (b) the three states of mortal creation at the micro level—the gross body of the individual creature called the waker or Vishwa, the subtle body of the individual creature called the dreamer or Taijas, and the causal body of the individual creature called the deep sleeper or Pragna; (c) the three states of immortal creation at the macro level—the sum total of all the gross bodies in creation called the cosmic waker or Viraat Purush, the sum total of all the subtle bodies in creation called the cosmic dreamer or Hiranyagarbha, and the sum total of all the causal bodies in creation called the cosmic deep sleeper or Ishwar; (d) the three Gunas called Sata (the noblest quality in the creation), Raja (the medium quality) and Tama (the meanest quality that a creature can possess); (e) the three Shaktis or powers and potentials that drive the world on—such as Gyan Shakti or the power of

knowledge, Ichha Shakti or the driving power of desires and ambitions, and Kriya Shakti or the ability and strength to carry out actions and do desired deeds; (f) the three planes of time—such as the past, the present and the future; (g) the three worlds—such as the terrestrial world where earth-bound creatures live, the sky where those who fly live, and the heavens where the Spirits and Gods live.

⁵The *five patron deities or Gods of OM* are the following—Brahma the creator, Vishnu the sustainer and protector, Shiva the concluder, Ishwar the supreme Lord or the Viraat Purush who is above them and from whom these Trinity Gods have come into being, and the eternal transcendental Lord known as Brahm who is supreme and shines like the celestial Sun upon the entire pyramidal structure of the creation, illuminating it.

The five Gods according to another version are the following—Brahma, Vishnu, Rudra (the angry form of Shiva responsible for conclusion of creation), Ishwar (the Viraat all-pervading macrocosmic body of the supreme Lord), and Sadaa Shiva (the eternal Truth that is absolute, calm, neutral and auspicious, that outlives all other Gods and from which they are all created in the beginning of creation.)

14-15. A person who is not well versed in the various aspects of OM, both at the level of this mortal, tangible, visible and perceptible creation represented by the individual creature as well as the immortal, invisible, intangible, supreme and transcendental level represented by the cosmic Brahm, is not fit to be called a Brahmin. [Since the word ‘Brahmin’ refers to someone who is well acquainted with the profundity, divinity and glory of Brahm with all its mystical hues and shades of meanings, a person who is not enlightened about it has no right to be called a Brahmin.]

It is said that the Pranav or the ethereal word OM is like the symbolic spiritual bow, the Atma of the creature which is its pure conscious self is the arrow, and the target is Brahm. [That is, the main aim of employing the word OM in meditation and other spiritual endeavours is to obtain access to the transcendental Divinity known as Brahm which is the ultimate resting place for the soul of the creature. The Atma of the creature is his true ‘self’. So this stanza means that a wise Brahmin is one who employs the divine Mantra OM to enable his Atma to reach its spiritual target of Brahm-realisation just like the arrow shot by an expert archer reaches and hits the bull’s eye of the target. A man is called truly Brahmin if he has that expertise when his ‘self’ has been realised by him and he has become worthy to be identified with Brahm from whom he has derived his name of a Brahmin.]

One should not be lackadaisical or careless in pursuing one’s objective, and should be diligent and focused in aiming this arrow at the target. [That is, the spiritual aspirant should practice meditation with full attention and interest, without letting himself be distracted by any other extraneous considerations. It is only then that he would taste success just like the archer is able to pierce the object with his arrow when he fixes his sight and attention steadily on it. Diligence, steadfastness, singularity of purpose, devotion, resilience, persistence, consistency and commitment are the basic requirements in obtaining success in every field, whether it is spiritual or otherwise. These eclectic virtues act as the spur that encourages, aids and propels the aspirant to reach his goal without losing steam midway, faltering, wavering and falling on the way side before the aim is fulfilled.]

As a result of this effort, when the supreme and ultimate aim is reached, i.e. when the spiritual aspirant has reached his target of Brahm realisation (which entails realisation of the true nature of his own pure conscious ‘self’ called the Atma which in turn is Brahm personified in his own bosom), he is able to obtain freedom from having to perform so many auspicious deeds and take so many righteous actions (such

as doing fire sacrifices, making charities and giving alms to the poor, studying the scriptures and doing meditation and contemplation etc. as part of the comprehensive efforts that a wise and sagacious man makes in order to reach the goal of realisation of the ultimate spiritual Truth which would give him eternal peace and bliss). [In other words, when the creature has reached the pinnacle of spiritual attainment, he finds such a huge and fathomless ocean of bliss, ecstasy, happiness, contentedness and peace that he does not need to make any more efforts in this direction. The aim of all meditation and contemplation, all auspicious deeds and righteous actions, is to obtain liberation for the soul from the endless cycle of delusions, grief, miseries and pains, and when that objective is fulfilled by Brahm realisation or Truth realisation, these mediums or tools become redundant. In the instance of the bow used to shoot the arrow at the target as cited in this verse above, once the arrow has been successfully shot and it has hit the target, the bow is no longer needed. Similarly, once self and Brahm realisation has been successfully done, once the creature has found his eternal peace and bliss that he had been searching for generations, once he has found his soul's emancipation and salvation, he would no longer need the Mantra OM, or for that matter any other means such as Yoga etc. as prescribed in the scriptures for this purpose.] (14-15).

16. It is from OM that all the divine Gods have come into existence; it is from OM that all forms of sound, audible or inaudible, in creation have emerged; and it is from OM that the entire creation and all its varied forms, both the animate as well as the inanimate forms, have sprung forth (16).

17. The divine word OM has three constituent parts called its Matras. The first is the 'Hrisva' Matra which literally means something that is little, small, light, miniscule, and of minimum attributes. It symbolically stands for the letter 'A' which is the first vowel of the Sanskrit language and the basic sound in creation. It is also the first subtle sound from which the word OM has been envisioned to evolve. [It is like the sound made while pronouncing the word with the silent A—as in 'ahoy', *abhor*, *abase* etc.] It has the symbolic mystical ability to destroy all sins and misdeeds.

The long sound of the second letter of OM, i.e. the sound of 'U' or 'Ooo' (as in *owl*, *awning*, *autumn* etc.) represents the eternal bountiful treasury of divine assets and good fortunes that are easily made available to the spiritual aspirant. [This is a metaphoric way of saying that when one has realised the truthfulness of Brahm and the divinity of his own pure conscious Atma, the world in front of his eyes no longer remains one that is perishable and a cause of sorrows, miseries, pains and entrapments. On the other hand, he begins to see it in the light of Brahm-realisation as a vibrant manifestation of the cosmic Consciousness in all its radiant and brilliant colours and variations. The world becomes one big treasury of bliss and happiness when seen from the eyes of wisdom and enlightenment. The aspirant realises that it is in this very life that he can realise the supreme Truth by means of meditation and contemplation, by studying the scriptures and doing auspicious deeds, and in due course attaining the double benefit of enjoying the comforts and pleasures of this materialistic world and at the same time achieving the bliss of self-realisation and Brahm-realisation. He begins to see the world in a positive light rather than from a negative angle. He finds the world friendly, brotherly and kind as well as full of charm, colour, interest, hope, life and energy, instead of seeing it as his enemy, being suspicious and skeptical of everything in it, and treating it as the root cause of his physical sufferings. This positive attitude is kindled in an enlightened man because he

sees this world as a manifestation of Brahm and not as a manifestation of Maya or delusions. Every coin has two sides; it depends upon how one looks at it. Such a wise man serves the supreme Lord when he serves the world, and not to serve his self interest.]

Finally, the last word 'M' is the half-syllable because it is said while the mouth is being finally closed after completing the pronunciation of the word OM (as when the mouth is closed after having said the word *mum*, *autumn*, *rum*). [The actual full letter of the Sanskrit consonant is 'Ma', and it is pronounced with an open mouth as 'M' in *mother*. This is not the case of its pronunciation in OM when the mouth is closed immediately upon its saying as done when one pronounces the word '*rum*' for instance. So it is a 'half consonant' or 'half sound' of the letter M.] It symbolises the attainment of 'Moksha', literally liberation and deliverance from the gross deluding world symbolised by this perishable body and illusionary activities in search of that illusive happiness and peace. [This is because after death, the creature finds eternal freedom from all the horrendous troubles and unending miseries and sorrows that he had been subjected to while alive in this world. No matter how hard he tried, he was not able to break free from the shackles of miseries and horrors of this world which kept his peace of mind and bliss of soul at bay. He was buffeted by the agonies of the body as well as the unending cycle of sorrows and worldly delusions which hit him in regular waves much like tides in a heaving ocean, sweeping him off his feet and carrying him along in their wake. The world never lets him rest in peace. But upon self and Brahm realisation he finds eternal rest and peace symbolised by the closing of the mouth after complete pronunciation of the word OM. This is a metaphoric way of saying that the cycle of birth and death has finally come to an end for a creature who has realised the supreme Truth of Brahm, for now he turns inwards during deep meditation and contemplation on the supreme transcendental Divinity residing in his own bosom as his pure consciousness or Atma, and becomes completely silent and totally oblivious of what is happening around him in the gross world of material sense objects. Thus, all those inputs of the world which had hitherto been causing disturbances to his peace of mind and heart cease to have any impact upon him, leading to his eternal peace and happiness, his complete beatitude and felicity. Refer Tejobindu Upanishad, Canto 1, verse no. 15, 22.] (17).

[Note—The concept of using OM as a medium of doing meditation has been expounded in a number of Upanishads, for instance Amrit Naad Upanishad, verse nos. 18, 21; Yogchudamani Upanishad, verse nos. 71-81 etc.

18. The cosmic Naad or the background sound that prevails in the entire cosmos is not audible to the ear of the ordinary creature. This sound is a continuous one much like the unbroken stream of oil flowing on an even surface. This sound resembles the prolonged reverberating sound that resonates when a huge metal bell is struck hard (18).

[Note—The various shades of sound heard when Naad is experienced by an attained ascetic has been described in a number of Upanishads—viz. Naad Bindu of Rig Veda, Yogchudamani of Sam Veda, Hanso-panishad of Shukla Yajur Veda, Brahm Vidya, Amrit Naad and Ekakchar of Krishna Yajur Veda amongst others.]

19. A wise practitioner of Yoga should meditate upon the supreme Divinity known as Brahm, the Lord of the entire creation, who is represented by the eternal word OM. This eternal Divinity is symbolically represented by the thumb shaped pricarp (called the 'Karnikaa') of the lotus-like heart of the practitioner. It is self-illuminated and radiant like the erect filament of light of a lighted lamp (19).

[Note—There are other Upanishads also which affirm that the size of this subtle Atma or consciousness present inside the bosom of all the living beings measures about the size of the thumb. Some of these are Kathavalli Upanishad, 2/1/12, which is Chapter 1, and Shwetashwatar Upanishad, 3/13, which is Chapter 5 of this volume.]

20-21. [It should be noted that verse nos. 20-106 are exclusively dedicated to the philosophy and practice of Yoga. Some of the other Upanishads that should be consulted while reading these verses are the following—Yog Chudamani of the Sam Veda tradition; Hanso-panishad, Trishikhi Brahmin and Mandal Brahmin of Shukla Yajur Veda tradition; Tejobindu, Yogshikha, Yogtattva, Yogkundalini, Amrit Naad and Varaaha Upanishads of the Krishna Yajur Veda tradition.]

The practitioner of Yoga should draw in air (breath) through the Ida Naadi (i.e. through the left nostril)¹ and fill the abdomen with it². [That is, he should withhold the inhaled air inside the body for a fixed period of time.] Meanwhile, he should contemplate upon and fix his attention upon the divine symbol of OM representing the supreme transcendental Brahm in his bosom (as described in earlier verses).

The three steps of Pranayam (breath control exercise undertaken in Yoga) are called 'Purak' (inhaling wind or breath), 'Khumbak' (holding the inhaled breath inside the body for a certain time so as to fill the abdomen with it), and 'Rechak' (exhaling breath slowly, so that the withheld wind is completely let out of the body). These three phases of Pranayam have three patron Gods, and they are Brahma the creator, Vishnu the sustainer and protector, and Shiva the annihilator or concluder respectively³ (20-21).

[Note—¹The process of inhaling is called 'Purak'.

²The process of holding breath inside the body is called 'Khumbak'.

³The symbolism is obvious here. Drawing in of fresh air inside the body during the process of Purak is tantamount to infusing fresh lease of new life into the body, a work assigned to the creator Brahm. When the body holds this oxygen-rich air during the Khumbak phase, it draws nourishment from it in order to sustain itself and its tissues, the function which falls in the domain of Vishnu. Finally, when breath is exhaled during the Rechak phase of Pranayam it symbolises the expulsion of the life-giving Pran or the vital wind from the gross body, thereby symbolising its death.]

22. The inner-self should be symbolically made the lower end of the 'Arani' (the wooden drill used to light the sacred fire by vigorous rubbing of two pieces of firewood, one at the top and the other at the bottom of this drill during fire sacrifices in ancient times) and the OM (represented by the sound made during the process of inhalation and exhalation) as the upper end, while deep meditation and contemplation is to be treated as the vigorous rubbing of the two ends in order to ignite the flame of self-realisation which is like igniting the sacred fire of the religious sacrifice. The 'light' of knowledge and wisdom that emanates from the 'flame' of enlightenment ignited by the energy generated during deep meditation and contemplation helps the aspirant to 'witness', to 'perceive' and 'experience' the presence of the pure conscious Atma or the truthful 'self' residing in his own bosom as a representative of the supreme transcendental Brahm. This is called 'self-realisation'—i.e. becoming aware of one's true 'self' as pure enlightened Consciousness personified (22).

23. A wise and expert ascetic should meditate upon all the subtle shades of vibrations generated by meditating upon the ethereal and divine word OM (i.e. by mentally humming this ethereal word and concentrating his mind and fixing his attention on the

different shades of notes and tones of sound emanating from this divine word OM while it is being hummed during the entire process of Pranayam) till the time the inhaled wind is completely exhaled during the Rechak phase of Pranayam (23).

[Note—The practitioner of Yoga should use the Mantra OM while doing Pranayam, a fact reiterated in a number of Upanishads, for instance Amrit Naad, verse nos. 18, 21 amongst many such Upanishads. The entire process of Pranayam involves three basic steps—viz. inhalation of breath called the Purak phase, the retaining of breath inside the body for a period of prescribed time called the Kumbhak phase, and the exhalation of the impurity-laden air during the Rechak phase. OM is used as a Mantra to help concentrate the mind in this entire process. When OM is repeated deeply in the mind, it produces vibrations that resonate in the head (see verse no. 102), and these vibrations also help soothe the nerves by gently massaging them, thereby not only giving them rest but also enabling the practitioner to experience extreme bliss and ecstasy when his nerves are titillated. The nerves are numbed simultaneously, thereby alleviating pain and tension in them, which in turn calms down the brain and the restlessness body. During Pranayam, the heart's action is slowed down because of reduced degree of physical activity, breathing becomes easy and regular along with the slowing down of the general metabolic activity of the body. This general calming effect of the Mantra on the nerves helps the practitioner to concentrate his attention on the Naad which is a subtle sound and can be heard only when all extraneous sounds are eliminated. To witness the truth of this statement one needs to plug the ear with the finger when all the sounds emanating from the external world are blocked out and one can hear a subtle roar in the ear.]

24. Those who experience and witness the presence of the supreme transcendental Consciousness in the form of a divine 'Hans'¹ (Swan) that resides in the inner-self of the living being feel spiritually fulfilled and are deemed to be realised and successful in their spiritual endeavour. This Hans is as splendid and radiant as millions of suns taken together. [This is because the consciousness that is present inside the subtle heart of the creature is like the celestial sun that shines brilliantly in the sky above the earth.]

This metaphoric 'Hans' is a mysterious and enigmatic entity. It shows movement on the one hand and remains unmoving on the other hand² (24).

[Note—¹The word *Hans* metaphorically refers to the bird Swan. This bird is considered the most pure, clean, wise, erudite and clever among the birds. It is believed that it eat pearls and picks them up from amongst an assortment of gems, which symbolically means it picks up and accepts only the best amid the variety of things available to it in the form of an assortment of various qualities and virtues that define the character of all individual creatures in this world. It is also reputed to drink the purest form of milk, leaving aside the water content of an adulterated form of this nourishing liquid. It is also the vehicle of Goddess Saraswati, the patron Goddess of knowledge, wisdom, intelligence, speech and learning. Hence, the reference to a swan while describing a creature conscious of the vital wind or Pran passing through him means the basic, inherent and intrinsic tendency of that wisened and intelligent creature is to be the best, most pure and divine, wise, awakened and enlightened, adroit, clever and sagacious like the swan, and pick all the goodness and forsake all that is bad in this world. Saraswati rides on a swan, symbolising the creature's inborn enlightenment and excellence of his mental caliber. Symbolically, Saraswati resides in his Pran because it rides on the swan, i.e. in his heart, throat and mind—that is, his heart has purity of emotions, he speaks well of all, and his words are sought after by all as priceless gems of wisdom, and his mind is intelligent, discerning and noble.

The alphabet 'Ha' of the word 'Hans' is sounded by the vibration of the exhaled wind passing through the vocal cords present in the throat or the wind pipe which

connects to the nose, while the alphabet 'Sa' is sounded by the root of the tongue which opens into the mouth when the breath is inhaled. Both the nose and the mouth open in the same cavity called the throat. Hence, the inter relationship between 'Ha' and 'Sa' is evident. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his divinity and sublimity, his exalted stature, till that was pointed out to him in this verse. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must do not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

Refer (a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyan Bindu Upanishad, verse nos. 61-65; Brahm Vidya Upanishad, verse nos. 20-28, 61-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, and Canto 6, verse no. 20, 52-54. (b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 82-83.

During the twenty-four hour period covering a single day and night, a person inhales and exhales, or breathes, roughly twenty-one thousand times because each cycle of inhalation and exhalation is equivalent to saying one Mantra 'Hans' consisting of the two syllables 'Ha and Sa'. Refer verse nos. 61-65.

²The Yogchudamani Upanishad, verse no. 93 clearly asserts that the 'Hans' is a metaphor for Pran. So when it is said in the present verse that Hans shows movement for instance, it refers to the movement in the form of the vital winds such as Pran (breath) which comes in and goes out of the body, the Apaana wind that moves down the intestines and helps the movement of food in the intestines, the Udaana wind that helps the body to rise etc. The proof of their movement lies in the fact that all the different functions of the body, including external movements such as walking, holding, speaking, eating and excreting etc. that are done by a man while awake are controlled by these winds, but when the man sleeps the external activities cease, making it appear that the vital winds are not moving. When a man is asleep, his vital winds are now moving inside his Naadis or nerves and veins in the form of his Pran or the vital life-giving factor called consciousness. But these winds present inside the body do not appear to move a bit; they do not show any vivid sign of movement at all; no one can observe the movement of the Udaana wind, the Vyana wind or the Samaana wind and even the Apaana wind that are present inside the body of the creature. Even in the outside world, no one can actually see the wind or air move from one place to another; their movement is deduced indirectly when we observe the movement of leaves for example on a tree. Thus, this Hans in the form of the Pran shows movement on the one hand, and remains immobile on the other hand.]

25. The Mana (mind) is the cause of creation, sustenance, development, enhancement and the ultimate conclusion of this deluding world of material sense objects, a world which inherently possesses the three 'Gunas' (the qualities of Sata, Raja and Tama) as the basic characteristic qualities that are present in all the creatures living in this world in various proportions, determining each individual's personality, behavioural patterns and character, and which is also marked by the rhythmic cycle of birth, growth and death.

When the cause of all this (i.e. the triangular world having the three apexes of birth, growth and death) is eliminated, i.e. when the Mana is abolished or made redundant so as to remove the very cause of this world coming into existence in the first place, the spiritual aspirant is able to free himself from the distorted and restrictive views of existence created by this triangular world having the three Gunas

as its three sides and the three phases of birth, growth and death as its three apexes, and see beyond it¹. It is then that the unrestricted and undistorted divine view of the supreme state of divine existence is discernible to and perceivable by him, and this is called the glorious world of Lord Vishnu (who is also known as the Viraat Purush), thereby indicating the macrocosmic view of creation which is much beyond the selfish and myopic view of the world centered around the individual creature (25).

[Note—¹This reminds one of the glass prism through one sees anything. The view seen directly would be very different from what is seen through this prism. Even the ordinary sunlight gets refracted and breaks up into seven colours when it passes through the prism. Similarly, the actual view of the world gets distorted when one sees it with biased mind and tainted intellect. So when one attempts to see the truth about something as ethereal and sublime through the prism of the mind and intellect that has already been corrupted by the influences of the deluding world of artificiality, it is but natural that the truth would elude him. That is why a man who has not attuned his mind-intellect apparatus sufficiently enough to peer deeply into and behind the façade of this world would be easily flummoxed when he reads in the scriptures that this world is a manifestation of the supreme transcendental Brahm. He begins to wonder whether Brahm is also as false and illusive as the world which he sees, or are the scriptures wrong in what they say of Brahm. The reality is that he is seeing Brahm with a prism that would never allow the reality to be observed by him. This fact has been beautifully brought out in verse nos. 93/1-93/15 below which describes how the Atma sees the world with various colours when it looks at it through the differently coloured petals of the symbolic lotus present in the heart where this Atma lives.]

26. The subtle heart is envisioned as a divine Lotus having a stem with eight sepals and thirty two petals. Inside its enclosure or the core (symbolised by the thallus) is present the Sun, and within the Sun is present the Moon (26).

[Note—The base of the flower from which the petals and sepals of the flower spring out, i.e. the thalamus, is like a golden sac symbolising the Sun, and the nectar present in this sac is indicated by the Moon because of its cool and soothing characteristics. The Moon is regarded in the Purans as the celestial pitcher of Amrit, the ambrosia of the Gods.]

27. In the center of this symbolic Moon located here is present the fire element representing the subtle spiritual energy of the pure consciousness that is said to reside in the subtle heart. At the core of this fire element are the intangible eclectic virtues of brilliance, radiance and splendour that are inherent to any form of 'light' emanating from any source (which in this case is the 'consciousness' located here). In the center of this fire endowed with the brilliance of a splendorous light is located the 'divine seat', called the 'Peeth', which is embellished with gems and priceless jewels of various shapes and colours (27).

[Note—The ovary of the flower compared to the Moon is supposed to harbour the fire element signifying the presence of the spark of life in a latent form in the ovule, and the microspore inside this ovule is the so-called symbolic seat where the actual 'life of the lotus plant' is ensconced in the representative form of Lord Vishnu. This is because Vishnu is regarded as a manifestation of Brahm at the cosmic level of existence and is synonymous with the Viraat Purush who is the invisible, all-pervading and all-encompassing macrocosmic gross body of Brahm. Vishnu is thus the Supreme Being personified, and it is from his navel as the primary creator that Brahma, the secondary creator of the visible world, was born atop a divine lotus that emerged from the navel of Vishnu at the very beginning of creation.

It ought to be noted here that we are dealing with three levels of creation here—the subtle level represented by the ovary, the subtler level symbolised by the ovule, and subtlest level indicated by the ‘divine spark of life present inside this ovule’.]

28. Seated on this exalted divine seat or ‘Peeth’ is Lord Vasudeo (i.e. Lord Vishnu, so called because he is the Lord of all the ‘Vasus’ which represent the physical wealth and priceless assets needed to sustain life in this creation as well as their patron Gods¹). Vasudeo is honoured by the epithet of ‘Niranjan’ (because he is one having no defects, faults, taints, blemishes, shortcomings and scars of any kind; one who is absolutely immaculate and pristine pure; an epithet applied to Lord Vishnu, the sustainer and protector of creation. one whose sublime, subtle, esoteric and mystical form is so microscopic and diffused that it cannot be seen by the naked eyes of the physical gross body, but which can only be perceived by the eye of wisdom, erudition and enlightenment). The Lord is especially adorned by the Srivatsa², the Kaustav Mani (the special jewel worn by Vishnu) and the Mukta Mani (pearls in the form of garland) that the Lord wears on his chest (28).

[Note--¹The eight *Vasus* are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluder or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

²*Srivatsa*— this is the mark of the foot of sage Bhrigu which he had caste on the chest of Vishnu ones when he got annoyed upon the Lord. The Lord is so enamoured of his devotees that instead of taking umbrage at this disrespect shown by the sage and punishing him for his misdemeanor, he had blessed the sage that his footprint would always remain on his chest as one of the jewels worn by Lord Vishnu. However, Laxmi was so angry at the temerity of sage Brighu that she cursed that henceforth she, in the form of wealth and material abundance, would always shun a Brahmin; it is believed that this is the reason why Brahmins, who are otherwise of a high birth, are always serving others in the society who are junior to them by birth for their monetary and material needs.]

29. The spiritual aspirant should meditate, with due persistence, steadfastness, devotion and humility, upon the glorious, splendorous and divine form of Lord Vishnu whose dazzling radiance is equivalent to millions of moons, and whose immaculate purity resembles the immaculacy and purity of untainted, transparent and colourless crystal (29).

30. One should concentrate his mind and meditate upon this glorious divine form of the four-armed Lord Vishnu (the sustainer and protector of creation), who resembles the flower of the linseed plant called ‘Atasi’, honorably seated on an exalted divine seat located in the navel¹ while inhaling air during the process of Purak phase of doing Pranayam² (30).

[Note—¹The *navel* is the point in the body where the placenta is attached to the embryo, enabling the latter to draw its nourishment from the mother’s body. Lord Vishnu is the sustainer and nourisher of creation, so his seat at the site of the navel is

a symbolism of this biological fact. Besides this, the navel is the site of the 'Nabhi Chakra' and below it is the 'Kanda' which is the center from where all the Naadis (nerves) in the body branch out. These Naadis carry consciousness and life throughout the length and breadth of the body which is a microcosm of the entire creation. This Nabhi Chakra is also said to be the abode of the Sun God which is a symbolic representation of the fact that the sun is the eternal cosmic source of light, heat and energy without which life on this earth is unimaginable.

²*Purak* is the phase of Pranayam when breath is inhaled through the nostrils. The word literally means 'to fill, to supply, to replenish'. During this phase, fresh life-giving air element is drawn inside the body. This air is then allowed to remain inside the body for a given period of time during the second phase called 'Kumbhak' which literally means a 'pitcher or hollow pot'. This phase is mentioned below in verse no. 31 below. Finally, the air is expelled during the exhalation phase called 'Rechak' which means 'to clean, to purge, to eliminate'. This phase is mentioned in verse no. 32 below. These three phases are an integral part of Yoga and all the Upanishads that deal with Yoga describe them in one context or the other.]

31. Similarly, during the next phase which entails the holding of the inhaled air inside the body, called the phase of Kumbhak, one should concentrate his mind and meditate upon the divine and glorious form of the four-headed Lord Brahma (the creator), whose countenance is fair but with a slight hint of pink, as being seated on the symbolic divine seat located in the subtle heart (in the sublime form of pure consciousness) (31).

[Note—The heart is the place where emotions and sentiments have their seat. It is the heart which makes a man emotionally and sentimentally attached to this world, loving it and longing for it with his heart, yearning for its sensual pleasures and longing for its material comforts. It is the heart which makes a man feel sentimental in certain situations, making him either hate or love something or someone. All sentimental notions and emotive impulses gush out from his heart and not from his mind-intellect which are more realistic and analytical by nature. The heart is the seat of emotions and sentiments. So when the Mana or the mind is under the command of the heart, the former is said to be emotive as well. In fact, as mentioned in verse no. 25, the Mana or the emotive mind is at the root of this vast colourful world of imaginary mirages that trap the unwary and innocent creature in their ever-spreading tentacles. Since the creator Brahm is said to have had in his heart a desire to create a wonderful world of magnificent charm and astounding diversity before he actually made a determined bid to implement his desires and give them a concrete shape using the instrument of the intellectual, analytical and discerning mind, it is safely assumed that the world's original or primary place of origin was in the heart of Brahm.

In other words, the heart came into the picture even before the mind was involved. The heart decided that it should create a colourful and charming world to play with, and then influenced the mind to see how this goal can be achieved in a systematic and planned manner. Then when the intellect warned the creature that he is allowing himself to get trapped by his own creation, the heart overruled its advice and kept the creature entangled in the world. It is only once in a while that wisdom dawns on the mental horizon of some isolated fortunate creature who would pay heed to the heed of the intellect and rein in the natural impulses of the heart so as to divert the efforts of the mind to search the truth and reality of existence. This is the general picture at the level of the individual creature.

Now to come back to our above verse, once the creation came into being, Brahma started to love it naturally in the same manner as a father naturally loves his offspring no matter how stupid or wild or good-for-nothing he or she is. The emotions of love and endearment have their seat in the heart, and the world exists only as long as the man is emotionally and sentimentally attached to it, for as soon as his heart feels

detached towards the world the latter has no charms left for the man. We love anything with the heart and not the mind. When a couple wish to start a family, the primary requirement is the involvement of the heart—i.e. the factors of love, passion, lust and belonging come into play immediately. Then when the offspring materializes, the parents begin to love him more than any other possession they have. In short, the heart and the world are intricately and inexplicably related to each other.

This fact is celebrated here in this verse by saying that Brahma has his seat in the heart. As has already been pointed out in verse no. 20-21 and note of verse no. 30 earlier, the Purak phase of Pranayam refers to the air being drawn in to fill the abdomen with it air. This is a metaphoric way of saying that the practitioner of meditation has accepted the cosmic responsibility of creation and the fact that he is a personification of the cosmic creator known as Brahma, the four-headed God of creation. Since Brahma is the creator of the visible world and the creatures who would inhabit this earth, the person who accepts Brahma in his heart also symbolically accepts the fact that he is the creator of this world. Seating this Brahma in the heart is like giving permanence to this belief. This fact is symbolised by the Kumbhak phase of Pranayam when the air is withheld in the body for a prolonged time. In metaphysical terms it means that he has accepted that this world in which he finds himself trapped is one of his own creation, and therefore he is the only one who can bring an end to it. This latter fact is metaphorically represented by the Rechak phase of Pranayam.]

32. Finally, while exhaling air during the concluding phase called Rechak, the aspirant should meditate upon and fix his mind upon the three-eyed Lord Shiva (the concluder) who is honorably seated on an exalted divine seat located in the forehead (between the eyebrows). Lord Shiva has a white (fair) complexion resembling the colour of crystal or quartz. [Crystal or quartz appear to be white in colour though they are colourless and do not have any inherent colour of their own but only reflect the colour of the sunlight which is white, indicating Lord Shiva's purity of thoughts and his inherent auspiciousness and uncorrupted nature because this 'white' colour is symbol of such eclectic virtues as purity, auspiciousness, divinity and holiness. This colour of his complexion is made physically possible because he smears the ash of the fire sacrifice all over his body.]

Lord Shiva is honoured by the epithet of 'Nishkal', i.e. one who is without a spot and taint or faults and shortcomings of any kind, who is stable and unwavering or is unchanging and steady under all circumstances and periods of time.

Lord Shiva is the vanquisher and destroyer of all sins and misdeeds along with their horrendous consequences for the creature (32).

[Note—*Lord Shiva* is the most enlightened, wise and self-realised omnipotent great Lord of creation who is able to provide the creature, who meditates properly upon the supreme Truth, with liberation from the bondages of ignorance and delusions, along with delivering his soul from this world of an endless cycle of birth and death by blessing it with emancipation and salvation. The Rechak phase of Pranayam relates to the exhalation of contaminated breath which has collected all the gaseous and other lighter impurities of the body while the breath was withheld inside during the Kumbhak phase. The Rechak phase is a metaphoric representation of the fact that the spiritual aspirant has collected all spiritual impurities that were present inside his inner self and has expelled them while doing Rechak. Thus, Yoga and especially Pranayam helps him to wash his inner self clean of all sorts of darkening soot of his character during the symbolic phase of Rechak, then imbibing auspicious and noble virtues during the Purak phase, and finally endeavouring to retain these good virtues during the Kumbhak phase. This entire process is tantamount to his becoming sinless and uncorrupted like Lord Shiva.

Shiva remains in a perpetual state of Yoga or doing meditation and contemplation as compared to Lord Vishnu and Brahma. This is because the latter two Gods are neck-deep involved in the creation and then the sustenance of the world; they have no time to reflect on the entanglements that this world have created for them. On the other hand, Shiva is totally detached and dispassionate by nature, so he finds time to shun the world and remain engrossed in the bliss obtained by meditation and contemplation. That is why Shiva is regarded as the patron God of ascetics and wise persons. That is also why he is regarded as the 'Maheshwar'—the 'Great' God.

Shiva is also regarded as the patron Lord of death and is said to reside in the cremation ground where he witnesses constant death all around him, and has therefore realised the futility of pursuing this illusive world. He has seen kings and paupers die and leave everything behind. So nothing of the material world can be exciting and attractive for him. He has realised that everything in this world is perishable and transient, and therefore to pursue them is as stupid an enterprise as running for water seeing a mirage in a hot desert. This wisdom of the futility of worldly charms and the perishability of the world itself makes Shiva most detached from the world and sincerely renounce it. Being totally detached from and disillusioned with all the charms of this fascinating world, he prefers to remain in seclusion of snow-capped mountains or caves where he can practice the worship of the Self in a constant state of meditation and contemplation called the state of Samadhi (a trance-like state of utter bliss and tranquility) without getting distracted by the deluding impulses of the material world.

That is why Shiva's symbolic abode is said to be in the forehead because the head is the site of wisdom, erudition, knowledge and enlightenment as compared to the heart which is inclined to be sentimental and emotional. The brain is located in the head of which the forehead is like the front of the computer monitor or the bonnet of the car. It is the head that makes the creature realise the 'truth and reality' by analyzing and interpreting facts in the proper perspective.

'Death' in the metaphysical context would mean getting rid of the world and involvement with it just like a dead person who is not concerned with what is happening around him. Mere physical presence without any involvement, or being a neutral observer, or even doing deeds without expecting any result or benefit from them are all tantamount to being 'dead' in this world as far as the Atma or soul is concerned. Therefore, a wise and self-realised man is virtually 'dead' even though he has a body and goes about his normal duties in this world.

When a self-realised person develops this eclectic state of mind and realises the eternal 'Truth' of existence, when he has understood that he is not an ordinary creature but a personification of Brahm in as much as the Trinity Gods Brahma, Vishnu and Shiva have their symbolic abode inside his own body as asserted in verse nos. 28-32 herein above, he is bound to undergo a profound psychological change for the better. He acknowledges the fact that he is a living personification of the Brahm, and therefore he must think and behave accordingly.

Since Rechak phase of Pranayam is symbolic of the exit of all forces of life from the body in the form of exhaled air, it is a metaphor for death of all evil tendencies and the cause of awakening of enlightenment in the aspirant much like the constant observation of death has awakened profound renunciation in Lord Shiva.

On the other hand, Vishnu has Laxmi as his consort, and this Goddess presides over material wealth and prosperity which can only entangle and not free the creature from worries. Similarly, Brahma is the forefather and so he is worried about the welfare of his progeny, the creation and its inhabitants. It is such an irony that though he is accompanied by Saraswati, the patron Goddess of knowledge, he still never feels as detached from this creation as Shiva is. So, whereas Brahma represents the first phase of life when the creature is born as an infant, and Vishnu stands for his growth and development, Shiva symbolises his last phase or old age when he has had enough of the world and seeks liberation and deliverance from its torments.]

33. Lord Shiva is symbolically enshrined in the divine Lotus present in the subtle heart of the creature. This Lotus resembles the plantain tree in as much as its stalk is bent like an inverted U at the top and the blossoming lotus flower is at the end of this stalk, its face pointing downwards. It is visualised that Lord Shiva, who is an embodiment of all the Vedas, resides here (33).

[Note—Lord Shiva is an embodiment of the Vedas because he is the wisest of all the Gods, and even wiser than Brahma, the creator of the Vedas. This is because Brahma has the notion of love and endearment for the world in his heart, being its creator and father, but Shiva is completely immune to such emotional involvements, remaining detached from and dispassionate towards the world. The Vedas also endeavour to inculcate the sense of profound dispassion towards this deluding world in the heart of the spiritual aspirant, and therefore Shiva is deemed to have really understood the essence and meaning of the teaching of these great scriptures as compared to Brahm, though the latter is the one from whom the Vedas were created like other elements of creation.

The posture mentioned here is the one obtained when one is deeply engaged in meditation when the neck is bent forward and the head is tilted downwards so that the chin touches the upper end of the breast bone below the Adam's apple. This happens in an advanced stage of Yoga when the practitioner is so lost in his thoughts of the 'self' that he is not even aware that his head is not erect and is drooping.]

34. While meditating, the aspirant should concentrate his attention on the divine Lotus symbolically located in the subtle heart. This Lotus has a hundred sepals, a hundred leaves and a hundred opened and blossoming petals. This Lotus enshrines the Sun, the Moon and the Fire element in this sequence (see verse no.26-27), and the aspirant should meditate respectively upon them in this order (34).

35. [Now, this verse describes how one can be made aware of these three entities, the Sun, the Moon and the Fire, while meditating upon this symbolic Lotus in his heart.]

In order to be enlightened about the presence of these entities in the symbolic divine Lotus¹ of the heart, the aspirant should first visualise in his mind during meditation that the flower is slowly developing and opening up in his heart. Then he should accept the 'Beej Akchars' or seed Mantras of these divine Gods (i.e. the basic letter or syllable that is regarded as the specific basic Mantra of these divine entities of creation, viz. the Sun, the Moon and Fire) and establish them in this Lotus² (35).

[Note—¹In the Upanishads, the lotus flower is invariably used to symbolise the heart because it is here that the pure consciousness known as the Atma resides. Lotus is a metaphor for purity, holiness, divinity and auspiciousness because of the physical fact that inspite of being born in a dirty pond it remains clean itself and not a drop of dirty water sticks to its petals.

²This is like cross fertilization of the female flower with the pollen grains from the male flower by the help of the bee or other insects. The Beej Mantras are like the pollen grains coming in from the anther of creation, and they represent the various divine forces of Brahm. The transplanting of these divine characteristics and auspicious virtues of Brahm in one's own heart is metaphorically said in the way of this cross fertilization of the flower by the pollen grains. When they fertilise the egg present in the symbolic divine Lotus present in the heart of the aspirant—a process only possible when the flower is fully grown up and in its prime beauty and blooming with all its colourful charms symbolising the maturity of thoughts of the spiritual aspirant—it is then that the eclectic virtues characteristic of Brahm are realised by the practitioner of Yoga in his own heart.]

36. A person who is aware of the presence of the supreme transcendental Being, the Supreme Being, in all the three places¹, the three paths², the three forms of Brahm³, the three Akchars or letters⁴, the three Maatraas⁵, as well as in the 'Ardha Maatraa' or the half-syllable⁶—such a person is the one who is deemed to be truthfully wise, erudite and enlightened about the fundamental tenets of the Vedas and the essence of their teachings (in the form of the great sayings called the Mahavakyas or the great sayings and other maxims and axioms of the scriptures. [Refer verse nos. 16-17 above.] (36).

[Note—¹The *three places* where Brahm resides are the three states in which consciousness exists, viz. the waking state, the dreaming state, and the deep sleep states of consciousness. The three places also refer to the three worlds called Triloki—viz. the terrestrial world represented by the word 'Bhu', the sky above the earth represented by the word 'Bhuvaha', and the heavens represented by the word 'Swaha'. Besides these interpretations, the three places refer to the three planes of time—viz. the past, the present and the future. The word in its broader perspective would involve the 'triad of the entire creation' because everything that exists is nothing but a manifestation of on single non-dual cosmic Truth known as Brahm. This is because of the simple fact that the creation 'does exist; it is seen, witnessed, lived in, and is verifiable and tangible', and not some hypothetical conjecture based on the figment of imagination.

The 'triad of creation' has been enumerated in note to verse no. 7, Canto 1 of Shwetashwatar Upanishad which is Chapter 5 of this volume.

²The *three paths* are the following—the two extreme paths, one that leads to his pomp, reputation, glory and fame, and the other that causes just the opposite to happen, leading to his ill-fame, ignominy and degradation, and the third path is the median one of moderation that is regarded as auspicious and well thought of. It is marked by the virtues of detachment, dispassion and non-involvement. According to some versions, these three paths are represented by the three aspects of the fire sacrifice by which the Supreme Being is worshipped, viz. 'Dhum' or the aspect of the fire sacrifice when there is smoke and much sputtering and crackling of the firewood before it catches fire properly, 'Archi' or the aspect of the fire sacrifice when the flames are burning brightly and brilliantly, and 'Agati' or the concluding part of the sacrifice when some firewood or other offerings remain half-burnt or incompletely burnt, leading to either smoldering pieces of leftover offerings, or the residue of the extinguished fire in the form of still-smouldering pieces of charcoal and ambers. Refer also to verse no. 93/12-93/15 which describes the three paths that the Atma takes from the metaphysical point of view.

³The *three forms of Brahm* are the following—the 'Vishwa' representing the gross form of the visible world in which the individual creature lives in his waking state of consciousness, the 'Viraat Purush' representing the gross form of the invisible cosmic parent body in its cosmic plane of waking state from which all the individual creatures of this world have come into being, and 'Brahm or Ishwar' which that entity from which even this Viraat has evolved. Another interpretation of these three forms of Brahm is its manifestation as the Trinity Gods consisting of Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder.

⁴The *three letters* are the three letters of OM, i.e. A, U and M. These three letters cover in their ambit the entire gamut of creation, viz. 'A' covers birth, 'U' covers growth and development, and 'M' indicated death or conclusion.

⁵The *three Maatraas* of Brahm are represented by the three phases in which this creation has evolved as a fraction of Brahm. These are called 'Hrisva' or the small beginning indicating the primary forms of life such as algae and fungi, the 'Dirgha' or the most evolved and widespread form such as the higher species of animals and the highest rung occupied by the humans, and 'Plut' symbolising the rudimentary forms left after the creation come to the end, or the conclusion of the creation itself. If these

are applied to the divine word OM standing for Brahm, then the letter 'A' stands for Hrisva, the letter 'U' for Dirgha, and the letter 'M' for Plut.

⁶The *half-syllable* stands for the incomplete sound of M pronounced at the fag end of saying OM when the mouth is closed as in the word '*sum*', thereby denying the letter 'M' to be pronounced with its full glory with an open mouth as in the word '*mouth*'.]

37. A person is said to be well versed in the essential tenets and teachings of the Vedas when he becomes acquainted with (i.e. when he witnesses and experiences first hand) the supreme Divinity and the Absolute Truth of existence. It is known as the cosmic Consciousness represented by the ethereal word OM. The sound of OM resembles the reverberations caused by the resonating sound emanating from a large bell, a sound which is in a continuous stream of vibrations much like the uninterrupted stream of oil flowing down a smooth surface¹, and which lies beyond the restrictions imposed by the physical characteristics of the symbol of OM having a Bindu, Naad and Kalaa (here referring to the sign of 'Chandra Bindu'—the crescent-shaped moon with the dot on top—placed above the symbol of OM. [That is, when the spiritual aspirant is able to experience the vibrations of ether in his meditative state, the center of his brain which receives sensory perceptions from the external world is overtaken by the resonance of sound that prevails in the cosmic ether so much so that none of the impulses of the external world are able to disturb his inner peace and tranquility. He remains in a state of perpetual bliss and ecstasy because his mind becomes oblivious to the turmoil in the surrounding world. This rare and unique state of existence that is witnessed by seasoned ascetics is tantamount to having witnessed the supreme conscious 'Self' that is beyond the purview of the mundane world, and is immune to all delusions and the entrapping web that this world casts.] (37).

[Note—¹The 'smooth surface' here refers to the cosmic ether in which the Naad has had its origin in the form of the cosmic waves, oscillating in regular frequency which generated sufficient energy that in turn produced the cosmic sound identified by and encrypted in the word OM. The calm surface of this ether is the tranquil state of existence that goes beyond the mundane life full of restlessness and turmoil, and the presence of 'consciousness' in this state of existence is symbolised by the energy of the waves that create an oscillation in the cosmic ether. The best way to experience this phenomenon is to stand on the beach beside an ocean during the night when a continuous and indefinable roar is heard in the distance. This 'distant' roar is symbolic of Naad. It is also heard when one closes one's ears with the fingers. When one is asked to describe the type of sound heard, there is only one word which would give an idea of how it sounds, and it is OM pronounced in a subtle but resounding manner when one hums this monosyllabic word OM. Refer also to verse no. 2-3, 102 also.]

38. Even as a man can suck in water through the bore of the straw, the expert ascetic is able to draw his vital winds called Prans while steadily practicing meditation, especially Pranayam, and divert them upwards (i.e. he is able to rise above the mundane and attain a higher state of exalted existence when his vital energy and life forces are diverted towards his spiritual elevation instead of being frittered away in worldly pursuits) (38).

39. A wise and seasoned practitioner of meditation should make efforts to symbolically suck up the divine subtle energy present in the Kundalini (the coiled energy center present at the base of the spine) that is to be treated as a 'well or fount'

of cosmic energy, by the path of the symbolic straw represented by the stalk of the divine Lotus present in his subtle heart (i.e. through the duct or Naadi, called the Sushumna Naadi, passing up from the mouth of the Kundalini, through the center of the spine, and reaching up to the top of the head), and using the Ardha Matra of OM (i.e. the resonating sound produced in the mind after the mouth is closed and the sound of the word OM is continued with a prolonged humming) as the force to do the pulling-up of this energy just like water is drawn up from a deep well¹ by the means of a rope and bucket (or a liquid is sucked up through the means of a straw).

The pulled-up energy from the Kundalini should then be focused in the center of the eyebrows² (39).

[Note—¹It is to be noted here that this ‘humming sound’ resembles the working of an electric water pump that is used to pull up water from deep bore wells. The pipes used for this purpose are like the Naadi called Sushumna through which the energy of the Kundalini is being pulled up, the Kundalini itself is the underground water reservoir, and the energy being concentrated in the forehead is like filling of the overhead water tank with this pulled-up water. As is obvious in this example, the underground water reservoir is of no use unless the water is easily available and made distributable as when it is stored in an overhead tank.

²In other words, the practitioner should endeavour to use his meditative exercises to concentrate his subtle energy, which was hitherto locked inside the Kundalini and now released by meditation practices, in the region of the forehead between the two eyebrows where the faculty of intellect and discrimination is located. It is believed that this spot is the place where the symbolic ‘third eye of wisdom’ is located. This ‘eye’ has the same powerful impact and the same penetrating powers in the field of metaphysics and spiritualism that the beam of laser has in modern science. The small triangle formed at this spot, i.e. at the tri-junction of the two eyebrows and the root of the nose, is called the Trikona in verse no. 95.]

40. The spot of the forehead between the two eyebrows and the root of the nose is the place where the supreme Brahm is said to have his symbolic abode. This is the place where the elixir of eternity and bliss, called Amrit, is located¹ (40).

[Note—¹Refer verse no. 95, 103-106 below. This spot is called the spot of wisdom, erudition and enlightenment in the body. When the ascetic is able to concentrate his mental energy here, he is able to attain supernatural powers to see even things not visible to naked eyes just like the x-rays that can penetrate the skin and see the bones behind them. It is like generating powerful laser rays of spiritual energy which enables the practitioner of Yoga to penetrate the outer shell and see behind; it gives him mystical powers of deep insight. He becomes so engrossed in this concentration that he forgets about anything else much like the bee which is sucking nectar from the flower. This is a metaphoric way of saying that he experienced utmost bliss when his attention is focused here at this point. Besides this, it is here in the mind—more precisely in the hollow of the skull—that he hears the reverberations of the cosmic Naad while he repeats the Mantra OM as described in verse no. 103-106 below. These cosmic vibrations soothe down his nerves by subtly massaging them, and as a consequence he experiences unprecedented ecstasy and bliss.]

41. The six limbs of Yoga are said to be the following—Aasan (sitting posture), Pranayam (breath control), Pratyahar (withdrawal of the mind and its control), Dhaarna (having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path), Dhyan (contemplation and concentration of the faculties of the mind and intellect), and Samadhi (a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation) (41).

[Note—Refer Amrit Naad Upanishad, verse no. 6, which is Chapter no. 9, and Tejobindu Upanishad, Canto 1, verse no. 16-42 which is Chapter no. 14 of this volume.]

42. The numbers of Aasans (sitting postures) of Yoga are as numerous as the number of species of living creatures in this creation. Thus, there are hundreds of such sitting postures, and they are all known to Lord Shiva (42).

[Note—This is a very significant observation. It means that all the creatures, no matter to which plane of existence it belongs to or where it lies in the evolutionary ladder, can do meditation and contemplation in order to obtain the benefit of spiritual liberation and deliverance. It is not necessary that only humans have the birth-right to do Yoga and obtain spiritual liberation, but they only have an advantage of an advanced faculty of the mind and intellect as well as the privilege of being able to read the scriptures and seek advice of those who have had a first-hand experience of pitfalls of such practices and precautions to be taken to avoid them. After all, spiritual emancipation and salvation is open to all forms of life because all forms have the same divine soul in them just like each human being has a right to education and knowledge but only a limited ratio of the population takes advantage of this right, and even amongst them only a handful make good and fruitful use of this privilege.]

43. The four main Aasans or sitting postures during meditation are the following—Siddha¹, Bhadra², Singha³ and Padma⁴.

The two subtle energy centers at the lower end of the body are the Muladhar Chakra⁵ and Swadisthan Chakra⁶ (43).

[Note—(1) The *Aasan* is the sitting posture adopted by a practitioner of Yoga (meditation) in order to concentrate his mind and vital energies of the body to obtain success in his spiritual pursuit or obtain access to the boundless source of subtle energy lying untapped inside his own body for acquiring mystical powers and deep insight into the para-natural. Successful accomplishment of Yoga is dependent upon such sitting postures because they are like specific instruments to be employed by a student of any particular discipline of science in order to obtain success in his experiments, and at the same time are like strict regimes to be followed by him for this success. Some of the other Upanishads that describe the prominent Aasans in great detail are the following—Yogchudamani and Jabal Darshan of the Sam Veda tradition, and Mandal Brahmin of Shukla Yajur Veda tradition. The Amritnaad Upanishad of Krishna Yajur Veda tradition, which is included as Chapter no. 9 of this volume also deals with them.

¹The *Siddha Aasan*—To sit in this posture, the two legs are first stretched out. The left leg is bent at the knee and folded in so that the heel touched the genitals and the sole lies flat against the inner thighs of the right leg. Then the right leg is folded in and the heel is placed in front of the pubic bone and the sole touches the inner thigh of the previously folded left leg. The two hands are stretched out and the outer side of the wrist of each hand is placed on the bent knee-joint of the respective side. The palm is opened and the thumb is touched by the bent first finger to form a virtual ring, with the remaining three fingers held straight out. The practitioner sits perfectly in a ram-rod straight position, with the spine, the neck and the head in a straight line. The mental sight is fixed on a spot in front of the nose, and this state of intense concentration is maintained as long as is feasible for the practitioner. Then the legs are gradually unfolded and after some period of relaxation, the process is repeated with the opposite leg being folded in first and placed below the other leg. It is believed that this posture is one of the best postures to be adopted for Yoga amongst the eighty four lakh (84×10^5) postures of meditation. This Siddha Aasan is capable of cleansing all the seventy two thousand Naadis (ducts in the body), and is so-called because it is possible to access the divine source of cosmic energy trapped inside the

body as well as experience the cosmic power of the kindled Spirit by employing this Aasan. The word 'Siddha' implies one who has acquired stupendous mystical and supernatural powers that are beyond the parameters of the physical and mundane world.

²The *Bhadra Aasan*—To sit in a posture by placing the two ankle joints under the buttocks on either side of the suture, i.e. the junction point of the testicles and the anus such that they (the two ankle joints) touch each other, and then using the hands to firmly clasp the soles from the back side of the buttock, is called 'Bhadrasan'. This posture can neutralise the ill effects of all diseases which cause the production of toxins in the body (or which are caused by administration of poisons or other toxins in the body; it helps to get rid of diseases as well).

³The *Singha Aasan*— The sitting posture called 'Singhasan' is so named as it resembles the way a lion sits. It is this — tuck both the ankle joints (by folding the legs inwards and backwards) under the buttocks in such a way that the right ankle joint is to the left of the suture, i.e. the left ankle joint is under the right buttock and the foot of this left leg protrudes out from below the buttock of the right leg. Similarly, the right leg is folded in and the ankle is tucked under the left buttock and the foot points out from under this buttock. Both the hands should be stretched out straight and the open palms kept on the knee of the corresponding side with the fingers spread out like a fork on that knee (i.e. left palm should rest facing down on the left knee and the right palm on the corresponding right knee of the bent leg, with outstretched fingers). Then, open the mouth wide, extending the tongue out as much as possible, and fix the attention and sight on the tip of the nose. This is a posture adored by ascetics (Yogis) and it is dedicated to the memory of Lord Narsingh, the half man and half lion incarnation of Lord Vishnu to liberate his great child devotee Prahalad from the torments inflicted upon him by his own demon father. Amongst the benefits of this Aasan is that it clears the voice and removes foul breath.

⁴The *Padma Aasan*—This is to sit in a Lotus posture. It is also regarded as one of the most widely practiced posture of Yoga because of its ease and sustainability. This entails to sit crossed-legged in such a way that the foot of the left leg rests on the upper and inner part of the thigh of the right leg, and vice versa. The spine, neck and head are in a ram-rod straight position, and the hands, with palms facing upwards and resting one on the top of the other, are placed on the folded legs in front of the navel region.

(2) The *Chakras* are the various subtle energy centers present in the body. According to Yoga texts, when the vital energy trapped in these Chakras are activated, a person acquires immense potentials, including spiritual and mystical powers. They have been elaborately described in Upanishads dealing with Yoga and mystical forms of ritualistic worship involving meditative practices in order to enable to practitioner acquire astounding mystical and supernatural powers. Refer Saubhagya Laxmi Upanishad, Canto 3 of Rig Veda tradition, as well as Yograjo, Yogchudamani and Jabal Darshan Upanishads (Canto 4) of the Sam Veda tradition.

⁵The *Muladhar Chakra*—It is located between genitals and anus, in the region known as the perineum.

⁶The *Swadisthan Chakra*—It is located in the groins of males and the Bhug area of females. It has a 5-headed male phallus like a sprouting seed and its counterpart in the female is the clitoris.]

44-45. Between these two (Muladhar and Swadhisthan Chakras) is located the area (site) responsible for reproduction. It is called the 'Kaamroop¹' because it is a personification of such qualities as passion, lust and desires that a creature has.

At the base of the anus there is a Chakra shaped like a Lotus with four petals. In the center of this is located the famous center of cosmic creative energy called

‘Kamakhya’. This is adored by acclaimed practitioner (because it has the same potential to ‘create’ that is also possessed by the supreme Lord of creation).

To the front of this Kamakhya is the male organ present outside the body in the anterior side of the anus (44-45).

[Note—¹This is called the *Kaamroop Peeth* in terms of the Tantra Yoga.

The word *Peeth* means a seat or pedestal for an idol of a deity. In the metaphysical context, it refers to the four sheaths which form the body that harbours the Atma of the creature at its center. These four sheaths are—the Annamaye Kosh or food sheath, the Pranmaye Kosh or the wind sheath, the Manomaye Kosh or the mind sheath, and Vigyanmaye Kosh or the intellect sheath.

The subtle heart of a creature is shaped like a divine Lotus where the supreme Lord known as Vishnu, the personified form of the Viraat Purush who is the infinite, invisible, all-encompassing and all-pervading macrocosmic gross body of the supreme transcendental Brahm, is honorably seated. This subtle heart is located inside the ‘self’ of the spiritual aspirant himself. Refer Dhyan Bindu Upanishad of Krishna Yajur Veda, verse nos. 27-28.

According to Tantra Shastra, the Peeths are said to be the places where the Shakti (cosmic dynamic energy of creation) is located in the body which itself is regarded as the temple of Shiva (Yogshikha Upanishad, Canto 1, verse no. 168), and of both Shiva and Vishnu as representatives of Brahm on the one hand and of Shakti and Laxmi as representative of Brahm’s cosmic dynamic and active principle on the other (Canto 5, verse no. 4). The body is also regarded as a holy city or pilgrim site where these four Peeths or temples of Shakti are located (Yogshikha Upanishad, Canto 5, verse no. 2-4).

There are four such Peeths as follows—The first seat or Peeth is called Kaam Roop Peeth, the second seat called Purna Giri Peeth, the third seat is called Jalandhar Peeth, and the fourth seat is called Uddyan/Udiyan Peeth.

These Peeths or seats and their locations have been described in verse nos. 170-175 of Canto 1, and verse nos. 8-15 of Canto 5 of Yogshikha Upanishad belonging to the Krishna Yajur Veda tradition.]

46-47. There is a self-illuminated center of light resembling a priceless gem, symbolising the fount of a natural source of wisdom, intelligence, thoughts and discrimination. A person who is well acquainted with it is said to be an expert in Yoga.

Located at a distance measuring the width of four fingers from the epicenter of the fire element (called the Kundalini located at the base of the spine) and below the pubic bone is situated the Gonad (the testicles in the male), the organ which produces the cells responsible for reproduction. It is symbolically radiant and glowing like the hue of molten gold, and brilliant and splendorous like the dazzling streak of electric. [That is, it is a center of a very powerful source of dynamic creative energy that has the potential to generate new life in the form of a new creature from one single cell of the mother, i.e. the egg, and one from the father, i.e. the sperm. The metaphors of the ‘molten gold’ and ‘electric’ are used here to indicate the stupendous energy and dynamism of creation that is concentrated in this part of the body. If the forehead is the site for wisdom and erudition, this lower end of the body, i.e. the gonad, is equally important if the creation is to be perpetuated.

The Swadhisthan Chakra is at the base of this center (46-47).

48-49. The area of the Swadhisthan Chakra is called the pelvic region. This site has the vital wind (the Apan Vayu) and it is illuminated like a gem. [This is because it is

the centre of the body harbouring such glorious centers of energy as the Kundalini, the Swadhisthan Chakra, the Muladhar Chakra and the reproductive organs.]

The Manipurak Chakra is situated in the region of the navel. It is shaped like a Lotus having twelve petals. It is the area that controls ‘Punya’ and ‘Paap’ done by an individual. In other words, it is the center that controls life in as much as it is through it that the embryo draws nourishment from the mother through the placenta, and being so nourished it develops and takes birth as a creature that does this and that deed in this physical world. Each deed done by him is classified as either good or bad, the former being called ‘Punya’ or something categorised as auspicious and noble, and the other is called ‘Paap’ or something demoted to the lowly class of sins and inauspiciousness (48-49).

50-51. It is only till the time that the living being is not aware of the essential truths behind these organs that he is remains trapped in the whirlpool or net of delusions and ignorance¹.

Above the region of the perineum and below the navel is the cluster of Naadis (ducts in the body; the nerves and veins) called the ‘Kanda’ (literally meaning a root like structure like the sweet potato or carrot or radish). It is from here that seventy two thousand Naadis originate. From amongst them, there are seventy two Naadis that are more important (50-51).

[Note--¹That is, till the time a man does not understand that the reproductive organs are meant to carry forward the legacy of the supreme Brahm in the way of procreation, and are not at all meant for sexual indulgences and gratification of carnal desires of the body, he remains trapped in ignorance-induced delusions and swept off in its tide. That is, he foolishly thinks that his sexual organs are meant for sexual enjoyments, pleasures and self-gratifications instead of realising that they are tools to participate in the cosmic scheme of creation. This eclectic thinking should be natural to a wise and enlightened man because he is deemed to be one who is aware that he is not an ordinary mortal creature but Brahm personified. The sexual organs are meant to fulfill some divine mandate and not for indulgence and sexual enjoyments. Refer note no. 3 of verse no. 36 above.

So as soon as this wisdom dawns in his mind, he begins to see his own self as a personification of the Supreme Being capable of generating new forms of life in the form of his offspring almost from scratch, besides creating this colourful and many-faceted world of magnificent charms and sights. He makes new discoveries, new innovations, improves on and adds to what the original creator has created in some earlier time. In other words, he possesses the same ‘creative and generating’ powers and potentials as possessed by the Supreme Being. This is exactly the main purpose of the great teachings of the Vedas and Upanishads—to kindle self realisation in the man and make him realise that he is not an ordinary mortal like other ordinary creatures in this creation who are destined to lead a life ending in death and rebirth depending on what that creature has done in its previous life, but someone specially privileged and endowed to get an opportunity to charter his own course of redemption and salvation which no other forms can do with the same ease that is available to him.]

52-53. Out of these (seventy two Naadis) there are only ten main Naadis through which the Pran (vital life giving forces present inside the body) move or pulsate. They are the following—Ida, Pingla, Sushumna, Gandhari, Haritjivha, Pusa, Yashaswani, Alumbusa, Kuhu, and Shankhini (52-53).

[Note—Refer Yogchudamani Upanishad, verse no. 15-17, and Jabal Darshan Upanishad, Canto 4, verse nos. 13-17 of Sam Veda tradition.]

54-57. Practitioners of Yoga are expected to have a thorough knowledge of these Naadi network. The three main Naadis amongst these are the Ida, Pingla and Sushumna, and the vital life known as Pran continuously pulsates and moves inside them. The patron God of Ida Naadi is Sun, of Pingla is Moon, and of Sushumna is Fire.

The Sushumna is in the center of the other two Naadis, the Ida being to its left and Pingla to its right. These three Naadis are like the highway through which the Pran moves.

The ten vital winds in the body are called Pran. They are the following—Pran, Apaana, Samaana, Udaana, Vyan, Naaga, Kurma, Krikan, Devdutta, and Dhananjaya. Out of them, the first five are the chief Prans while the last five are subsidiary Prans¹ (54-57).

[Note--¹According to various Upanishads, especially the Trishiki Brahmin Upanishad, 1/5 and 2/77-87, and Paingalo-panishad, cantos 2, verse nos. 3 of the Shukla Yajur Veda tradition, the 'Pran' (vital wind) is classified into ten types depending upon the function that the wind element performs in the body of a creature. Amongst them, there are five winds which are considered more important than the rest. As such, these five are called the main 'Pran', or 'Panch Prans', and they are the following:--(1) Pran, the wind element, as breath, that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without life no other wind would be of any significance to the creature; (2) Apaana, the wind that passes down the intestines and is responsible for digestion of the food taken by the creature and its excretion through the anus and urinary organs (kidneys); (3) Samaana, the wind that is responsible for equal distribution of nourishment throughout the body, as well as in circulation of blood; (4) Udaana, the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases in the body through the nostrils and mouth in the form of exhalation and cough; and (5) Vyan, the wind that helps in maintaining equilibrium and pressure within the body, and it also controls the functioning of the other winds.

Besides the above, there are five subsidiary winds which act more like assistants to the chief Prans. They are:- (1) Naaga—this junior wind which helps in exhaling breath and belching; (2) Kurma—this subsidiary wind helps the eyelids to open and shut; (3) Krikan—this creates the sensation of hunger; (4) Devdutta—this creates sleep; and (5) Dhananjaya—it prevents decay and deformation of the body immediately after death for some time.

According to Subala Upanishad, canto 9, verse no.1-14 of the Shukla Yajur Veda tradition, these ten winds have the following functions—(1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apaana—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaana—this controls the tongue and the faculty of taste (verse 4); (5) Samaana—this controls the skin and the faculty of touch (verse 5); (6) Vairambha—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antaryaama—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11) Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naaga—this controls the 'Chitta' or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

Location of the five chief vital winds, called the Panch Prans, in the body—(1) Pran—it is present in the mouth, nose, heart, navel, big toe of the leg; (2) Apaana—it is present in the intestines and anus, lower abdomen, thighs, knees; (3) Samaana—it is

uniformly present throughout the body; (4) Udaan—it is present in the hands, legs, joints of the body; and (5) Vyan—it is located in the ears, thighs, waist, heels, shoulders, throat. The subsidiary winds as listed above, i.e. Naag, Kurma, Krikar, Devdutta and Dhananjay are located in the skin, muscles and the bones.

Besides the Upanishad mentioned above, there are others that elaborately describe the vital winds, their locations, their functions, how they are satisfied, along with their significance. The chief amongst them are (1) Chandogya Upanishad in its canto 3, sections 13-18; canto 5, sections 19-23 (describes how the five winds are satisfied); and canto 7, section 15, (2) Jabal Darshan Upanishad, canto 4, verse no.23-24 of the Sam Veda tradition, (3) Maitrayanu Upanishad, canto 2, verse no.6-7 of the same Veda (which describes the functions of these winds), (4) Subalo Upanishad, canto 9, verse no.1-14, (5) Paingalo-panishad, canto 2, verse no.3 of the Shukla Yajur Veda tradition, and (6) Amritnado-panishad, verse no. 33-38 of the Krishna Yajur Veda tradition. These vital winds have also been elucidated upon in sage Veda Vyas' Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39.]

58. The subtle vital forces of life called Pran collectively move and oscillate in these thousands of Naadis, injecting life or 'Pran' into the otherwise lifeless gross body of the creature. The living beings move up and down under the influence of the Pran and Apaana respectively¹ (58).

[Note—¹In metaphysical terms this means that they attain spiritual upliftment when their Pran is more active, while they get demoted to the mundane world of lowly life marked by grossness and inertia when the Apaana wind is more active. In more physical terms the movement of Pran refers to the process of breathing, while the movement of Apaana refers to the peristaltic movement that helps the food to move down the intestines. The breath (Pran) which brings in fresh oxygen-laden air inside the body and helps to rejuvenate the tissues on the one hand and removes toxic gases and other lighter waste products of the body when it is exhaled, and the movement of food in the alimentary canal, its digestion and expulsion of waste products from the body governed by the Apaana wind are both essential and indispensable parts of life because no life can survive without either of them.]

59-61. The Pran (here referring to the breath passing through the nostrils when one breathes) moves sometimes through the path which goes to the left (of the central Sushumna Naadi, i.e. through the Ida Naadi passing up to the left nostril), and sometimes through the one that goes to the right (of the central Sushumna Naadi, i.e. through the Pingla Naadi passing up to the right nostril). The Pran wind is so subtle and sublime that it cannot be visibly seen.

Just like a ball thrown at random by the player moves restlessly in various directions, bouncing here and there and changing its course every now and then unpredictably, the creature is also buffeted and kicked around (like the ball)¹ by the two prominent winds called the Pran and Apaana, and he moves restlessly in so many places (and in so many wombs or takes so many births).

The tug and pull of these two winds on the creature is much like a bird being pulled down by the string tied to its legs while it attempts to fly off in the sky². An ascetic who is well acquainted with this fact is regarded as really wise and enlightened.

While the Pran leaves the body it makes a sound equivalent to the Sanskrit alphabet 'Ha' (equivalent to the sound made while pronouncing *her*; this is the sound made in the throat whilst one exhales breath with mouth open). On the other hand when it is taken in, it makes the sound of the Sanskrit alphabet 'Sa' (equivalent to the

sound made while pronouncing sir; this is heard when one inhales air through the clenched teeth but open mouth). [Refer verse no. 24 also.] (59-61).

[Note—¹The same idea has been described in Yogchudamani Upanishad, verse no. 27-28 of Sam Veda tradition. It says—“Just like a ball or balloon being throne or kicked around by players, a creature (an individual) cannot remain stable and steady for long because it is under the spell of Pran, Apaana and other vital winds which constantly keep it restless, agitated, always mobile and fidgety and in a state of constant flux (27).

The creature, under the buffeting influence or thrust of the vital winds or airs, is compelled to move upwards or downwards, to the left and to the right (like an air-filled balloon) so swiftly that it loses its bearings and does not know what is happening to it (28) [27-28]”.

These winds slap and dash against the sail of a ship on a high sea, as it were, tossing and turning it with the lashing of every gust. The creature cannot sit quietly and calmly in the ship because these vital wind forces continue to flap and flutter the sail, whipping the ship recklessly in the churning waters of the sea represented by this world.

The creature's body is like the balloon or a football, as it is filled with air called the vital winds. Even as a balloon or an air-filled light ball moves with the slightest touch, is easily tossed about violently in a squall or gale and it cannot remain at a single point for long even when there is no apparent breeze blowing, the creature also has an inbuilt and inherent natural tendency to be always on the move, remain restless and be fidgety. The biggest proof of this fact is witnessed when a dead body is observed. All the rest of the organs of a body while it was alive are present in a corpse, the only imperceptible element which has left the body is 'Pran' or the vital wind. The corpse becomes heavy than a living man and it lies motionless if it is not moved by others; it has no capacity to move on its own and it becomes heavy like lead. So it is clear that it was the 'Pran' that made the body light weight, agile and active much like the air-filled balloon or ball. Once the Pran leaves the body, the latter becomes heavy as lead.

The creature is flung around so rapidly in quick succession in waves of emotions and sentiments originating in its heart and mind due to the various influences of the external world that it is not able to discern and make out what is transpiring. It becomes completely disoriented in the topsy-turvy path of transmigration. It does not get a chance to bring itself together and realise who it is, what it truly is, where does it belong, what is the correct direction it should take and which direction it is actually heading to, where should it go and where it should not. Taking the example of a boat in a stormy high sea, the harried creature is so rapidly hurled and tossed about like a ball and thrown over board that it is more concerned with grabbing any float at hand just to avoid getting drowned than to focus on long term spiritual goals of life. Its immediate concern is the survival in the next moment, and not the moment beyond the first. Another good example would be a balloon or a dry leaf or a kite caught in a storm. There is no need to elaborate what happens to them. The allegory will aptly summarise the comic but alarming situation the trapped creature faces.

²The analogy of the *bird* is used here to emphasise the point that the creature has a natural tendency to remain free like the bird, but it allows itself to be tied voluntarily in shackles of delusions pertaining to this world out of its own ignorance, and its unending greed and desires, and gets trapped as a result much like the bird which falls for the trap laid for it by the cunning bird-catcher. The tug and pull in the world with its astounding variety of magnificent charms and fascinating colours, no matter how transient and horrifying they are in the long run, are nevertheless very enthralling and captivating for the time being for the creature, and the latter has no inclination to look ahead and see the horrendous consequences of falling for them. This is the 'downward pull of the Apaana wind', used here in a metaphoric way

because it is this wind that moves down the body through the intestines and helps to push the eaten food down the alimentary canal and out through the anus. On the other hand, the Pran moves in the upwards directions as is obvious when we observe the breath which moves out of the lungs and goes up to the nostril to be exhaled. This 'upwards movement of the Pran' is a metaphoric way of saying that the creature is seeking spiritual upliftment, it is 'looking up'.]

62-63. Since these two alphabets 'Ha' and 'Sa' form the word 'Hans'¹ meaning a divine Swan (representing the immaculate, uncorrupted, untainted and divine Brahm, and implying the constant assertion of the creature that he is as immaculate and pure as the Swan representing this Brahm), it is deemed that all the living beings (here referring to the human beings and other creatures who breathe air specially) are constantly doing Japa (repetition) of the divine Mantra pertaining to the supreme Brahm. This Japa is done involuntarily and automatically approximately twenty one thousand six hundred times because this is the number of times one breathes during the course of a day consisting one day and night².

This is equivalent to doing Japa using the famous and most acclaimed Gayatri Mantra as far as the Yogi who is a well established, wise, erudite and enlightened ascetic or any other practitioner of meditation and contemplation is concerned. This automatic Japa of the Mantra 'Hans-Hans' repeatedly and incessantly by the ascetic provides him the same benefit of emancipation and salvation that is obtained by repeating the Mantra of Gayatri³ (62-63).

[Note—¹The concept of *Hans* has been described in note to verse no. 24 above in this Upanishad. This verse says that the supreme transcendental Brahm known also as cosmic Consciousness resides in all the living beings in the form of a Hans or a divine Swan. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his divinity and sublimity, his exalted stature, till that was pointed out to him in this verse. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must do not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

The Yogchudamani Upanishad, verse no. 82-83 of Sam Veda tradition describes this Swan in the context of Yoga. Let us see what it has to say in this context—"The 'Hans' (literally a divine swan) resides gloriously and majestically in the center of the two eyes of a creature during the waking state of consciousness. The letter 'Sa' (सकारः) of the Hindi/Sanskrit alphabet represents the 'Khechhari Mudra' of the Yogi which is certainly the personification or the image of the word 'Twam' (82).

The letter 'Ha' (हकारः) represents the supreme Lord of creation, called 'Parmeshwar' which is certainly symbolised or represented by the word 'Tat'. That is, the two syllables of the word 'Hans', meaning the divine swan, are 'Han' (ह) and 'Sa' (स) which stand for the two words of metaphysics which have profound impact—the 2nd word is 'Twam' and the 1st is 'Tat' corresponding to these two syllables respectively. Any person who concentrates his mind and attention, and contemplates and meditates upon the letter 'Sa' shall surely become akin to, or equivalent to the form or the image represented by the letter 'Ha'. This is called contemplating upon and practicing of the twin tenets of 'So-a-ham' and 'Tattwa-masi' (83) [82-83]."

The Upanishadic sage establishes uniformity and oneness with the two great philosophies and metaphysical concepts of the scriptures—"So-a-ham" which means 'that is me', and 'Tattwa-masi' which means 'the essence is pure consciousness and it is me'. The word 'that' refers to Brahma which is the universal and absolute Truth and Reality about the existence, and has the qualities, inter alia, of enlightenment, of

being eternal, omnipotent, universal, omnipresent, immanent, omniscient etc. When the seeker/aspirant focuses his attention on the self represented by the letter 'Sa' (self) and the 'Khechari Mudra' (when he is unconscious of the external world and focuses his attention on the glorious supreme entity present in the center of his eyebrows), he realises the truth of the maxim 'So-a-ham'. When he opens his eyes of wisdom, the truth of the 2nd tenet 'Tattwa-masi' dawns on him. Put simply, it means that the creature realises that 'he is the same as the supreme Brahma who resides in his Atma/soul present in his bosom/heart'. At the same time, 'the external world seen through this eye of wisdom symbolised by the presence of the divine swan in his eyes is the same Brahma who has revealed himself in this multifarious, diverse and myriad world'. This is the essential truth, or 'Tattwa'.

Refer Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 61-64, 78-79. This is Chapter 16 of this volume.

²The Amrit Naad Upanishad says that a living being breathes 1, 13, 680 times during the course of a day and night.

³The *Gayatri Mantra* has two versions which are presented here. According to one version, it is based on the typical 'Gayatri Chanda' which is a poetical composition consisting of three stanzas or lines each having eight letters or syllables. The total number of letters or syllables is thus twenty four. The Gayatri extolled by Brihad Aranyak Upanishad, Canto 5, Brahmin 14 is the one strictly conforming to this rule. On the other hand, the usual and commonly known Gayatri Mantra has four steps or stanzas and is based on the composition style called the 'Anushtup Chanda'.

The 'Gayatri Chanda' is used to compose the sacred hymns of the Vedas. Amongst the different composition styles, this is regarded as the best style of Chanda in which the Vedas were revealed (Jaimini Brahmin, 2/227) because it has the divine virtue and supernatural powers that provides protection to the Pran of the person who says the Gayatri Chanda and elevates his stature to that of the celestial Sun.

Let us first see the typical *Gyatri Chand pattern* of this divine Mantra. The Gayatri Mantra based on the style of this poetical composition is described in Brihad Aranyak Upanishad, Canto 5, Brahmin 14, of the Shukla Yajur Veda tradition. This Mantra having three steps is extolled as the one which is superior to other forms of the Gayatri Mantra having four steps because this three-stepped Mantra is synonymous with Pran, i.e. it is the life or the essence of all that exists.

The Gayatri Mantra having three lines is the following—"Tatsaviturvarnyam Dhimahi Dhiyo Yo Naha Prachodayat". The fourth line honours and glorifies this Gayatri as a manifestation of the Sun God, and as brilliant and splendid as it. It is—"Paro Rajase Suvarnam". Since the Sun is a visible manifestation of the supreme Brahm who is the Transcendental Consciousness of the entire creation at the macro level, having the Atma resident in the bosom of the individual creature as its micro level counterpart and Pran as its subtle manifestation, the Gayatri Mantra is in honour of the supreme Authority of creation, i.e. Brahm.

Now the question arises that if the three lines are the complete Mantra, then what was the purpose of including the fourth line? It must be especially noted in this context here that this fourth step of leg of the Gayatri Mantra does not consist of any word which is a part of the main Mantra, but is only meant to establish its divine stature as the citadel for all spiritual Mantras; it is intended to give this Gayatri its place of honour in the pantheon of divine Mantras. Besides this, the fourth leg is visualised as a symbol of stability because anything that has four legs is more stable and steady as compared to one with only three.

Therefore, last stanza is like an epithet highlighting the magnificent divinity and spiritual value of the Gayatri Mantra. It is akin to the Sun shining in the sky, and all other planets and their satellites such as the moon shine because they reflect this light from their surface. The Sun is at the centre of the solar system even as the Gayatri is at the symbolic hub of all divinity and spiritually empowered Mantras. It is also akin to the Pran which supports life in a gross body of a creature and is an acronym for life

as a whole. The Pran symbolically illuminates the dark realm of the body from the inside while the Sun does the same from the outside.

The actual Gayatri Mantra that should be preached to the spiritual aspirant consists of the first three steps as described in verse nos. 1-3 of Brihad Aranyak Upanishad, Canto 5, Brahmin 14.

This famous Mantra is dedicated to the Sun God who is a manifestation of the supreme transcendental Brahm. It is this Mantra—which is a group of ethereal words having profound spiritual value and metaphysical importance. It is called Gayatri because it gave protection to the Pran--Brihad Aranyak Upanishad, Canto 5, Brahmin 14, verse no. 4. It has been accepted as a manifestation of Pran in Shatpath Brahmin, 1/3/5/15, while it is praised as having the potentials of Agni (fire) present in the faculty of speech known as Vak in Taittiriya Sanhita, 3/2/9/3, as Tej (energy) in Shatpath Brahmin, 1/8/2/13, and as Brahm (the supreme transcendental consciousness) in Maitri Brahmin, 4/3/1. According to the Purans (mythological histories of the Hindus), the Gayatri has been praised having manifested in the form of the Trinity Gods—Brahma the creator, Vishnu the sustainer, and Shiva the concluder--Skanda Puran, Kashi Khand, Purva, 4/9/58. Whatever that exists is a revelation of Gayatri because it is a manifestation of Brahm—Chandogya Upanishad, 3/12/1. In fact this whole earth that gives refuge to all the life forms in this world is a manifestation of Gayatri-- Chandogya Upanishad, 3/12/2. By worshipping it, a person is blessed with worldly assets such as abundant livestock and flourishing family, a long, healthy and active life, wealth and fortunes, good name and fame, as well as spiritual attainment in the form of Brahm realisation—Atharva Veda, 19/71/1.

The Gayatri Mantra has been expounded and elucidated upon in Brihad Aranyak Upanishad, Canto 5, Brahmin 14 and other Upanishads, such as the Savitri Upanishad which is entirely dedicated to it, the Maitrayanyu Upanishad, Canto 5, verse no. 7, and the Chandogya Upanishad, Canto 3, Section 12, verse nos. 1-9 belonging to the Sam Veda tradition. Besides these, the Gayatri Upanishad appears as eight assorted verses or Kandikas numbering 31-38 of the Gopath Brahmin belonging to the Atharva Veda.

It has been said in the scriptures that Brahmins, the highest class amongst the humans and who are regarded as the most learned and wise amongst them, were born from Gayatri, thereby drawing a parallel between the highest stature and exalted standing of Brahmins amongst the creatures and the Gayatri amongst the hymns. It is pertinent to note here by the way that Kshatriyas, the warrior class, were born from the Chanda known as Trishtup, and Vaishya, the trading class, from the Chanda known as Jagati. In other words, the divine and eclectic powers encrypted in the Trishtup Chanda revealed themselves as the Kshatriya, and those of the Jagati as the Vaishya. The Trishtup Chanda has four lines each having eleven letters or syllables, totaling forty four letters or syllables in all, while the Jagati Chanda has six lines with eight letters or syllables each, totaling to forty eight letters or syllables.

(b) According to some schools of philosophy, the Gayatri Mantra composed in the style of an Anushtup Chanda is to be worshipped. Therefore, the Mantra according to this school of thinking is the following--‘OM BHURBHUVAHA SVAHA¹, TATSAVIURVARENYAM², BHARGO DEVASYA DHIMAHİ³, DHIYO YO NAH PRACODAYAT⁴’. It means ‘OM is the supreme, transcendental Brahm. He is the lord of creation of the terrestrial, the celestial and heavenly worlds. I offer my oblations to you. That Brahm is luminous like the sun. He is excellent, the best, the most exalted, a destroyer of sins, and a divine entity. May he imbibe, infuse and inspire our intellect with wisdom and enlightenment so that we are purified and move on the righteous and noble path’. The four phrases of the Gayatri Mantra are clearly marked by small numerals in this Mantra. This Mantra appears in the Rig Veda (3/62/10), the Sam Veda (1462), and Yajur Veda (3/35, 22/9, 30/2, 36/6).]

64-65. When the wise and erudite ascetic or any spiritual aspirant gives this sound of breath (i.e. the sound of Ha + Sa as described in verse nos. 61-63) going out of the body and coming in it the same importance, the same significance, the same respect, the same dignity and the same honour that any eclectic and divine Mantra (such as the famous Gayatri Mantra or any other Mantra for that matter) is given, then this sound of breath ('Hans') gives him the same benefit as any other famous Mantra.

He is able to obtain freedom from the ill effects of all sins and their evil consequences, and is able to reach and have access to the supreme state of Brahm realisation. There is no other Vidya (mystical knowledge and expertise) to match it; there is no Japa (repetition of a Mantra) equivalent to this constant and effortless repetition of the Mantra known as 'Hans'¹; and there is no other more auspicious deed than this (because it helps the man to focus his attention constantly, consistently and persistently on Divinity, and veer his mind away from this world of artificiality and delusions).

There is no Mantra as potential and holy as this subtle and sublime unspoken Mantra known as 'Hans'—there has never been and there would ever be (64-65).

[Note—¹This is because this Mantra Hans is repeatedly automatically when the man breathes—refer verse no. 61. Breathing is an effortless and natural exercise for a man, requiring no special attention, efforts, exertion and energy so much so that even an unconscious man or a sleeping man breathes just like when he was wide awake and active.]

66. The supreme source of divine cosmic energy is personified as a female deity (a Goddess) called the 'Parmeshwari'. [Here the term refers to the Kundalini¹ because it is the fount of this cosmic dynamic energy in creation inside the body.] This Parmeshwari representing the stupendous source of energy lies in a sleeping state or in a dormant state of existence, blocking the entrance or doorway to the pathway to Brahm realisation (called the 'Brahm-Dwar')².

This Parmeshwari is aroused or literally woken up from her sleep by the process of 'Vahni Yoga'³ or the meditative practice that is tantamount to doing a fire sacrifice in a symbolic way⁴ because it kindles the latent fire element inside the Kundalini. This process is aided by the strong will power of the mind called the Mana, and the proper channelising of the forces of the vital winds called the Maruts present inside the body by doing Pranayam and other exercises of Yoga (66).

[Note—¹*Kundalini*—The Kundalini is a coil-like center of subtle energy lying at the base of the spine. It is generally lying in a dormant state. By doing Yogic practices, the stupendous energy trapped in its coils can be released by the unplugging of its mouth which opens into the 'Sushumna' nerve. This energy then rises up the spinal cord and ultimately reaches the top of the head. The Yogi who practices this Kundalini activation, called 'Kundalini Jaagran', experiences brilliance and dazzle unmatched by any other experience.

²The *Brahm-Dwar* is the lower end of the Sushumna Naadi, the tubular duct running through the center of the spine and is regarded as the only duct that helps the expert ascetic to divert his vital winds upwards along with the subtle cosmic energy released from the Kundalini, upwards so that they reach the top of the head where the Brahm-Randhra is located. This Brahm-Randhra is the hair-like slit on the top of the skull from where the supreme transcendental Brahm is said to have entered the gross body of the creature at the time of creation and had taken up his abode in the creature's mind and intellect in order to control his creation at the gross level and material plane of physical existence from there. According to the philosophy of Yoga, when an acclaimed practitioner of meditation and contemplation is able to concentrate his vital forces of life, i.e. the Pran and Atma, there, he experiences a

closeness with this Supreme Being present in a subtle and imperceptible form at this spot. Finally, at the time of death, his Pran makes its exit, along with the Atma, his pure self or consciousness, from this point to merge with the wind or air element present in the vast cosmos outside the physical body. This is tantamount to the aspirant's final liberation and deliverance because then this Pran would not have to reenter any other body as it has merged and got itself lost permanently in the elements of Nature, losing its individuality.

Usually the lower end of this Brahm-Dwar (represented by the Sushumna Naadi) is blocked by the mouth of the Kundalini. The thrust of Yoga practice, especially the Vahni Yoga is to un-block it by opening the Kundalini's mouth and releasing the latter's cosmic energy into this pathway.

Yogchudamani Upanishad, verse no. 36 of Sam Veda tradition describes this pathway.

³*Vahni Yoga*—It deals with the activation of the vital wind/air with the fire/energy of life. For it, various techniques, processes, postures and exercises have been prescribed in Yoga, the chief among them being the activation of the Kundalini by Pranayam. The 'fire' required to heat and activates the 'Apan' wind and push it upwards comes from the 'Sun Chakra' or the 'Surya Chakra' (subtle energy center) located in the region of the navel. It is done by 'Surya Pranayam'. During this meditative practice, it is imagined that leaping flames are flaring up from the core of the sun symbolically residing in the navel of the Yogi, and these flames are virtually heating the Sushumna nerve (also called the pathway leading to Brahm) as well as the other vital winds present in the lungs, the heart, throat etc. By heating the lower end of the Sushumna nerve, which is akin to heating one end of a heating rod or coil, alongside the heating of the Kundalini and the Apan wind, the opening of this Sushumna nerve, which was up till now blocked, is unclogged and the subtle energy of the coiled Kundalini, which was hereto before trapped inside it, is released and pushed up by the Apan wind into the spinal cord through this Sushumna nerve where it rises up through this channel right up to the mind or the top of the head, mixing with it all other winds en-route, collecting all their impurities with it, much like the hot air above the surface of the earth developing into whirlwind and rising up into the atmosphere, taking up along with it the dust particles, dry leaves, twigs etc. as it goes up. This polluted wind is finally exhaled through the right and left nostrils during the process of Rechak. The rising of the Kundalini is similar to the rising of heated mercury in a thermometer. When the bulb is heated, the mercury shoots up. Here, when the Kundalini is heated, the energy trapped inside it rises up the Sushumna nerve.

Vahni Yoga is so-called because it stokes the latent fire energy lying dormant hitherto in the body of the spiritual aspirant by activating the vital winds, especially the warm Apan wind present in the lower end of the intestines, and utilizing its powerful force to stoke and activate the Kundalini, thereby heating it and releasing its subtle energy through the opening of its mouth covering the lower end of the Sushumna Naadi (nerve). This released energy then snakes up this Naadi and reaches the head, first at the root of the nose and center of the eyebrows and ultimately the top of the head at the point of the Brahm Randhra, the hair like slit on the skull, from which is finally escapes at the time of death of the ascetic, giving him liberation from the fetter of this body for ever.

(Refer Yogchudamanu Upanishad, verse no. 38 and 107 of Sam Veda tradition.)

⁴The Yogchudamani Upanishad, verse no. 36-39 of Sam Veda tradition has an identical view which says—

“Verse no. 36—The 'Kundalini energy' is located above/at the top of the 'Kanda' in the form of a coil having eight spirals. It covers the mouth of 'Brahm-Dwar' (literally, the doorway leading to Brahm). It remains ever present, but dormant, in that place.

“Verse no. 37—The stupendously supreme, Goddess-like divine and sublime cosmic energy (i.e. Kundalini) remains dormant and in a sleeping state. It keeps the door or the entrance point of the channel leading to Brahm residing in the ‘Mana’ of a creature (the Brahm which lives in the realms of the mind and the intellect, the heart and the soul of the creature) blocked or closed or chocked by its own mouth. This entrance point is called ‘Brahma’s doorway’, which is actually the opening of the ‘Sushumna’ nerve. [The coil of Kundalini is like a serpent, with its hood blocking the lower end of the spinal cord like a plug in the neck of a bottle.]

“Verse no. 38—By the practice of ‘Vahni Yoga’ (literally, the ‘fire Yoga’) it becomes activated. Simply put, the ‘fuse’ is ignited by the subtle fire produced or kindled or stoked by Yoga to make this energy active and viable. Once activated, it assumes the form of ‘light’, and accompanied by (or pushed by or impelled by) a determined mind as well as the forceful push of the vital winds, it gradually snakes up or rises up the ‘Sushumna’ nerve (like a flexible needle snaking up the intestine or veins during a micro-hole surgery as done during endoscopy by a doctor).

“Verse no. 39—Even as a person can open the locks of the door to his house with a key, Yogis can open the door to liberation and deliverance, emancipation and salvation by the use of this Kundalini.

To understand the phenomenon, one can imagine a flexible probe or scope passing up one’s rectum during a medical process called endoscopy. The rectum and the lower intestine have a titillating experience as a result of the probe moving inside it. The entire process has been elaborately described in a note to verse no. 107 of this Upanishad.]

67-68. Upon being woken up, this Parmeshwari (i.e. the cosmic dynamic energy trapped in the Kundalini but now released in its subtle and sublime form) rises up and moves upwards the Sushumna path (i.e. this energy snakes up the Naadi called Sushumna), taking along with her the Mana (subtle mind) and the Pran (the vital wind forces in the body representing the spark of life and vitality that makes the creature move about and show signs of life) just like the needle takes the thread passing through it upwards when it is moved in that direction by the hand while sewing a cloth.

Wise, erudite and expert ascetics diligently and forcefully open the door leading to their liberation and deliverance from the fetters that shackle them to this body by releasing the trapped energy of the Kundalini just like a man opens a magical trapdoor of some mysterious citadel by clapping or knocking at it to summon the person inside the citadel to open the door for him¹ (67-68).

[Note—¹True form of liberation and deliverance for an enlightened ascetic implies the release of the ‘Pran’, i.e. the vital winds present in the body which are synonymous with ‘life’ in a creature, from the trap-like physical gross body upon its exit from the latter, and its merger with the primary air or wind element that is present outside the body, followed by the disintegration of the body and release of the other elements such as earth, water, fire and sky, which were an integral constituent parts of the gross body, into their primary cosmic forms. This ensures that there would be no more vestiges of the earlier body left, and the dissolution is complete and final. Refer Yog Kundali Upanishad of Krishna Yajur Veda tradition.

69. [This verse describes how to activate the Kundalini.]

The person desirous of activating the Kundalini and releasing its subtle energy for his spiritual benefit as well as to empower him with great mystical and occult powers should sit steadily in the Padmasan posture¹. The palms of the two hands are placed one on the top of the other, face upwards and put on the heels of the two legs (which have already been folded in from the knee joint in such a way that the heels

are just opposite the navel, the sole is pointed upwards and inwards towards the body, and the toes of the leg of left side rest on the thigh of the right side and of the right leg on the thigh of the left side). The chin is drawn in and held tightly near the pit of the throat below the Adam's apple.

While sitting in this posture, the practitioner should focus his mind on the patron deity of ascetics, usually on Lord Shiva who is regarded as the supreme Brahman manifested in the form of the 'pure self'. The *Apaan Vayu* (i.e. the wind in the lower part of the body, especially in the lower intestines and pelvic region) is drawn or pulled upwards, while at the same time the *Pran Vayu* (i.e. the breath moving in the upper part of the body, especially in the nostrils and lungs) is made to divert inwards or held from escaping. [This physical exercise is very difficult and requires a lot of practice and patience. It results in mixing these two primary winds in the body. This is effectuated when the *Apaan* wind is pulled up by the upwards tug of the *Pran* wind, and the latter is pushed down by the downwards pull of the former, resulting in a balancing effect.]

The net result of this exercise is that the practitioner is able to experience the astounding potentials of the released powers of the trapped subtle cosmic energy that was hitherto lying dormant in a hibernating state in the *Kundalini*. [When the two winds cross each other's path, they create enough force that shakes and rattles the *Kundalini* into activity, thereby unplugging its mouth to release the energy trapped inside its coils. This is like doing physical exercises in a gymnasium to loosen rigid muscles and tone them up.] (69).

[Note—¹The *Padmasan* posture is to sit in a lotus posture. This entails to sit cross-legged in such a way that the foot of the left leg rests at the base of the thigh of the right side and the heel is just in front of the navel. Similarly, the right leg is drawn in and the foot is placed at the base of the thigh of the left leg and the heel is in front of the navel. The toes of each leg rest upon the thigh of the other side and the sole points upwards. The spine, neck and head are held in a ram-rod straight position, and the hands, with palms facing upwards and resting one on the top of the other, are placed on the folded legs in front of the navel region. The chin is drawn in and held tightly near the base of the Adam's apple near the chest. This *Aasan* has been described in *Trishikhi Brahmin Upanishad*, Canto 2, verse no. 39 of the *Shukla Yajur Veda* tradition.]

70. Those expert ascetics who are able to pull in the *Pran Vayu* (fresh breath) through the relevant *Naadi* during the practice of *Pranayam* (i.e. during the inhaling phase called 'Purak' when the breath is pulled in successively through the left and right nostrils where the *Ida* and *Pingla Naadis* are respectively located), and then hold this *Pran Vayu* inside the body during the 'Kumbhak' phase, are certainly able to obtain liberation and deliverance from the fetters represented by this body (i.e. are able to obtain 'Mukti' as described in note to verse no. 66-68 above). There is no doubt about it (70).

71. The drops of sweat that come out (due to the rigorous efforts made for *Pranayam* and *Kundalini* activation) should be rubbed into the body (instead of wiping them off with a towel). The practitioner should avoid diet that includes things that are bitter, sour, acidic or salty. Instead, he should remain happy subsisting on a diet of milk (71).

72. A diligent and wise ascetic who practices *Yoga* (various meditation exercises such as *Pranayam* etc.), observes the principles of *Brahmacharya* (self control, abstinence and continence etc.) and restrains his eating habits (as outlined in verse no. 71) is able

to obtain success in his meditative endeavours by attaining Siddhi (mystical powers and spiritual elevation) within a period of one year. There is no doubt it (72).

[Note—The points mentioned in verse nos. 71-72 here are exactly the same as expressed in Yogchudamani Upanishad, verse nos. 41-43 of the Sam Veda tradition.]

73-76. [Verse nos. 73-78 ½ describe the three ‘Bandhas*’ and their benefits for the practitioner of Yoga.]

An erudite and wise ascetic is able to obtain Siddhi (spiritual, mystical and occult powers) by harnessing the stupendous potentials of the Kundalini located at the upper end of the Kanda¹.

Constant practice of the meditative exercise called ‘Moolbandh’ or closing of the Muladhar Chakra² (located at the base of the spine, between the anus and the genitals) helps in mixing of the two vital winds, i.e. the Pran and Apaana (as described in 69-70 above). The output of urine and stool is reduced to a minimum level, and this can make an old man much younger than his age.

Moolbandh is done by pressing the genitals with the heels and constricting the muscles of the anus to close this opening. Meanwhile, the Apaana Vayu (the wind present in the rectum and anus region) is pulled upwards forcefully. [Refer Yogchudamani Upanishad, verse no. 46-47.] (73-74^{1/2}).

‘Uddiyan Bandh’ is said to resemble the flight of some great bird (such as a falcon, a kite, a hawk, or an eagle) in the sky when it draws its stomach in to make its body more suitable for flight according to the principles of aerodynamics. Thus, the practitioner should pull the muscles of the stomach (abdomen) inside so much so that it is sucked in and almost touches the backbone or spine (thereby making the front part of the stomach look like a concave surface or a hollow bowl). The navel is pulled upwards as much as possible. [Refer Yogchudamani Upanishad, verse no. 48-49.] (74^{1/2}--76).

[Note—*The word *Bandha* literally means to stop, to close or to prevent the escape of an entity. In the context of Yoga it refers to the closing of the subtle apertures of the body through which the Pran or the vital winds could escape when pressure is exerted on them while doing Pranayam or other Yoga exercises. It is the virtual closure of all the exit points in the body so that the vital airs trapped inside and activated by doing various Yoga exercises such as Pranayam or Asanas or Mudras etc. are prevented from escaping from the body when put under great pressure. As a result, these winds can then be diverted in the desired channel by the practitioner of Yoga, such as utilizing them to unclog the blocked Kundalini (the coiled subtle energy center located at the base of the spine) and the Naadis (the tubular ducts of the body through which the vital life-factors called the Prans, the various impulses and signs of life such as the consciousness etc. move inside the body—e.g. the nerves, capillaries and veins). These Bandhas enable the practitioner to acquire stupendous mystical powers that enables him to perform supernatural deeds, such as to float in the air. They also help to arouse the latent energy of the Kundalini and aid in its rising up in the Sushumna Naadi to reach the head which ultimately leads the practitioner of Yoga to experience the bliss of ‘consciousness realisation’.

The three Bandhas described in these verses are also described in the Yoga Kundalini Upanishad, Canto 1, verse no. 41 of Krishna Yajur Veda tradition. Refer also to Tejobindu Upanishad, Canto 1, verse nos. 27, and Varaaha Upanishad, Canto 5, verse nos. 44-45 of Krishna Yajur Veda.

¹Jabal Darshan Upanishad, Canto 4, verse nos. 3-6 describes the *Kanda*. It is located at a distance of nine fingers above the Muladhar Chakra. The Kanda means ‘a root which is edible’, e.g. radish. Kanda is located near the navel, is approximately 12 inches above the opening of the anus, approximately 4 inches or finger-width in

diameter, and is about 12 fingers in length. It is enclosed or encased by a soft, silk like shroud made of a jelly like membrane or fold of skin. It is oblong and shaped like an egg. The nerve passing through the center of the Kanda (as its core) is the 'Sushumna Naadi'. It is surrounded by a dense network of nerves numbering 72 thousand.

Refer also to verse nos. 50-51 of the present Dhyan Bindu Upanishad which also describes the Kanda.

²The *Muladhar Chakra*—The word 'Muladhar' means a principal place or the root or fundamental place or foundation upon which everything else rests, or the place which gives support to all others, while 'Chakra' means a whirling energy center in the body. It is one of the principal seven nerve centers in the body where all the Naadis coordinate and form a knot of nerves. The word comes from 'Mool' or 'Mul' meaning 'a seed, the head, the source, the beginning, the root of a tree'. Hence, it is a metaphor for that portion of the body which harbours the divine subtle fire which, when aroused and kindled, can foster life in the creature. Muladhar is the foundation of life, as it were, because life rests on it. It is also called the Agni Kund or the symbolic 'fire pit' which harbours forces of life.]

77-80. This Uddiyan Bandh has the same relation to death for the ascetic as the lion has for the elephant. [In other words, just as a lion, though smaller in size than the giant elephant, is able to kill it because of its sheer muscular powers, agility, maneuverability, strength and stamina along with a fierce determination and use of crude force, this Uddiyan Bandh can certainly deliver the aspirant from the fetters of this body by setting his Pran or vital wind along with the Atma or soul free from the captivity of the body.]¹

The 'Jalandhar Bandh' literally means to hold the flow of water and it is like the magical and supernatural capacity of stopping the rain from falling down from the sky and instead remain hanging or transfixed up there in the sky itself. Practicing this Bandh helps the aspirant to overcome pains and torments caused by sins and misdeeds, as well as to destroy the fetters created by the deeds done by him which tie ordinary mortals in their entangling web².

To do Jalandhar Bandh, the throat is constricted at its pit so as to close the glottis and the larynx. This stops the flow of air (breath) and prevents the drop of Amrit (the nectar-like ambrosia of life) from virtually falling down and being consumed in the fire present inside the body. [In other words, the holding of the breath helps to preserve vital energy and hinders the decay of the body by the latter preserving its latent vital energy from being consumed in the fire which would be otherwise stoked if the air was allowed to be let in and out. This is like putting the vital functions of the body on hold, to put a break on the metabolic processes of the body or at least slow them down perceptibly, or it is like closing the workshop of the factory for a while to let the body recuperate its lost energy and regenerate its consumed vital fuel.] [Refer Yogchudamani Upanishad, verse no. 50-51.] (77-78^{1/2}).

The 'Khechari Mudra'³ is that in which the tongue is inverted and tucked inside the mouth near the upper palate, and the sight is fixed at a point between the two eyebrows. When the Yoga practitioner is able to gain expertise in doing this Mudra, he is able to acquire astounding mystical powers that are supernatural and empowers him with great potentials. By successfully accomplishing it, the ascetic has no fear from being tormented by excessive desire to sleep, hunger, thirst and fear (78^{1/2}—80). [77-80].

[Note—¹The Uddiyan Bandha gives the practitioner to fly like the bird and acquire the same strength as that possessed by the lion vis-à-vis death—i.e. it helps the ascetic to

conquer death much like the lion overcomes and kills the elephant (verse nos. 74 ½-76 ½).

²The Jalandhar Bandha can empower him with such great mystical powers that he can stop the rain from falling if he so wants. From the metaphysical point of view, this Bandha helps him to overcome the pains and torments or evil consequences of sins and misdeeds (verse nos. 77-77 ½).

³The *Khechari Mudra* is amongst the best and toughest body postures that can be adopted by any ascetic, but at the same time it can empower the practitioner with stupendous mystical and occult powers and potentials. The word 'Khechari' is derived from the root 'Khe' which stands for the sky, and 'Chari' means to move, to wonder or to roam. Therefore the combined word 'Khechari' means one who can move in the sky.

It involves elongation of the tongue by constantly pulling it out and making it flexible by constant rotation. The nerves and veins at the lower end are cut so as to make it senseless. To obtain success in this, the tongue is smeared with butter and stretched by holding it with an iron tong. This results in the tongue getting sufficiently elongated as to reach the inner opening of the mouth by inverting it backwards, and then it is tucked inside the rear of the mouth at the back of the hind part of the upper palate, at the spot where the wind pipe, the food pipe and the mouth cavity converge in the throat. It is generally believed that it greatly helps in focusing attention. It also helps to conquer hunger, sleep, greed, unconsciousness or numbness of the sense organs, and keeps the practitioner alert and focused, etc. The apparent difference between Khechari and Shambhavi Mudras is that in the latter the tongue is not tucked inside the mouth cavity, and is therefore easier to practice. Meanwhile, the sight is fixed unwaveringly at a point midway between the two eyebrows.

This Khechari Mudra has been graphically described in Gherand Sanhita, Chapter 3, verse no. 25-28, besides the Yogchudamani Upanishad, verse nos. 52-64 of the Sam Veda tradition; the Mandal Brahmin Upanishad, verse no. 2/1/8 Shukla Yajur Veda tradition; the Yogshikha Upanishad, Canto 5, verse nos. 40-42, the entire Canto 2 of the Yog Kundalini Upanishad of Krishna Yajur Veda tradition.]

81-84. A wise and erudite person who is an expert practitioner of Khechari Mudra is not tormented by epilepsy or fainting disease, nor by any other type of disease. He is also freed from getting entangled in the web of deeds and their consequences.

A person whose attention is diverted upwards towards higher planes and values of existence (i.e. when he attains spiritual elevation and supernatural powers) symbolically enabling him to float in the sky and soar higher into it, and whose tongue has been bridled and reined in (or tamed by tucking it inside the roof of the mouth, symbolising his control over his speech and the ability to remain silent for prolonged periods of time), is said to be possessed of great mystical and occult powers that are made available to him by the brilliant good effects of Khechari Mudra so much so that he cannot be tied any longer by any of the fetters of Kaal (time, age and circumstance) that are so strong that rarely anyone is freed from their clutches. [That is, he is able to cut through the web of ordinary existence by rising much higher than the mundane and possessing such mystical supernatural powers and potential that he can achieve goals that are not ordinarily possible for ordinary living beings.]

This is why this Khechari Mudra is so much lauded and applauded by experienced and acclaimed ascetics.

It is so potent that a person who has mastered this art can withhold his sperms from being ejaculated even while having sexual intercourse with a woman¹. And as long as the life-giving sperm is held inside the body, say how can he fear from death and its chance appearance?² (81-84).

[Note—¹Refer Yogchudamani Upanishad of Sam Veda, verse nos. 57-59 which explicitly describe and reiterates this fact. Refer also to Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 6, Brahmin 4, verse no. 9-11.

²That is, so long as a ascetic is able to exert sufficient control over his vital life forces and energy form being frittered away in sensual gratification, he would preserve sufficient stamina and vitality to maintain his health in a prime state, thereby eluding death for as long as is practically possible. This verse should not be wrongly construed to mean that he would never die, for this is incongruous even to imagine as everything that has come into being in this gross world would certainly come to an end some or the other day. The idea is to lead a healthy and productive life free from diseases which generally attack a body made feeble by dissipation of vital forces of life in the body such as happens by over-indulgence in sensual pleasures, whether it be related to overeating, sexual indulgences or any other sphere of physical activity that puts a strain on the vital energy of the body.]

85-88. If the sperm inadvertently ejects into the womb of the woman even while the man is in the Khechari Mudra, then it is possible to suck it back from the womb if the man is well versed and an expert practitioner of this Mudra.

The cells bearing life are of two types—one is white coloured and the other is blood coloured. The white coloured ones are called ‘sperms of the male’, while the red coloured ones are called the ‘egg of the female’, called so because it is embedded in the vaginal fluid which resembles blood. This female fluid is called ‘Maharaj’ (the vaginal fluid), while the male fluid is called ‘Shukra’ (semen which contains the male sperm).

The red hot life bearing cells called the Maharaj is present in the womb, while the male cell is located in the testicles called ‘Chandra’ because of its white colour and its dangling nature outside the body in the scrotum. Obviously, their union is rare and very difficult to bring about.

The male sperm is said to be a personification of the Moon God and Lord Shiva, while the female reproductive cells are regarded as the personification of the Sun God and Shakti, the manifestation of the stupendous generative powers of creation in a personified form. (85-88).

[Note—Refer Yogchudamani Upanishad, verse nos. 59-62 and Mandal Brahmin Upanishad, 2/1/5 which expound an identical view on the subject. The semen is a white fluid just like the ambrosia of eternity and bliss that is meant for the use of Gods. It is called Amrit and is stored in the transparent celestial pitcher called the Moon—and this is why the Moon appears to be shining white in colour. The sperm helps to perpetuate creation with its magical and magnificent generative powers; hence it is used as a metaphor for eternity, fertility, perpetuity, virility, vitality, strength and stamina. Since sexual process gives immense bliss, it is also regarded as a giver of extreme bliss and ecstasy. Lord Shiva is the personified Viraat Purush, the cosmic ‘male’ of creation, so he is depicted in iconography as bearing the pitcher of sperm, i.e. the Moon, on his head.

On the other hand, the female sexual fluid is red in colour like the blood, which is again a metaphor for life and vitality besides being synonymous with energy, heat, fire and passions. It is associated with new forms of life because of the presence of blood in it. It is used as a metaphor for the ferocity of fire, its dynamism and energy. It is red-hot, so it is compared to the Sun instead of the Moon. Lord Shiva’s counterpart is called Shakti which is the Sanskrit word for energy, stamina, strength, vitality and powers. This female aspect of Shiva symbolises the creative powers represented by the ovary and its eggs along with the other female sexual organs. It’s their union called ‘Yoga’ which results in the coming into being this visible creation. Refer also verse nos. 89-90 ½ below and its accompanying note.]

89-93. When these two, the male sperm and the female egg cell, unite, the physical body of the creature is conceived. When the mature eggs in the female ovary are activated or moved by the forces of subtle winds present inside the body, they are dislodged from the ovary and taken to the hollow cavity of the womb much like any light thing is taken aloft in the space of the sky by the sweeping action of a strong gust of wind, such as a tornado or a violent storm¹.

This female cell is endowed with the dynamic creative energy and the heat of the Sun (because it is surrounded by blood which is red in colour and is a symbol of vitality and life, and also because the red colour is a metaphor for heat and energy as indicated by the fiercely burning fire which appears to be aglow with a fiery red or orange colour). The white 'Shukra' (sperm floating in the sperm) resembles the Moon, and the red 'Maharaj' resembles the Sun². A person who is aware of the equal importance of these two forms of life is said to be an expert and erudite ascetic who is well versed in the essential philosophy of Yoga. [These concepts have been described in Yogchudamani Upanishad, verse nos. 63-64 also.] (89-90^{1/2}).

The 'Maha Mudra' is employed to cleanse the different Naadis (tubular ducts in the body) of their impurities that clog them, disciplining their functioning and reforming and revitalizing them. The impurities that clog the Naadis are 'Vaat' (afflictions caused by rheumatism, gout and arthritis; problems of disturbed wind in the body), 'Pitta' (excessive bile formation; acidity) and 'Vayu' (wind or flatulence) by employing the coordinated efforts of the Sun and the Moon³. [Refer also to Yogchudamani Upanishad, verse nos. 65-70.]

The process of doing the Maha Mudra is the following—the hollow at the pit of the throat is pressed by the chin, the left leg is folded in at the knee and its heel is pressed against the genital, the body is bent forward so that the big toe of the outstretched right leg is grasped by the thumb and first fingers of both the hands, the abdomen is filled with inhaled air in the process called Khumbhak (holding it inside for roughly 1-3 minutes), and then letting it out gradually (also in another 1-3 minutes).

This process is repeated with the right leg folded in and the left stretched out. Wise and acclaimed ascetics assert that this 'great posture of Yoga' called the Maha Mudra is potent enough to destroy all sins and their evil consequences (90^{1/2}—93).

[Note—¹This is a metaphoric way of describing aroused sexual passions and lust in a mature woman which 'drives her madly towards sexual intercourse', fuelling her 'flight of imaginations and fancy' much like a balloon swept away by the wind. She does not bother about the consequences of this enterprise that can cast an eternal ignominy on her and taint her character for ever if such passions and natural desires are not handled by her judiciously, prudently and with propriety. She even forgets about the horrors and pains of bearing the child and the torments at child birth along with the attendant consequences on her general health so much so that she willingly goes about the entire cycle repeatedly, more often than not in quick succession, often coaxing her partner into submission. It is usually believed that it might be possible for a man to control his sexual passions, but for a lustful woman it is almost impossible.

²The *Moon* is said to be a heavenly transparent pitcher containing Amrit, the elixir of life and eternity which is white in colour indicating its purity and divine nature. The semen resembles this Moon because it contains the sperm which is possessed with all the qualities possessed by the mythical Amrit.

Similarly, the female egg is embedded in the blood present in the cavity of the female sexual organs. This cavity is hot and sexually arousing besides being the harbinger of life and its crucible. It is therefore compared to the *Sun* which is said to

provide energy and heat to all forms of life in this world. Refer note to verse nos. 85-88 above also.

³The *Sun* is a symbol and receptacle of Nature's energy, light, heat, vitality and life bestowing abilities as is evident from the fact that life would be extinguished without the presence of the Sun. Likewise, the *Moon* is said to be a receptacle of Amrit, the ambrosia of Gods that gives fertility and eternity.

In the present context, the coordination of the Sun and the Moon to de-clog the blocked and congested Naadis and revitalize them implies that the 'Maha Mudra'—so called because it is the 'great posture of Yoga'—can enable the ascetic to harness the dynamic energy of creation symbolised by the Moon and the Sun, standing for the male generative powers and the female generative powers respectively, which is present inside the body itself in the form of different Chakras (whirling subtle energy centers of the body) and the Kundalini (the coiled serpent-like energy center at the base of the spine), and which flows in the various Naadis (ducts) of the body once it is unleashed. This energy helps to revitalize and energise the Naadis, scrubbing them and reactivating them along with the other tissues of the body, and ridding them of their impurities and toxins. The entire process rejuvenates the entire body of the practitioner. That is why an ascetic who practices Maha Mudra is able to render himself free from all sorts of bodily ailments and chronic diseases—refer Yogchudamani Upanishad, verse no. 69 which is very specific and explicit on this point.]

93/1. [Verse nos. 93/1-93/11 describe why the otherwise taintless, faultless and eternally immaculate pure conscious Atma of the creature is viewed as being tainted and corrupted by the influences of the different traits and qualities that it allows itself to be surrounded with during its interaction with the material world and its habitat in the gross body of the creature. This results in the Atma exhibiting certain traits that are not characteristic of it.

The Atma is visualised as residing in a Lotus which is like a glass-house having coloured walls. When this wishes to see the world, it sees it through these walls and gets a coloured view of the truth, i.e. it sees a tainted view of the world. Conversely, when one attempts to analyse the nature of the Atma he would be constrained to view it through these walls also and naturally the observer's view of the Atma would be effected by the colour of these walls.]

Now the Atma, the pure conscious soul, is being discussed. The Atma is the pure consciousness of the living being, which is the latter's truthful 'self', and it resides in a microscopic form in a hypothetical Lotus having eight petals said to represent the subtle heart. This Atma is an invisible and imperceptible divine source of illumination (symbolising knowledge, erudition, sagacity, wisdom and enlightenment) manifesting itself as 'conscious self' of the living creature known as the 'Jivatma'. The Atma is all-knowing and omniscient, is omnipotent and able to accomplish everything, and is the habitat of everything in this existential world.

The Atma erroneously believes that it is the one who is the doer of all deeds, and is consequently the enjoyer of the rewards of these deeds or a sufferer of their evil effects. Likewise it believes that it is the one who suffers from distress and sorrows as well as enjoys and feels happy; it has deformities of the physical body such as being a one-eyed one, lame, dumb, deaf, emaciated and thin, or fat and well built. In this way, it behaves in different ways under different circumstances and occasions in an independent manner (93/1).

93/2. The petal of this divine symbolic Lotus pointing towards the east is white in colour. It is symbolic of the dominance of such traits as 'Dharma' (virtues of

auspiciousness, righteousness, nobility and good conduct) and ‘Bhakti’ (the virtues of devotion, faith, reverence and submission of one’s self to the divine forces in creation and worshipping them). Thus, the Atma exhibits these grand traits when it dwells on this petal (of the divine Lotus symbolically present in the heart); or it exhibits these grand virtues when it turns towards this petal or leans more towards it as compared to other petals when it sees and interacts with the world.

In other words, when the Atma sees the world through the east side of this symbolic prism represented by the petal located on the east side of this Lotus, it discerns the eclectic virtues of Dharma and Bhakti as being more dominant than other qualities in the world. Thus it is influenced by these eclectic virtues and begins to exhibit them its self (93/2).

[Note—This is a metaphoric way of saying that these two traits—Dharma and Bhakti—are some of the divine virtues and eclectic qualities present in the Atma in its most primary and divine form as pure consciousness.

In more contemporary terms it is like the Atma looking at the world through a white prism. The colour of the prism would naturally affect the way the Atma sees the world much like a man wearing an eye-glass tinged white. Taken differently, this is like the Atma being surrounded by a transparent sheet of plastic which has a slight whitish hue to it, thereby casting a similar colour on the surface of the Atma. Thus, in this scenario, the Atma would appear to have a white colour and exhibit all those characteristics that go with this colour, such as the auspicious and virtuous traits of Dharma and Bhakti.

This same analogy would apply to all other verses showing different colours of the petals which are like different prisms through which the Atma looks at the world, or the different coloured sheaths or veils that surround the Atma, and which in turn cast their specific colours symbolising one or the other traits unique to that colour upon the Atma, thereby distorting its neutral existence. These characteristic traits either make the Atma appear tainted by corruptions so typical of this material world, or auspicious if it is able to acquire some noble and good characteristics which are also present in the same world. This is because the world has the three types of qualities called the Gunas—viz. the Sata Guna, the Raja Guna and the Tama Guna—simultaneously in varying proportions. While the Sata Guna induces noble and auspicious virtues which makes a man contemplative and thoughtful, inducing in him a desire to search the truth of life and attain liberation from the shackles of the world, the Raja Guna makes the man more inclined to enjoy the world and its material comforts and pleasures, and the Tama Guna makes him evil and pervert, making him thoughtless and reckless.

Looking at the world through these symbolic petals as narrated in verse nos. 93/1-93/9 is a metaphoric way of saying that the Atma would not be able to see the reality as long as it depends upon the instruments of the body such as its gross components as the organs of perception and action, or its subtle components as the mind-intellect complex. The only way to know the ‘truth and reality’ would be to be self-contemplative and analytical by its own self. This is the main endeavour of all spiritual pursuit—to make the man realise the true nature of the Atma which is not only his ‘true self’ but also the immaculately pure consciousness and the Absolute Truth of existence that is never affected by any of the traits of this existential world. It is like pure gold which might appear to take myriad shapes and get tainted when the goldsmith moulds various ornaments with it, but ‘gold’ as the pure metal is always taintless and free from all impurities.]

93/3. The petal of this divine Lotus pointing towards the south-east is red in colour. It is symbolic of the dominance of such traits as ‘Nidra’ (tendency to sleep; drowsiness) and ‘Alasya’ (lethargy, torpor, inactivity, laziness, sloth, idleness and indolence).

Thus, the Atma exhibits these negative traits when it dwells on this petal (of the divine Lotus symbolically present in the heart); or it exhibits these negative qualities when it turns towards this petal or leans more towards it as compared to other petals when it sees and interacts with the world.

In other words, when the Atma sees the world through the south-east side of this symbolic prism represented by the petal located on the south-east side of this Lotus, it discerns the negative qualities of excessive Nidra and Alasya as being more dominant than other qualities in the world. The Atma gets influenced by these traits, and as a result it appears to be dominated by sleep and laziness. Since the Atma is also the 'true identity' of the creature, such a creature who picks up these traits from the world would be more inclined to be drowsy and lethargic (93/3).

[Note—This is a metaphoric way of saying that these two traits—excessive desire to sleep and remain drowsy, as well as to become indolent and lethargic—are some of the negative virtues and demeaning qualities exhibited by the Atma when it begins to disassociate itself from its grand original nature as the immaculately pure consciousness by thinking that it is someone who has a physical gross body known as the creature that has a tendency to enjoy sleep when it feels tired and worn out, or become lazy when it abhors work and prefers bodily comforts.]

As explained in note to verse no. 93/2, the colour of the prism or veil through which the Atma sees the world and which in turn casts its own shadow upon the colourless Atma is red in the case of this verse. This colour stands for the qualities mentioned above, thereby making the Atma appear to possess these attributes.]

93/4. The petal of this divine Lotus pointing towards the south is black in colour. It is symbolic of the dominance of such traits as 'Dwesh' (having ill-will, hatred, resentment, malice and animosity towards others) and 'Krodh' (having anger, indignation, spite, and being vengeful and wrathful). Thus, the Atma exhibits these negative traits as well when it dwells on this petal (of the divine Lotus symbolically present in the heart); or it exhibits these negative qualities when it turns towards this petal or leans more towards it as compared to other petals when it sees and interacts with the world.

In other words, when the Atma sees the world through the south side of this symbolic prism represented by the petal located on the south side of this Lotus, it discerns the demeaning negative qualities of Dwesh and Krodh as being more dominant than other qualities in the world. As a result it is influenced by these traits and consequentially the creature also begins to exhibit these characteristics in his dealings (93/4).

[Note—This is a metaphoric way of saying that these two traits—having Dwesh and Krodh—are some of the negative virtues and demeaning qualities exhibited by the Atma when it begins to disassociate itself from its grand original nature as the immaculately pure consciousness by thinking that it is someone who has a physical gross body known as the creature who is different from other creatures in this creation, forgetting in the process that all the creatures have the same Atma inside them. The Atma begins to treat others with suspicion and treats them as competitors and opponents who are ready to harm its self-interest. This motivates the Atma to develop these negative traits of Dwesh and Krodh as described in this verse. The Atma becomes selfish and cruel; it develops animosity, jealousy, ill-will and skepticism which in turn fuel anger and hatred. The Atma forgets that the other creature is also its own image because the same consciousness resides uniformly and universally in all the living beings.]

As explained in note to verse no. 93/2, the colour of the prism or veil through which the Atma sees the world and which in turn casts its own shadow upon the

colourless Atma is black in the case of this verse. This colour stands for the qualities mentioned above, thereby making the Atma appear to possess these attributes.]

93/5. The petal of this divine Lotus pointing towards the south-west is blue or violet in colour. It is symbolic of the dominance of such traits as 'Paap Karma' (the natural tendency to commit unrighteous and sinful acts, and do deeds that are not auspicious, noble and virtuous) and 'Hinsaa' (causing harm of any kind to other creatures, whether physical or mental). Thus, the Atma exhibits these negative traits when it dwells on this petal (of the divine Lotus symbolically present in the heart); or it exhibits these negative qualities when it turns towards this petal or leans more towards it as compared to other petals when it sees and interacts with the world.

In other words, when the Atma sees the world through the south-west side of this symbolic prism represented by the petal located on the south-west side of this Lotus, it indulges in the demeaning negative qualities of Paap Karma (evil deeds) and Hinsaa (cruelty) because it sees the world as its opponent, competitor or harming its self-interest, or it forgets about its noble heritage and exalted pedigree as the supreme cosmic Consciousnesses personified and consequentially gets sucked in the muck of worldly deeds not bothering whether what it is doing is virtuous or not (93/5).

[Note—This is a metaphoric way of saying that these two traits—doing Paap Karma and showing the tendency of Hinsaa—are some of the negative attributes and demeaning qualities exhibited by the Atma when it begins to disassociate itself from its grand original nature as the immaculately pure consciousness by thinking that it is someone who has a physical gross body known as the creature who is selfish and self centered, and he needs to lord over other creatures in this creation who are meant to serve him. This erroneous belief and perception about its true 'self' leads the Atma to commit horrible sins in order to serve its selfish interests and gratify its own self, even to the extent of causing pain to others if they come in its way. This is because the Atma treats itself as being different from other creatures in this creation, forgetting in the process that all the creatures have the same Atma inside them. The Atma begins to see and treat others as its opponents and competitors who are hell-bent in harming its self-interest, and therefore it is motivated to become extremely selfish and cruel, resulting in its doing evil deeds and becoming ruthless and cruel in order to protect its interests at all costs.

As explained in note to verse no. 93/2, the colour of the prism through which the Atma sees the world and which in turn casts its own shadow upon the colourless Atma is blue or violet in the case of this verse. This colour stands for the qualities mentioned above, thereby making the Atma appear to possess these attributes.]

93/6. The petal of this divine Lotus pointing towards the west is said to have the divine colour of the pure crystal (i.e. transparent and colourless, having the colour of the surrounding environment). It is symbolic of the dominance of such traits as 'Krida' (the natural tendency to playfully do anything in a spirited form; to play sport and do deeds cheerfully, to remain ever active and spirited) and 'Vinod' (to remain in a cheerful and joyous mood; to enjoy life and its delights; to treat the world and its activities as a magnificent deal; to derive pleasure and comfort from this world and its activities; to derive maximum pleasure and comfort from the materials that this world has to offer). Thus, the Atma exhibits these enjoyable and exhilarating traits when it dwells on this petal (of the divine Lotus symbolically present in the heart); or it exhibits these unique qualities of doing deeds as a means of enjoyment when it turns towards this petal or leans more towards it as compared to other petals when it sees and interacts with the world.

In other words, when the Atma sees the world through the west side of this symbolic prism represented by the petal located on the west side of this Lotus, it discerns the enjoyable characteristics in the world such as the qualities of Krida and Vinod that all the creatures in the world indulge in. This acts as an incentive for the Atma to indulge in Krida and Vinod itself though by nature it is supposed to be neutral, dispassionate and detached from such things pertaining to the gross world and the gross body. Again, since the Atma is the true 'self' of the creature, the latter also begins to get involved in enjoying this world and deriving pleasure from the activities of the material world (93/6).

[Note—This is a metaphoric way of saying that these two traits—playfully doing all types of activities or indulging in doing Krida, and enjoying it and deriving pleasure from it at the same time, i.e. having Vinod from it—are some of the attractive attributes and engaging qualities exhibited by the Atma when it begins to disassociate itself from its grand original nature as the immaculately pure consciousness that is neutral to, uninvolved in and dispassionate towards any forms of emotions and sentiments that have anything to do with the material world and its alluring charms and physical attractions that cause any kind of arousal and restlessness in the calm waters of the deep state of eternal blissfulness in which the Atma, the pure self, exists. This distorted view of what consists of true happiness and joy leads the Atma to exhibit these traits of getting involved in playful activities of the world and then enjoying the pleasures derived from success in them.

As explained in note to verse no. 93/2, the colour of the prism or veil through which the Atma sees the world and which in turn casts its own shadow upon the colourless Atma is like the crystal in the case of this verse. This colour stands for the qualities mentioned above, thereby making the Atma appear to possess these attributes.]

93/7. The petal of this divine Lotus pointing towards the north-west has the colour of Manik (a dark red-coloured gem known as Ruby). It is symbolic of the dominance of such traits as 'Gaman-Chalan' (the natural tendency to be constantly on the move and wander from place to place) and 'Vairagya' (to remain in a state of profound renunciation; having total disinterest in anything pertaining to this material world or anything that is not eternal and imperishable; to be dispassionate and detached). Thus, the Atma exhibits these grand traits when it dwells on this petal (of the divine Lotus symbolically present in the heart); or it exhibits these virtues and auspicious grand qualities when it turns towards this petal or leans more towards it as compared to other petals

In other words, when the Atma sees the world through the north-west side of this symbolic prism represented by the petal located on the north-west side of this Lotus, it finds that the world is always on the move and never rests. It also finds that the world is arriving and departing constantly—i.e. the creatures die and take a new birth in an endless cycle. It sees constant destruction and construction; it observes that nothing is static and stable in this world. This makes the Atma also think that these characteristics of the world are also applicable to it, and it forgets in the process that it is distinct from the ever-changing world as it is a stable, unmoving, eternal and imperishable divine entity (93/7).

[Note—This is a metaphoric way of saying that these two traits—remaining constantly on the move like a wandering friar or mendicant, and having complete renunciation—are some of the magnificent attributes and virtues qualities exhibited by the Atma when it begins to recognise its true nature and form as the immaculate and pure enlightened consciousness, and consequentially begins to disassociate itself

from the falsehoods of this illusionary and perishable world along with its equally illusionary and perishable material pleasures and comforts.

As explained in note to verse no. 93/2, the colour of the prism or veil through which the Atma sees the world and which in turn casts its own shadow upon the colourless Atma is dark red in the case of this verse. This colour stands for the qualities mentioned above, thereby making the Atma appear to possess these attributes.]

93/8. The petal of this divine Lotus pointing towards the north has a yellow (or orange) colour. It is symbolic of the dominance of such traits as having pleasure in 'Sringar' (the natural tendency to be constantly decorating oneself and trying to look physically beautiful and attractive to others; grooming one's self and taking unusual care of the external beauty of the physical body; being obsessed with physical charms and beauty of the body and deriving immense pleasure and mental satisfaction from it). Thus, the Atma exhibits these peculiar quirky traits of self indulgence in the gross and perishable body when it dwells on this petal (of the divine Lotus symbolically present in the heart); or it exhibits these negative qualities of self-indulgence and being extra obsessed with the care of the body and its physical charms and attractiveness when it turns towards this petal or leans more towards it as compared to other petals.

In other words, when the Atma sees the world through the north side of this symbolic prism represented by the petal located on the north side of this Lotus, it finds that the world is a beautiful physical place to live in and those with beautiful and handsome bodies are at a premium; everyone praises those who are charming and attractive to look at. So the Atma begins to adore the physical gross body in which it lives and starts adorning it and grooming it. It forgets in the process that the 'real self' is not the physical gross body that needs to be groomed or decorated but the eternal 'consciousness' that does not need any external grooming or adoration to enhance its natural beauty. It also forgets in this delusory environment that this body, so meticulously taken care of, is nevertheless perishable and subject to decay and death (93/8).

[Note—This is a metaphoric way of saying that this trait—of being unduly obsessed with the grooming of the gross body, spending hours to decorate it and make it look attractive and charming, i.e. doing Sringar—is one of the many ill begotten traits that taint the Atma and divert it from its inherently taintless nature and form. This happens when the Atma begins to identify its self with the body and not as the pure consciousness residing inside this body as the true 'self'.

As explained in note to verse no. 93/2, the colour of the prism or veil through which the Atma sees the world and which in turn casts its own shadow upon the colourless Atma is yellow or orange in the case of this verse. This colour stands for the qualities mentioned above, thereby making the Atma appear to possess these attributes.]

93/9. The petal of this divine Lotus pointing towards the north-east has the colour of Vaidurya Mani (the precious gem known as beryl; lapis-lazuli; the gem with a silvery grey colour; or yellow, white, green and blue colour; the most common forms being Aquamarine and Emerald). It is symbolic of the dominance of such noble traits as 'Daan' (doing charities, making donations and giving of alms) and 'Kripa' (showing kindness, compassion, mercy and grace). Thus, the Atma exhibits these virtuous noble traits when it dwells on this petal (of the divine Lotus symbolically present in the heart); or it exhibits these grand and magnificent qualities of (of being magnanimous

and kind towards others and helping them in their needs) when it turns towards this petal or leans more towards it as compared to other petals

In other words, when the Atma sees the world through the north-east side of this symbolic prism represented by the petal located on the north-east side of this Lotus, it discerns grand and auspicious virtues of Daan and Kripa as the dominant traits in this world. The Atma finds that these virtues are very much lauded and sought after, so it endeavours to acquire them for its self; it gets influenced by this noble view of the world and becomes charitable and compassionate its self (93/9).

[Note—This is a metaphoric way of saying that these two traits—Daan and Kripa—are one of the many auspicious and divine virtues shown by the Atma when it is in its primary form. These two attributes of the Atma are what makes a man as holy and revered as the supreme Lord who is famously known as the ‘merciful one’ and the ‘benevolent Lord of all’.

As explained in note to verse no. 93/2, the colour of the prism or veil through which the Atma sees the world and which in turn casts its own shadow upon the colourless Atma is that of Aquamarine and Emerald in the case of this verse. This colour stands for the qualities mentioned above, thereby making the Atma appear to possess these attributes.]

93/10. When the attention of the Atma of the creature is focused on the various joints of the body, great sufferings afflict the body and it suffers from great pain and agony caused by ‘Vaat’ (disturbed wind in the body), ‘Pitta’ (disturbed bile and acidity in the body) and ‘Kaf’ (disturbed mucous in the body, causing cough and other discharges)¹ (93/10).

[Note—¹When the Atma thinks that there exists something called the ‘body’ which is its ‘own self’, it is only then that it begins to feel pain and suffer from that pain. But once it gets disassociated from the body and treats the latter as a distinctly separate entity from its self, then such cause of pain does not arise. The clear proof of this way of thinking lies in two examples—one, a particular man does not feel pain when someone else writhes in agony due to an injury, and two, the same man does not feel the pain in his own body when he goes to sleep. This is because in the first instance, his own Atma is not linked to the second person’s body and therefore this person does not feel the pain and suffering of the other person, and in the second case the sleeping man’s consciousness is diverted away from the physical body as long as he is asleep, thereby eliminating all senses of pain and sufferings.

The idea here is that only as long as the Atma identifies itself with the body that it would feel pain afflicting the latter, such as the horrible torments of rheumatism, arthritis, gout, cough, acidity and other diseases of the body which causes its movement very painful. Once the Atma pulls itself away from the body, it would lose all connections with it and would become a neutral observer of its sufferings, watching it stoically with a calm demeanour.]

93/11. When the attention of the Atma of the creature is focused away from these joints and centered on some other point (i.e. when the creature is not tormented by stiff joints and pain in them, or cough and hyper-acidity that causes headaches etc. for example), it is able to divert its attention in learning things, in focusing its attention on studying and acquiring knowledge, in singing and dancing and generally enjoying life¹ (93/11).

[Note—¹When the Atma is freed from the numerous afflictions of the body, i.e. when it begins to tolerate the pains of the body and regard them as part of the game of life, becoming unconcerned about them and does not remain too obsessive with them, it then begins to enjoy the same life with new zeal and vigour though the body might still be suffering from these afflictions.

In other words, this verse advises the reader to be dispassionate and neutral towards this body and the sufferings of the world, and treat them as a part of the game of life which have to be tolerated without making any fuss, because making fuss and raising tantrums would not erase the pain and suffering, instead they would only exacerbate them. The best path for a spiritual aspirant is the median path of being stoic and tolerant, tending to the needs of the body just like a doctor attends to his patient dispassionately and in a clinical fashion, but always remaining cheerful and happy internally so that the mind is peaceful and life could be lived fruitfully.]

93/12. [Verse nos. 93/12-93/15 describe the three paths or rings that the creature traverses to reach his final resting place when he is tired of this world and wants peace and rest. Since the Atma is the true identity of the living being, when the word 'Atma' is used in these verses it is used as a synonym for the living creature.]

When the eyes are tired, the Atma is said to move along the first path or first ring that is overcast with the colour of the flower called 'Bandhuk' (a flower that blooms in the middle of the day and is usually of red colour), making the eyes look drowsy, droopy and sleepy. When the Atma follows this path, the man falls asleep. [It is like the case of a hot summer day when a man feels tired and wishes to go to sleep in spite of the fact that the natural sleeping time is not the day but the night. It is also why tired or over-strained eyes look blood-shot red.]

The dreaming state of existence is during or part of this sleeping state of consciousness. During this dreaming state, the Atma does not find its complete rest because of so many activities that are deemed to be done by it during this stage, and because there are so many things that are seen, heard and imagined during the dreaming phase of sleep (93/12).

[Note—When the man is tired of the work in this world and wants to take rest, his eyes clearly reflect this weariness by becoming sleepy and blood-shot red; the man becomes drowsy and listless; his eyelids begin to droop and he loses focus and attention. This indicates that he wants to retire to his inner-chamber or the bed-room and rest for the day.

When he falls asleep, it appears that he is resting, but it is only his gross body that is inactive, for the mind and the sub-consciousness are as active as they were while he was awake. Rather, the mind becomes over-active in his dreams because now it can feel freed from the limitations imposed by the physical gross body, and therefore it can imagine a world which is much more fascinating and stupendous than what the man was actually witnesses while he was awake, and then the mind makes the man do things that he would never imagine of ever doing in the physical world where he lives. The mind takes 'wings' and lets off its imaginative and creative talents take hold of the man's sub-conscious, and he begins to fly off to unimaginable heights of fantasy and magical charms. In other words, the man begins to dream. That is why a man dreams of things, places, persons and achievements that are simply beyond his imagination while awake.

In short, when the creature is tired, his Atma wishes to take rest, so the creature sleeps. The first step of sleep is this 'dreaming stage'—defined as the 'first path' or the 'first ring' here. The red, tired eyes are the preparatory stage or the initial stage for this first path. Like a man closes his office doors when he wishes to retire for the day, the closing of the eyelids are done by the Atma to shut off the outside world and go to sleep.]

93/13. To overcome the restlessness and the weariness caused by strenuous efforts made during the dreaming state of existence, the conscious Atma enters the second ring or path called a 'Valaya' that leads to the path that gives better rest to the Atma. This so-called second path is called 'Sushupta' or the deep sleep state of existence.

This path has a shadow over it to give protection and comfort to the Atma which has become weary from the restlessness of the dreaming stage. This shadow is of the colour of the insect called 'Vir-Bahuti' (a red coloured insect that appears when the first rains fall). [The word 'shadow' here refers to the practice of covering one's eyes when one goes to sleep. Though the eyelids are already closed, proper sleep is got by covering the eyes with some cloth or shutting off all sources of external light which would be also like putting the eyes in a shadow.]

During this stage of deep sleep state of existence called the Sushupta, the creature's intellect and thoughts are concerned only with the supreme transcendental Consciousness present in his own bosom as his 'true self' which is wisdom and enlightenment personified. It is only when this stage is reached that it is possible for the creature to have access to the supreme transcendental Ishwar or Brahm (present in his own self as his Atma as described in the next verse) (93/13).

[Note—Even though the external body appears to be resting during sleep when the man is dreaming, he does not find actual rest as expected as his mind is as active and restless as it was during the waking state of his existence. This is because the mind is engaged in doing so many things, seeing so many things, hearing so many things in the imaginary world of dreams that it is equivalent to it remaining engaged while the body was awake, and getting tired in the process. So the creature enters the second path which is much quieter for him, and this is the path of deep sleep when there are no dreams and the mind then finds complete rest. It is freed from having to attend to so many sensory inputs from the external world in which it had dwelt earlier, whether it was the physical world of waking state, or the imaginary world of dreams. Now the mind has got the time to look somewhere else, and then it discovers to its amazement the world of pure bliss, the world of peace and restfulness is in the non-involvement with the world, whether that involvement is physical or imaginary. This total 'non-involvement' comes in the deep sleep state of existence because the mind-intellect as well as the sub-conscious are inactive.]

The Atma which is the 'real self' of the creature was involved in this world in the hope of deriving peace and bliss in it, but to its dismay it discovered that the world would not give it either of them. So it wished to sleep. Then to its utter frustration it discovered that the mind would not let it rest it in sleep also because it started dreaming. Then the Atma crosses this ring and enters the next inner ring called the 'deep sleep or Sushupta' state of consciousness. Left undisturbed and unperturbed, the Atma of the creature now finds rest and peace. The creature discovers the presence of pure consciousness in his own bosom, and this is the supreme transcendental Divinity known as Brahm personified.

So on the one hand the Atma has searched out its 'true self' as the pure consciousness which is Brahm personified, and on the other hand the creature has got what he wanted—peace and tranquility.]

93/14. When the creature's Atma enters the third ring or takes the third inner path which is of the colour of Ruby or a red lotus flower and plunges into it, then it is said that it has reached the fourth state of exalted existence called Turiya¹. This is a stage from where the Atma does not revert back to first three stages, i.e. the deep sleeping, dreaming and waking respectively in this reverse order, and thus it remains in perpetual contact with the fount of eternal enlightenment and blissfulness known as the Atma. In other words, it gradually withdraws itself from successive layers of existence and finally enters the sanctum sanctorum of Divinity when it realises the eternal source of enlightenment and bliss, of beatitude and felicity which is known as the Atma, and then remains perpetually submerged and drowned in it, without thinking of anything else (93/14).

[Note—¹There are in all three primary stages in which the creature's Atma exists in this world from the metaphysical point of view. The first is the waking stage, and then it enters the second stage called the sleeping stage. This sleeping stage has two divisions—i.e. the dreaming stage as described in verse no. 93/12 and deep sleep stage as described in verse no. 93/13. Beyond this is the third stage called the Turiya stage as described in current verse no. 93/14.

These primary stages can be regarded as four stages if we take the two stages of dreaming and deep sleep separately. Refer also verse no. 94. Verse no. 36 of this Upanishad presents another interpretation of these three states of existence.]

93/15. At this last stage, the aspirant should merge his Pran and Apaana winds (i.e. the wind that is primarily located in the upper part of the body, and the one located in the lower half respectively), and treat the entire world as synonymous with the single divine entity known as the pure conscious Atma. [It is to be noted that the process of mixing the two winds has been described briefly earlier in this Upanishad in the context of Pranayama, various Aasans and Mudras.]

When the aspirant is convinced that there is essentially only one truthful entity in this creation, which is the immutable and immanent 'Atma', he should then focus his entire attention on this single goal as the aim of his spiritual pursuits. This last stage is called 'Turiyatit' or the stage that goes even beyond the fourth stage of Turiya. During this last state of existence of the creature, all his doubts and confusions are removed, and everything appears to be soaked in absolute bliss and ecstasy. This is the ultimate state of the realisation of the Absolute Truth of existence.

Only till the time the creature believes that it has a physical body which belongs to it and is its true 'identity' and 'self' does it remain trapped in this delusion and erroneous perception about the true nature of the 'self'. As soon as the creature goes beyond this fallacious notions of the 'self', and rises higher in his spiritual progress to realise the actual eclectic truth about his own self as being the subtle and sublime Atma which is the universally pure consciousness and not the gross physical body with its inherent limitations, he is said to have obtained the essential nectar of supreme transcendental Divinity marked by eternal beatitude and felicity.

This eclectic path provides a holistic approach to divinity and holiness in as much as it shows the way to 'Moksha' (liberation and deliverance, emancipation and salvation) as well as to 'Atma Darshan' (the realisation of the truth about the real 'self' of the creature as the Atma which is the pure, enlightened and sublime Consciousness, and which is different from the gross body) (93/15).

94. When the Atma is accustomed to remaining steady inspite of the buffeting effects of the winds present inside the body which cause undue restlessness to it and hinder its spiritual progress (by causing so many distractions for it as narrated, inter alia, in verse nos. 50, 59-61, 80-81, 93/10-11 above), it acquires sufficient expertise to accompany the vital winds as they move upwards towards the abode of Brahm by the practice of various meditation exercises and concentration of the forceful powers of the mind as described earlier in this Upanishad.

In other words, these four symbolic paths (described in verse no. 93/12—93/15 above) are taken by the Atma (i.e. the pure conscious self of the creature) along with the Pran (i.e. the vital winds that infuse life inside the body) as it moves towards the 'Maha Dwar'¹ or the great doorway leading to Brahm-realisation and attaining the final Moksha or liberation and deliverance of the soul. During this journey, it reaches the so-called 'Ardha Trikona'² or the symbolic half-triangle. Here the Atma is able to witness or 'see' the presence of the exalted seat of the divine Being honoured by the

epithet 'Achut'³. In other words, it is here that the spiritual aspirant is able to witness the symbolic presence of the supreme Brahm as 'Achut' because it is here that he gets the light of enlightenment. (94).

Note—¹The *Maha Dwar* is literally the 'great doorway or gate'. In metaphysical terms it refers to the Brahm-Randhra located on the top of the head (cranium) where there is a hair-like micro-fine slit in the skull bone from where it is believed the Pran, or the vital life-giving winds present inside the body, of the ascetic leave when he reaches the climax of meditation. This Pran is accompanied by the Atma on its outward journey from the body. This is because Pran and life are synonymous with each other, and so is the Atma which is synonymous with 'consciousness' that prevails in a living being. When the ascetic dies by the exit of his Pran from the body through the Brahm-Randhra, it is obvious that his consciousness also leaves; the body that is rendered lifeless without the Pran becomes unconscious—or 'without consciousness'. It is believed that the supreme transcendental Brahm entered the body of the man at the time of creation through this Brahm-Randhra, and then took up residence in the head as the man's eclectic virtues of having wisdom, erudition, sagacity and intellect with its accompanying faculties such as reasoning, rationality, analysis, logic, discrimination, deduction, scientific predictions etc.

Yoga Upanishads describe elaborately how the Pran is channelised through the Sushumna Naadi by activation of the Kundalini and practicing the various Mudras and Aasans along with Pranayam to reach the forehead. It is here that the ascetic experiences the presence of light of wisdom and enlightenment besides accessing the various mystical powers of deep insight into the realm of the unknown and transcendental. Such achievements are truly super-human, and can only be achieved by a Brahm-realised person and not by an ordinary mortal. So when the Atma reaches this area of the head, the spiritual aspirant witnesses the presence of the supreme Divinity known as Brahm.

When the Pran makes its exit through the Brahm-Randhra and merges with the universal air or wind element present outside the gross body of the creature, there is no chance of it ever returning back into the body. This is tantamount to his final liberation and deliverance because the body without life would disintegrate into its basic elements such as the fire, water, sky and earth, leaving nothing behind. This is also called 'Kaivalya Mukti' in metaphysical parlance.

It is the final dissolution of the creature when he becomes one with the cosmic elements of creation from where his origin can be traced. This Brahm-Randhra is called the 'Maha Dwar' because it is the main gate through which the Pran and the Atma exit from the body to find their liberation and deliverance; it facilitates the exit of the Pran and the Atma from the great prison of the body in which they were trapped. Since freedom from a life of bondage is an exhilarating experience, it is said that the creature experiences extreme sense of bliss when the creature in the form of his Pran (life sustaining forces in his body) and the Atma (pure consciousness) reaches this Maha Dwar.

The Amrit Naad Upanishad of Krishna Yajur Veda tradition, in its verse no. 26 asserts that it is the Mana or the mind of a creature that decides the path he should take to reach his goal in life out of the various options available depending upon the natural inclinations, temperaments, objective of life and desires of the creature. So if the creature sincerely wishes to obtain liberation and deliverance from the shackles of the body and the find freedom from the endless cycle of birth and death in the world and its accompanying horrors, then the mind would aid in the process by concentrating all its faculties to help the Atma and Pran reach the Maha Dwar and escape. In other words, the Mana would enable the enlightened creature to find the eternal source of bliss and happiness by becoming 'self-realised'.

Another related concept is the *Brahm Vivar*. It is literally a hole like aperture present at the back of the mouth where it opens into the wind pipe which connects the

lungs to the nose. This is the location of the 'Talu Chakra' or the swirling subtle energy center located at the back of the palate. It has a direct link to the Brahm Randhra present in the cranium at the top of the head, and is the hair-like slit marking the joint between the two parts of the skull.

This Brahm Vivar is also called *Brahm Dwar* or the 'doorway to Brahm' because it opens directly into the duct that connect the lower part of the body to the Brahm Randhra and through which the vital winds called Pran travel during the practice of Yoga (such as Pranayam, Kundalini and Sushumna Naadi activation, various Aasans and Bandhas etc.).

Refer verse nos. 103-106 of this Upanishad below in this context. Refer also to Amrit Naad Upanishad, verse nos. 27, 39; Kshuriko-panishad, verse nos. 18-20; Yog Kundali Upanishad, Canto 3, verse nos. 12-17 in this context.

²The *Ardha Trikona* or the half-triangle refers to the area of the forehead between the hair line and the two eyebrows. The full triangle would consist of the base formed by joining the eyebrows so that the line passes through the base of the root of the nose, and the apex would be the Brahm Randhra described above. This area is said to be the seat of wisdom and enlightenment. Refer verse no. 39 of this Upanishad.

It is here that the creature witnesses the supreme transcendental Brahm's presence in the form of Achut.

³*Achut* means an entity that is exalted, divine, holy, immaculate and incorruptible; that has a high stature, is untainted, imperishable, steady, constant and eternal; an entity that cannot be demoted, degraded, demeaned or belittled in anyway whatsoever. This epithet applies to the supreme transcendental Brahm present in the creature's inner self as his own Atma or the pure consciousness.]

95. Above this so-called 'half-triangle' is the site where the brain is located, and therefore is the site where the thinking powers of the creature, the stupendous powers mind and intellect to contemplate and fix attention on something, to discriminate and analyse, to rationalize and deduce anything systematically as well as their creative and constructive powers of imagination are located. [This area is the cerebrum.]

A wise practitioner should meditate and contemplate upon the primary elements along with their primary colours and their relevant Beej Mantras here.

Therefore, he should next meditate and contemplate upon the basic elements of creation such as the earth etc. (the others being water, fire, air and space) as well as the five vital Prans (winds such Pran, Apaana, Vyan, Udaana and Samana) along with their root words (called the 'Beej' Mantra or the basic letter that symbolises them and represents their inherent subtle strength and powers), their specific distinguishing marks and classifications (called their 'Varns'), and their locations (called their 'Sthaan') in this creation.

The Beej or seed letter of the Pran wind (the primary air which infuses life inside the gross body; the breath) is the Sanskrit alphabet 'Ya'. It has the hue of purple or violet or reddish blue, and it represents the rain bearing clouds that are harbingers of life on earth.

The Beej or seed letter of the Apaana wind (the primary air which moves downwards in the body and helps in food intake and its movement through the intestines, its digestion and elimination from the body) is the Sanskrit alphabet 'Ra'. It has the hue of golden yellow resembling the brilliant sun, and represents the fire element (95).

96. The Beej or seed letter of the Vyan wind (the primary wind that helps in maintaining equilibrium and pressure within the body, and it also controls the functioning of the other winds) is the Sanskrit alphabet 'La'. It has the hue of red like

the colour of the flower called 'Bandhuk' (a flower that blooms in the middle of the day), and it represents the earth element.

The Beej or seed letter of the Udaan wind (the primary wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases in the body through the nostrils and mouth in the form of exhalation and cough) is the Sanskrit alphabet 'Va'. It has the hue of shining white like that of the conch shell, and it represents the Jiva or the living being in this creation (96).

97. The Beej or seed letter of the Samaan wind (the primary wind that helps the body in equal distribution of nourishment throughout it, as well as in the circulation of blood) is the Sanskrit alphabet 'Ha'. It has the hue of the colour crystal, and it represents the taintless, colourless and pristine pure sky element in creation.

This Samaan wind lives in the heart, navel, nostrils, ears and the big toe of the foot (97).

98. It (Samaan wind) also lives uniformly in all the seventy two thousand Naadis (ducts of the body) as well as in the twenty eight crore (1 crore = 10 million) roots of hairs present in the body (98).

[Note—In the context of verses nos. 95-98, refer also to the Amrit Naad Upanishad, verse nos. 31-39.]

99. It is to be noted that Pran wind and Samaan wind are not two distinct winds but are essentially the same wind element hypothetically classified into two types just for the sake of convenience of study—primarily they are one, they refer to the same living entity which cannot survive even for a fleeting second without the presence of any one of them.

So a wise practitioner of meditation should steady his mind and attention, and not allow it to be stupidly and unduly get disturbed in futile debates about these artificial classifications of life giving entities known by different names. Thus, becoming steady in his convictions, he should diligently practice the three phases of Pranayam such as Purak (inhaling wind or air), Kumbhak (filling the body with this inhaled air and holding it inside for certain time) and Rechak (exhaling this trapped air from the body). [This would help in mixing all the winds in the body, because no artificial boundaries are present inside the body that could prevent the various winds from mixing freely.] (99).

100. He should draw all the forms of the wind element from different parts of the body and concentrate them into the core of the subtle heart (where his pure conscious 'self', the Atma, resides). To enable this to happen, he would have to prevent the vital winds from escaping from the body by stopping their exit in the form of the Pran wind (the exhaled breath) and Apaana wind (the flatulence passing out of the anus). [Verse nos. 73-93 describe how this is brought about.]

To aid in this enterprise, he should focus his attention of meditating upon OM in a holistic way. [This is described in verse nos. 14-34, 54-65, 70, and 93 amongst others in great detail.] (100).

101. The passage of the throat (i.e. the trachea and the gullet) and the opening of the genital organ (i.e. the urethra) are drawn in and closed, followed by the upwards pulling action of the Sushumna Naadi which resembles the stalk of the lotus flower

which emerges in the Mooladhar Chakra at the base of the spine and passes up through it (101).

102. An expert practitioner of Yoga exercises hears a resonating sound resembling the music emanating from the Indian lute reverberating through the core of the Sushumna Naadi much like the hollow of the conch shell produces the sound when air is blown hard into it (102).

[Note—Refer also to verse nos. 2-3, 37 of this Upanishad also.]

103-106. When the practitioner of Yoga is able to concentrate his Pran and Atma in the top of the head (the skull) which is shaped like an inverted hollow bowl, he hears a sound resembling the loud call made by the peacock¹ at the spot called the 'Vyom Randhra' which is also known as the Brahm Randhra².

The inverted (upside down) bowl of the skull has four openings, called the 'doors'³.

The self-illuminated and self-enlightened Atma (here referring to the supreme transcendental Consciousness known as Brahm) is present in the subtle space of the hollow of the skull much like the celestial sun is present in the external sky.

The inherent subtle and sublime divine authority, powers and potentials that this Atma (i.e. Brahm) possesses are represented by the 'Shakti' (the female personification of these virtues and qualities) standing at the opening of the 'Brahm Randhra'. This Shakti empowers the practicing ascetic to be able to concentrate his thoughts and focus his attention on realisation of the true 'self' which is the pure conscious Atma personifying the supreme transcendental Brahm in order to facilitate his final liberation and deliverance from this body and the world. This is tantamount to emancipation and salvation of his soul, called 'Kaivalya Mukti' because it is his final dissolution and a unique one at that in as much as he would not have to take birth again. This is possible when true self-realisation and enlightenment dawns upon the intellect and mind of the aspirant ascetic, and this unique achievement is therefore regarded as the crowning glory of all his Yoga practices as well as his spiritual pursuits.

The point in the forehead where the virtual 'third eye of wisdom' is located is like the Chandra Bindu placed on the symbol of OM. [That is, it is like the focal point of the parabolic surface representing the cosmic dish where the practitioner of Yoga can hear the cosmic Naad, the primary sound of ether, resonating in his head.] It symbolically represents the 'sight' that comes with wisdom and enlightenment. Since Lord Shiva is the God who personifies the virtues of wisdom, enlightenment, erudition and self-realisation of the highest order, remaining perpetually in a state of meditation and contemplation, this place in the forehead is said to be his symbolic abode⁴.

Again, since knowledge, erudition, wisdom and enlightenment are like priceless and glittering gems, this place is said to be bejeweled and embellished with brilliantly shining gems.

A person who is well acquainted with the knowledge contained in this Upanishad is deemed to be eligible to attain final emancipation and salvation for his self, called Kaivalya Mukti. Verily, this is what this Upanishad expounds, elucidates, asserts and affirms.

Thus ends this Upanishad (103-106).

[Note—¹When the vital winds are concentrated on the top of the skull which is like an inverted bowl, the grave and resonating but soothing sound emanating from the

Sushumna Naadi is heard louder like a shriek of the peacock because of the acoustic make of this area. The hissing and rustling sound that is made by the movement of the vital airs inside the body is magnified manifold when they enter the Sushumna Naadi and reach the head. The practitioner of Yoga can hear this otherwise very subtle sound that is inaudible under ordinary circumstances in a loud reverberating mode as narrated in verse no. 102.

²The *Brahm Randhra* is the hair like slit on the top of the skull from which the Pran and Atma of the Yogi escape to the outside world at the time of his death and his final dissolution into the elements. It is believed that the supreme Brahm had entered the man's body through this aperture at the time of creation.

The word Vyom means the sky, and therefore the opening that opens into the sky is known as *Vyom Randhra*. This is also the location of the *Vyom Chakra*.

³The four openings or 'doors' of the skull are the following—the two nostrils and two eyes. Through the nostrils the creature inhales and exhales wind which creates a whizzing, hissing or rustling sound when it passes through them; it is symbolically depicted as the sound made when the string of the bow is pulled and released. The other opening, i.e. the eye is the site of all vision and knowledge acquired by the creature when it sees things in the world. It is a metaphor for the subtle quality of wisdom and enlightenment as well as of deep insight and the sixth sense that any creature possesses. ⁴That is why it is called the seat of Lord Shiva and Shakti because Shiva stands for such virtues as wisdom and enlightenment of the highest order, while Shakti stands for the stupendous authority, powers and potentials that knowledge bestows upon the creature. The forehead is the site of the fore part of the brain much like the headlight on the miner's helmet or the headlight of the car which enables the miner or the driver of the car to see in the darkness. This is a metaphoric way of saying that the practitioner of Yoga who follows the rules and regulations as laid down in this Upanishad is able to see the truth in the light of wisdom and enlightenment that is present in his own head. This area of the head is known as the cerebrum.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 16

Brahm Vidya Upanishad/Brahmvidyo-panishad

The word 'Brahm' refers to the transcendental supreme Divinity, the cosmic Consciousness and the ultimate Truth of existence, while the word 'Vidya' means knowledge, information, skills and erudition on a subject. Therefore, this Upanishad expounds and elucidates upon the mysterious secrets of Brahm, and it is an exposition on the various means by which this great enigma of creation can be unraveled by a spiritual aspirant. This eclectic and esoteric knowledge opens for him the vast treasury of bliss and contentedness that comes when one has accessed the ultimate goal in one's life, and has discovered the great spiritual 'truth' that can provide him with freedom from the endless cycle of delusions and their attendant miseries and torments.

This Upanishad discusses the ways by which Brahm can be realised by a spiritual aspirant, along with explaining the esoteric and mystical form of that Brahm. It starts with a discussion of the subtle meaning of the four sublime letters that constitute the ethereal word OM which is metaphorically used as a classical synonym of Brahm. It goes on to describe the difference between Brahm, the transcendental and eternal Supreme Being, and the ordinary Jiva, the mortal living being or creature, and how this same Jiva can become as exalted as Brahm and be known as a Hans or a divine Swan when it becomes enlightened about the Atma or the pure consciousness present in his own bosom. This eclectic knowledge about Divinity helps the creature break free from all fetters that shackle him down to this mortal existence, and it paves the way for his obtaining eternity, beatitude and felicity by being liberated from the grossness created by the physical world and the gross body, and instead realising the true nature of one's own self as the Atma that is nothing but the ethereal, subtle and sublime cosmic Consciousness.

The attainment of emancipation and salvation of the soul is the final aim of all spiritual pursuit, and the metaphysical knowledge that empowers the aspirant to achieve this aim is called 'Brahm Vidya'. It is also called so because everything discussed in this Upanishad is aimed at elucidating upon the essential form of Brahm that is ethereal, divine, truthful and eclectic, and which helps to unravel the great mysteries associated with this enigmatic divine entity besides highlighting the path to be followed for its actual realisation. 'Brahm Vidya' literally means that text which imparts knowledge of Brahm, which enlightens an aspirant about the salient features of Brahm.

In context of this Upanishad, one should refer to some other Upanishads that describe the Atma and are quite similar in tenor and language to this one, e.g. Hanso-panishad of Shukla Yajur Veda, Atma Pujo-panishad of Rig Veda, Brahm Bindu, Dhyan Bindu, Amrit Naad, Shwetashwatar and Tejo Bindu Upanishads of Krishna Yajur Veda, and Atmo-panishad of Atharva Veda. Besides them, the Upanishads that deal with Yoga are equally relevant because Yoga plays an important and leading role in Brahm-realisation. Some of the Yoga Upanishads are (i) Rig Veda—Saubhagya Laxmi Upanishad; (ii) Sam Veda—Yog Chudamani and Yog-rajo, Jabal Darshan Upanishad; (iii) Sukhla Yajur Veda—Advaya Tarak, Trishikhi Brahmin, Mandal Brahmin and Hanso-panishad Upanishads; (iv) Krishna Yajur Veda—Dhyan Bindu, Yog Kundalini, Amrit Nada, Kshuriko, Shwetashwatar (Canto 2), Varaaha, Yog Shikha and Yog Tattva Upanishads. Some parts of Tejobindu Upanishad describe the metaphysical importance and spiritual significance of terms used in Yoga texts in its Canto 1, verse nos. 15-19, 25-27, 31-42; and (v) Atharva Veda—Shandilyo-panishad.

-----Shanti Paath-----

ॐ सह नाववतु । सह नौ भुनक्तु । सह वीर्यं करवावहै । तेजस्वि नावधीतमस्तु । मा विद्विषावहै ।
 ॐ शान्तिः । शान्तिः । शान्तिः ।

The meaning of this Shanti Paath is given in appendix no. 1.

1. Now we shall describe the Upanishad called Brahm Vidya. It is by the grace and blessing of the supreme Lord known as Vishnu (the sustainer of creation; the Viraat Purush or the macrocosmic form of the Supreme Being known as Brahm) who is famous for his most marvelous, fascinating and mysterious deeds which are very auspicious and divine by nature that this eclectic but most esoteric and mystical knowledge is revealed for the benefit of all spiritual aspirants. This knowledge is called 'Brahm Vidya' and it is like an eternal and steadily burning fire of knowledge and enlightenment (because it provides the much needed 'light' that illuminates the path for the spiritual seeker of Brahm by enlightening him about the secrets of this divine transcendental supreme Authority of existence) (1).

2. [Verse nos. 2-12 analyse the various metaphysical connotations of the different components of OM. This monosyllabic word stands for 'Pranav' which in turn is an aphorism for the supreme transcendental Divinity, the Absolute Truth and the cosmic Consciousness known as Brahm. In this context, refer Dhyan Bindu Upanishad, verse nos. 2, 9-18, 37 and 102, besides Tejobindu Upanishad, Canto 1, verse nos. 1-6.]

Those who are experts in the metaphysical knowledge pertaining to the supreme transcendental Being known as Brahm address and recognise him by the monosyllabic word OM. This word OM is known as 'Akchar', i.e. something that is imperishable and perpetual. It is also called 'Akchar' because it consists of one continuous homogenous sound that rolls out like a rumble of the distant cloud. Upon analysis it is determined that this sound OM consists of three distinct subtle letters (A, U and M), and this analogy is used by these experts to explain the three subtle aspects of that Brahm—viz. its body or form, its habitat or the places where it is deemed to be present, and its planes of existence which are three in number (called the 'Kaal Traya') (2).

3. This ethereal and eternal word OM has three Devtas (patron deities)¹, incorporates the three worlds², symbolises the three Vedas³, and has the three forms of the legendary fire element⁴ in it in a latent form. These three letters represent Shiva—one who is auspicious and truthful, is most enlightened, wise and erudite, and is most exalted and pure in nature. Besides these three letters, the complete word OM has a half-syllable called 'Ardha Matra' consisting of the 'Anuswar' or the dot put on the top of the symbol of OM⁵ (3).

[Note—¹The three Devtas are the personification of the three primary forces of Nature—viz. the Fire God, the Water God, and the Wind God.

²The three worlds are symbolised by the three primary words uttered by the creator Brahma at the time of creation—viz. 'Bhu' or the terrestrial world, 'Bhuvaha' or the sky, and 'Swaha' or the heavens. Another interpretation can be the three worlds such as the heavens, the earth and the nether world.

³The three Vedas are the Rig, Sam and Yajur.

⁴The three fires are the Garhapatya or the fire of the household hearth, the Dakshinagni or the fire lit as a witness to charities and donations and other auspicious deeds, and Ahawaniya or the fire lit during a fire sacrifice to invoke the Gods.

⁵In Sanskrit, the dot placed on the top of an alphabet to produce the nasal sound is called an 'Ardha Maatraa'. It is pronounced as 'sum' depending upon the word. Refer Dhyan Bindu Upanishad, verse nos. 2 and 17.]

4. Those who are experts in the eclectic knowledge of Brahm have proclaimed and asserted that the symbolic body of the first letter 'A'¹ (of the divine ethereal word OM

standing for the supreme transcendental Brahm) consists of the following units—the Rig Veda, the sacred fire called Garhapatya Agni (fire of the household hearth), the Prithivi (earth) element, and Brahma (the creator of the visible world) (4).

[Note—¹The Sanskrit letter ‘A’ is the first letter of the alphabet and the first basic short vowel sound. It forms the base for pronunciation of all consonants. It sounds similar to the sound of ‘o’ in the word ‘son’, or the first vowel ‘A’ of the English alphabet and used to denote a single entity or as an article in English grammar—e.g. ‘a’ man. According to metaphysical interpretation, this letter forms the base from which the entire creation has sprung forth. This is drawn from the fact that it is the basic and first sound that emanates from the throat when a person attempts to begin to speak. It symbolically therefore stands for the initiation phase of creation.]

5. The second letter ‘U’¹ (of the divine ethereal word OM standing for the supreme transcendental Brahm) consists of the following units—the Yajur Veda, the sacred fire called Dakshinagni (fire lit as a witness to some charitable deed such as giving of donation or alms), the Akash (sky) element, and Vishnu (the sustainer and protector of the visible world) (5).

[Note—¹The Sanskrit letter ‘U’ is the fifth letter of the alphabet and third short vowel sound. It is sounded as in the word ‘full’. According to metaphysical interpretation, this letter stands for the expansion, development and growth of the creation. It is pronounced by cupping the lips in a spout mode, indicating the spewing of the vital spark of life to as long a distance as possible just like a water-syringe is used to sprinkle liquid over a large area. When a full-throated ‘U’ is sounded as in the case of an expression of utter astonishment or excitement, or as an exclamation made in immense shock or horror, its sound is heard at a long distance, symbolising the fact that the point of origin of this sound has affected a point far away from it. It is different from the guttural sound which cannot be heard from afar.]

6. The third letter ‘M’¹ (of the divine ethereal word OM standing for the supreme transcendental Brahm) consists of the following units—the Sam Veda, the sacred fire called Ahavahaniya (the fire lit during a fire sacrifice to invoke the Gods), the Duo Loka (the heavens and far reaches of the deep space), and the supreme Lord called Ishwar (referring to the Supreme Being) (6).

[Note—¹The Sanskrit letter ‘M’ is the twenty fifth consonant and the fifth one in the fifth category of consonants headed by the letter ‘Pa’. It is the labial nasal, and sounded as ‘ma’ in mother. This class of Sanskrit alphabets is pronounced by snapping the lips open (e.g. when we say any word beginning with ‘P’, our lips have to be opened with a snap). In metaphysical terms, the letter ‘M’ stands for the conclusion of the creation because when we pronounce the word OM, the mouth is finally closed and the lips shut. This is akin to the state of sleep when one closes one’s mouth, or the state of dissolution when one has no awareness of the existence of the external world. This ‘death like’ state is when the entire creation dissolves and merges into its primary form, the invisible and attributeless Brahm from it has sprung forth when the first rumblings of life and activity were symbolised by the appearance of the word ‘A’.]

7-8. The letter ‘A’ is symbolically present in the center or core of the splendourous area that surrounds the celestial Sun. The letter ‘U’ is similarly located in the center or core of the brightly illuminated area that surrounds the celestial Moon. And the letter ‘M’ is present in the terrestrial fire that has no smoke (i.e. the fire which is burning brightly) as well as in the fire that is at the heart of the electric or lightening in the sky (i.e. as the stupendous fire element inherently present in electric, enabling the latter to burn anything to ashes in an instant).

Hence, these three letters or syllables should be regarded as being equivalent in their mystical powers and dynamism to the Sun, the Moon and the Fire (7-8).

[Note—The symbolism is very remarkable here. The sun is the harbinger of life on the planet—it provides rains, light, heat and energy. As soon as the sun rises in the morning there is activity and signs of life everywhere, the animals and birds start calling and the man wakes up and normal life with all its accompanying cacophony springs back to life after the sleep of the previous night. This is like the initiating of the new phase or dawn of life by the pronouncement of the letter 'A' by Brahm. Besides this, the Upanishads have uniformly described the Sun God as a visible manifestation of Brahm.

Next comes the Moon and the letter 'U'. The Moon God is the patron God of the Mana, the emotional and sentimental behaviour of a man; he controls the heart and the mind. The moon shines during the night, the period when one makes love to his partner and indulges in the activity of procreation. The letter 'U' stands for expansion of creation, and therefore this procreative activity done during the aegis of the benevolent Moon God is symbolised by saying that this letter is at the core of the moon.

Finally, the letter 'M' stands for conclusion—an obvious allusion to the destructive and ruinous character of the fire element. The lightening and electric are more potent and powerful manifestation of this basic character of the fire to destroy and reduce everything to ashes. The fire without smoke also refers to the fire that is at its ferocious worst, for a smoldering fire would not burn things as easily as the brilliantly lit fire.]

9. Just like a leaping flame of a fire or an erect flame of a lighted lamp is always located on the upper side of it and faces or moves upwards (instead of downwards), one should understand that the half-syllable (represented by the 'Anuswar') is always placed on the top of Pranav (the word for OM representing the supreme transcendental consciousness known as Brahm) (9).

[Note—The Anuswar is the after sound represented by a dot placed on the top of Sanskrit letter to produce the nasal sound of 'Um' as in the word '*sum*', or as 'Ang' as in '*sung*'. It always belongs to a preceding vowel. In the present case of OM, it belongs to the preceding vowel sound 'A' which stands for the initiator of creative cycle, i.e. the supreme Brahm. Hence it refers to the Ishwar, the Lord God called also as Pranav. When the word OM is sounded in the mind, a resonating effect is produced in the region of the forehead around the tri-junction of the root of the nose and the two eyebrows. This is the symbolic location of the third eye of wisdom, and wisdom and enlightenment are like fire in the sense that they remove the darkness of ignorance and burn all impurities of the mind much like the fire doing the same thing in the physical world.]

10-11. This erect or upwardly facing flame is visualised in the form of a lotus filament. This majestically waving filament of fire represents the Naadi (the tubular duct; the nerve or vein of the physical body of the creature) which is like the Sun in its splendour and potentials. It appears to thread all the other seventy two Naadis in the body and pass through the brilliant Sun (like an arrow passing through the fire to reach the other side) to reach the top of the head (i.e. the cranium, past the cerebrum). It has the divine power to bless everyone and it pervades every aspect of creation (10-11).

[Note—The Naadi referred to here is the Sushumna Naadi which starts at the bottom of the spine and is said to reach the top of the head. It controls the central nervous system. It is obvious that the proper functioning of the central nervous system is at the core of conscious living in this world. The symbolism is very clear—a wise man

is able not only to live but to live wisely and intelligently as indicated by the symbolism of this Naadi piercing through the Sun indicating the man's ability to have deep insight and see the truth and real nature of things beyond the blinding dazzle and illusions created by ignorance and delusions.]

12. The sound of OM resembles the reverberating and resonating sound produced by a bronze bell. OM is soothing for the nerves and it vanishes into nothingness just like the sound of the bell vanishing into silence long after it has been rung. The person who understands the import and importance of OM in its entirety is able to attain enduring peace and tranquility (12).

[Note--In other words, this is a symbolic way of saying that a spiritual aspirant can find enduring peace and tranquility by diligently cultivating devotion for the supreme Divinity, the transcendental Being known as Brahm as well as Pranav and represented by the eclectic, ethereal and esoteric word OM, by meditating on this word and by using it as a medium or Mantra to concentrate upon the great Truths of creation to unravel their mysterious secrets. This also helps him to acquire mystical powers that are inherently enshrined in OM and are unleashed once the aspirant is able to unlock its secrets. The spiritual aspirant can reach lofty heights of enlightenment and self-realisation by contemplating upon the esoteric meanings and significance of the sound elements that constitute the all-pervading cosmic sound OM that ubiquitously pervades throughout the universe in its sky element, and which is a subtle hint of presence of life and consciousness everywhere. The aspirant sort of harnesses the cosmic energy trapped in the sound elements of OM and can use it for his own benefit, whether he is desirous of worldly gains or of spiritual liberation and peace.]

13. The esoteric, mystical and enigmatic entity in which the subtlest element in creation, i.e. the sound, vanishes is known as the supreme transcendental Brahm¹.

Similarly, the Buddhi, which is the intellectual mind and also a subtle element in creation, that submerges itself in meditation and contemplates upon this unknown Brahm is said to be indistinguishable from Brahm and becomes one like the Brahm (because it would remain submerged in and fully occupied with the thoughts of Brahm)².

Resultantly, it would also be like that Brahm and possess or exhibit virtues and characters of Brahm, such as having the eclectic quality of being like the excellent elixir of life known as Amrit that gives everlasting peace and tranquility to the creature³ (13).

[Note—¹When the bell is struck, a sound appears from nowhere, lasts for sometime, and then vanishes into nothingness. It is a physical mystery because no one has seen the place from where the sound had emerged and where it vanishes. Surely there must be some spot from where the sound had come and where it vanished. This unknown and mysterious point source of sound is known as Brahm. It is consciousness personified because only an entity that has 'life' can generate sound, and not a dead entity. A dead man does not speak, and that is why doctors are not satisfied that a person has recovered after some life threatening disease or operation unless he is able to answer questions put to him, i.e. he is able to speak.

Since the word OM encompasses the entire gamut of cosmic sound as well as all the genres of basic sounds that are heard on earth, the hearing of OM in the mind and its attendant soothing effects on the nerves and the resultant peace and tranquility that overtakes the entire being of the spiritual aspirant is tantamount to his being dipped in a pitcher of elixir and drenched in the eclectic virtues of peace and tranquility. His earlier form and nature of being restless and agitated and fragile in temperament is now replaced with that which is one of a calm and serene and stable demeanour. This is what is meant here. When a person becomes Brahm-realised or when he practices

meditation by using the word OM, he becomes peaceful and calm, he overcomes his earlier state of remaining in a state of flux and vexed, and instead becomes rested and stable. This is in effect the purpose of Yoga—to bring a harmony between the soul and the supreme Soul, to restore the lost balance between the mortal creature and the immortal being. Thus, concentration on OM has the same effect that is had by Brahm-realisation because OM is a ‘sound’ manifestation of Brahm.

²We can understand this phenomenon with a simple example. In the cosmos there are certain mysterious spots called the Black Hole. These are collapsed stars which have become so dense that even light cannot escape from their gravitational pull—hence the name ‘black’ because anything appears to be black when light is completely absorbed by it. Nothing that falls in this ‘black hole’ escapes, even radiation of the cosmos. Another instance is one looking fixedly or gazing unblinkingly at the fire or a brightly lit flame or the sun for a prolonged period of time—sure enough he would lose sight and would not be able to see anything else. Likewise, when the intellect is focused on Brahm, the latter’s powerful attractive powers and stupendous brilliance of consciousness and divinity precludes the chances of the mind and intellect ever moving away from it. It is also like the case of a less dense object coming into contact with a denser object—the gravitational pull of the large object would trap the smaller object in its grasp.

This macrocosmic divinity known as Brahm is represented by the ethereal word OM which is known as the cosmic Naad or the background noise in the cosmos. This is so overwhelming that when the aspirant meditates using the word OM as a Mantra, the resounding vibrations created by its constant chanting or repetition drowns other sounds and impulses that flow through the sensory nerves of the brain. This effectively blocks them out, and the aspirant submerges in the extreme sense of bliss and ecstasy that this OM produces in his mind by massaging his nerves and titillating them.

When the mind constantly repeats the ethereal Mantra OM and contemplates upon its subtle elements as described in verse nos. 2-8, it becomes so engrossed in it that it forgets about everything else just like a serious student or researcher remains submerged in his study and research so much so that he even remains oblivious of whether it is the day or the night.

³The exalted spiritual stature when this happens is so exhilarating for the aspirant that his condition is comparable to the bee which is drinking nectar from a flower. Like the bee, he too remains oblivious of everything else except the bliss that he gets by this meditation and contemplation.]

14. The Jiva (the living being) is compared to the three subtle elements—the Vayu (wind or air element), the Tej (the dynamic energy, vitality, vigour, stamina, agility etc. that form the inherent quality in a creature), and Akash (the sky and space element).

The dimension or measurement of this Jiva is visualised to be as miniscule as the hundredth part of the tip of a hair follicle (14).

[Note—It is obvious from this dimension that the word ‘Jiva’ does not refer to the physical gross body of the creature. A whale or an elephant for example are not this small! Therefore, the creature or the living being referred to here is its microscopic Atma or soul which is the real identity of the creature. This Atma is the pure consciousness residing in the creature’s bosom in his subtle heart. No part of the gross world is the subject matter of Upanishadic research, for what is obvious and visible need not be researched and looked into. What needs study is something that is not apparent, and not something that is obvious; something that is secret needs to be deciphered, and something that is known by all requires no research.

This invisible and mysterious entity known as the Atma is nevertheless the secret and hidden power-house that runs the visible and the apparent world. This is because

if the Atma is removed from the scene, the world would cease to 'exist' and 'live'; it would cease to have any meaning and relevance. This mystery about the Atma arouses curiosity in an enquiring and intelligent mind which gets inspired when it faces something mysterious and unknown which titillates it and provokes it to research and try to unravel its mysteries and the enigma surrounding its existence.

The size of the Atma is compared to the tip of the hair follicle as a means to stress the point that it is too small to be imagined in physical terms in which we are accustomed to measure and visualise the world and its things around us.

Refer Shwetashwatar Upanishad, Canto 5, verse no. 9 which also asserts this point.]

15. That Jiva (the creature or the living being represented by the conscious factors of existential life) lives in the symbolic navel of the vast manifested world. That is, this vast visible world has any value and importance because there is life and consciousness at its core for which the navel is a metaphor or symbol. Or, this living world revolves around the central hub known as the Atma or pure consciousness which injects life in the creature's gross body. [This is because the creature is a microcosm of the entire creation. No one would have given a second glance on this world if there was no life and vitality in it. Thus, the Atma as pure consciousness forms the nucleus (navel or hub) of this creation; life with all its vibrancy and colour revolves around this central core much like a wheel rotates around a central hub.]

This enigmatic entity which is the core (i.e. the truthful essence and the absolute reality) of this world is however different from the world of which it forms the navel¹.

It (i.e. the Atma) is like the Sun that appears to be at the center of the sky to light up the entire world with its brilliant light (just like a lighted lamp lit in the center of a room illuminates the whole room)² (15).

[Note--¹That is, whereas the Atma most subtle and sublime, is pristine pure, immaculate, eternal, imperishable, infinite, all-pervading and consciousness personified, the world of which it is the core on the other hand is gross, corrupted, impermanent, finite and artificial. Though the conscious Atma permeates throughout the length and breadth of the living world in a uniform manner, the latter nevertheless remains gross and perishable.

The physical body of the Jiva or the living being is like the physical gross world that can be visibly seen and verified. But even as this world is not the reality and the true picture of the Atma which is at its core, the gross body of the Jiva is also not its true identity and self though the consciousness flows throughout the gross body.

If we take the example of the wheel, if the central hub is removed then the entire wheel would fall apart and cease to be called a 'wheel'. Similarly, if the Atma is removed, the Jiva and the world would cease to exist and live.

²The Sun is metaphorically like this navel of the creation. It shines and provides the life sustaining factors of heat, energy and light to this world. Besides this, if there was no Sun the planets would run off randomly and collide with each other. It is the gravitational pull of the Sun that keeps the planet dangling in the void of space as well as in their fixed circuits in the vast bottomless space of the sky. One can imagine the all-engulfing darkness of death and doomsday that would surround the creation if there was no Sun. Similarly, the Atma is at the core of creation and life. Had there been no such entity as the conscious Atma, the living world as we know of today would not have come into being in the first place, and this cosmos would have been one big pitch dark void just like a dead body from which the Atma has exited, or would have been as dark, fearful and foreboding as a huge underground dungeon or catacomb of cellars in which the lamp has been extinguished.]

16. The Jiva (i.e. the life-consciousness present inside the gross body of the living creature) involuntarily does a constant Japa of the two holy Mantras—i.e. ‘Sa’ and ‘Ha’¹. [Japa refers to the repetition of an esoteric group of letters which are called a holy Mantra. They are said to possess mystical and divine powers, and are used as a tool to focus attention and energy during meditation and contemplation. The concept of involuntary Japa has been described in verse nos. 78-79 below.]

The mystical effect of this involuntary Japa is that the Jiva (in the form of his subtle Atma or conscious life factor) moves upwards or looks upwards from the ‘Nabhi Randhra’ (literally the subtle aperture of the body represented by the navel where this life factor is supposed to live)².

This Jiva is not affected by any of the flaws and shortcomings that are inherent to this material world of sense objects³ (16).

[Note--¹When the creature breathes, the inhaled air produces a sound which is equivalent to the letter ‘Sa’ in the mouth, and the exhaled air produces the sound equivalent of the letter ‘Ha’ in the throat. The combined effect is the creature is involuntarily repeating the great Mantra ‘So-a-ham’, meaning ‘that essential and absolute Truth of creation that is known as Brahm is none but I’, or ‘the supreme Truth is my true self and it is me’. Here ‘me’ or ‘I’ refers to the soul. In other words, the creature is involuntarily, at the subtle and atomic level of his existence, recognizing and accepting the spiritual fact that he is not an ordinary component of the world but the supreme Brahm personified in his form. This is called the exalted state of self-realisation and enlightenment.

Since breathing is an automatic and involuntarily exercise done regularly and without any effort whatsoever, when the wise and enlightened aspirant understands that each breath is tantamount to repeating the eclectic Mantra ‘Hans’, he is deemed to be doing an involuntarily and unbroken Japa day in and day out. Refer Dhyan Bindu Upanishad, verse nos. 62-65.

There are a number of Upanishads that elaborately deal with this quintessential Mantra of *Hans*—e.g. (a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyan Bindu Upanishad, verse nos. 24, 61-65; Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, and Canto 6, verse no. 20, 52-54. (b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 82-83.

The present Brahm Vidya Upanishad itself has many verses dedicated to this eclectic Mantra—e.g. verse nos. 16, 20-28, 34, 60-64, 78-79.

²The *Nabhi Randhra* is the virtual center of the body as the site of the navel. This is because—(a) It is through this cite that the embryo draws its nourishment when it lay in the mother’s womb, which is like saying that the lifeless clump of flesh was infused the spark of life and vitality through this hole. (b) It is here that all the Naadis or nerves in the body are said to have their center in the Nabhi Kanda, and it is from here that they radiate out to various parts of the body. (c) The navel is believed to be the center of the Nabhi Chakra, the subtle energy center which is the focus of the sun’s energy which is concentrated here. It is in this center where the sun is shining in a symbolic way in the body of the creature like it does in the sky. The point of the sky where the celestial sun is located is regarded as the navel of the Viraat Purush, the invisible, macrocosmic and all-incorporating gross body of the supreme Brahm. The navel of the individual creature occupies the same importance because the latter is regarded as an image of the Viraat Purush. The subtle form of the sun located here energises the body much like the celestial sun energises the world from its center located in the sky.

Since the creature draws its energy, vitality, strength and nourishment from the mother’s blood through the placenta attached to the navel, the latter is like the

aperture of the mouth through which one draws or sucks in liquids through the bore of a straw dipped in the latter. That is why this navel is called a 'Randhra' which literally means a slit or opening present in the body. This is the picture at the micro level of creation in relation with the individual creature. When it is extended to the macro level, then the cosmic embryo would be the Hiranyagarbha and the subtle aperture from where it draws its nourishment and dynamic creative energy from Brahm to reveal itself in the macrocosmic gross body known as the Viraat Purush would be represented by the celestial Sun. That is why the Sun is regarded as the cosmic center of creativity, energy, vitality and life; it is the cosmic swirling center of dynamic energy. It is like the 'navel' of the Viraat Purush much like the navel that is present in the body of the individual creature because the latter is the microcosmic visible manifestation of the former.]

17. This essential entity known as the Atma (soul or pure consciousness) of the living being (creature) is pure and wholesome like the clarified butter which is extracted by churning the milk, and is a refined and purest essence present in it¹.

This Atma is known by the five dimensions or parameters of life called the 'Panch Prans', or the five forms in which life exists in this world² (17).

[Note--¹In other words, the Atma is the purest form of life in this world. It is the real essence of life in all its forms. It is immaculate and uncorrupt; it is wholesome and without any faults associated with the world much like the butter which has nothing to do with the adulteration of milk with water, for once the butter is extracted from milk it loses its wholesomeness. The 'churning' of the milk is a symbolic way of indicating that the Atma is hidden in this world and can be known only by diligent effort, by deep research and contemplation, by doing meditation and study.

²The five forms of life or Pran refer to the five basic elements in existence—such as earth, water, fire, air and sky. These five are the fundamental building blocks of life much like the atoms which are at the core of the molecules that combine in various permutations to metamorphose into the uncountable number and variety of gross things in this world. Taken in their physical elementary forms, all of them are lifeless entities, but the great mystery of creation is that the same elements exhibit stupendous life-bearing abilities in this world in their subtle forms. Thus, there must be some mystical power that helps them do so, and it is this power that is being referred to here as the consciousness or Atma. When these elements are injected with the Atma, they begin to show vital signs of life and activity. To illustrate this point, we can take a simple example of a balloon. When the balloon is filled with air, it tosses about on its own; if it is filled with some light gas, it even rises on its own to reach high altitudes. The earth is a lifeless clod of mud or hard rock, but the same earth harbours an astounding variety of vibrant life forms in its bosom. The factor that helps bring about this is known as the Atma.

The five Prans are also called the five forms of the air or wind element which infuses life in the creature's body. These five vital airs are the following—Pran, Apaana, Samaana, Udaana and Vyana. The statement that 'the Atma is known by the five dimensions or parameters of Pran' establishes that the two entities—the Atma and the Pran—are synonymous with each other; they are like the two sides of the same coin known as 'life'.

The five forms of Prans are called the Atma's five 'Kalaas', and they have been described in verse no. 18 below.]

18. Just like the milk is churned by the churning rod, the main vital wind present in the body, called the Pran, keeps the four other forms or aspects of this vital wind, called its four Kalaas¹, to remain activated and circulating in the body through the medium of the four sections of the heart². [In other words, the breath called the main

Pran keeps the body alive, thereby ensuring the heart beats and helps in circulating the blood and the other four forms of the Pran inside the body.] (18).

[Note—¹The word *Kalaa* refers to the different aspects or forms of an entity. The Pran is the vital wind or air element that sustains life in a man. The chief form of this air element that sustains life in the body is called 'Pran', and the term is usually applied to the breath. But besides this, there are four other types of main Prans such as Apan, Saman, Udan and Vyan. These are the names given to the vital wind in order to distinguish between the various functions or roles that it performs inside the body. This classification is done in order to study this air or wind element in a comprehensive way just like we classify any given subject into various streams or branches to facilitate study and analysis. Therefore, hypothetically, the Pran is divided into five main Kalaas. Thus, there is the main Pran and its four Kalaas as follows—(i) The 'Pran' is the wind element which, as breath, is exhaled as well as inhaled and is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without the life-infusing breath, no other wind would be of any significance to the creature. (ii) The 'Apan' is the wind that passes down the intestines and is responsible for digestion of the food taken by the creature and its excretion through the anus and urinary organs (kidneys). (iii) The 'Saman' is the wind that is responsible for equal distribution of nourishment throughout the body, as well as in circulation of blood. (iv) The 'Udan' is the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases in the body through the nostrils and mouth in the form of exhalation and cough. (v) And finally the 'Vyan' is the wind that helps in maintaining equilibrium and pressure within the body, and it also controls the functioning of the other winds.

The main Pran or breath is the one which keeps the entire machinery working. If a man stops to breathe, or when his supply of fresh breath is cut off as in the case of strangulation, then neither can the heart nor the remaining four vital winds can keep him alive. The heart would cease to beat and the other four Kalaas of the Pran would become defunct as soon as the Pran (breath) is cut off.

The breath or Pran is depicted here as a 'churning rod'. If we see the structure of the wind pipe, it indeed looks like a length of pipe, resembling a churning rod, going down into the body from the opening of the nostrils.

From the metaphysical point of view, there is another dimension of this verse. The body of the man is said to have the following five Kalaas which represent the five sheaths that surround his Atma or pure consciousness—the Anna Maye Kosh or the food sheath, the Pran Maye Kosh or the vital wind or air sheath, the Mano Maye Kosh or the mental sheath, the Vigyan Maye Kosh or the intellect sheath, and the Anand Maye Kosh or the bliss sheath. These sheaths cover the Atma and determine the Atma's characters, temperament, nature, inclinations and behavioural patterns in this world. The Pran Maye Kosh is the churning-rod here because the rest of the body is kept alive by its energizing and revitalizing effect.

²The heart has four sections—two auricles and two ventricles. The four must work in harmony and with perfect coordination in order to keep the man alive. The Pran as breath keeps the heart beating and supplies fresh oxygen to the body which oxidizes and revitalizes the various tissues and organs of the body while at the same time helping to remove or purge the body of all impurities and toxins such as poisonous gases like carbon dioxide etc. that have accumulated due to metabolic activities inside it.]

19. The great and swift Bird symbolising the Atma or pure consciousness of the creature, which incidentally is the true identity of the latter, resides in a restless manner in this body¹.

When the breath stops, i.e. when the body dies, the living being called the Jiva becomes lifeless or loses all his Kalaas². In other words, when the Pran leaves the

body, all other vital signs of life also cease to exist, and the Jiva shows no characteristics and attributes that had distinguished it while it was alive. [This is because all dead bodies are alike. It is only when a man is alive that each individual person depicts his unique personality and character traits, his typical way of speaking, behaving, writing, interacting, thinking etc. So symbolically, when the breath is stopped, he also stops to exhibit his uniqueness and individuality. The 'Jiva' dies as soon as the breath known as the Pran stops. What remains is the 'non-Jiva' aspect of the gross body.] (19).

[Note—¹The Atma is compared to the big bird such as a falcon or eagle or kite which is accustomed to a free-flying life in the sky being suddenly trapped in a small cage. This bird would become extremely agitated and restless.

It is 'restless' in the sense that it is never satisfied with this body and never finds peace while residing inside it. It always wants this and that; it is in a constant state of uneasiness and flux. The bird would be endlessly restless and clawing at the walls of the cage in its attempt to break free; it would be hopping mad from one corner to another in its bid to find a way out of its prison-like confinement though no string might be tied to its legs to keep it in forced bondage and the bird-catcher might even give it proper and adequate food to eat.

It is 'swift' because as soon as it finds an opportunity it would immediately fly off to freedom. Similarly, the Atma takes a fraction of a second to leave the body when the creature dies. There is another connotation to the word 'swift'. The subtle mind is very agile and swift as it keeps on changing from subject to subject like a bird hopping around when picking grains from the ground. Even the gross body is very restless and swift in the sense that it continuously changes position from moment to moment; it is fidgety and twitchy.

In the context of the Atma which represents the creature's 'true identity and his true self', the condition is similar. The bird got caught because of its greediness and ignorance that it is being trapped when it swooped down on the bait shown by the bird-catcher. The Atma similarly got trapped in this body when it got enticed by the attractions and charms of this deluding and entrapping world. Since the world can be enjoyed by the medium of a gross body having organs of perception and action and not in the ethereal form of the Spirit and Consciousness that do not have any grossness in them, the Atma willingly fell in the trap of acquiring a body for its self. It was then too late for it; once inside the body it began to experience its horrors and limitations, and yearned for freedom.

But even as the bird is so stupid that if once given a chance to fly free it would again fall prey to another bait, the Atma of the creature also leaves one body at the time of death and re-enters another body instantly in the hope of further enjoying the material comforts proffered by the material world and the pleasure derived by the gross organs of the body, instead of remaining eternally free like the ethereal Spirit. Another reason for it to enter another body is the fact that in the earlier one the Atma had thought that the deeds done by the body were actually being done by it and therefore it is entitled to their rewards or benefits. Since this is not possible in one life time and also since the last deed done would bear results after some time, the Atma takes another body. Besides this, there are many unfulfilled desires and aspirations of the previous phase of life in the earlier body which needs to be addressed by the Atma. This is the reason for it taking a new birth.

²As has been explained in note to verse no. 18 above, the word 'Kalaa' refers to changeable aspects of an entity. A dead body does not show any signs of life such as movement etc. It remains in a static and unchanging state. This is what is meant here—as soon as the Pran leaves the body, the latter loses all signs of change. The erroneous notion that the creature had harboured that the body is his 'true self' is used here while referring to the body as the 'Jiva'. It has already been said in the first

stanza that the Atma is restless and swift—i.e. it is ever changing and agile, an aphorism for having Kalaas.]

20. Such a man who contemplates about and meditates upon the enigmatic and eclectic divine entity that is subtly present in the sky element and which, like the sky, has no attributes and qualifications whatsoever is able to free himself from the fetters that shackle the creature to this world of attributes, qualities, characteristic features and qualifications. [That is, he becomes one like the supreme Brahm which has no attributes, qualities, characteristic features and qualifications. It is like the case of white light which contains all the seven colours of the rainbow but they remain hidden in its whiteness.]

A self-realised person hears the cosmic vibrations called ‘Anaahat Naad’¹ emanating in his heart from the divine entity in the form of a symbolic ‘Hans’² (a Swan) present there (when it breathes—refer verse no. 16) (20).

[Note—¹Anahat/Anaahat Naad—The word *Anahat Naad* refers to the apparently self-created cosmic sound called ‘Naad’. It is called ‘Anahat’ because it was generated on its own without any apparent cause such as striking of two entities with one another which is the usual cause of generation of sound in this world. It resembles the distant rumbling of clouds or a train trundling along on its track. The Naad Bindu Upanishad of the Rig Veda tradition describes this Naad in great detail. From the point of view of genesis according to the Tantra Shastra which believes that everything in existence originated from Shiva and Shakti (the cosmic male and female elements), a very interesting depiction is given as to how the cosmic Naad came into being and how the rest of creation was revealed from it. Its basic scene is as follows-- According to the philosophy of Tantra Shastra dedicated to the worship of divinity in the form of Shiva and Shakti, the process of creation took the following initial steps. Before anything came into being, Brahm, the supreme consciousness and the ultimate truth of creation, known as Shiva, was established in his own radiant effulgence or self-illumination symbolising his splendourous glory, majesty and divinity. Hence he was called ‘Prakash’, literally meaning light. When he decided to deliberate and actually started the process of deliberation in order to start the process of creation, there was a subtle ‘spandan’ or a slight throb or imperceptible movement which transformed into a vibration. The waves generated by this initial vibration developed in the cosmic ether and gradually coalesced with each other to give rise to higher waves of higher amplitudes. This produced the cosmic sound called the Naad. Since the creation was conceived in the bowl of the cosmic ether, the energy of the initial sound was focused at a central point, called the focal point or the dot or ‘Bindu’. This Bindu contained the combined powers of both the male Shiva and the female Shakti like a dicotyledonous seed which produced the two separate entities called Shiva and Shakti. The union of these two resulted in the unfolding of the rest of the creation. Thus it will be observed that whatever exists in this creation can be traced back to this primeval Naad. Hence, the latter is called ‘Shabda Brahm’, or the Brahm as sound. Therefore it is very natural to assume that all Mantras dedicated to any divine entity and consisting of the sound element (because Mantra consist of letters and words, and are chanted or repeated to make them effective) has its origin in this Shabda Brahm and gets its powers and energy from this Shabda Brahm. In other words, the Mantra contains in itself the essential meaning, form and spirit of the deity whose Mantra it is and which is being worshipped and invoked. Constant repetition of the Mantra generates so much energy in due course of time that the deity being worshipped is revealed. This is because the sound has great powers and energy as is evident when reverberation of sound waves and the resonance created by them are so powerful and forceful that they can shatter sheet glass in windows when an explosion occurs near a building.

Thus we observe that the Naad is the ethereal background reverberating sound energy in Nature which is said to be the primary source of energy that provided the vital spark to set off the chain reaction in the primordial cosmic gel from which the rest of the creation eventually evolved. The Naad has been envisioned in the form of waves in the cosmic ether, the waves which overlapped and coalesced with each other to generate sufficient energy that produces sound which traveled in the sky and was heard by ancient sages and seers who devised the word OM to capture its fundamental tones and notes in the constituent letters or syllables of this OM. Since the primordial cosmic gel was a neutral and static entity, this energy of sound waves was the first to create some sort of activity in it—like subtly and imperceptibly stirring it from within. This energy multiplies itself manifold and in due course of time the different elements separated from one another, the heavier ones settling at the bottom and the lighter ones going upwards to float on the surface. This is how basically the earth and other elements such as the water and air took up their places in creation, with the heavier earth solidifying at the lower level and the lighter water floating on its outer surface and the air going still higher into the space of the sky. The fire element however remained trapped in the bowls of the earth as the world gradually crystallised into its present shape.

The Naad was envisioned by ancient sages and seers as the cosmic sound having its genesis in the form of waves in the cosmic ether, the waves which overlapped and coalesced with each other to generate sufficient energy that produced the background sound which traveled in the sky and was heard by them during their meditative sessions which lasted for extended periods of time. Now once having heard it, they devised a word to encapsulate its fundamental notes and tones, and they came up with the word OM to capture the essential mode in which this cosmic Naad was heard by them. When they revealed this secret to their disciples, it was through the word OM, and they went on to analyse this sound and deciphered its components as the basic letters that constitute it, i.e. A, O, U and M. Refer to Tejobindu Upanishad of Krishna Yajur Veda tradition, Canto 1, verse no. 6.

Since the primordial cosmic gel was a neutral and static entity, this energy generated by the sound waves was the first to create some sort of activity in it—like subtly and imperceptibly stirring it from within. This energy multiplied itself manifold and in due course of time the different elements present earlier in the homogenous cosmic gel separated from one another to give it a heterogeneous character, the heavier ones settling at the bottom and the lighter ones going upwards to float on the surface. While this process was progressing, the elements captured or soaked energy according to their capacity much like sponge soaks water or earth attracts anything by its gravitational pull.

This is how basically the earth and other elements such as the water and air took up their respective places in creation, with the heavier earth solidifying at the lower level and the lighter water floating on its outer surface and the air going still higher into the space of the sky. The fire element however required a medium to hide itself in because the water and air were inimical to its existence; the water would douse it and the wind would blow it out of existence. Therefore it hid inside the bowls of the earth and entered subtly into things originating from earth. That is why it is present even under the vast reservoir of water known as the ocean, and at the same time lives subtly inside everything that grows on earth, such as food. The creator is so wise that he has this tremendous source of life, energy and vitality in the earth because he knew that if life is to be made sustainable it would need a viable source of self-sustenance in the form of an inexhaustible source of energy. Finally, the grossest element known as the earth also solidified into its present shape.

Since the Atma is the only conscious factor in creation showing basic elements of the existence of life in any of its myriad forms, and the Naad is also the first sign of primordial activity in the cosmos, it naturally follows that the Atma, the 'soul or life' of all that exists in Nature, and the Naad, the primary source from which the entire

creation is said to have evolved and derived its energy, are synonymous with each other. This fact has been endorsed by Tejobindu Upanishad, Canto 5, verse 3 of Krishna Yajur Veda tradition which says that the Atma is synonymous with the Naad. This cosmic Naad is still hearable when one closes one's ears when one hears the roaring sound of the blood flowing through the veins and arteries inside the body.

But the cosmic Consciousness called the Atma is not such an easy thing to understand, because the same Tejobindu immediately asserts in the following verse no. 4 of its Canto 5 that the the Atma is even beyond the concept of Naad. It is because the Naad has been visualised in the form of the cosmic ethereal subtle sound heard when one pronounces the word OM. It is believed that it is from this OM that the rest of the creation has evolved, i.e. Naad and OM have some 'beginning', no matter how ancient and primary. On the contrary, the Atma is said to be 'eternal and infinite, having no beginning and end, and even outlasting the end of the present creation and preceding the next one'. The Atma is the eternal cosmic consciousness which initiates the process of creation, and hence of Naad in the first place. It's not the other way round.

In order to understand the genesis of creation in terms of Naad, this cosmic sound represented by the word OM has been broken up in its constituent sound elements represented by the various letters and syllables such as A, U, O and M. These alphabets symbolise the basic forms in which sound representing cosmic energy in its most fundamental and basic form exists in this creation. Then each unit is further analysed and assigned symbolisms—such as the letter 'A' for example was envisioned to represent the appearance of the first signs of creation, the letters 'U' and 'O' for its evolvement, development, expansion and growth, and 'M' for its conclusion. Then a geometrical symbol was devised to physically depict this word OM, and it is 'ॐ'.

Sound has its own classifications which are used in the field of learning music. But the Atma is such a unique and magnificent entity that even though it has been said that it is like the cosmic sound called the Naad in this Upanishad's verse no. 3 as stated above, but it is only to emphasise the fact that like the Naad it too is a cosmic and enigmatic phenomenon, but this observation should not be treated too literally because the Atma is much superior to the Naad and does not qualify to be treated at par with any physical phenomenon like the Naad. The Naad is actually (physically) heard by ascetics who have risen above certain level in their meditation much like the Atma which is also experienced and witnessed by all spiritually enlightened aspirants.

But the comparison ends there, for the Atma cannot be analysed and classified and mastered like the sound element is done by an expert musician who can fiddle and play around with it to create masterpieces of music, or by teachers of metaphysics and theology who try to explain the complex phenomenon of creation by using the word OM as some model in a science laboratory.

The Tejobindu Upanishad of Krishna Yajur Veda tradition, in its Canto 5, verse no. 2 asserts that the *Naad* is a manifestation of the cosmic Consciousness. The Hanso-panishad of Shukla Yajur Veda tradition, in its verse no. 16-17 describes the sound emanating from this Naad, while verse no. 18-20 describes its effect on the body. Refer also to Mandal Brahmin Upanishad of Shukla Yajur Veda tradition, Brahmin 2, section 2, verse no. 2; Dhyan Bindu Upanishad of Krishna Yajur Veda tradition in its verse no. 2-3, 37 and 102.

²The concept of 'Hans' has been explained in note of verse no. 16. Refer also to verse nos. 21-28, 34, 60-64, 78-79 of the present Brahm Vidya Upanishad.

This swan is the pure consciousness living inside the subtle heart, and the Anaahat Naad is the sound that is heard when this swan breathes. This concept has been elaborately explained in the Hanso-panishad belonging to the Shukla Yajur Veda tradition amongst other Upanishads.]

21-22. This pure consciousness, which is likened to a divine Hans or Swan, is eternally blissful and self-illuminated. A wise and erudite person who is able to go beyond the two phases of breathing process called Rechak and Purak (exhalation and inhalation respectively), and instead hold the breath inside the body as done during the Kumbhak phase of meditation exercises called Pranayam, is able to merge the two vital winds called Pran and Apaana in the region of the Naabhi Kand (i.e. in the region of the navel)¹.

Consequently, he becomes so focused and concentrated in hearing this Anaahat Naad reverberating around him as he becomes completely engrossed in drinking the nectar-like elixir of bliss and spiritual ecstasy called Amrit dripping from the subtle sky located in his head² (21-22).

[Note--¹The word Rechak refers to elimination or purging and hence stands for the Apaana wind, while Purak refers to filling and hence it refers to Pran wind or breath which fills the body with oxygen and life. When an ascetic stops breathing, it is obvious that these two forms of winds would mix with one another as there are no water-tight compartments in the body to separate them. Now where is it done? This is answered here—‘in the region of the navel’. This is because when the breath is held, the abdomen acts like the pitcher in which the air is filled. The navel is the metaphoric center of this pitcher-like abdomen, hence the symbolism. All the Upanishads dealing with Yoga describe how these two winds are mixed by doing Pranayam.

²The is a remarkable observation. The reverberating humming heard by the ascetic is like the humming of the honey bee, and the dripping of the nectar from the head is like the dripping of the honey from the honeycomb hanging high up as symbolised by its presence in the head. The divine swan is the Atma as the pure conscious ‘self’ of the man, and the Naad heard is the resonating sound that is heard by ascetics when they meditate upon OM. This can be practically heard by an ordinary man also and its process has been elaborately described in Upanishads dealing with Yoga.

In practical terms this verse means that when a spiritual aspirant practices Pranayam, he is able to bring together the vital winds in the body, such as the Pran and the Apaana. Hitherto they had different directions of movements—for while the Pran was located in the upper part of the body in the lungs and nostrils and moved upwards, the Apaana was located in the intestines and moved downwards. Due to Pranayam and the closure of the body’s apertures called the ‘nine doors of the body’, all the vital winds present inside the body get mixed and their energy is coordinated to help the aspirant achieve the spiritual high of extreme bliss and ecstasy. Refer verse nos. 66-68 and 75 in this context which describe this concept in detail. The incarcerated wind gets heated and agitated while it violently swirls inside the abdomen, dashing with each other and gaining in energy and heat. This helps to build up the pressure inside the body and the vibrations caused by these clashing winds build up to reach a crescendo that is heard as the reverberating Naad in the head in the form of a resonating buzz or hum. This is aided and compounded by the constant chanting of the Mantra OM. The resultant effect is an overlapping of waves and compounding of frequencies which have an astounding affect on the nerves of the practitioner of Yoga and he experiences an extreme sense of bliss and ecstasy.

This phenomenon is metaphorically depicted in the form of dripping drops of Amrit from a pitcher held aloft in the head much like the honey is squeezed from a full honeycomb dangling from the branch of a tree. The ‘squeezing’ here is done by the pressure of the heated and energized vital winds of the body. In fact, the nerves are massaged and titillated to such an extreme level that the practitioner experiences only exhilaration to the exclusion of all other types of sensory perception such as pain and worries that had been tormenting him till this exalted state is reached. He does not want to revert back to his earlier time of miseries and wishes to put it behind him.

This is a symbolic way of saying that he has found the eternal fountain of bliss and happiness through the practice of Yoga.]

23-24. Those wise ones who symbolically pour a stream of this elixir on the divine deity called Mahadeva (literally the 'great God' or Lord Shiva), located in the region of the navel and whose form is like a lighted lamp, while doing Japa with the Mantra 'Hans-Hans'¹ are blessed with being free from various diseases such as the degenerating effects of old age culminating into death. [That is, such a man acquires robust health and maintains it even in his old age; he dies peacefully without having to undergo the usual torments associated with old age and death.]

He is also becomes eligible to acquire the various mystical powers called Siddhis² such as Anima etc. [That is, he acquires special powers by preserving his vital energy, stamina and vitality.] (23-24).

[Note—¹The word *Hans* has two components—Ha + Sa. It comes by reversing the great saying 'So-a-Ham' meaning 'that essence or truth is me'. So when the self-realised man repeats this Mantra, he is in effect asserting that he has realised who he actually is. He affirms that he is not an ordinary man with the body, but that divine Being known as the Brahm who resides in his heart as the pure consciousness or Atma. The bird swan is chosen to represent him because this bird is deemed to be very pure and selective in what it accepts and what it rejects. It is known to select pearls from an assortment of gems, and drink milk and leave its water content. Similarly, the wise man is expected to pick the truth from amongst the basket of assorted charms present in this creation and leave aside the non-truths. The concept of Hans have been described elsewhere in this Upanishad also, such as verse nos. 16, 20-22, 25-28, 34, 60-64, 78-79.

²The *Siddhis*—The word Siddhi refers to various mystical and occult powers that a spiritual aspirant acquires as a result of certain ritualistic practices.

There are eight Siddhis which are divine mystical powers which enables the person to accomplishment astounding feats. They are the following— (i) 'Anima' means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) 'Mahima' is to have majesty, glory and fame; to be honoured and acknowledged for one's achievements, knowledge and skills; (iii) 'Garima' is to have weight, stature, dignity, decorum, gravity and significance, (iv) 'Laghima' is to have simplicity and humility; (v) 'Praapti' is to be able to attain or obtain anything wished or desired; (vi) 'Paraakram' is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) 'Ishwatwa' is to be able to have lordship or sway over others; and (viii) 'Vashitwa' is to be able to control and subdue others.

The Yogshikha Upanishad of Krishna Yajur Veda tradition, in its Canto 1, verse no. 151-155 classifies all Siddhis into two categories—Kalpit and A-Kalpit. The Kalpit Siddhis are the ones which are created with efforts made for them using various means and methods. They have a limited scope, are perishable, and have imaginable powers and potentials that can be predicted. On the other hand, the A-Kalpit Siddhis are those which are self-generated or uncreated by any artificial means, are natural and with unimaginable mystical potentials and powers that cannot be predicted.

Refer also to Yogshikha Upanishad, Canto 5, verse nos. 46-55 and Yogtattva Upanishad, verse nos. 56-102.]

25. A wise and enlightened man who is constantly involved in pursuing this spiritual path of Brahm-realisation is indeed able to attain the exalted stature of the supreme Lord known as Ishwar. In other words, he becomes one with Ishwar. There are a number of enlightened people who have successfully done this (25).

26-28. There is no other way to spiritual eternity and attainment of an exalted stature of being one with the supreme Brahm except following this path known as 'Hans Vidya' (as described in the forgoing verses). Any wise and enlightened man who imparts this great, eclectic, most magnificent and holy spiritual knowledge called Hans Vidya to an eager seeker should be duly respected, honoured and served by all. Whatever good or bad (acceptable or unacceptable, liked or disliked, compatible or incompatible, pleasant or unpleasant, comfortable or uncomfortable, reasonable or unreasonable) instructions that such an exalted Guru (teacher) gives to his disciples should always be obeyed by the latter without raising any questions and in a calm manner. [Obviously, such a wise and enlightened teacher would not give instructions that would harm the self-interest of the disciple or would violate the codes of conduct which deal with righteousness and auspiciousness.]

One should accept this eclectic knowledge from the wise teacher and then ensure that the teacher is served to the best of his abilities. [This is because such knowledge is hard to come by, and there are few enlightened souls who would be willing to impart it to others. This knowledge is like the gem amongst the entire body of spiritual knowledge that is available to a man; this knowledge is so precious and priceless that no material wealth in this world can weigh even a fraction of its importance. Therefore, the recipient of this knowledge has a moral obligation towards his Guru, and this obligation is so great and binding upon him that he in spite of his serving the teacher with the best of his ability and with full sincerity he would still be indebted to his teacher; he would still feel that he could have done more if given a chance.] (26-28).

29. By the blessings of the enlightened and honest Guru, one becomes enlightened about one's own 'self', and this leads him to become enlightened about the essence of the Atma residing in his own bosom. This Atma of his is synonymous with the cosmic, all-pervading, quintessential and ubiquitous supreme Atma or soul of everything in existence, and the latter is called cosmic Consciousness or Brahm. This helps one to become steady in his convictions and beliefs; he gets firmly established in this knowledge because it has come through 'self-realisation' and not something which is merely based on hearsay or conjecture.

When he understands the reality and comes to terms with the essential and absolute Reality and Truth of existence, the rest of the things in this creation become superficial and redundant. He does not care about the different codes of conduct to be followed or about the sanctions or restrictions imposed upon individuals depending upon the Varans or classes of society to which he belongs, or the worldly traditions that are meant to be followed by all living creatures having a gross physical body with which they interact with other members of the society. For a self-realised man who has known the nature of the true 'self' as the Atma and not the body, such regulations, codes of conduct and traditions pertaining to worldly behaviour become unnecessary, obsolete and redundant. This is because for such an enlightened man all creatures become one Atma instead of distinct living beings having different bodies. He has discovered the 'truth' of existence and the reality of what constitutes a living creature—consequently for him the gross physical body and identification based on it become irrelevant. Thus, for such an enlightened man all classes of human beings become one irrespective of their birth, clan, nativity, age, sex, colour of skin, vocation etc. because he has realised the fundamental truth that the body is not one's true self, but it is the Atma and this Atma is the same in all persons (29).

[Note—The Atma is the universal Spirit that is invisible, immanent, ubiquitous and uniform in the entire creation. The Atma as the pure consciousness is the true ‘self’ of all living creatures, while the gross body which the world recognises as the creature is merely a dwelling in which this invisible Atma lives. Whereas the Atma is immaculate, taintless, eternal and imperishable, the body is perishable and subject to deformities of old age and sufferance such as diseases. So when a wise man who has known the spiritual secrets revealed in the Upanishads and has verified their trustworthiness, truthfulness and applicability in practice by constant meditation, contemplation and observation of life in the real world deals with other creatures, he does so from a high level of wisdom, knowledge and enlightenment. This ensures that he sees behind the external façade of delusions and falsehood and realises that the person with whom he is dealing is not the physical body but the Atma in that body. Since the Atma in all living beings is the same, it obviously follows that all living beings are the same in their essential form and nature.

Ancient sages and seers had formulated certain laws and regulations in order to maintain orderliness in society, but all pertain to the physical gross body and not to the Atma simply because the latter is an ethereal Spirit which cannot be restricted and butted and bounded like the gross body.

Therefore, a person who has in-depth knowledge of the Hans Vidya knows that all the creatures (human beings for instance) who breathe are actually Brahm in that form. He realises that the entity who is breathing and making the subtle sound of ‘Hans’ while doing so as described in verse no. 16 is the real living entity who is known as the ‘living being or creature’, and the latter’s true identity is the pure consciousness known as the invisible Atma and not the gross physical body in which it lives as a temporary dwelling in this world. Since the world is accustomed to recognizing things that are easily seen instead of things that cannot be seen, it usually recognises the gross body that is visible as the creature’s identity instead of the Atma which is invisible.

A wise man would like to deal with the truth, and hence would like to deal with this Hans that resides in the gross body of the creature instead of the latter. Since the Hans is the Atma which is constant and uniform in all the creatures, it follows that he would treat all living beings alike without any discrimination, equally and with equanimity. For him no one is an enemy and no one is a friend.]

30. Similarly, he abandons getting perplexed by so many versions of scriptures (because he has already understood the basic truth that they all attempt to explain in different ways). Instead, he should serve his Guru diligently and with devotion. [This is because this Guru has helped him save his precious time and energy by helping him to know what he set out for, without letting him get bogged down in voluminous scriptures and getting lost in their maze. A disciple should indeed be obliged and grateful to such a teacher.] By following this path, a man finds true welfare and auspiciousness (30).

31. The Guru is Lord Hari (Vishnu, the supreme Lord) personified. He is nobody else. This is the assertion of the Vedas (Sruti) (31).

32. Whatever the Vedas (Sruti) say is indeed auspicious and trustworthy; there is no doubt in what they say. If one doubts them, if one questions their authenticity and truthfulness, if one begins to contradict, ridicule, doubt and flay them, then nothing is left by which things in this world can be judged as to their truthfulness or otherwise. There would be no standard criteria, yardsticks or touchstone left against which other things can be weighed or measured or compared, and their certainty, truthfulness, reality or trustworthiness be ascertained. Anything that has no proof or

certainty, anything that is not based on some reliable criterion, anything of which the truthfulness or trustworthiness cannot be unequivocally confirmed or positively ascertained would be ruinous and harmful in the long run. [It would be based on hearsay and conjecture, and would be like the mirage seen in a desert. When a person is not certain of the value of anything or not certain of the goal he is pursuing in life, he would be listless and like a ship adrift on a choppy ocean—tossing around and causing immense hardship for the passengers and the sailors alike. He would be agitated and restless, he would be skeptical and apprehensive, he would be lacking in drive and motivation, and he would be a fertile breeding ground for doubts, confusions, perplexities and vexations. Every now and then he would try to find out his bearings and much of his energy and time would be spent in this than the actual pursuit of the goal. He would be literally going round and round in a wild goose chase. Even if has accessed pure gold, he would still be miserable and regard himself as penniless because he does not know what he has and what is its value.] (32).

33. The consciousness present in the gross body of the creature called the Jiva-atma should be regarded as the one that has different Kalaas, i.e. as the one which shows various attributes and characteristic qualities and features typical or specific to that body. On the other hand, the same consciousness when it is freed from the limitations and tainting effects of the gross body becomes free from these limiting factors and thus becomes one without any Kalaas, i.e. it has no attributes or special characteristic features that are specific to it, that can limit its virtues and qualities to a particular set of attributes and characteristics¹. [Refer verse nos. 37-40.]

This eclectic and divine knowledge that is received by the grace of an enlightened Guru, who is himself self-realised and enlightened, is universal and uniform. This knowledge enlightens the aspirant of the fact that the Atma is to be realised as being the pure and true 'self' of all the living beings, including the aspirant himself. It is the same in all the creatures; it has none of the attributes exhibited exclusively by any one sample creature. Externally all the living beings exhibit different characters and attributes which are specific to each one of them simply because the gross body is a variable and changing entity as compared to the Atma, and it is the gross body that is usually regarded as the identity of the creature simply because it is easily visible and easy to deal with as compared to the invisible Atma which is an ethereal spirit.

So, two creatures appear to be different from one another because their bodies are wrongly treated as their identity instead of their Atma which is actually their true 'self'. Since this error creeps in, the perception about the creature changes—i.e. the immaculate, immutable, uniform, eternal and imperishable Atma appears to be tainted and ever-changing. Therefore, obviously, when the gross body is removed from the scene, what remains is the pure consciousness or the Atma which is always and invariably the same in all the creatures irrespective of the type of the body that they have (33).

[Note—¹To understand this phenomenon we can take a simple example. Water in its purest form consists of two atoms of hydrogen and one atom of oxygen. But this water assumes so many shapes and colours according to the vessel in which it is kept, or it acquires so many tastes such sweet or salty, or is assigned such attributes as being hot, warm, cold, scalding, boiling etc. Then this same molecule of water has different names such as water, vapour, moisture, ice, snow, rain, sleet, river, stream, ocean, sea, lagoon, lake, pond, well and puddle. Is there any fundamental difference in water molecule in any of these different varieties of water bodies? No, certainly not. The same thing applies to the Atma which is also atomic and microscopic like

the basic unit of water called its 'molecule'. When the Atma is seen in the context of the physical body of the creature, it shows so many attributes, but shorn of this body and seen in its pristine pure form it becomes an entity that is one and non-dual.]

34. A wise and enlightened man who remains engrossed in repeating the eclectic and divine Mantra 'Hans-Hans' (i.e. '*So-a-Ham' meaning 'that essence or Truth or Brahm is me') is indeed an auspicious personification of the Trinity Gods, i.e. of Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder. He can be successful, by the grace and blessing of his enlightened Guru, in becoming aware or realising the ubiquitous supreme Brahm who all-pervading, all-encompassing and all-incorporating (34).

[Note—Refer verse nos. 16, 23-24, 61-64, 78-79 also. This Mantra *So-a-Ham is also prescribed in Yogshikha Upanishad of Krishna Yajur Veda, Canto 1, verse no. 132.]

35. Just like oil is present in the sesame seed and fragrance is inherent in flowers, the same universal Brahm is uniformly present inside as well as outside the body of a human being (just like the same air is present inside and outside of a hollow pitcher) (35).

[Note—The word 'Brahm' refers to its microcosmic part as the pure conscious Atma.]

36. Even as the lighted torch is abandoned as it is rendered useless after one has seen or found the thing that was being searched with the help of its light, a wise person is one who leaves the instrument of Gyan (information, knowledge and their intelligent application), which was being used by him to successfully study, analyse, deduce and obtain access to the object of his intellectual pursuit, once his aim is fulfilled (36).

[Note—In other words, once a wise man has realised the truth about Brahm, which was only possible by application of intelligent and analytical mind and its various faculties as well as by taking help from external sources such as the scriptures and the teacher, he no longer needs them just like a professional man no longer needs his college text books once he has mastered the subject and passed the exam. The word Gyan has a wide application here, such as the use of the brain's intellectual faculties, its analytical, thinking and rationalizing abilities as well as so many other intangible aspects of the consciousness that come under the general terms such as the person's own sixth sense, his intuition, his moral and spiritual background, certain special divine qualities that he carries which enable him to do stupendous tasks not within the reach of others, his diligence and perseverance etc. which all together lend a combined helping hand to him to successfully reach his lofty goals and attain things not even imaginable by others.

In the context of metaphysics and spiritualism, this goal of knowledge is Brahm-realisation and self-realisation; to understand the real Truth and separate it from the apparent truth. It is the pursuit to find out the 'absolute and irrefutable truth' of existence and solve the eternal riddle about one's true identity, origin and form as well as the destiny of the creature and how to break free from the endless cycle of miseries and agonies associated with this mundane world and its vicious entrapments. Once this spiritual goal is successfully reached, once the man becomes self-realised and Brahm-realised, then the medium of Gyan becomes redundant much like one no longer needs the boat once the river is crossed. The wise man would proceed with his journey instead of clinging to the boat or dragging it along or carrying it on his head! One reads the scriptures, studies them, discusses them and hears them preached by erudite scholars only till the point their essence is not grasped; after that they are no longer needed.]

37. [Verse nos. 37-40 describe the concept of 'Kalaas' vis-à-vis the living creature. In this context, refer also to verse no. 33 above.]

The entity that has a definable and tangible form, characteristic features, qualities and attributes which gives it its individuality is regarded as 'Sakal', i.e. one that has one or more Kalaas. Such entities are gross and have a physical dimension. On the other hand there are certain things which do not come under this definition; they are called 'Niskal', i.e. one that has no Kalaas. Such entities are subtle, ethereal and sublime; they lack a physical dimension.

To illustrate, the flower is Sakal, while its fragrance is Niskal. Similarly, the tree is Sakal, while its shade is Niskal (37).

[Note—The flower has a gross body and a physical structure, it can be touched, seen and felt, but its fragrance is a subtle thing that cannot be even precisely defined. Similarly, the tree has a definitive form and characteristic features; it is vibrant and colourful; it is full of variable life forms and a resting place for a wide variety of insects, birds and centipedes. On the other hand, its shade is obviously something that no one can touch, smell and precisely describe; it is dark, gloomy and intangible; it has no trace of life whatsoever in it.]

38. In the aforesaid way, one can observe the existence of both the Sakal and the Niskal aspects of creation everywhere in this world. The entity that comes under the ambit of the definition of Sakal is a medium or instrument or aid which is employed or used to arrive at or to know or to deduce or to learn about or to gain access to the entity that comes under the ambit of Niskal (38).

[Note—The different scriptures and other means of acquiring the knowledge of the quintessential truth of the supreme transcendental Brahm would come under the category of Sakal because they are tangible and known instruments employed to arrive at some other entity that is intangible and unknown. The latter is Niskal in the sense that it is most sublime and subtle, having no attributes and definitions applicable to it in a specific manner. The Sakal is one which has Kalaas, which has certain attributes and qualifications, while Niskal has no Kalaas, it has no attributes and qualifications. In the instance cited in verse no. 37, when one sees a particular flower one immediately gets an idea of the type of fragrance that it emanates. Similarly, when one sees a tree from afar one instantly gets an idea of the type of shadow it produces and the area this shadow covers. For instance, when a group of people look for shade on a hot summer day, they search for a tree that is large and has a huge cover of foliage because they take it for granted that its shade would be large and dense enough for them to rest.]

39. An entity that is described as being 'Sakal' has one or more Kalaas (aspects, forms, fractions, attributes, qualities, qualifications etc.) in it as its integral part or characteristic feature. On the other hand, that which is said to be 'Niskal' has no such limitations imposed upon it. [That is, the Niskal entity is immutable, indivisible, non-dual and one single subtle and sublime whole. It cannot be portioned or partitioned into segments or fragments that have specific Kalaas for study and analyses, or for any other reason.]

Those entities that come under the definition of Sakal (i.e. ones that have various Kalaas) have one, two and three Kalaas. They are differentiated by and classified into different classes or segments based on the number of Kalaas they have (39).

[Note—This is a very interesting verse. Let us see how it describes the various levels of creation in an encrypted language. The living world consists of both the animals as

well as the plants. The basic life forms have one or two Kalaas to start with, and then it progresses to the level of humans and Gods having five and more Kalaas.

The creatures in the living world have been classified into four categories and their respective Kalaas are as follows—(i) Udbhij—these are those life forms that are born from seeds, such as members of the plant kingdom. These have only one Kalaa called Anna Maye Kalaa. In other words, they depend on food and become food for others higher up in the evolutionary ladder. (ii) Swadej—they are those which are born from dampness and sweat, such as fungi, algae, bacteria, germs, mosquito, lice, flies etc. They have two Kalaas, viz. Anna Maye and Pran Maye. That is, they are formed from food, they live for food and they die as food. Besides this, they also exhibit signs of life, e.g. the mosquito and lice have life like any other member of the animal kingdom. (iii) Andaj—they are placed higher up in the evolutionary ladder, and are born from eggs, whether inside the mother's womb or outside. Such birds as pigeon, sparrow, parrot, peacock etc. come under this category. They have three Kalaas which are Anna Maye, Pran Maye and Mano-maye. The last Kalaa refers to the fact that such creatures have a mind and heart which enables them to think, albeit in a primitive level. (iv) Jarayuj—these are the creatures that are born as embryo that develops inside the mother's womb. Under this class come the animals such as horses, cows, dogs, elephants etc. They have four Kalaas, such as Anna Maye, Pran Maye, Mano-maye and Vigyan Maye. The last Kalaa refers to their ability to have a higher level of thinking ability called intelligence. The human being comes under this last category with the added benefit of having five Kalaas. Besides the four Kalaas mentioned above in other creatures of this category, the man has the fifth one and it called the Anand Maye Kosh. It is only possessed by a man and not by other creatures in the sense that the man can realise the true meaning of the terms 'bliss and happiness that is eternal and substantial' by the virtue of his attaining higher level of intelligence and his ability to delve into the secrets of the concept of truth itself and then realising that kind of happiness and bliss that is not superficial and which is not limited to enjoyment of the sensual pleasures of the body and the material comforts of the world, but which has a holistic and all-inclusive dimension that incorporates the spirit or the soul.

Since the present verse deals with one, two and three Kalaas, it refers to the Udbhij, Swadej and Andaj class of creatures.]

40. That which is half of a Kalaa, i.e. one that is so small and miniscule that it is not even one single unit or Kalaa of any given entity but is only a fraction of it (that is, an entity that is smaller than one molecule and only a part of it, i.e. the atom), is to be regarded as 'Paraa', literally meaning knowledge of things that are beyond the range of perception and comprehension, or that which is subtle and sublime (in the sense that it is invisible, miniscule and microscopic as compared to the Kalaa which has grosser and more tangible form). [This refers to the subtle body of the creature such as his mind and intellect, as well as his various qualities which form his basic character but which cannot be physically seen or felt. These effect his Atma, which is a fraction of what the supreme transcendental Brahm is, hence most apt to be called one with the 'half Kalaa'.]

Beyond the state of Paraa, or one that transcends this state, is called 'Paraatpar', literally which is beyond the furthest point of imagination and comprehension, something that transcends the boundary of knowledge and comprehension. [This refers to the supreme transcendental Brahm who has no Kalaa or embodies all the Kalaas in him to form a one single immutable whole.]

In this way one should recognise this world as having five subtle forms and five grosser forms¹ (40).

[Note--¹The figure of 'five' is arrived as follows—entity with one Kalaa + entity with two Kalaas + entity with three Kalaas (as described in verse no. 39) + entity with half Kalaa + entity that has no Kalaa (as described in verse no. 40) = 5. This obviously covers the entire gamut of creation for the following reason.

The five *subtle forms* of Kalaa are the five vital winds such as Pran, Apan, Samaan, Udaan and Vyan. The vital winds are synonymous with life and consciousness in a living creature—see verse no. 17.

The other subtle Kalaas of the creature are its five Koshas or sheaths that surround its Atma. They are the Anna Maye Kosh or the food sheath, the Pran Maye Kosh or the vital wind sheath, the Mano Maye Kosh or the mind sheath, the Vigyan Maye Kosh or the intellect sheath, and the Anand Maye Kosh or the bliss sheath. It is the last that encloses the Atma.

Besides them, there are the five states of existence of consciousness—viz. the Jagrat or waking state, the Swapna or dreaming state, the Sushupta or deep sleep state, the Turiya or the post-deep sleep state of Samadhi, and the Turiyateet or the transcendental state of Smadhi at its pinnacle.

The five *grosser forms* of Kalaa are the five elements of creation such as earth, water, fire, air and sky. Since all of these are part or fraction of the same Brahm, they are all the various Kalaas of Brahm. The entire living creation is manifested from these five Kalaas because the grosser forms or elements are the building bricks for the gross body of the creature, and the subtler forms such as the different Prans infuse life in this gross body and live inside it in a subtle and imperceptible form.]

41. Brahm, the supreme creator in his role as Brahma, the grandfather of creation and patriarch who has created the visible world, has his symbolic residence in the heart of a man, Vishnu (the protector and sustainer) in the throat, Shiva (the concluder) in the palate or back of the mouth near the glottis, and the great Lord called Maheshwar (here referring to the supreme transcendental Brahm) in the forehead (in the region of the cerebrum) (41).

[Note—The symbolisms are easy to understand. The heart is the seat of all emotions and sentiments, and of such qualities as love, infatuation and affection. When one falls in love with someone, one's 'heart' is involved in the entire process. So the heart is the symbolic habitat of Brahma, the creator, because the process of creation is replicated by a man in his love making exercise in which the heart plays a dominant role. Besides this, the heart is also the abode of the pure consciousness called the Atma. This heart is the subtle heart and is said to be like a lotus. This is therefore the abode of Brahm, the Supreme Being in the form of the Atma.

The throat is the location of two vital functions of the body—it is through it that food passes down the gullet into the intestines to be digested and nourish the body, and it is through here that the wind pipe passes that takes air inside the body during inhalation and brings polluted air out of the body during exhalation, thereby helping the man to remain alive. Since Vishnu is assigned the duty of sustenance, nourishment and protection in creation, his abode here is understandable.

When a man is about to die, his glottis shuts tight and he is unable to eat or drink, and neither can he breathe due to shutting down of the trachea. His tongue clings to the roof of the mouth and virtually acts like a cork shutting tightly the neck of the bottle. This biological phenomenon is metaphorically represented by the presence of Shiva at this point of the body. This is because, one, Shiva is the patron God of death and conclusion of creation, and second, this is equivalent to doing the 'Khechari Mudra' which is the toughest form of Yoga which liberates the practitioner's Pran or his vital life-forces from the shackling effect of the gross body and provides him with liberation. This liberation is called 'Kaivalya Mukti' in the sense that there is no reverting to the gross body any more and the liberation is final. This is also called

‘dissolution’ of the Atma and its final merger with the supreme Atma of creation. Refer Dhyān Bindu Upanishad, verse nos. 78-92.

Finally, the brain is located at the top of the body in the head, and it is the seat of knowledge, wisdom, erudition, skills, expertise and scholarship, virtues deemed to be synonymous with those who are wise, learned and enlightened. Therefore, it is the symbolic seat of Brahm. The Dhyān Bindu Upanishad, verse nos. 26-32 describe the symbolic location of these Gods of the Trinity in the context of Yoga.]

42. At the tip of the nose, the ‘Achut¹’ is said to have his abode, while at the root of the nose (i.e. at the base of the nostrils where the two eyebrows meet) is established the ‘Param Pad²’. There is nothing better than the Param Pad because it is the best and the most exalted stature or abode or state of existence (as it represents the state of enlightenment and self-realisation as well as Brahm-realisation) (43).

[Note—¹The word *Achut* refers to one that is immaculate and dignified, one who is exalted and firmly established in his dignified form, one who is steady and unwavering in his high pedestal, one who cannot be demoted or downgraded—here referring to the supreme transcendental Brahm as visualised by ascetic while meditating.

²The *Param Pad* literally refers to a stature that is supreme and the highest state of existence of a man. It is the highest pedestal on which a man can stand. It refers to being enlightened about the true nature of the pure conscious self and of Brahm. With this realisation, a man is said to have reached the highest citadel of spiritual achievement that has been described by the scriptures as his ultimate goal in life.]

43. The disembodied supreme divine Being (Brahm) should be visualised as being established at a distance measuring twelve fingers width above the tip of the nose, while the all-pervading and all-encompassing ubiquitous supreme Lord (Brahm) is envisioned as being present in the ‘Sahasraar Chakra’ (a swirling subtle energy center located in the head having a serrated saw-like edge with thousands of sharp points)¹ (43).

[Note—¹In other words, the practicing ascetic should visualise the supreme transcendental and formless Brahm as being present in the area around the head. Brahm is synonymous with wisdom, erudition, knowledge and enlightenment as it is omniscient and all-knowing. Brahm is the cosmic Consciousness and the Absolute Truth of creation. Brahm has the form and contours of the sky element amongst its numerous forms and contours. Brahm’s symbolic manifestation in a visible form, complete with its dazzling splendour and life-giving and life-sustaining virtues as the celestial Sun at the cosmic level, and the pure consciousness or the Atma at the individual level of the creation. That is why a glowing halo of light is iconographically depicted around the head of self and Brahm realised persons. This halo around their heads is indicative of the presence of Brahm there as clearly said in the present verse.

Does it mean that Brahm is not present there in those who are not self-realised or Brahm-realised? No, that is not the case—just as the cloud in the sky blocks out the shine of the Sun, the spiritual impurities that cling to such people prevent this light of Brahm from shining through.]

44. In spite of the mind of an expert ascetic wandering from place to place and his eyes flickering from one object to another, he internally remains steady in his meditation (as described above in verse nos. 41-43).

[Note—That is, a true ascetic is one who has disassociated himself from his gross body and its organs. What his external body does is of no concern to him. He remains unruffled by its overtures and its waywardness. In other words, he might behave like

an ordinary man but internally he is completely at peace with himself and lost in constant meditation and contemplation. His physical eyes might flicker from object to object because it is their natural habit, but he has reined in his internal sight so much that it is fixed on one target that is Brahm or the Absolute Truth; he sees nothing but this 'truth'.]

45. This is an esoteric, an enigmatic and a mystical knowledge (about Brahm). It is superior to any other thing or knowledge. There is nothing better than it; there is no knowledge superior to it (45).

46. One should acquire unadulterated knowledge that is like the rejuvenating elixir called Amrit. With the help of this Gyan or eclectic knowledge and erudition, one can attain eternity because this truthful knowledge would him the correct path, wizen him about what actually consists of the 'truth' instead of getting lost in the maze of 'apparent truths', make him aware of the concept of eternity and imperishability, along with the pitfalls to guard against in his spiritual pursuit. It would teach him to reach the correct goal following the correct path.

This is the greatest secret that must be diligently researched and contemplated upon to arrive at its core essence and unravel its mystery (46).

[Note—The mysterious entity that is the goal of all spiritual endeavours is known as Brahm. The path to this enigmatic Brahm is shown by the Upanishads and explained by the Guru or teacher. The competent teacher is like an expert archer who can shoot the arrow right in the bull's eye. In other words, the competent teacher can lead the spiritual aspirant straight to the spiritual goal without wasting time and energy in a wild goose chase and sort of leading the way by holding the hands of his ward till the destiny is reached. But all this pre-supposes that the teacher must be an expert himself.]

47. This eclectic, enigmatic and mystical knowledge pertaining to the supreme transcendental Brahm should not be divulged even to one's own son or disciple who is incompetent and unsuitable to accept such knowledge (for he would misuse it or wrongly understand it, thereby causing his own ruin as well as that of his forthcoming generations by passing distorted versions of the real thing). It should be imparted to those who are faithful to their Gurus and serve them devotedly. [This does not mean that even though a son or a disciple is incompetent and generally ineligible for imparting such eclectic and secret knowledge is given it just because he has been serving his teacher diligently. But the sincerity of service and the time he spends in close proximity of the teacher would enable the latter to judge his intelligence and general mental caliber along with other virtues necessary for imparting such divine knowledge. The teacher would have ample opportunity to weigh his character and sincerity and steadfastness of purpose.] (47).

48. This eclectic and divine knowledge should be divulged only to those who are devoted and diligent and sincere, and not to anybody else. If anybody violates this sanction and willfully divulges to unworthy candidates, then such persons would go to hell (i.e. would have to suffer the ill effects of such violations), and would never be able to achieve further success in his own spiritual enhancement (48).

[Note—The restrictions imposed in verse nos. 47-48 are basically intended to guard knowledge from falling into wrong and irresponsible hands because that would be catastrophic for the society at large and for the future of that knowledge itself.]

49. No matter to which section of society or phase of life one belongs, whether he is a Brahmachari (a celibate student or adult), a Grihastha (a householder), a Vaanprastha (a person who has retired from active household life and leads a life of renunciation and usually spends time wandering in pilgrim centers), or a Sanyasi (a friar, mendicant, monk or hermit), no matter where he lives—if a person understands the eternal and irrefutable essence of existence, the absolute and universal ‘truth of the Spirit’ that is one, irrefutable, immutable, eternal, imperishable and non-dual, he is deemed to be knowledgeable, wise and enlightened. Such a person is entitled to be called a ‘Gyani’. [All other sorts of knowledge pertain to the artificial and perishable world and hence are not sustainable and eternal like the knowledge that relates to the ethereal Spirit and the cosmic Consciousness known as Brahm at the larger macrocosmic level of existence, or as Atma at the microcosmic level of existence.] (49).

[Note—This is a great observation having a wide ramification. It follows that even a householder who seems to be engrossed in his daily routine can be as erudite and enlightened as a monk who lives a cloistered life in a monastery, or a hermit meditating in the forest, if this householder has understood and realised the truth and the essence of what the scriptures preach. Otherwise, the monk and the hermit are no better than him; rather they may be worse off.]

50. This eclectic and divine knowledge is so potent and effective that even though a man might be indulgent in this material world and engrossed in its enjoyment, he still can hope to find redemption and an auspicious destiny for his soul after his death by following the fundamental tenets of this knowledge and having its holistic awareness. [This is because, as it is mentioned above in verse no. 44, he would remain oblivious of what his body is doing, and on the contrary remain ever submerged in meditation and contemplation internally. It is what is present inside that matters rather than what is on the outside, because the outside is superficial, transient, non-reality and illusory.] (50).

51. Those who are so highly enlightened, wise, erudite and Brahm-realised that they do not see any difference between the formidable evil consequences of murdering a Brahmin and the astounding boons got by doing the great Aswamedh Yagya (the sacred ritual of the fire sacrifice called the ‘horse sacrifice’), i.e. who treat them alike and remain unmoved and calm under both the circumstances, who neither wail and feel distressed when having to suffer the horrendous pains and torments caused as punishment for murdering a Brahmin, nor do they exult and rejoice in the blessings and good fortunes bestowed upon them for doing the great horse sacrifice—such excellent persons are deemed to be truly exalted.

They are called ‘Prerak’, i.e. the ones who are truly inspiring and motivating for others; they are called ‘Bodhak’, i.e. the ones who are truly enlightened, knowledgeable, wise, erudite and sagacious themselves and can make others who come in their contact equally so; and they are called ‘Moksha-Daayak’, i.e. the ones who are truly empowered and competent enough to bless others with the boon of finding liberation and deliverance for their souls. [This is because only those who themselves know the subject well can teach others correctly; only who know the path themselves can show it to others. Since such persons are experts in this spiritual field and have a first hand experience and knowledge of it themselves, they are indeed eligible and competent to teach others. It is wise and advisable to shun the others for they are imposters who would do more harm than good.] (51).

52-53. In this world, all true teachers come under these three categories. The 'Prerak' are the ones who show others the auspicious and righteous path to be followed; they inspire and motivate and egg-on their followers to follow this path. In fact, their own lives are living examples to be emulated; they show the auspicious way and the eclectic rewards to be had by following this path.

The 'Bodhak' makes others aware of the intricacies of the various aspects of this path, guides them and teaches them the smallest issues that are relevant, enlightens them about the real goal of life, and acts as a constant companion and friend to help them in solving all their problems that they might encounter off and on.

The 'Moksha-Data' is the one who gifts the best and the most excellent gift that can be given to someone, i.e. the gift of 'Moksha', the treasure trove of emancipation and salvation, the blessing that enables the disciple to reach the true final goal of life, and it is the breaking of the fetter that shackles him to the endless cycle of birth and death, to liberate him from the fathomless pit of ignorance and delusions in which he is presently trapped. With the knowledge imparted to a spiritual aspirant by a wise, selfless, enlightened and competent teacher, and under his able guidance and inspiration, the disciple is able to attain the aim of freeing himself from the fetters that shackle him to ignorance and its attendant delusions, thereby liberating his soul and delivering him from the torments of bondage and serfdom to the gross body and the world with its horrors and impertinence. Armed with this knowledge, the aspirant is able to attain the supreme bliss and reach the highest stature in life.

Oh Gautam!¹ Now you listen about a symbolic way of doing a sacred sacrifice in the context of the body² (52-53).

[Note—¹The word 'Gautam' pertains to any enlightened ascetic, sage or seer belonging to the lineage of the exalted legendary sage Gautam. It is like a surname adopted by the followers of sage Gautam.

²The symbolic fire sacrifice where the oblations are offered internally to the deity which in this case is the supreme Brahm residing in the subtle heart of the worshipper as his Atma is elaborately described in Pran Agnihotra Upanishad also. This latter Upanishad is Chapter 29 of this volume. This philosophy does away with the necessity of doing elaborate fire sacrifices in order to attain some spiritual goals such as seeking emancipation and salvation, as well as general welfare.]

54. By doing this symbolic sacrifice in the body itself, one is able to attain an exalted stature that is eternal and truthful, that is imperishable and wholesome. He is successful in observing, in experiencing and witnessing, the presence of that attributeless and infinite entity resembling a Bindu (a 'dot' or point source) from where the fountain of eternity and bliss springs forth as being located in his own body and nowhere else in the outside world (54).

[Note—There are a number of Upanishads which deal with Yoga and which show how the ascetic is able to have a first hand experience of Brahm in his own body. This experience translates into extreme state of blissfulness and ecstasy. It leads to the eclectic state of Samadhi, a trance-like state during which the ascetic is unaware of the external world as well as of his own body itself though he apparently remains fully awake, but is actually in a perpetual state of highest elation and ecstasy obtained by being in constant contact with the pure consciousness residing in his own bosom which in turn makes him unbothered about or indifferent to anything else.

The word 'Bindu' means a dot, a point source, a fountainhead, a well-spring. Here it refers to the single-point source from which sprouts the fountain of extreme bliss and ecstasy in the ascetic's own self, and this 'Bindu' is his Atma or pure consciousness which makes him aware of his true conscious 'self'. This Atma is Brahm personified, and this Brahm is a fathomless ocean of beatitude and felicity of

stupendous magnitude. So why would he be so stupid as to keep splashing around in the slush of this artificial and deluding world once he has found such a treasury of eternal and truthful bliss, peace, ecstasy and happiness?]

55. The day and the night should be treated as the two ‘Ayans’ of the year, i.e. as one half of a year, the period of either the summer solstice or the winter solstice respectively. During the course of a period of time consisting of a day and night, one should practice Yoga (meditation, especially Pranayam) consisting of the three steps of Rechak, Purak and Kumbhak for at least one Prahar in each phase. [The word ‘Prahar’ refers to a period of three hours. Therefore, the total time spent on Pranayam should be three hours in the day time and three hours after sunset, totaling a period of six hours daily. Refer Yogtattva Upanishad, verse no. 67.]

This would be symbolic of doing Yoga for one fourth period of one’s life if the whole year is regarded as a metaphor for one life cycle. In other words, a wise and learned aspirant should spend at least one fourth life on meditation and contemplation to ensure his spiritual welfare (55).

[Note—The terms Rechak, Purak and Kumbhak are collectively called Pranayam exercise of Yoga, and they have been elaborately described in Yoga Upanishads. Briefly they mean as follows—(a) Rechak refers to the exhalation of breath; (b) Purak refers to the inhalation of breath; and (c) Kumbhak refers to keeping the breath trapped inside the body between the other two phases.]

56. [The following verses now describe how to go about it.] To begin with, the aspirant should reverentially pronounce the two Mantras (OM + Hans, or OM + So-a-Ham) and perform the preliminary worship in the prescribed manner. He should reverentially bow and adopt the different Mudras (postures) of Yoga (meditation) to worship and honour the Divinity (represented by these two Mantras) (56).

[Note—Verse nos. 2-8 assert that OM is the Mantra for the cosmic Consciousness known as Brahm, while verse nos. 16, 20-26, 34, 60-65, 78-79 stress that the Mantra is Hans because it refers to the consciousness residing as the Atma inside the living being.]

57. Oh Son! The Sun God is symbolically worshipped and his blessings invoked by doing the fire sacrifice in the form of repeating the Mantra (So-a-Ham)¹.

True, steady, honest and irrefutable knowledge of the Truth and Reality ensures that the devotee obtains oneness with his chosen deity whom he worships and honours. This form of liberation and deliverance of the soul of the aspirant is called ‘Saujya Mukti’ whereby it becomes one with the cosmic soul of the creation just like a drop of water is irrevocably merged and inseparably dissolved in a bigger body of water (such as the ocean) when this individual drop of water is dropped into the latter² (57).

[Note—¹When a fire sacrifice is done, each oblation is accompanied by saying a Mantra. This Mantra ought to be specific for the deity who is being worshipped through the fire sacrifice. In the present case, the deity is the Sun God who is a personification of the Supreme Being as it showcases some of the eclectic and divine virtues of the latter—such as its matchless splendour, radiance, glory, life-sustaining qualities, light and creative dynamic energy etc. The Sun is the most powerful and potent visible manifestation of Brahm as compared to other entities that are visible in this world.

The Sun is like the celestial hub around which the wheel of life revolves as is evident from the fact that life would be unsustainable, untenable and unthinkable without the sunlight. This metaphysical fact is symbolically represented by the solar

system where all the planets revolve around the Sun. Without the Sun, these planets would sort of lose their foothold in the vast void of the cosmos and would be lost forever.

From the angle of the fire sacrifice, the Sun is like the cosmic cauldron where the Supreme Being performs the sacred fire sacrifice in order to sustain this world. It resembles the fire pit because anything coming near the Sun would turn into ashes in a jiffy, and there is no chance of retrieving it later on.

So when the wise and enlightened aspirant does the internal fire sacrifice with the conviction that each breath is an oblation to the eternal fire of life burning inside his own body as the consciousness and other life factors, then the automatic sound of 'Hans' made by the breath as it comes in and goes out as clearly described earlier in verse no. 16 would be like chanting of formal Mantras during the external forms of the fire sacrifice. Again, since breathing is a constant and unbroken exercise, with this conviction he would be literally doing an eternal fire sacrifice to honour and worship the Supreme Being. That is why internal fire sacrifice is deemed to be much better and spiritually elevating than the external forms of it.

²The *Sayujya Mukti* is one when the aspirant seeks to become one with the chosen deity whom he worships. In terms of Upanishads, this oneness means that the individual Atma of the creature would merge with and become one with the supreme transcendental Brahm which is the cosmic Consciousness. From the perspective of Yoga, this would mean that the Pran or vital winds of the practitioner leaves the body and merge with the cosmic wind element present outside the gross body when these vital winds are able to travel up to the Brahm Randhra at the top of the head and exit from there as a result of Pranayam and other Yoga exercises.]

58. There is so much benefit in the practice of Yoga (mediation and contemplation) that the effort made in this direction is very worthwhile. So, one should diligently and constantly practice Yoga with unwavering steadfastness (58).

59. One should constantly do Yoga using the Mantra as prescribed in this Upanishad and thereby remain perpetually engrossed or submerged in a trance-like state obtained as a result of such meditation and contemplation exercise.

The supreme and transcendental form of Divinity (i.e. of Brahm) is obtained by the help of Gyan (true, irrefutable and incisive knowledge of the absolute reality and truth). [That is, Brahm is such an entity that can be known only by deep insight and sharp intelligence, almost like the case where only the brightest students are able to excel in science and engineering streams in college and do high quality research in science.] (59).

60. In the body of all living beings, the imperishable and eternal Divinity is always present in the form of the 'Hans' (i.e. in the form of the divine Swan symbolising the pure consciousness or the Atma or the soul that is present in the creature).

This Hans (i.e. the pure conscious Atma) is the ultimate Truth, and this Hans is an embodiment of divine Shakti (powers, energy, vitality, prowess and strength) that is present in any creature. [In other words, without this Hans or Atma the body would be lifeless and would not show any of the signs of life, vitality, prowess and strengths that it is famous for and known to exhibit. It would be like a lump of dead flesh.] (60).

61. This word 'Hans' is the great saying of the Vedas; it is the maxim and axiom proclaimed by the Vedas; it is the assertion of the Vedas.

This Hans is Rudra (Lord Shiva) personified, and it is the Supreme Being himself (61).

[Note—The word *Hans* refers to the eclectic Mantra ‘So-a-Ham, meaning ‘I am that essence’, or more elaborately ‘I, in my truthful form as the pure consciousness known as the Atma, am that essence known as Brahm’, or ‘I and Brahm are one’. Here the word ‘I’ refers to the Atma or pure consciousness. The Vedas endeavour to enlighten a person about his true ‘self’ and remove ignorance from his mental horizon. They preach the Truth of existence, about who the aspirant actually is, what is the true goal of life, how to reach it, how to get rid of miseries and problems of life and find permanent deliverance from them, how to obtain happiness and bliss that is permanent and best etc. When the spiritual aspirant discovers to his astonishment that the exalted stature that is obtainable by doing elaborate fire sacrifices and other religious rituals is easily obtainable by him by turning inwards, by meditation and contemplation that lead to him discovering his own divinity and holiness in the form of the Atma, he exults in joy and spontaneous ecstasy. He would literally dance in joy at having discovered a pitcher of eternal happiness and peace hidden inside his own bosom rather than somewhere outside.]

62-63. Amongst all the Gods, the Hans is the most exalted God called Maheshwar. Right from any point on the earth to the far reaches of the infinite directions, right from the first letter of the Sanskrit language, i.e. the letter ‘A’ (implying the beginning of creation) and extending to the last letter ‘Ksha’ (indicating conclusion of the creation, because the word ‘Ksha’ stands for decay and ruin)—it is the same Hans representing the pure consciousness, the ultimate Truth and the supreme Brahm that pervades throughout the creation represented symbolically by the alphabets of the language.

Nowhere is any Mantra (which is an esoteric and mystical group of letters or words or phrases used to worship or pay tributes to a deity) preached or nowhere does it have any meaning or even an existence if there is no Maatrikaa¹ in it (62-63).

[Note—¹The *Maatrikaa* of a Mantra are the various Sanskrit letters or alphabets that collectively form the text of the Mantra. The word Maatrikaa literally means ‘a little mother’. Since the Mantra represents the cosmic divinity known as the supreme transcendental Brahm in its numerous manifestations known as various Gods, the letters are called the Maatrikaas because they empower this Mantra with the stupendous mystical powers that this Mantra possesses much like Brahm employing his cosmic dynamic energy to enable him to initiate and then sustain and develop this creation, and even bring about its conclusion.

Brahm initiated this creation with the help of his cosmic dynamic powers and energy represented and encrypted in the Beej Mantra. But as it happened, the unfolded creation had numerous Gods and Goddesses. These Gods actually symbolise the various aspects of Brahm’s cosmic powers and authority, and the Goddesses represent their empowerment and strength to give effect to their mandate. This is a classic case of delegation of authority.

Mere letters and words or phrases of the Mantra would be neutral if not given their powers, or if they are not ‘empowered’ and ‘enabled’ much like Brahm which was a neutral entity until it empowered and armed itself with the cosmic dynamic energy, the necessary strength and authority to enable itself to initiate the process of creation. So, the Maatrikaa or Beej Mantras are the empowering aspect of the main body of the Mantra.

Each Mantra has two components—subtle and gross. The subtle part is its ‘Beej Mantra’ which is like the seed from where the huge tree grows. The gross part is the larger and extended part of the Mantra having a number of letters or words or phrases. The Beej Mantra consists of a consonant and the vowel sound attached to it

with a dot on top to indicate its point-source of cosmic energy as well as to indicate its anointment as the chief component of the Mantra. The dot is called the Anuswar, and it produces the nasal sound in association with the vowel sign preceding it. For example, in the Mantra 'Hans' as described in the Brahm Vidya Upanishad, verse nos. 62-63, the Beej Mantra is the Sanskrit consonant 'Ha' + the vowel sound of the letter 'A' with a dot on top—producing the sound equivalent of 'hunt + *suns* or *sons*' = 'hans'. Since this word 'Hans' refers to the cosmic transcendental supreme Brahm and its counterpart as the Atma or pure consciousness present in the body of an individual creature, the letter 'Ha' represents Brahm, while the letter 'Sa', which is a sibilant sound following the main Beej Mantra, means 'like that' or 'like it' referring to the Atma because the Atma is 'like that Brahm'.

The Beej Mantra is like the 'seed or root' from which the rest of the Mantra evolves and is said to derive its mystical and stupendous powers and potentials. This Beej Mantra is like the seed having the tree secretly present in it, and the Mantra would then be like the fully grown-up tree. Even when grown, the tree needs the root to anchor it and derive its nourishment from the ground. Hence the two epithets 'seed' and 'root' used to describe the Beej Mantra. Each deity has a specific Beej Mantra dedicated to it, and one Beej Mantra may apply to more than one deity.

In Hinduism, meditation and contemplation upon a chosen deity is done by the help of a Mantra as a specific formula dedicated to invoke its powers as well as to concentrate the mind and its various faculties on the deity along with aiding the process of meditation and contemplation. This is done by doing Japa which involves repetition of the given Mantra. In fact, Japa is an integral part of any religious exercise, even for success in Yoga because it helps to harness the latent and dormant energy in the body by focusing the mind on the purpose at hand. The Beej Mantra is used for its concentrated energy and strength alongside its ease of use and usefulness in offering oblations or doing Anga Nyas (which is establishing the divine powers of the deity on the different parts of the body to purify them, empower them and strengthen them with dynamic energy and holiness associated with the Mantra).

In metaphysics, the supreme Brahm is the deity worshipped, and his Manta is OM which is a monosyllabic word. The Brahm Vidya Upanishad however describes the Mantra as 'Hans' because it refers to the pure consciousness called the Atma as a manifestation of Brahm in the body of the individual creature, and repetition of this Mantra is like establishing a union between the two of them and reminding the spiritual aspirant that his 'true self' is the Atma which is none other than the Supreme Being known as Brahm. That is why there are a number of Yoga Upanishads that extol the virtues of this Hans Mantra during the process of various meditation and contemplation exercises.

The single point source of everything in existence is indisputably Brahm represented by the Beej Mantra. If the letter of the Beej Mantra represents this Brahm, then the dot and the vowel sign of the Beej Mantra are like the dynamic powers, energy and authority of Brahm. The extended part of the Mantra would then be equivalent to the revelation of Brahm in the form of myriad Gods representing one or the other virtues and qualities of Brahm, and their divine counterparts called the various Goddesses would represent the powers and authority vested in these Gods by the supreme Authority so that they can carry out their assigned duties.

In Tantra form of occult worship, the Supreme Being is worshipped as a divine cosmic Shakti or cosmic Mother which is actually the cosmic powers and dynamic energy of the supreme Brahm that is responsible for the creation coming into being, its development, growth and sustenance, and is even responsible for its conclusion. If the Supreme Being is regarded as the cosmic Male, then the opposite force, the cosmic Female, is envisioned as the Shakti, or the dynamic energy and vital powers, potentials and authority of this Supreme Being. The cosmic Male provided the vital spark of life in the form of the cosmic Consciousness which is like the 'sperm', while the cosmic Shakti is the female counter-part, called the 'Prakriti' which received this

‘sperm’ and nourished it in its womb to produce the offspring in the form of this vast creation. It was in the Prakriti’s womb that the creation was conceived, developed and grew to emerge as the mysterious creation which is as mystical and enigmatic as its father, the Supreme Being. Obviously, the cosmic sperm would have been wasted if it was not accepted by the comic Mother known as Prakriti.

In Tantra philosophy, the Supreme Being is known as Mahadeva or Shiva, and the female part or Shakti is known as Uma or Parvati. In the language of the Upanishads or Vedanta, the same Supreme Being is known as the Viraat Purush, the macrocosmic gross body of the supreme transcendental Brahm from which the entire creation sprouted like the tree from a seed, and the cosmic Shakti is called Maya or Prakriti. The Maya is nothing but the Viraat Purush’s dynamic powers that brought about the beginning of creation, sustains it and would finally conclude it; the Prakriti is the womb where the creation conceived and developed. The embryo is the Hiranyagarbha which is the subtle body of Brahm, and this embryo developed and revealed the Viraat Purush.

So, if the given Mantra is regarded as a personification of the given deity, then the Maatrikaa would be its energy and dynamism that is latent and inherent in it. The Mantra would lose its powers and potentials in the absence of the Maatrikaa just like the Supreme Being needed the power of the Shakti to create the world.

The word Maatrikaa literally means a ‘little mother’. It is given the same reverence that one would give to a mother because it is the mother that gives shape to the body of the offspring—in this case the main body of the Mantra. Shorn of the Maatrikaa, the Mantra would be meaningless and powerless.

The Beejnighantu text (Beej = seed Mantra; Nighantu = dictionary) written by Bhairav lists 50 such Beej Mantras and describes what they stand for. Another text known as Beej-vidhaan has 75 lines in the poetical style called the Anushtup Chanda describing the Beej Mantras like Hrim, Strim, Aim, Krim etc. representing different deities such as Aindri, Vaamekshana, Saraswati, Kali etc. respectively. Similarly, the Ekakhar-kosha of Purshottamadeva lists the Beej Mantras of various Gods and Goddesses, such as ‘A’ for Vasudeo, ‘Aa’ for Pitaamaha (Brahma the creator of the visible world), ‘Pa’ for the Wind God called Pawan, ‘Saa’ for Laxmi the goddess of wealth as well as for Shiva the third God of the Trinity. Another text called Mantraarthaa-bhidaan by Varadaatantra also lists the Beej Mantra such as ‘Haum’ for Shiva, ‘Dum’ for Goddess Durga, ‘Krim’ for Goddess Kalikaa, ‘Hrim’ for Goddess Bhuvaneshwari, ‘Klim’ for Kaamdeo-cupid, the patron god of love and passion, ‘Gam’ for Ganesh, ‘Kshraum’ for Narshingh, the half-lion and half-man incarnation of Vishnu, etc. According to Maatrikaanighantu by Mahidas, the Beej Mantras and even the word Mantras of certain chief deities are as follows—‘A’ stands for Shrikantha (Shiva, the one with a blue-tinged throat), ‘Keshava’ for Krishna, ‘Vaata’ for the Wind God of Pawan, ‘Ka’ for Maya, ‘Ma’ stands both for Vaikuntha, the abode for Lord Vishnu who is the second of the Trinity Gods and is responsible for sustenance of creation, as well as for Mahaakaal, one of the names of Shiva, ‘Ya’ stands for Yamuna etc.

The *Brahm Vidya Upanishad* of the Krishna Yajur Veda tradition, verse no. 63 asserts that no Mantra has any value if there is no Maatrikaa in it. To quote—“Nowhere is any Mantra (which is an esoteric and mystical group of letters or words or phrases used to worship or pay tributes to a deity) preached or nowhere does it have any meaning, value or even an existence if there is no Maatrikaa in it (63).”

This Upanishad has elaborately described the ‘Hans Mantra’ in its various verses, e.g. verse nos. 16, 20-28, 34, 60-64, 78-79. In the present case, the Mantra is ‘Hans’ referring to Brahm in the form of the Atma or pure consciousness present inside the body of the spiritual aspirant.

Refer also Yogtattva Upanishad, verse nos. 21-22.]

64. The magnificent splendour and the stupendous glory of this divine Hans (i.e. the pure conscious Atma or the supreme Brahm) are central to all the eclectic virtues and glories that all the honourable Gods in creation possess. This Hans occupies an exalted stature amidst the Gods and is the focal point around which all the Gods of this creation exist¹.

The aspirant should meditate in the Gyan Mudra while remembering Lord Shiva in his 'Dakshin Mukhi' form² (64).

[Note—¹That is, this divine, self-illuminated and glorious entity is seated like an Emperor surrounded by all the Gods as his attendants. This is a figure of speech to emphasise the following points—(a) All the Gods derive their powers and strengths on the authority of the supreme Brahm who is central to their existence. (b) Brahm is at the center of the entire creation much like the hub of a wheel, and all the different Gods and Goddesses represent the different attributes, virtues and qualities of Brahm. They have spread out like the branches of a tree, and if the tree is not there these branches would also not be there. (c) These Gods owe their existence, powers, strength, authority and virtues as well as their importance, value and significance to one single point source called Brahm. They revolve around this central axis just like the planets do around the sun. (d) If Brahm is the seed, the Gods are the huge colourful tree with multifarious shape and size. This is the picture at the macrocosmic level. At the micro level of creation, the creature is a representative of the cosmos, while his Atma which is pure consciousness and his 'true self' is the central point of his existence because without the Atma his existence is not feasible. The various Gods represent the different functions of the body and they therefore reside in the respective organ carrying out those functions. That is why the Hans—the aphorism for this Atma—is central to the Gods because without the Atma the body and its Gods would be meaningless.

²The *Gyan Mudra* in relation with the word Dakshin Mukhi refers to the sitting posture adopted by Lord Shiva while he meditated facing south. It also might mean 'with a bowed head' because the word Dakshin in Sanskrit means downward facing. In ritualistic forms of worship, this direction is the location of Yam God, the god of death whose controller is Shiva. The word Yam also means self control and self restraint. Hence, meditating with total self control and restraint over the restless organs of the body is called Gyan Mudra with a Dakshin Mukhi dimension.

An entire Upanishad of the Krishna Yajur Veda tradition is dedicated to this south-facing form of Shiva, and it is called 'Dakshin Murti Upanishad'. It is Chapter 18 of this volume.]

65. The aspirant should remain established in a perpetual state of Samadhi which is a trance-like state of blissfulness and eternal ecstasy. He should remain contemplative and meditative while in this state. This would create an aura of divinity around him which would shine and glow like the light emanating from a piece of crystal (65).

[Note—The enlightened spiritual aspirant is compared to a crystal because he is as pure and untainted as the latter. The crystal has no light of its own but shines due to reflection and refraction of light that falls on its surface. Similarly, the aspirant physical body has no light of its own but it reflects the inner light of holiness and divinity of the Atma that shines through his inner self as well as the light of wisdom, enlightenment and knowledge that he possesses. The divine glow around him indicates the purity of his self and the fact that this purity enables the glow of Brahm to be reflected from him. Since light is reflected in all its purity from a clean surface, and gets faint when reflected from a dirty or tainted surface, the fact that the aspirant is uncorrupt and holy shows in the glow of divinity around him. Again, only a plain mirror without any surface distortions would reflect perfect light, the holy and self-realised aspirant reflects the entire divinity and glory of Brahm without distorting it.

In fact, this is the reason why it is said that a self-realised person is Brahm personified because he is a perfect image of what Brahm has been visualised to be.]

66-68. The aspirant should always contemplate upon this divine Hans (Swan) honourably enshrined in the central part of his body, i.e. in his subtle heart.

The meditation that is done using the five principal vital winds such as Pran, Apaana, Samaana, Udaana and Vyan, along with their coordination with the five organs of actions of the body (such as hands, legs, mouth, genitals and excretory) is said to be very effective.

If this coordination between the five organs of action and the vital winds is extended to include the other minor vital winds such as Naaga, Kurma, Krikala, Devdutta and Dhananjaya, then the results are simply astounding, they are extremely effective.

The Shakti is the center in the body where, as its name suggests, the subtle fire element and the dynamic energy of creation are located. [This 'Shakti' is the center of subtle energy in the body, which is the coil like Kundalini located at the base of the spine.] On the other hand, the energy of the Sun is symbolically located in the Naabhi Chakra (which is the subtle energy center located in the region of the navel) (66-68).

69-70. In the beginning, the aspirant should practice the Mudra (meditative posture) called 'Bandha'¹.

The fire element has three subtle forms and three symbolic locations in the body. Thus, the fire element in the first letter 'A' (of the divine ethereal word OM) has its location in the tip of the nose and in both the eyes. The fire element in the second letter 'U' (of the divine ethereal word OM) has its location in the heart. And finally, the fire element in the third letter 'M' (of the divine ethereal word OM) has its location in the middle of the two eyebrows.

The energy and vitality, the strength and stamina of the Pran Shakti or the vital winds present in the body should be injected in these fire elements. [It is like igniting the latent and dormant fire element that is inherently present inside the body at these three symbolic sites where the fire pit of the sacred fire sacrifice that is being symbolically done by the medium of Yoga as mentioned in verse no. 54 is located by blowing air or vital wind into it.]

The Brahm Granthi (the knot or specific site where Brahm is said to have his seat) is said to be located in the region at the tip of the nose as well as in the eyes. Similarly, the Vishnu Granthi (where Vishnu is said to have his base) is located in the subtle heart² (69-70).

[Note—¹The *Bandha Mudra* pertains to the Baddha Aasan. It is described in Trishikhi Brahmin Upanishad, verse no. 40. It is literally a closed or tied form of Padmasana when, after sitting in a normal or common form of Padmasana posture, the big toe of the left foot is held by the right hand, and that of the right foot is held by the left hand. [In this posture, the hands are taken behind the back, and the clasping of the toe of the opposite side is done from behind. To facilitate this posture, the spine will have to be curved backwards a bit. The hands and legs are virtually 'bound or tied' to each other. That is why it is called 'Baddha' or tied or closed form of Padmasana.]

The *Benefits of Mudras*—The Varaha Upanishad of Krishna Yajur Veda tradition, in its Canto 5, verse no. 68 says that the various Mudras of Yoga, in association with the different Bandhas, are able to provide freedom from all sins if practiced mildly, and reward the ascetic with complete liberation and deliverance if

done for a prolonged period of time and at a higher level of concentration with due diligence.

²The word Granthi means a node, a nodule or module or knot. It also symbolises the center of power and authority because it is the nodal point from where all the authority needed for governance spread out. It is also like the seat of power and authority of a king, much like the strong fortress from where he rules over the kingdom. The Granthis mentioned in this Upanishad should be seen in this context. They represent the nodal points in the body where the Trinity Gods have their symbolic residence, and it is from here they control the functioning of the body of the individual as well as everything that he thinks and does. If the individual is regarded as the microcosm of the entire creation, then the Atma would be the supreme Brahm, and the various patron deities of the organs would be the different Gods of creation.

Brahm is synonym of Gyan which is knowledge of the truth and possession of the highest degree of erudition, sagacity, enlightenment and wisdom. Since these are the functions of the brain located in the head, the seat of Brahm in the *Brahm Granthi* is said to be here. Knowledge helps to remove the darkness of ignorance, i.e. it is like symbolic opening of the eyes so that the man can see the truth the light of enlightenment and wisdom. Therefore the eyes are also the locations of Brahm Granthi.

In the same vein, Vishnu is the sustainer, protector and nourisher of the world. Compassion, graciousness, love, mercy, benevolence, magnanimity, kindness etc. are some of the eclectic virtues that must be present in a person who is responsible or charged with looking after a huge and extended family which consists of all sorts of members. Since these virtues are the functions of the heart, Vishnu's seat or *Vishnu Granthi* is located here.]

71-74. The Rudra Granthi (the symbolic site of Lord Shiva) is said to be in the central point or tri-junction of the root of the nose and the eyebrows¹. All these three Granthis (Brahm, Vishnu and Rudra Granthis) are ruptured or broken by the help of the 'Akchar Vayu', the eternal, imperishable, infinitely powerful and invincible wind or air element².

The creator Brahma has his symbolic abode in the letter 'A' of the divine and ethereal word OM. Similarly, the sustainer and protector of creation Vishnu has his symbolic abode in the letter 'U', and the concluder Shiva in the letter 'M'. Beyond them is the supreme Brahm (who is present in the word OM formed by all these individual letters and thus incorporates all of them in his self)³. [Refer verse nos. 4-6 of this Upanishad.]

[Now the Yoga exercise is being described.] The throat should be constricted (i.e. the breath should be stopped), the astounding cosmic dynamic energy that is the progenitor of all other energies and which is located in the Kundalini should be activated, and the tongue should be pressed in the mouth. Then the Naadi (i.e. the tubular duct or the most important nerve in the body passing through the center of the spinal cord) which has sixteen roots branching out from it at its base (like a huge banyan tree), which moves upwards from the lower part of the body (i.e. the base of the spine) to reach the point called the 'Trikoort' (a reference to a mountain with the same name, literally the mount with three summits; here referring to the point in the head where the three primary Naadis, the Pingla, the Ida and the Sushumna, meet), which has three dimensions or forms (as Pingla, Ida and Sushumna), which knows about the location of the Brahm Randhra (the hair-like slit on the top of the skull from where Brahm is said to have entered the body of the man at the time of creation) because it goes up to that point, and which is very fine and subtle, should be activated.

Along with the activation of this Naadi, the trapped energy in the Kundalini should be unlocked and the Prans or vital winds too should be made active. This results in the creation of the right instrument or weapon that symbolically has the same stupendous potentials and astounding strength possessed by the Trident held by Lord Shiva, is as strong, potent and invincible as the Vajra (the weapon of Indra, the king of Gods, with which he controls the world), which has all the glories and potentials inherent in OM (because this word symbolises the four aspects of creation and stands for the four aspects of divinity as mentioned above—i.e. Brahma, Vishnu, Shiva and Brahm).

By using this potent and powerful instrument, the ascetic should ease the energy of the Kundalini through the Naadi (Pingla, Ida and Sushumna) and take it up to the Trikoort. [Here, the tri-junction of the base of the nose and the meeting point of the two eyebrows is being referred. This is the area of the cerebrum.]

This method should be used by him to conquer or rupture the 'Sashi Mandal', or the realm of the Moon God. [In other words, he should be able to exercise absolute control over his Mana or mind and heart because the Moon God is the patron god of the Mana in the man.] (71-74).

[Note—¹The word 'Rudra' implies anger and wrathfulness. When one becomes angry, the site where *Rudra Granthi* is located becomes furrowed or crooked or cocked as one frowns and cocks his eyebrows in annoyance and anger. Rudra is one of the forms of Lord Shiva's form which is synonymous with anger.

²This can be imagined in physical terms also. The constant repetition of the Mantra 'So-a-Ham' generates high vibrations in the subtle wind element present inside the body so as to activate it. The energy of these vibrations then focuses the activated air during meditation on these knot-like Granthis much like a high velocity jet of gases that are so powerful that they help to lift a heavy rocket from the ground. This jet of vital airs present in the body strikes these Granthis violently, unstucking them from their moorings and cracking them open.

³Refer verse nos. 2-9 above.]

75. The aspirant ascetic should practice the most potent form of breath control exercise called 'Vajra Pranayam' (literally meaning the Pranayam which has the potentials and powers that are equivalent in their effect to the invincible and strong weapon of Indra, the king of Gods, called Vajra; hence this form of Pranayam is infallible) by closing all the so-called nine doors¹ of the body (to ensure that the vital winds finds no way to escape and can be focused on the activation of the Kundalini and the Sushumna Naadi)². He should have a cheerful mind and sit in a comfortable position. That is, there should be no element of stress and discomfort, as it would cause hindrance in concentration and act as a distraction for the mind and the body. With this preparation, the ascetic should literally ride the Pawan or the wind/air element³ (75).

[Note—¹The symbolic nine doors of the body are the following—two ears, two eyes, two nostrils, one mouth, one anus, and one urethra. Refer Shwetashwatar Upanishad of Krishna Yajur Veda tradition, 3/18.

²As has been envisioned in the previous verses, there is lot of pressure needed to be built to push the subtle divine energy from the bottom of the spine where the Kundalini is located right up to the top of the head where the Trikoort and Brahm Randhra are located, and more than that is the effort needed to rupture the various knots called the Granthis. If there is any leak in the body, the vital air would not be able to develop sufficient pressure to accomplish this great task. More importantly from the metaphysical point of view, the closing of the nine openings of the body is to emphasise the fact that total self-control is needed if one were to succeed in one's

spiritual efforts. Half hearted and less than complete commitment would be like a leaking balloon.

³In other words, he would feel as light as someone floating in air or riding an air vehicle. The body will feel light and lose its grossness much like a balloon filled with hot air. Since the air inside is trapped because of closure of all exit points, it gets heated up and consequentially become lighter and tends to move up inside the body. This helps to levitate the body.]

76. [This verse outlines the benefits of doing meditation in the way prescribed above.] The aspirant is able to hear the cosmic vibrations known as Naad in the region of his Brahm Randhra, the Shankhini Naadi appears to rain nectar or elixir of bliss and ecstasy called Amrit, and since the subtle lotus of six petals has been slit open, the light of enlightenment that was hidden in it now comes to the fore. [This lotus enclosed the Atma in its petals, and once these petals have been slit open, the inherent enlightenment of the pure consciousness shines in the subtle space of the heart to light up the entire inner self of the ascetic.] (76).

77. The Supreme Being or the great Lord of creation who is established in all the mortal creatures should always be reverentially worshipped and duly honoured. He is present in them as their pure consciousness or Atma, is an embodiment of Gyan or truthful knowledge, wisdom, erudition and enlightenment, and is free from any of the ailments or faults or shortcomings¹ that normally afflict every creature in this world in lesser or greater degree (77).

[Note—¹The various Faults that afflict the creature in this world have been classified under different categories, and are variously listed as being broadly of six, five, four, three, two and one types. The terms used to describe the various faults or shortcomings have been described at the end of this listing. Now let us see them one by one.

(a) The *six faults* or shortcomings of the body are the problems associated with this gross world that has a physical origin, takes a birth and ultimately ends or dies. Naturally they are not applicable to the supreme Lord who does not take birth and does not die. These so-called 'Vikars' are the following—(1) problems associated with birth, (2) problems associated with growth, (3) problems associated with consequences of deeds done and actions taken by a creature in this world, (4) problems associated with gradual decay and decline of the body and its functions, (5) problems associated with old age and its attendant horrors, and (6) problems associated with the ultimate destruction and end of everything that relates to the creature. One will observe that the life of a creature is a continuous graph of sorrows, sufferings and pains of one or the other kind. It is only when the creature realises the truth of existence and who he really is that he begins to disassociate himself from the body and the world, and thus is able to break free from this seemingly interminable cycle of horrors. Refer *Mudgal Upanishad*, Canto 4, verse no. 6 of Rig Veda tradition as well as *Adhyatma Ramayan* of Veda Vyas, Lanka Kand, Canto 3, verse no. 29.

According to the *Varaha Upanishad*, canto 1 of the Krishna Yajur Veda tradition, there are *six Urmis* or faults associated with a creature. They are the following—Ashanaaye (hunger), Pipasa (thirst), Shoka (grief and sorrows), Moha (delusions), Jara (old age) and Mritu (death)—refer also *Mudgal Upanishad*, Canto 4, verse no. 7 of Rig Veda tradition.

There also *other six faults* that are considered as *enemies* of a man—Kaam (worldly passions, lust, desires and yearning), Krodh (anger, indignation, spite and wrathfulness), Lobh (greed and rapacity), Moha (ignorance based delusions, worldly infatuations, attractions and attachments), Mada (egoism, arrogance, haughtiness and

hypocrisy) and Matsarya (envy, jealousy, malice and ill-will)—refer *Mudagal Upanishad*, Canto 4, verse no. 4 of Rig Veda tradition.

(b) The *five faults* or shortcomings of the body—According to *Mandal Brahmin Upanishad* of Shukla Yajur Veda tradition, Brahmin 1, section 2, verse nos.1, there are following—viz. (1) Kaam (worldly lust, desires, passions and yearnings), (2) Krodh (anger, indignation, spite, wrathfulness), (3) Asthma or obstruction of breath, (4) Bhaya (fear of physical harm), and (5) Nidra (sleep, lethargy, indolence, drowsiness, sluggishness and lack of alertness especially when doing some important or dangerous work requiring concentration of mind, vigilance and alertness of the faculties) (verse no. 1).

How to overcome them—Mandal Brahmin Upanishad, 1/2/2 describes the method to overcome these faults of the body in these words—“These faults which translate into spiritual impediments can respectively be overcome by the following methods—viz. to be without any desires whatsoever, to be forgiving and tolerant, to eat less and moderately, to be strong, brave and courageous, and to constantly devote time and energy in contemplation and meditating upon the essential and true nature of things, called Tattwa Sevanam (i.e. to keep the mind from lying idle and instead keep it occupied in introspection and engrossed in deep thoughts of what constitutes the reality and truth) (verse no. 2).”

According to *Ram Charit Manas* by Saint Tulsidas, Aranya Kand, Doha 39, Chaupai 2/1, there are *five shortcomings* in a creature and they are the following—Krodh, Kaam, Lobh, Mada, and Maya.

(c) The *four faults* that are associated with a creature’s temperament and natural inclination and mental bearing have been described in detail in *Ram Charit Manas* by Saint Tulsidas, the greatest epic ever penned in the realm of devotional literature which is suffused and soaked in the philosophy of the Upanishads at the same time. This great treatise has the following take on the four faults or shortcomings that afflict all the creatures in this creation—(1) Baal Kand, Doha 285, Chaupai 1/2 states that the four faults are Mada, Moha, Krodh, and Bhram. (2) Doha 43, Chaupai 3/1 says that they are Kaam, Krodh, Mada and Moha. (3) Baal Kand, Doha 112, enumerates them as Shok, Moha, Sandeha, and Bhram. (4) Baal Kand, Doha 128 says that they are Moha, Matsarya, Mada, and Maan. (5) Aranya Kand, Doha 43 lists these four faults as Kaam, Krodh, Lobh and Mada. (6) Aranya Kand Doha 44, Chaupai 2/1 enumerates the four faults as follows--Kaam, Krodh, Mada and Matsarya.

(d) The *three faults* that afflict the creature, according to *Ram Charit Manas* by Saint Tulsidas, Aranya Kand, Doha 38/A, are the following—Kaam, Krodh and Lobh

(e) The *two faults* associated with the creature that prove his great *enemies* are the following according to *Ram Charit Manas* by Saint Tulsidas, Aranya Kand, Doha 43, Chaupai 5/1—Kaam and Krodh.

(f) The greatest fault however is *one*, and it is ‘Moha’ (delusions and its attendant attractions towards this world and its charms, leading to attachments, infatuations and a sense of belonging to it). This Moha is compared to the dark night in *Ram Charit Manas* by Saint Tulsidas, Baal Kand, Doha 116, Chaupai 3/1, and Aranya Kand, Doha 93, Chaupai 1/2. Moha is like a moral disease that afflict all creatures and eat them up like cancer—Uttar Kand, Doha 121, Chaupai 15/1; Moha makes everyone blind—Uttar Kand, Doha 70, Chaupai 4/1.

So, briefly the various ailments that afflict the creature in this world can be summarised as follows—*Kaam* (worldly desires, lust, passions etc. and the attending greed, yearnings and aspirations that they create in their wake); *Krodh* (anger, indignation, wrathfulness and a sense of vengeance when desired results are not obtained and aspirations are not fulfilled); *Lobh* (greed, rapacity and yearnings); *Moha* (delusions that create a sense of attachment, infatuation and belonging with this world and attractions towards the material charm that its sense objects offer, along with their pleasures and comforts); *Matsarya* (envy, jealousy, malice); *Mada* (arrogance, false pride, hypocrisy and haughtiness); *Maan* (self pride and ego); *Maya*

(ignorance based delusions, illusions, misconceptions and their attending hallucinations); *Bhram* (confusion and doubts caused by ignorance of the actual truth, which lead to perplexities and vexations); *Shok* (the feeling of regret, contrition, grief, sufferings, torments, miseries and sorrows); *Ashanaaye* (hunger); *Pipasa* (thirst); *Jara* (old age and weakness); *Mritu* (death); *Bhaya* (fear of any kind, such as physical harm); *Nidra* (sleep, lethargy, indolence, drowsiness, sluggishness and lack of alertness especially when doing some important or dangerous work requiring concentration of mind, vigilance and alertness of the faculties); *Sandeha* (doubts, skepticism and lack of confidence in some truth such as doubting the authority of the scriptures and their tenets and maxims).]

78-79. All spiritual aspirants who have a gross body (and of course are wise and enlightened) should constantly contemplate upon and visualise the ubiquitous presence of the supreme Lord who is faultless and immaculate, who is all-pervading, all-encompassing and omnipresent in this creation. While doing this, he should constantly repeat the divine eclectic Mantra 'Hans-Hans'. [In other words, the aspirant should constantly remind himself that he is no one else but the supreme Brahm himself personified. This is because another form of the Mantra is 'So-a-Ham', meaning 'that is me'. Refer verse nos. 16, 20-28, 34, 60-64.]

This type of Japa (repetition of the Mantra) done constantly and involuntarily is called 'A-Japa Japa', i.e. repetition of the Mantra in an involuntarily way and without being consciously aware of it being done at all¹.

This type of Japa involves a coordination of the Pran and Apaan winds. [This is because inhalation of breath during the Purak phase is known as the Pran, while the exhalation done during the Rechak phase is called Apaan.] Since a man breathes roughly twenty one thousands time during the course of a day, this is the number of times this Mantra 'So-a-Ham'² is automatically repeated (78-79).

[Note—¹It is called 'A-Japa Japa' because this repetition is done involuntarily and without any special effort or attention paid to its repetition. The practitioner is not even aware that he is repeating any Mantra because it is directly linked to the normal breathing process which is an involuntary and an automatic biological process done constantly and without break, even while a person sleeps or goes about his daily chores of life—refer verse no. 16 and its note. The prefix 'A' indicates negation, and therefore this repetition of the Mantra Hans is not regarded as doing a Japa in the conventional sense when special attention is focused on repeating any Mantra during some religious ritual or practicing Yoga. It is automatic and involuntary. So when the spiritual aspirant has risen to a level of awareness and enlightenment when he becomes aware of the spiritual importance of each breath that comes in and goes out of his body as representing the two limbs of the Mantra for Brahm, i.e. the letters 'Ha' and 'Sa' or the combined word 'Hans', he is deemed to have become Brahm-realised. Only then can he say that he is repeating the Mantra 'So-a-Ham' meaning 'that Brahm is me as my true self known as the pure consciousness or Atma'.

²The eclectic Mantra 'So-a-Ham' has been described in a number of Upanishads. For instance, Krishna Yajur Veda's Yogshikha Upanishad, Canto 1, verse nos. 131-133; Shuka Rahasya Upanishad, verse no. 20; Sam Veda's Yogchudamani Upanishad, verse no. 83.]

80. The practitioner of Yoga should always meditate upon the symbol of Lord Shiva, called a Lingam, at three places—viz. as a 'Adho-linga' (i.e. as an inverted or downward facing Lingam) in the front of the Kundalini¹, as 'Pashim Linga' (i.e. as a Lingam facing to the west direction, or to the left hand side, or one that is rear-facing) at the place where the subtle filament of light burns in the body (i.e. in the heart

region, because it is here the flame of consciousness burns as the Atma), and as the 'Jyoti Linga' (i.e. as a self-illuminated source of light) in the middle point of the eyebrows (which is said to be the site of the third eye of enlightenment and wisdom) (80).

[Note—Refer Yogshikha Upanishad of Krishna Yajur Veda, Canto 1, verse no. 168; Canto 2, verse nos. 9-11 which describe the presence of the Shiva's Lingam—the symbol representing Lord Shiva—in the body of the man in the course of discussing Yoga.]

[Verse nos. 81-110 are the truthful statements made by a self-realised person who has discovered the great spiritual Truth about himself. It must be noted here that the pronoun 'I' that is constantly used in each verse is not being used for the body but for the Atma or pure consciousness that is the true and real identity of the spiritual aspirant who is making each statement. The observations made in the following verses have an excellent resonance in other great Upanishads belonging to the Krishna Yajur Veda tradition—such as the Tejo Bindu Upanishad in its full Canto 3 and in Canto 4, verse nos. 1-30, Canto 6, verse nos. 32-39, 58-72, as well as in Sarwasaar Upanishad, verse nos. 16-21. The statements made herein below mark the pinnacle of enlightenment and realisation of the ultimate Truth that inspires the spiritual aspirant to feel so exulted and ecstatic that he is unable to withhold his sense of elation at this discovery, and become so overjoyed with it that he exclaims as follows—]

81. I cannot be demoted or degraded from my exalted stature; I am not fallen and degenerate.

I am beyond comprehension and thoughts (i.e. I am so mysterious, esoteric and enigmatic that I just cannot be fully understood).

I am beyond the limits of logic and rationality (i.e. no one can understand me by applying logics of the material world and try to prove or disapprove my existence in some science laboratory as if I were some material object or some animal species from an alien planet).

I am without a birth (because I am eternal, imperishable and infinite).

I do not have any (spiritual and inherent character) deformities symbolised by such external signs as wounds or tumors (i.e. I am perfectly healthy and without any scars or blemishes in my immaculate character and nature).

I do not have a gross body, and therefore I do not have any organs or any fears that come with the possession of a body (such as from old age, enemies, diseases, pains and other such torments that have a direct relation with the body) (81).

82. I am without words and forms (i.e. I cannot be described in words; I have no physical attributes and features; my true form has no physical dimensions which words can hope to describe or express). Therefore, I am beyond the perception of touch and the sense of feeling (that is associated with anything gross and physical, simply because I have no forms).

I am non-dual, immutable, universal and uniform. [This is one of the reasons why I can't be precisely and correctly described, because each word and each phrase used to describe me would be limiting me, but that would be erroneous as I am limitless and infinite. Each word or phrase has more than one meaning when used in different contexts, whereas I am one whole indivisible single Unit. Further, how can anything that has no form be of two types, or be 'dual'? That is why I am 'non-dual'.

Again, Truth is always one and not two, another reason of my being 'non-dual, uniform, universal and immutable'.]

That is also why I am without the gross perceptions of taste and smell. [This is because I have no gross body with the organs that can taste or smell. I am non-dual, so there is no separate thing that has a taste which is tasted by someone else, and neither is there some thing that emanates a smell that can be smelled by someone else.]

I am an embodiment of eternal and primary elixir of creation called Amrit. [This is evident in the fact that after the previous creation came to an end, everything else perished except me. Thus, I must be something on which death has no effect, and such a thing is called Amrit because it is an ambrosia of eternity and imperishability.] (82).

83. I am imperishable and do not decay or come to ruin. I am without a body and its organs. I am therefore not subjected to the decay of the body and the effects of old age. I have no dimensions, forms, shapes, fractions or aspects. [All this is simply because I am formless, eternal, infinite and imperishable as well as universal, uniform, immutable and non-dual.]

I have no Pran (physical life) but still I can speak (i.e. I have manifested myself in the subtle world as the faculty of speech).

I am so mystical, esoteric and enigmatic that I am beyond thoughts and comprehension. [Refer verse no. 86.]

I do not do any deeds (because the deeds are done by the physical body and I am not the body but the subtle, sublime and pure consciousness which is absolutely distinct from the physical gross body) (83).

84. I dwell inside all the creatures and know their inner thoughts and feelings. [That is why I am called 'Antar-yaami', i.e. one who lives inside and knows the inner secrets.]

I cannot be caught hold of or grasped. [That is, neither can I be physically held because I have no gross body, nor can I be understood and grasped by the mind because I am the most mysterious entity in creation.]

I do not need any directions; I do not have any directions. [This is an excellent example of playing around with words. I do not need any directions implies that I know everything and therefore do not need any advice or guidance; it also means that I need not be told where to go or in which direction to proceed simply because I am all-pervading and omnipresent entity. Similarly, I have no limiting body or form which has any sense of physical direction as north or south. Since I am an all-pervading, omnipresent and ubiquitous entity, the concept of having any direction where I am not present does not apply to me. The various directions of the compass have a limited dimension in space and area, a notion that is not applicable to me.]

I have no attributes or defining qualities or characters or features.

I do not have any clan, lineage, caste or creed; (and this is because) I do not have any physical body. Hence, I do not also have the organ of sight called eye, or the organ of speech (called the tongue and mouth) (84).

85. I am invisible (because only gross things can be seen, but I am the invisible ethereal 'spirit'). I have no colours or distinguishing marks that puts me into one or the other classes in the society. I am immutable, indivisible, one and wholesome. I am therefore most strange, mysterious, enigmatic and esoteric, and therefore beyond comprehension and grasp of the mind.

I cannot be heard or seen. I am an entity that is worthy of deep research, pondering and contemplation.

I am eternal and infinite, something that never dies because it is immortal and imperishable (85).

86. I am not the wind or the air element, and neither am I the sky or fire elements. [That is, I should not be judged by weighing me or measuring me against or comparing me with these elements simply because I have a non-gross and subtle body. Though these elements along with others are my manifestations, but it is not the other way round.]

I do not involve myself in promiscuous behaviour (i.e. I do not violate the rules of propriety, probity, righteousness and auspiciousness; I am faithful and steadfast in my beliefs and convictions).

I am unknown and cannot be known in entirety. [Refer verse no. 83.]

I have no birth (because I am eternal and infinite).

I am smaller than the minutest (because I am smaller than the tip of the hair follicle—see verse no. 14), and without any faults or shortcomings of any kind (86).

87. I am free from the effects of the three Gunas called Sata, Raja and Tama¹. I am beyond their reach. I am therefore free from the effects of Maya²; I do not possess the element called Maya (i.e. I am free from the delusory effects caused by these three Gunas as well as by ignorance of the truth).

I am myself experienced and well versed in everything (and therefore cannot be led astray by false charms and enticing allurements proffered by Maya). At the same time, I am an entity that can be experienced (as the ultimate Truth, pure consciousness and infinite bliss that is obtained upon self-realisation).

I am infinite and fathomless.

I am not the material object of the world that can be pursued by the sense organs of the body (87).

[Note—¹The *three Gunas*—The character of all the living beings in the entire creation is dependent upon three primary qualities called the Gunas. They are Sata, Raja and Tama.

(a) The *Sata Guna* is the best of the three qualities present in any creature. It is a positive quality and is marked by a propensity for following the path of nobility, auspiciousness, probity, propriety, virtuousness, holiness and righteousness. Creatures that have a predominance of Sata Guna are inclined to do selfless service, be benevolent, merciful, kind and gracious, have coolness of head and a rationale and balanced mind, be contented, have humility and piety etc. Such creatures are devoted to good values in life and have a desire to acquire knowledge that would help them reach higher spiritual goals in life.

This Sata Guna is marked by high standards of ethical and moral existence that makes the bearer of such qualities highly respected in society. Such people have a spiritual dimension to their personality. This quality is spiritually uplifting and gives a divine halo to those who possess it and practice it.

The Vasanas that have the Sata Guna or quality dominant in them are like a veil covering the lamp or like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort.

(b) The second quality is the *Raja Guna* and it makes a man more attracted to this material world and its charms, and less spiritually inclined. The Raja Guna is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It makes a creature inclined

towards the material things of the gross world and their enjoyments, towards creation of wealth, its enhancement and protection, and generally having a desire for growth, development and expansion etc. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, selfishness, expansionist tendencies, a desire to acquire, retain and develop such acquisitions even to the detriment of one's long term spiritual welfare and even if such actions cause pain to others. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Vasanas that have the Rajsic Guna or quality dominant in them can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality.

(c) The third quality is called the *Tama Guna* and is the meanest and the basest of the three Gunas. It is a demeaning quality in a creature that leads to his downfall and perpetual entanglement with things that are considered improper and unethical. It creates an inclination for committing all sorts of sins, misdeeds and demeanours. It leads the creature towards negativity and inspires him to acquire negative qualities such as various vices, evils, sins, perversions etc. It makes him inclined to be greedy, rapacious, haughty, arrogant, lustful, intoxicated, vile and wild to the extreme. Such a creature with a predominance of Tama Guna has utter disregard for propriety, noble virtues and ethics, for righteousness and morality.

In brief, it is the most degrading, denigrating and contemptible of the three characteristics in a person, and leads to such behaviour which is utterly immoral, denigrating and depraved, marked by grossness, crassness and recklessness. It therefore leads to his downfall, ignominy and ruin as well as ignorance, delusions, gloom, inertia, anger, frustration etc.

The Tamsic Guna or quality is like the embryonic membrane that covers the foetus in the womb. They cannot be removed easily and require great diligence, effort, persistence, dedication and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, and the worst type to possess.

The Vasanas that have the Tama Guna in dominance are regarded as the 'bad Vasanas' or better still the 'worst type of Vasana' that any individual can have.

The varying quantity and intensity of these three in any given individual would decide his specific character and how he is inclined to deal with the world and a given circumstance. The various permutations and combinations of these three qualities create a particular nature of an individual, giving him his individuality and his special personality which are unique to him; they determine his temperament, behaviour, thought process, et al. Two individuals having the same external form of the gross body might look very much alike but they vary immensely in their nature, habit, temperaments, inclinations, behaviour, thinking, outlook, the way they act and do their deeds, the way they tackle the problems of life, the level of their wisdom and intelligence, their personality and their general way of living.

This is also the reason why it is believed that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual and countable specific number of births that the creatures have to take, but only symbolise the huge possibilities of individual characteristics that are determined by the differing ratios of these three Gunas, and the immense number of individuals that exhibit these characteristics in this creation.

The three Gunas that determine the individual character of the creature, that determine his 'individuality' as compared to the general character of the group to which that individual belongs, are like the *isotopes* in chemistry. The isotope refers to the phenomenon wherein one of two or more atoms of the same chemical element that contain the same number of protons but different numbers of neutrons in their

nuclei and therefore have the same atomic number and chemical properties but different mass numbers and physical properties. For example, two brothers have the same genes and the same inheritance, but the presence of the three Gunas in different ratios between them changes their personality and thought processes. One may be a highly righteous man while the other might be just the opposite. Their parents are the same, their upbringing is the same, they have attended the same school and ate the same food, but there is a deep chasm when it comes to their character as individuals.

Since each individual is like an independent piece of mosaic that completes the entire picture in conjunction with other such pieces, this individual creature's nature and character helps to determine the overall shape of the creation. These Gunas keep the creation in a state of constant change, because numerous creatures die every moment and new ones are born. The Supreme Being has to be constantly on the alert because of this flux.

The various permutations and combinations of these three qualities create a particular 'nature' of an individual giving him his individuality and his special characters which are unique to him; they determine his temperament, behaviour, thought process et al. Two individuals having the same external form of the gross body—e.g. two men—might look very much alike but they vary immensely in their nature, habit, behaviour, thinking, outlook, action and deeds, wisdom and way of living. This is what is meant when it said that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual, countable specific number that there are actually and physically 84 Lakh types of bodies of living beings; it only symbolically refers to the huge possibilities that are possible with these three 'Gunas' and their different combinations that can imaginably produce a myriad variety of creation that can be created with these three basic qualities and their various sub classes of qualities.

The proportion of the three Gunas decides the nature, natural temperament, tendencies, habits and inclination of the creatures. For example, a person with a greater proportion of 'Satvic' (noble) characteristic will be considered nobler than a man with a greater proportion of 'Rajasic' or 'Tamsic' qualities. So we can say that sages, seers, prophets, scholars and generally enlightened persons have a high degree of 'Satvic' qualities in them; kings and householders who live a noble life are example of those with higher amount of 'Rajasic' quality in them; while sinners, killers, drunks, rowdy elements, cheats etc. are those people with higher 'Tamsic' quality in them. These Gunas have direct bearing on the personality of a man.

The first quality of Sattva is concerned with creation and enhancement of knowledge and wisdom. For this, one has to remain alert and vigilant like Brahma. The 'Jagrat state' also corresponds to that state when the creature is awake and interacts physically with the external world, imbibes whatever knowledge and information that comes to it, gains experience, and physically reacts to that knowledge and information. Further, such people are regarded as seniors in society, and they are best depicted in the form of the old patriarch Brahma the creator. They remain so engrossed in the world that they forget who they actually are, what their true identity is, and the very basic fact that what they are thinking to be real is actually not.

Next comes the 'Swapna state' in which a man dreams, and it is a metaphor for imagination and visualization of things based on the experience and knowledge gained during the Jagrat state. In this state a man lives and does things in a virtual manner in a virtual world of dreams. He sustains and nourishes his imaginations, fantasies and conceptions in a world of dreams which is far away from the harsh realities of life in the physical world. He suffers and enjoys in his dreams, then when he wakes up, he sometimes forgets what that imaginary world was like, but at other times there have been incidents wherein he has got new insight and new inspiration while he was dreaming. This is how Vishnu sustains and nourishes the creation created by Brahma. For all practical purposes, a dreaming man appears to be in a state

resembling the state of Samadhi, or a state when an aspirant is in deep meditation and engrossed in contemplation, because he remains aloof and oblivious to the external world, and remains absolutely motionless. But this state is temporary, because he would revert back or wake up to the Jagrat state. That is why Lord Vishnu, who represents this quality of Raja, is depicted as perpetually reclining contemplatively on the bed of the coiled legendary serpent floating on the celestial ocean of milk called Kshirsagar. Since without a vision and imagination one cannot grow, develop and rise, Vishnu is regarded as a maverick player of fantastic tricks in order to sustain and enhance his interests of looking after the creation. Out of these Trinity Gods, it is Vishnu who assumes so many forms and adopts so many tricks to do the needful.

The third quality of Tama is represented by Shiva, and that is why he shows certain traits which are so typical of this quality—viz. being short tempered, and destroying at the shortest notice; his external behaviour and attire also represents the excess of this lowest quality in him. The Sushupta state that he represents stands for being totally oblivious of the external world, and remaining in total bliss. This is exactly how Shiva has been depicted—he remains in a perpetual state of meditation, completely indifferent to the external world, unconcerned and detached from the attractions of the enchanting outside when he can find complete bliss inside his own bosom. The Tama quality marks the presence of ignorance in a greater ratio, and this is depicted by Shiva when he remains ignorant of the niceties of worldly behaviour, notwithstanding his exalted stature of being the greatest amongst the Gods.

²Maya—The word Maya briefly means something that is deluding and ensnaring, something that is not the reality but gives an impression that is just the opposite. *Maya* is a word which has two parts, Ma + Ya. The first half means a 'mother; a progenitor; something that creates', while the other half refers to the 'notion of doubt, of either this or that; the notion marked by uncertainty'. The word 'Ma' also means 'to measure, mark off, by any standard; to show, to exhibit, to display; to infer, to conclude; to be formed, built, made of'. Therefore, the composite word Maya refers to a situation which harbours or creates uncertainties, where it is uncertain whether what is said or understood or seen or witnessed or experienced is actually the truth or not. It is virtually the 'mother of all confusions, doubts and perplexities'. It therefore refers to something or some situation which creates or produces perplexities, doubts and confusions, something that is not real; that which is deluding, illusionary, deceptive, mirage-like and deceitful, and is caused by the ignorance about its truth and reality; something that has no substance or pith; displays no certainty and leads to wrong inference. The term Maya is used to define this entire complex phenomenon at once. Hence, Maya is a synonym used for all that is deceptive, faulty, false, deluding, ignorance-based, illusionary, imposturing, deceitful, invisible and super-natural in the sense that it defies all logic and understanding; all that which has no reality or substance in spite of appearing to be for real; all that is hollow and lacks gravity though appearing to be solid and dense. It creates hallucinations in a creature's mind leading him to believe that what he sees is the truth. It is the deluding and magical powers of the supreme transcendental Lord that hides the reality and creates an imaginary world of deceptions and misconceptions.

Maya has three basic constituent qualities. Hence it is called *Trigunmayi*, i.e. one which has the three Gunas or qualities. These three Gunas or qualities are—Sata, Raja and Tama as described above.

The basic idea here is that Maya is like a transparent coloured sheet which covers the supreme 'truth' in the creation. Since it is transparent, it assumes the attributes of the 'truth' that it covers, because for all practical purposes an ordinary man is unable to see that veil because of its transparency. But at the same time, being tinged by different Gunas, the view of the 'truth' as seen through the veil of Maya gets tainted or distorted consonantly. This is a simple way of understanding what is called 'illusion and Maya vis-à-vis the Truth and Reality'. Maya nevertheless hides the truthfulness of the Truth, and instead lends its own attributes and characteristics to

that Truth known as the 'Nirgun Brahm' by the Upanishads when the latter is observed through this veil, while at the same time assuming the glorious attributes of Brahm itself. So ignorant fools think that the Maya is the real thing, whereas they are actually seeing the 'veiled truth' as observed through this covering of Maya, because the actual 'truth' is hidden from view by this transparent sheet which has lend it its own colour and hue to it . As a result, that Nirgun appears to have some attributes, and it thereby becomes 'Sagun', or the one with attributes and characteristics, by the interference of Maya.]

88. I am non-dual, immutable and one. I am complete and wholesome. I have no outside or inside; I am neither outside nor inside. [That is, since I have no physical body, there is no cause for the existence of concepts of outside and inside, as this demarcation can happen only when there is a physical boundary enclosing a particular area of space, such as an empty pitcher or room. Refer verse no. 84.]

I have no ears (because I have no physical body).

I am not even huge and long (because anything that has no physical dimension cannot be measured).

I am un-manifest and without visible characteristics and attributes.

I am free from any disease or faults that ordinarily afflict all the creatures of this creation. [Refer verse no. 81.] (88).

89. I am a non-dual entity that is an embodiment of infinite beatitude and felicity, and of enlightenment, erudition and wisdom.

I am faultless and without any taints or blemishes.

I have no desires and yearnings. I am not engrossed in or entangled with anything; I have no attachments with and attractions towards anything pertaining to this material world.

I am not the doer of anything (because the deeds are done by the body and not by the Atma which happens to be my 'true self and identity').

I am a non-dual entity (that need not do anything because there is nothing besides this entity in this creation) (89).

90. I do not do anything that is done out of ignorance and lack of proper and correct knowledge.

I am not perceived by application of either the Mana (mind) or the Vaani (speech). [That is, I am beyond the reach and grasp of both the Mana as well as the Vaani. I cannot be understood by application of the mind and its various faculties, and I cannot be described and limited by words.]

I have no small fraction; I do not come under the category of things that are small or limited in scope, or that can be measured by a scale that is applicable to worldly things (for I am vast, fathomless and measureless; I am infinite and endless)¹.

I am free from all grief, sorrows, miseries and agonies of all kinds.

I have no alternatives and no parallels.

I do not have to subscribe to any specific way of life revolving around or recognised by some special type of fire². [In other words, the eclectic and divine entity that is being referred to in these verses does not come under the purview of any of these fires and their related things. It need not conform to any particular way of life revolving around a specific type of fire, or observe a set of sacrosanct rules or perform any of the rituals involving a specific type of fire to be regarded as holy, righteous, divine and auspicious. Even without subscribing to any particular type of divine fire, it is nevertheless holy, divine, pure, auspicious and righteous.] (90).

[Note--¹This is easy to understand—we do not measure the distances of far away stars and galaxies in meters or centimeters. They are measured in light years—the distance traveled by light in one year which is a standard measure for astronomical distances. Likewise, we cannot weigh the planets in grams or kilograms. In other words, the supreme transcendental entity that is the subject matter of these verses as well as the Upanishads in general cannot be measured by a measuring tape with a mundane worldly perspective, for it is super-human, outwardly and transcendental.

²There are five special types of *fires* which are related to five types of circumstances or events in the life of a man. They have been elaborately described in Chandogya Upanishad, canto 4, section 10 to 13. They are—(a) ‘Garhyapatya’ (the fire of the household hearth), (b) ‘Dakshinagni’ (the fire used as a witness to making charities or any other religious festivity), (c) ‘Ahawaniya’ (the fire to invoke the Gods during a ritualistic sacrifice), (d) ‘Sabhya’ (the fire of the Vedic period which was continuously lit) and (e) ‘Awasathya’ (the fire of the later Smriti period). Worship of the three important fires have been described in Chandogya Upanishad, canto 2, section 24, while canto 5, sections 4-10, 19-24 explain their great symbolic metaphysical significance.

The Garhyapatya fire—This is the householder’s fire. A householder has land and farm representing ‘earth’ in which he grows food. This food is grown with the help of the light of the Sun, and it is cooked in the fire of the fire place in the house. Hence, the Garhyapatya fire, or the householder’s fire, is intrinsically present and is implied in these 4 entities. It is an integral part of these four. The earth has the ‘fire element’ because without heat and warmth, no seed would germinate and no life can survive on this earth. The food has fire present inherently in it because it is the energy inherent in food which helps to energise the creature that eats it. The presence of heat in the sun does not need to be explained because it is very evident.

The Dakshinagni fire—is a witness to making of charities when some water is poured as libation to the Gods. It signifies that the Gods are offered water to drink. To give water to the thirsty is the greatest form of charity. Therefore, this fire is symbolically present in water, and when it is poured, it signifies that the heat produced by sins committed by the person has been doused. Charities and donations make a man famous and renowned, hence the allusion to directions of the earth. His glory shines like the bright moon and he is called a star among human beings. He is the most exalted amongst his peers and compatriots even as the moon is most prominent amongst the stars in the sky.

The Ahawaniya fire—is lit to invoke Gods, and the Gods live in the heaven; hence the reference to the sky, heavens and electric. Since Pran is the best form of the vital winds, the allusion means that the Gods are the most exalted forms that exist in creation. The ‘electric’ is a metaphor for immense strength, potent and power, which of course the fire possesses. This inherent quality of Electric that it possess most stupendous powers and strength is likened to the presence of Brahm in it even as the great power and strength present in a man is due to the Atma or Pran present in him. Even as a man is useless without the presence of Pran in him, the Electric would lose its importance if there was no Brahm present in it which gives it its punch and strength.

The following are also regarded as the five fires—(i) The Sun, (ii) The Lightning, (iii) The Terrestrial fire, (iv) The Master or Lord of the household, and (v) The Chief Priest.

According to Garbho-panishad, paragraph 5 of Krishna Yajur Veda tradition, the body of the living organism is called ‘Deha’ or body because it harbours the Fire element in it.]

91. I do not have a beginning, middle or end. I am like the sky (i.e. endless, fathomless, measureless and infinite). [Refer verse no. 98.]

I am the pure conscious Atma. I am that eternal, cosmic and all-pervading Consciousness which is a measureless treasure of beatitude and felicity. [Refer verse no. 92.] (91).

92. I am an embodiment of Anand (bliss and joyous abundance). I am like Amrit (the elixir of life that provides both eternity and bliss). [Refer verse no. 91.]

I am established in my Atma. I am an entity that is the inner-self of all living beings as their conscious Atma (soul).

I am 'Atma-Kaam', i.e. I am fully contented with my Atma and my self. I am like the supreme Atma (the cosmic Consciousness or the supreme Brahm) that is like the sky (i.e. I am as vast, infinite, eternal, measureless, fathomless and featureless as the sky) (92).

93. I am Ishaan (Lord Shiva, the emblem and insignia of divinity and holiness). I am worthy of worship and reverence. I am the best and the most exalted Purush (i.e. I am the Viraat Purush—the macrocosmic gross body of Brahm from whom the rest of creation evolved—personified). I am, therefore, the best, immaculate and the most exalted entity in creation.

I am merely a witness to whatever that is happening in this world (because I am not involved in this world, I am neutral, and I am not a doer of anything, so I simply watch everything like a dispassionate observer who is not at all concerned about the consequences of the happenings).

I am beyond everything and every considerations; I am transcendental and even beyond its definitions (93).

94. I am the only one of my own kind; I have no parallel.

I am a 'Kavi', i.e. I am an expert in words and expressions; I am well lettered and well read.

I am the Lord who presides over all deeds and judges them (because I am the Supreme Being personified).

I am the cause of all causes (i.e. I am the one who is behind everything that has a cause, and I am the seed that is at the root of all causes giving rise to myriad happenings in this world).

I am the implied secret meaning behind everything mysterious, enigmatic, esoteric and mystical (in the sphere of mysticism, theology, metaphysics and spiritualism). Indeed, I am secret and keep myself secret.

I am the hidden eye which empowers the visible organ of the eye to see things. [In other words, I am the subtle power and authority that actually 'sees' things, and use the external organ of the eye as merely an instrument to aid me in seeing them. This is because I wish to remain secret and behind the curtain. I am the subtle faculty of seeing that resides in the eyes and empowers them to carry out the function of 'seeing'.] (94).

95. I am eternally blissful and happy.

I am the one who infuses life and consciousness to all others. [In other words, I am the Atma which injects consciousness and life in the gross body of all the living beings. Without me, they would all be dead and lifeless.]

I am a treasure and fountain of enlightenment and knowledge, of wisdom and erudition. [Refer verse no. 93.]

I am not only illuminated but am an embodiment or a fount of the best form of illumination in existence (95).

96. In the dark, I am like a secret witness to everything. [In other words, no one should think that if he does anything in the dark or in secret, if he acts surreptitiously and deceitfully, he can hoodwink me who am the consciousness and the Atma. That is why it is said that the Lord watches every deed of the man, whether done overtly or covertly.]

I am the basic essence of the word Turya, i.e. I transcend all planes of existence and am beyond all definitions. [The 'Turya' is the fourth state of transcendental existence when the ascetic goes beyond all awareness of the existence of the world.]

I am beyond the reach of darkness. [That is, darkness in any form can have no effect on me, it cannot touch me, and it cannot cast its gloomy shadow upon me. 'Darkness' is connected to anything that has a negative connotation, such as ignorance, delusions, falsehoods, illusions, deceit, conceit, etc. It is negativity in all its dimensions. Thus, this stanza means that the divine entity being referred to here is not at all affected by any of the things that come within the definition of Darkness. The untold reason behind it is that I am eternally 'self-illuminated', and where there is light there can be no darkness of any kind, physical or otherwise. Refer last stanza of verse no. 95.]

I am a glorious living embodiment of Divinity and Godliness. I am farsighted and can be 'seen', or witnessed and experienced by those who have farsightedness. [That is, the pure conscious Atma is not perceivable by all and sundry. Every Tom, Dick and Harry cannot know it or see it. It requires a lot of deep insight and erudition, a lot of patience and self-control, a lot of diligence and sincerity to even have a glimpse of one corner of this divine and esoteric Godhead. After all, the words 'supreme and transcendental and beyond comprehension' etc. cannot refer to the mundane, the known and the routine.]

I am that eternal and steady Truth that is at the foundation of sight, that gives meaning and substance to what is being seen, that proves that what is seen is actually the reality and the truth, that it cannot be false because it is actually 'seen' first hand. [In other words, one can see things that have an existence, and not things that have no existence. The latter would come under the category of 'imagination of the deluded and hallucinating mind'. The mirage seen in the hot desert comes under this latter category. Even the world of material sense objects that are perishable come under this class. But there is another dimension to this world which is not so easily seen but is nevertheless the 'real and truthful thing', and it is this entity that is being referred here. It is the ultimate 'Truth' called the Consciousness without which nothing would be seen in the first place, whether real or unreal. This concealed entity is the truth in the form of consciousness that forms the foundation upon which the activity called 'seeing' and the faculty of sight are rested. The proof of this lies in the fact that a man from whose body consciousness or Pran has left, i.e. a dead man, never sees anything in spite of the fact that the eye is still there in the body as much as is the brain in the skull of the same body. These two entities that had been seeing everything clearly a while ago become unable to do so now because the consciousness or Atma, also called by its synonym the Pran, has left the body. So we deduce that the function of seeing was not done by either the eye or the brain but by something else. And this 'something else' is the 'consciousness' (Atma) that injects and activates the factor of 'life' (Pran) into these and other organs of the body.] (96).

97. I am eternal and omnipresent; I am present in every moment of life. I am innocent, guiltless, taintless and faultless.

I do not do anything; I am a non-doer of deeds (because all the deeds are done by the body and not by the pure consciousness).

I am without any blemishes and dark taint of any kind; I am flawless.

I am pure and immaculate. I have no alternatives and no parallels. [Refer verse no. 98.]

I have no family and lineage from which I could draw my name, fame and renown, my mystical powers, authority and divinity. [The word 'Nirakhyaat' means name, fame, renown, a description of some royal family, family lineage, or legion of saints. In other words, I have no parent from whom I could have my birth and from whom I could derive or inherit my fame and powers. I do not depend upon anyone else's legacy. What I am is my own being, have my own unique character and virtues, and I do not depend upon someone else to acquire some kind of greatness and divinity, some kind of mystical powers and authority. My divinity, holiness and godliness etc. are a part of my inborn and inherent attributes, virtues and abilities.]

I am steady and unwavering; I do not fluctuate; I do not undergo any change (like the waxing and waning phases of the moon) (97).

98. I am without any faults and taints of any kind (refer verse no. 97). I am eternally and infinitely pure, uncorrupt and immaculate. I have no definable and delineable attributes and qualifications. I am detached with and non-involved in everything.

I have no gross organs of the body (because I am formless and an ethereal spirit). [Refer verse no. 91.]

I am the ultimate controller and regulator of everything. I am neutral and dispassionate.

I have no Kalaas (i.e. I have no fractions or characters that can be definitely be delineated, defined and understood; I am one single non-dual entity that has no fractions and separate aspects) (98).

99. I am the supreme Purush (i.e. I am a personification of the Viraat Purush, the macrocosmic revelation of the supreme Brahm, and from whom all the other Gods as well as the rest of creation came into being, and who has revealed himself in the image of the man). Hence, I am the most ancient and traditional supreme transcendental Parmatma (i.e. I am the Supreme Being himself who is the most ancient in the sense that he existed even before the creation came into being).

I am a fathomless and infinite ocean (treasure) of knowledge, wisdom, erudition and enlightenment (Paraavar). I am wise and enlightened enough to crush all delusions and deceit that might be created out of falsehoods and ignorance (99).

100. I am the best Amrit (the eternal elixir of life and wisdom; the ambrosia of eternity and bliss that is drunk by the Gods) and the most ancient and complete supreme Lord. [That is, I represent that elixir which gives eternal life and beatitude because I am the Supreme Being, the undisputable Lord of creation himself personified.]

I am a personification of wholesome and complete bliss and happiness (because I am Amrit personified). I am an embodiment of that knowledge and enlightenment which is one and non-dual, which has no two meanings or aspects (that can cause any kind of confusions or vexations as to which one of them is the 'truth').

I am the evident truth in the form of the consciousness that resides inside the inner self of all living beings. I have only one subtle and sublime form that never changes, and that has only one divine contour (as the 'consciousness'). All of them are nothing but me (100).

101. I am an expert who has specialized knowledge, erudition and wisdom (Pragyaataa).

I am very calm, tranquil and peaceful.

I am the splendorous and self-illuminated entity known as the Parmeshwar (the supreme Ishwar, the Lord God) who is like the sky (i.e. is fathomless, infinite, endless, imperishable, attributeless, without any qualifications, all-pervading, all-encompassing, all-incorporating etc.). [In other words, I glow with a divine light emanating from my being which has given the rest of the world its light. Of course it is the 'consciousness' which lights up the world and makes it alive for the creature to enjoy it. Who would have liked to live in a dark and gloomy world with fearful ghosts and hobgoblins for company?]

Beyond the definitions and debates of what constitutes Dvaitya (dual concept of creation) and what is Advaitya (non-duality), I am neutral and the only entity that is worthy of research, contemplation, meditation and deep ponderings. [Obviously, when one comes in contact with such a mysterious entity that cannot be defined and which does not come under any known classifications or categories, an intelligent and inquisitive mind with an adventurous spirit would not leave it alone but delve deeper and deeper until one is able to unravel its secrets. In the realm of metaphysics and spiritualism, such researchers with adventurous spirits were ancient sages and seers who did not flow with the tide but dared to go against its overwhelming push to unravel the greatest secrets of creation. This discovery they revealed to others in the form of their teachings enshrined in the Upanishads.] (101).

102. I am intelligent and intelligence personified. I am the Lord who takes care of, sustains and protects all the mortal creatures called Bhuts—i.e. I am 'Bhutpaal'.

I am the 'Bhagvan'¹ who is not only enlightened and splendorous but also an embodiment of the virtues metaphorically represented by 'light' with its brilliance, radiance, dazzle and splendour. [That is, as a divine entity that has all the positive, glorious and divine virtues which are collectively symbolised or represented by the single umbrella-like all-inclusive word 'light', as opposed to 'darkness' which would signify negativity, dearth and all lowly qualities, I glow with its divine halo which radiate out from me to light up the surrounding world and remove the darkness that is so foreboding and fearsome. Had it not been for me, the world would have been plunged into the nether world of destruction and decay. That is why I am called 'Bhutpaal', or the one who takes care of all the living beings by the virtue of my divine powers of knowledge, wisdom and erudition alongside astoundingly virtuous qualities such as compassion, benevolence, magnanimity, kindness, mercy, equanimity and graciousness.]

I am called Mahadev—i.e. the great Lord precisely for the aforesaid reasons.

I am great and majestic (because I not only possess astounding virtues but also put it to good use by benevolently taking care of this creation and its creatures).

I am the one who is also known as 'Maha-Gyea', i.e. one who is most knowledgeable, most omniscient, most wise, most erudite and most enlightened.

I am indeed the Maheshwar, i.e. the great Ishwar, the great Lord. [Incidentally, Lord Shiva is also known by this name of Maheshwar. The reason is that amongst the

pantheon of Gods he is said to be most enlightened, a completely detached and self-realised Godhead, and a renunciate ascetic who remains perpetually in the state of meditation and contemplation in the remote snow covered mountains, away from the entrapments of the material world and its accompanying spiritual upheavals, perplexities and dilemmas.] (102).

[Note—¹The word 'Bhagwan' refers to an enlightened being who possesses certain divine qualities not possessed by ordinary human beings, and which are even difficult for the Gods to have. The word has two parts—'Bhag' and 'Wan'. The 2nd part 'wan' means 'one who possesses', while the 1st part 'Bhag' means 'one who is like the receptacle or womb' that harbours the following six qualities or virtues—(1) to have 'Aishwarya', which means to possess all the virtues that come under the category of having majesty, powers, wealth, fortune, opulence, flourish, supremacy, sway, dominance, glory, grandeur, omnipotence and other divine faculties in existence (सम्पूर्ण ऐश्वर्य); (2) to have all Dharma, which means to possess all virtues that come under the ambit of righteousness, probity, propriety, virtuousness, and nobility of thought and conduct (सम्पूर्ण धर्म); (3) to possess all the glories and majesties that come under the definition of the word Yash, i.e. to have great fame, glory, majesty and renown (सम्पूर्ण यश); (4) to have Sree, i.e. to possess all wealth, prosperity, pomp and circumstance, to have prestige, dignity, respect, honour, splendour and glory, as well as all other factors associated with those qualities mentioned in serial no. 1-3 above (सम्पूर्ण श्री); (5) to have complete and comprehensive Gyan, i.e. to have true, deep, incisive, complete and all-incorporating knowledge, erudition, wisdom, skills, expertise and enlightenment (सम्पूर्ण ज्ञान); and (6) at the same time to have immaculate and the highest degree of Vairagya, i.e. to have complete renunciation, detachment, indifference and dispassion towards everything in this world (सम्पूर्ण वैराग्य). Hence, anyone who is endowed with the above six divine, eclectic and exemplary qualities, is called a Bhagwan.]

103. I am free from all encumbrances. I am 'Vibho'¹.

I am worthy to be invited, welcomed and accepted (i.e. I am an honourable, dignified and divine entity that all wise men should invoke, welcome, accept and show respect to; I am worthy of spiritual pursuit).

I am all-pervading and all-encompassing, being omnipresent, all-inclusive and ubiquitous.

I am the best form of the cosmic element called 'Vaishwanar'².

I am Lord Vasudeo³ (one of the names of Vishnu, the sustainer and protector of creation, signifying his lordship over all the essential elements in Nature, called the Vasus of which there are eight in number, created to help sustain the forthcoming creation).

I am the cosmic eye of the whole world (Vishwa Chakshu) by which it sees everything. [This refers to the consciousness that uniformly resides in the bosom of all living creatures. It is this consciousness that injects life and awareness in their gross body. Without consciousness, the body would not be able to 'see' any thing. The word 'see' is a symbolic way of saying that the body lives and becomes aware of the existence of this world and its myriad creatures due to the presence of this single factor called consciousness or Atma inside it, because only a living body 'sees' and not a dead body. The word 'see' also means that the conscious factor present inside the body always warns the creatures and endeavours to show the right path to the

creature and prevents him from going wayward. This is called the 'inner voice of the conscious' which tells one not to follow the unrighteous and inauspicious path. Refer last stanza of verse no. 94.] (103).

[Note--¹The word *Vibho* means 'one who is omniscient, omnipresent, all-pervading, magnanimous, eternal, almighty, omnipotent, majestic and powerful Lord of all'.

It is an epithet usually used to describe the virtues of Lord Vishnu who is regarded as being synonymous with both Brahm, the attributeless and infinite Supreme Being who had manifested as Narayan, as well as the Viraat Purush, the macrocosmic gross body of this creation. He is also called the 'Chief Purush', the virtual commander-in-chief of this creation or the President of the institution known as creation. Whether a male or a female occupies these high seats of power, the terms commander-in-chief and president are applicable to them both.

(ii) 'Vibho' refers to Brahm while the word 'Purush' refers to Lord Vishnu in the form of Viraat Purush. It is due to the joint efforts of Brahm and the Viraat Purush that this creation has come into being.

(iii) The meaning of the word *Vibho* depends upon the context in which it is used. For example, in Tejobindu Upanishad, Canto 5, verse no. 68, and Canto 7, verse no. 36 of Krishna Yajur Veda tradition, it is the Atma that is called the *Vibho* for it possesses and exhibits all the glorious virtues of Brahm. Earlier, verse no. 67 of this Canto calls the Atma as a manifestation of Vasudeo, one of the names of Vishnu. When these two verses are read together, the inference becomes obvious—that is, the word is applicable to any entity that exhibits the divine and glorious virtues that characterize the supreme transcendental Brahm, the Supreme Being and Lord of creation. Here, both the Atma as well as Vishnu are honoured by the title of *Vibhu*.

²The *Vaishwanar*—the word *Vaishwanar* has many connotations as follows —

(i) It is the fire used in sacrificial rituals. (ii) The microcosmic pure consciousness that resides inside the body of the creature, providing it with life, vitality and energy which helps it to digest food. (iii) Vedanta says that it is the pure consciousness that is a fraction of the Supreme Consciousness, and it resides in the body of the creature even as the Supreme Consciousness resides in the macrocosmic vast body of Nature or creation. It is representative of the supreme, transcendental entity that is the Lord and the primary cause and the governing authority of the whole creation. (iv) Since the creatures have myriad forms, it has as many forms as the creatures themselves, incorporating all of them in it. Hence, it is also called 'Viraat Purush' (which means the vast, colossus, all incorporating, all-pervading, almighty form of the microcosmic Atma of the creature as well as the macrocosmic Atma of the creation; it is measureless, infinite and eternal). This is the subtle form of 'Vaishwanar'. (v) The gross manifestations of this 'Vaishwanar' is the 'Annamaya Kosh' or the food sheath which is one of the five sheaths enclosing the Atma of the creature. This is because, as the *Vaishwanar Agni* (fire), it helps in digestion of food. (vi) Its state of existence is defined as the 'waking state of consciousness'. (vii) The word also means — relating to or belonging to all men, omnipresent, known and worshipped everywhere, universal, general, common, complete, immutable, full in number, a collective noun for all the Gods, one who is all commanding and almighty.

(b) The *Vaishwanar Fire (Agni)*—The legendary 'fire element' has a very prominent place in the scriptures. The Fire God or *Agni* appears in the Vedas as follows—Rig Veda—1/1; 1/12; 4/5; 5/1; 6/7-9; 7/1, 3-6; 12-13; 8/1, 23, 39; 10/1-7; 12/1-122 etc.; in Sam Veda—1-51; 53-55 etc.; in Yajur Veda—1/5; 2/4; 7/24; 18/72 etc.; and in Atharva Veda—6/119; 8/3; 12/3.

Since it was the first born amongst the various Gods, it was called 'Agni' meaning the one who comes first, that which precedes others. It is the inherent 'fire' element present in all the living creatures that distinguish them from non-living creatures. It is all-pervading and omnipresent, and infuses life to all the creatures

(Kaushitaki Brahmin, 4/3; Brihad Aranyak Upanishad, Canto 5, Brahmin 9, verse no.1). This fire helps in digestion of food (Shatpath Brahmin, 148/10/1).

He is the foremost amongst the Gods worshipped on earth (Shatpath Brahmin, 6/1/1/11). He is compared to the Sun in the heavens. He has 7 tongues representing the 7 colours of the rays of the Sun or the colours of light (Rig Veda, 1/146/1; 3/6/2). Since he provides nourishment to the Gods by accepting the offerings made to the sacrificial fire at the time of fire sacrifices, he is deemed to be their sustainer and father (Rig Veda, 1/69/1). Other names of the Fire God called Agni or Agne are the following—Vishwavedus, Kavi, Kavikratu, Jaatvedus, Vaishwaanar, Tanunpat, Matrishwa and Naraashansa. It is believed that he was born from the mouth of the Virrat Purush (Rig Veda 10/90/13).

According to some texts, the fire element has *three* legendary forms—viz. the ‘Agni’, which is the terrestrial fire on earth represented by the word Bhu, the ‘Jatvedas’, which is the fire of the sky represented by the word Bhuvaha, and ‘Vaishwanar’, which is the fire of the heavens represented by the word Swaha (Brihaddevatakaar, 1/67). The term appears in the Rig Veda approx. sixty times and is more often than not synonymous with both life as well as the fire element.

³Vasudeo—These *Vasus* are the various patron Gods who preside over the essentials of life; they are eight in number—Vishnu is the sustainer, Shiva who is the annihilator, Kuber who is the treasurer of the wealth of the Gods, the Sun, Water, Fire, Wealth represented by gems and gold, and ‘Ray’ representing glory and fame. The element ‘Fire’ is the most potent, prominent and essential force in creation, because without fire the world would freeze to death. Hence, the Fire-God is said to be the chief amongst the Vasus. The ‘fire’ element is the active force in creation and is primarily responsible for kindling the cosmic cauldron that set in motion the process, and once having set it in motion it then sustained it and would finally annihilate it by burning it to cinders. On the other hand, Lord Vishnu is the passive force of creation represented by his other form of Viraat Purush which is the primary male aspect of creation. Lord Vishnu, who is the sustainer of the creation, is the Lord of Laxmi who is the Goddess of wealth, and is the supreme creator because Brahma, the old patriarch of creation who created the visible world and its creatures, was himself born atop the divine lotus that emerged from the navel of Lord Vishnu. Lord Vishnu utilizes the services of Laxmi who is the personification of the active forces of creation to create, sustain and annihilate the world. The Vasus are symbolic Gods who represent those essentials aspects of creation without which life would be difficult to conceive and sustain and finally conclude.

The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluser or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following—Dhruv, Dhar, Som (the sap of an elixir-providing plant called Som which is used during religious ceremonies as sanctified liquid offered to the Gods), Aapha (water), Anil (wind), Anal (fire), Pratush and Prabhas.

These eight Vasus are the semi-Gods who symbolise the various types of assets needed to sustain this world. They therefore represent such assets as jewels, precious stones and gems, gold and other forms of wealth and property. Vasus also refers to the fire and water elements as well as their grosser forms as the terrestrial fire and

water bodies such as ponds and lakes; to the virtue of radiance, splendour and glory; to the ray of light; to Kuber (the treasurer of Gods), Shiva, Sun, Vishnu, and a simple and pious gentleman.]

104. I measure more than the dimension of the cosmos or universe; I mean more than what is conventionally and traditionally meant and understood by the word cosmos or the universe. My definition and existence is much far ahead and beyond of what is known as the cosmos or universe. I do not come within their conventional and traditional meaning. I cannot be implied to mean anything coming within the ambit of the known and the unknown cosmos.

I am more huge, more vast and more colossus than the entire Vishwa (cosmos, universe, world at a macrocosmic level). [And that is why I am called the 'Viraat Purush'.] As such, I am the macrocosmic Lord Vishnu who is the creator and controller of the entire cosmos (creation). [This refers to the Viraat Purush who is the macrocosmic gross body of the invisible supreme Brahm from whom even the creator of the visible creation, i.e. Brahma the patriarch, was created. This Viraat Purush when he decided to initiate creation assumed the role of Vishnu, and then from his navel emerged the old patriarch of visible creation, i.e. Brahma. The two, Viraat and Vishnu, are interchangeably used. The word 'Viraat' literally means vast and colossus, something that has an infinite dimension and implication. Refer verse no. 99.]

I am pure, uncorrupt and immaculate (Shuddha).

I am the auspicious and the life-infusing cosmic sperm that has injected life in the otherwise life and inane cosmos. This cosmic sperm represents the grand and glorious virtues of life such as vitality, vigour, stamina and strength which mark this vibrant and colourful creation. This I do in my role of Vishnu, the creator and nourisher of the creation.

I am an embodiment of the virtues of peace, tranquility, serenity and calmness.

I am eternal, uniform and infinite. I am Shiva (i.e. I am auspicious, righteous, truthful, beautiful, realised, enlightened and renunciate) (104).

105. I am the Atma that resides in the inner self of all the mortal living beings called Bhuts. I am eternal and omnipresent, being ubiquitous and ever present everywhere at all times. I am traditional, primeval, ancient and primary.

I remain firmly and majestically established, and shine in my own divine glories (105).

106. I reside in the bosom (the inner self) of all the living beings as a fount of light representing their Atma (pure consciousness), and as such I am their Lord. [This is the microcosmic view of the Atma because it pertains to an individual creature.]

All the mortal creatures that have life have their existence in me. [This is the macrocosmic view of the Atma. This statement conforms to the concept of Vedanta that everything in existence is a tiny fraction of the vast cosmos which consists of the body of the supreme Brahm in his manifestation of Viraat Purush much like the individual hair follicles on the body of a man in relation with his entire body.] This is because I am ubiquitous, all-pervading and omnipresent in all spheres of time and eras (106).

107. I am a witness to all; I am a witness for all (refer verse no. 103). I am the Atma which universally lives in all the living beings (as their soul and pure consciousness).

I (pure consciousness) am the mystical entity that is the secret behind all life forms in this mortal world (because without me nothing would live and feel anything).

I bring out and highlight the individuality and the glorious potentials of all the organs of the body (because it is due to my presence in the body that these individual organs perform their designated tasks which are so magnificent and astonishing). But at the same time, I am absolutely separate and distinct from them; I do not have any organ of my own (because I am the ethereal and eternally free Spirit and disembodied cosmic Consciousness which do not have any grossness in them and neither do they need any gross organ to showcase their stupendity and astounding divine glories). [Refer verse no. 98.] (107).

108. I transcend the three states of existence of a creature. [These three states are the waking state, the dreaming state and the deep sleeping state of existence of consciousness, i.e. I am in the fourth state called the Turiya state which is a state of complete bliss and ecstasy.]

I am gracious, kind, benevolent, munificent and magnanimous towards all.

I am the supreme Parmatma, the Supreme Being and the cosmic Soul of the creation who is eternally and truthfully blissful, joyous and happy (refer verse no. 99, 102). I am dear to all and all are dear to me (108).

109. I am nothing but Anand (bliss, happiness and joy) in its true, undiluted and eternal form (refer verse no. 92, 94, 100).

I am self-illuminated and a treasury as well as a fount of pure consciousness (refer verse no. 99).

I am an embodiment of truth; I am indeed truthful (refer verse no. 96). I possess mystical powers, and therefore I am called a 'Siddha'.

I am the Atma or soul of all (living beings). [Refer verse no. 106.] (109).

110. I am like a base and foundation for all living beings (because no one can live without the Atma or consciousness and Pran or the vital spark of life in him).

I am an embodiment of that truth that is established in all of them (as their Atma).

I can cut through all fetters (of ignorance and delusions that have tied the creature to this world of falsehood and illusions) and unshackle all the creatures to provide them with liberation and deliverance (because I am enlightened and wise, I am knowledge and erudition personified, and therefore eminently qualified to do so).

I can devour all that have come into existence (because I am the end of creation and have revealed myself as Lord Shiva, the God of conclusion).

I see and observe all (as I am the supreme Lord of creation and nothing is unknown to me or hidden from me because I am omniscient and all-knowing, I am omnipresent and all-pervading, and therefore nothing happens without my presence and knowledge). [Refer verse no. 84.]

I am the one who experiences everything on behalf of all the creatures (as their conscious Atma or self).

A person who is aware of these facts about me and my truthful nature and form (i.e. about the pure consciousness Atma or soul) is the one who truly a wise Purush (a wise and enlightened man). This is the teaching of this Upanishad (110).

-----Shanti Paath-----

-----*****-----

Chapter 17

Yogtattva Upanishad/Yogtattvo-panishad

The name of this Upanishad itself indicates what it is about. The word has two components—Yog and Tattva. ‘Yog’ means meditation as a means of bringing about a union between the soul of the individual and the Soul of the creation, to establish harmony between two entities that have been artificially separated though they are inherently the same. Tattva means the essence and principle of anything. Hence, the combined meaning is clear—the text strives to establish a unity between two inherently divine entities which are essentially and by principal one and the same but been inadvertently and erroneously separated from one another. They yearn to be reunited into their original non-dual form as the Principal entity that is the Absolute Truth of creation.

This is a revealed Upanishad as it was taught or preached by Lord Vishnu, the sustainer and protector of creation, when Brahma, the creator of the visible creation, approached the former to advise a method by which the creatures of this vast colourful creation that was being unfolded by him could free themselves from the clutches of ignorance about the reality of existence and find the correct path that can ensure their liberation and deliverance. So Vishnu taught Brahma about the essential features of Yoga, its benefits and its different aspects. Regular practice of Yoga enables the practitioner to be able to break free from the unending cycle of miseries and transmigration, and instead find liberation and deliverance from it.

It describes the concept of Kaivalya (the ‘only one’) and stresses that Yoga is the best path leading to it. In the realm of Yoga, it deals with five types, i.e. Mantra Yoga, Laya Yoga, Hath Yoga, Raaj Yoga and Purna Mano Yoga, and narrates their various aspects. It goes on to outline the daily norms and codes of conduct to be followed by an ascetic, and the subtle signs which indicate that he has achieved success in his spiritual pursuit. Such a person acquires mystical powers that are divine and godly. He is able to witness the light of consciousness lighted in his inner self and find permanent liberation and deliverance from the cycle of birth and death.

It also outlines the symbolic location of the five primary elements, viz. earth, water, fire, air and sky, in the body and their personification in the form of the various Gods or deities that are worshipped and revered in Hinduism.

This Upanishad is very similar to Yogshikha Upanishad which is Chapter 21 of this volume. Whereas the teacher in the present case, the Yogtattva is Lord Vishnu, the teacher in the case of Yogshikha is Lord Shiva. Other Upanishads of the Krishna Yajur Veda greatly related to this Upanishad are the Tejobindu, Dhyani Bindu, Brahm Vidya and Varaha to name a few of them.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. I shall describe the essential principles and tenets of Yoga with the all round welfare of ascetic and spiritual aspirants in mind so that they can have a guideline to show them the correct path. It is so potent that hearing it, studying it and implementing it (its principles) in one's own life can bless one with the ability to destroy, overcome or neutralise the bad consequences of one's sins and misdeeds (1).

2. Lord Vishnu is known as the primary and most ancient 'Maha-Yogi' (the great patriarch of ascetics who followed the tenets of Yoga diligently himself and is deemed to be the prime and most ancient teacher and exponent of this philosophy).

He is also known as the 'Maha-Bhut' because he is the primary and most ancient cause of all the Bhuts, i.e. all the primary elements (earth, water, fire, air and sky) that exist in this creation and from which the rest of the creation has come into being (or moulded from); he is the greatest of all the Bhuts; he is the progenitor of the Bhuts.

He is also known as 'Maha-Tapa', i.e. the one who does severe penances for the welfare of others and to keep himself pure by observing the strictest and harshest laws of austerity, probity, propriety nobility, auspiciousness and righteousness which entail a lot of sufferance in their wake.

In the path of essential Truth and Reality, in the path that is true and holy, the path that is free from all deceit and delusions, he is like a lighted lamp. [In other words, he is like a light that shows the correct spiritual path to all the followers just as a lamp shows the path to others by its light by removing the darkness.] (2).

[Note—Refer verse no. 120 in this context.]

3. The old patriarch and the creator of this visible creation, Lord Brahma, went to Lord Vishnu, the lord of the entire creation (visible and non-visible), bowed his head reverentially before him and said, 'Oh Lord of the entire world! Please preach to me all aspects of Yoga, complete with its eight branches called 'Ashtaanga Yoga'' (3).

4. Hearing this, Lord Hrishikesh (Vishnu) replied to him, 'Alright. I shall narrate that 'Tattva' (principle, essential, fundamental and basic knowledge) that you seek to know. Listen attentively. All the creatures are bound or trapped in the web or net weaved by Maya¹ (delusions) out of the two opposing threads called Sukha or comforts and happiness, and Dukha or a motley collection of assorted sorrows and miseries that together cast a magical spell of delusions upon the creature and keep him trapped (4).

[Note—¹The concept of Maya: Refer also to Brahm Vidya Upanishad, verse no. 87 and its note (Chapter 16), and Tejobindu Upanishad, Canto 5, verse no. 33 and its note (Chapter 14).]

5. This path or way is the only one which can take the creature across the hurdle of death and lead it to liberation and deliverance from the web of Sukha and Dukha created by Maya that had shackled the creature in its iron-like grip, providing him freedom from the endless cycle of birth and death along with its attendant agonies such as old age and diseases (5).

6. The supreme stature that a creature can attain, the best destiny for the creature that is one of its own kind, is not obtainable easily by following any other path or method other than the one described here. Even wise and erudite ones who try to follow so

many different paths shown by so many different scriptures become perplexed and confused. Their intellect gets bogged down in this quagmire from which they find hard to extricate themselves (6).

7. That supreme stature and spiritual achievement is so enigmatic and esoteric that even the Gods fail to fully grasp it and describe it, or even mention anything about it in a cogent manner. Say then, how is it possible for the scriptures to do so? How is it possible for them (the scriptures) to definitely and with certainty describe the subtle and sublime Atma which is immanent, self-illuminated, quintessential and enlightened cosmic Consciousness when even the divine Gods—who are much senior to ordinary mortals, who have attained their Godly stature because they had risen above the mundane and acquired certain divine qualities not available to others, and therefore have become more enlightened about this Atma that is quintessentially present everywhere—cannot do so. These Gods have become Godly in the first place because they had realised the presence and glory of this eclectic divine entity known as the Atma, but still they are unable to tell anything about it. (7).

8. This Atma is without any Kalaas (portions and aspects, because it is one single immutable non-dual whole). It is without any worldly faults, filths, taints and blemishes. It is calm, tranquil and serene. It is beyond everything and all transcends all definitions. It is free from all physical and moral ailments that afflict the creatures (because such things happen to someone who has a physical body and who is involved in the affairs of the world, but the Atma is an ethereal spirit, unattached and uninvolved).

But the irony is that such an immaculate and pristine pure entity, i.e. the Atma, gets soaked and drenched in the after effects of deeds that are categorised as either good (auspicious, righteous, noble, proper and correct) or bad (the opposite of what is good) when it assumes the role of a Jiva (living being)¹ (8).

[Note--¹This is because the Atma assumes an identity as a 'Jiva', i.e. a living being that has a gross body, and is therefore subject to all the problems associated with the latter and conditioned by all the characteristic qualities of it. The Atma now loses its independence and its primary ethereal and spirit form; it becomes limited to the body, conditioned by it and influenced by it. This Atma-with-a-body, the Jiva-Atma, receives information from the outside world through the medium of the gross body and its organs, and acts according to it, thereby becoming conditioned, influenced and biased. It would lose its pristine and independent nature of 'self thought' and 'self action'. Since it has to live in this world which is deed-oriented, it cannot remain idle and must do this or that. Each deed done would leave a trail of consequences, either good or bad. This would compel the Atma to suffer the effects of the deeds and get affected just like a passenger of a chariot is tossed about and hurt when the vehicle in which he is traveling is itself rocking and swinging from side to side; the passenger cannot remain immune to the way the chariot moves. See verse nos. 12-13 below.

The virtuous attributes and eclectic characteristics of the pure conscious Atma have been narrated in a number of Upanishads—(a) Krishna Yajur Veda's Brahm Vidya Upanishad, verse nos. 81-110; Tejo Bindu Upanishad, Canto 3, verse nos. 1-51, 60-64, Canto 4, verse nos. 2-30, 69-79, Canto 5, verse nos. 1-75, 90-96, Canto 6, verse nos. 1-72. (b) Shukla Yajur Veda's Adhyatma Upanishad; Subalo-panishad, Canto 3, 5, 7 (verse no. 1), and 9 (verse no. 16); Paingalo-panishad, canto 4, verse no.18. (c) Rig Veda's Atma-poojo-panishad. (d) Atharva Veda's Atmo-panishad.]

9. Now the natural question arises as to why and how that Atma—which is said to be transcendental, beyond all concepts and notions, eternal and infinite, omnipresent and

all-pervading, an embodiment of Gyan (enlightenment, wisdom, erudition and sagacity), and without any tinge of Maya (delusions and misconceptions caused by ignorance and deceptions)—becomes a Jiva (a living being or creature having a gross body and subject to all the taints and shortcomings associated with this gross body and the world in which it lives)? (9).

10. [This verse briefly summarises the first moments of creation, and is akin to all the Upanishads that deal with the genesis of creation.]

In the beginning, that principle primary and primordial ‘essence’ (Tattva) was absolutely placid and calm¹.

Then there were minute and almost imperceptible ripples in it just like the ones in water, indicating some subtle and secret activity². This caused the element of Ahankar³ (the sense of pride and ego) to emerge in it.

This activity resulted in the formation of the primary cosmic egg which had certain Gunas⁴ (inherent qualities, attributes, virtues and characteristics) that would determine the specific nature, temperament and personality traits of the creature that would finally emerge from this egg when it hatched. [These Gunas were like the chemical ingredients in any fluid that determine its fundamental qualities and characteristics. They would determine the underlying subtle and basic nature, the basic temperament and character traits of the offspring, i.e. the creature, which would emerge when the egg hatched finally upon maturity.]

Besides the above, the yolk of the egg had as its basic constituent ingredients the five primary elements called ‘Panch Maha Bhuts’ (which are sky, air, fire, water and earth). These elements determined the basic texture of this yolk that would determine the form which the offspring (creature) would get when the egg finally hatched⁵ (10).

[Note--¹There is a play on the word *Tattva* here. We speak of a flower’s *Tattva*, i.e. the volatile liquid extracted from the flowers and used as various scents and perfumes. It is called the ‘essence’ of the flower. Even the nectar is called ‘essence’ or *Tattva* of the flower. The oil extracted from seeds and herbs are also called their *Tattva* or essential extracts. The common factor in all these is the ‘liquid or fluid’ nature of the *Tattva*. It is this reason why life is said to have emerged in water, a fluid and elixir of life and vitality, the ‘essence’ or *Tattva* that sustains and protects life. The primary essence of creation was not some liquid as we understand the term; it was ‘ethereal’, more like the air or wind element, resembling more closely to the something that fills the outer space above the surface of the earth. It must be understood that though ‘air’ does not exist outside the atmosphere of the earth, it is not an absolute vacuum, for there is something that lies between any two celestial bodies or planets, separating them and preventing them from colliding with each other. All celestial bodies are dipped in this cosmic liquid which is like a ‘volatile essence’ drawn from flowers. It is ‘volatile’ because it is never the same, and that is why we say that the creation is continuously and perpetually changing and evolving. Had it not been so, had that *Tattva* been a solid, everything in creation would have been cast in one fixed mould for eternity.

²According to the philosophy of *Tantra Shastra* dedicated to the worship of divinity in the form of Shiva and Shakti, the process of creation took the following initial steps. Before anything came into being, Brahm, the supreme consciousness and the ultimate truth of creation, known as Shiva, was established in his own radiant effulgence or self-illumination symbolising his splendid glory, majesty and divinity. Hence he was called ‘Prakash’, literally meaning light. When he decided to deliberate and actually started the process of deliberation in order to start the process of creation, there was a subtle ‘spandan’ or a slight throb or imperceptible movement

which transformed into a vibration. The waves generated by this initial vibration developed in the cosmic ether and gradually coalesced with each other to give rise to higher waves of higher amplitudes. This produced the cosmic sound called the Naad. Since the creation was conceived in the bowl of the cosmic ether, the energy of the initial sound was focused at a central point, called the focal point or the dot or 'Bindu'. This Bindu contained the combined powers of both the male Shiva and the female Shakti like a dicotyledonous seed which produced the two separate entities called Shiva and Shakti. The union of these two resulted in the unfolding of the rest of the creation. Thus it will be observed that whatever exists in this creation can be traced back to this primeval Naad. Hence, the latter is called 'Shabda Brahm', or the Brahm as sound. Therefore it is very natural to assume that all Mantras dedicated to any divine entity and consisting of the sound element (because Mantra consist of letters and words, and are chanted or repeated to make them effective) has its origin in this Shabda Brahm and gets its powers and energy from this Shabda Brahm. In other words, the Mantra contains in itself the essential meaning, form and spirit of the deity whose Mantra it is and which is being worshipped and invoked. Constant repetition of the Mantra generates so much energy in due course of time that the deity being worshipped is revealed. This is because the sound has great powers and energy as is evident when reverberation of sound waves and the resonance created by them are so powerful and forceful that they can shatter sheet glass in windows when an explosion occurs near a building.

³This is because that Tattva thought to itself 'well, I have life in me; I can show activity; I can move; I am not dead'. This factor of 'I' was the root of Ahankar. That is why even today, the word 'I' is associated with ego, pride, vanity, arrogance and haughtiness, collectively called Ahankar.

⁴The three characteristic qualities inherently present in the creature, in different ratios, are the three thought textures which bombard the mind. These three thought textures are manifestations of the 'Vrittis and Vasanas' (inherent tendencies or desires) of the creature which mire its pure conscious Atma or soul as a covering or veil. These three basic qualities or *Gunas* which are inherent in all the living beings determine their nature, habits, temperaments and inclinations which in turn decide the behaviour, personality and outlook of each individual in this world.

(a) *Sata Guna* or quality is the best quality present in a creature and it is marked by a predominance of auspiciousness, righteousness, virtuousness and noble qualities. It is marked by such high standards of ethical existence that have, as their characteristic features, such qualities as coolness of head, peace, contentedness, humility, devotion, wisdom, mercy, compassion, creativity, selflessness, service, righteousness, virtuousness, holiness and nobility of thought and action etc. As is evident, these qualities are the best qualities that one can have in him; they have a spiritual dimension to them; they are spiritually uplifting and give a divine halo to those who practice them. This quality creates an inherent affinity in a creature towards things in life which are of high moral value and uplifting for the soul rather than things which are demoting and denigrating for the spirit.

The *Sata Guna* or quality is the veil covering the soul like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort. It is the foremost and the best amongst the three characteristics of a creature such as good and positive virtuous such as righteousness, creativity, noble deeds and thoughts, the positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc.

(b) *Raja Guna* is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, desires, selfishness, expansionist tendencies, desire to sustain etc. All these pertain to this materialistic world, and they create an inherent affinity in a creature

towards the material world of sense objects and their enjoyments rather than the world of spiritualism. In other words, those creatures who have this quality as a dominant trait are more inclined towards the world as compared to those creatures who have the Sata quality in a greater density. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Rajsic quality or Guna can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality. Rajsic tendencies are the second best quality which produces worldly desires, ambitions, passions, selfishness, various obsessions, desire to sustain and expand etc.

(c) *Tama Guna* is the third quality which is the meanest and basest of the three types of qualities in a creature. It is marked by evilness, perversions and sinfulness. It is the most degrading, denigrating and contemptible of the three characteristics in a person, leading him to such negative traits as sins, vices, perversions, greed, avarice, haughtiness, pride, lust, attachments, yearnings, intoxication, wild behaviour, promiscuity, evils, utter disregard for anything which is righteous, ethical and noble etc. This quality creates an inherent affinity in a creature towards things which are very mean and lowly, which are totally sensual and pertain to the immediate gratification of the sense urges without any thought to what would be their consequences in the long run. In brief, behaviour which is utterly immoral, denigrating and depraving for the creature, marked by grossness, crassness and recklessness of demeanors. It is the lowest and meanest of the three qualities leading to a person's downfall, ignominy and ruin.

The Tamsic quality or Guna covering the soul is like a foetus in the womb covered by the embryonic membrane—they cannot be removed easily and require diligence, effort, dedicated and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, the worst type to possess, and is marked by such negative traits as sin, evil, perversions, immorality, vices, misdemeanors, anger, inertia, delusions, deception, gloom, ignorance et al.

Since each individual is like an independent piece of mosaic that completes the entire picture in conjunction with other such pieces, this individual creature's nature and character helps to determine the overall shape of the creation. These Gunas keep the creation in a state of constant change, because numerous creatures die every moment and new ones are born. The Supreme Being has to be constantly on the alert because of this flux.

The various permutations and combinations of these three qualities create a particular 'nature' of an individual giving him his individuality and his special characters which are unique to him; they determine his temperament, behaviour, thought process et al. Two individuals having the same external form of the gross body—e.g. two men—might look very much alike but they vary immensely in their nature, habit, behaviour, thinking, outlook, action and deeds, wisdom and way of living. This is what is meant when it said that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual, countable specific number that there are actually and physically 84 Lakh types of bodies of living beings; it only symbolically refers to the huge possibilities that are possible with these three 'Gunās' and their different combinations that can imaginably produce a myriad variety of creation that can be created with these three basic qualities and their various sub classes of qualities.

The proportion of the three Gunas decides the nature, natural temperament, tendencies, habits and inclination of the creatures. For example, a person with a greater proportion of 'Satvic' (noble) characteristic will be considered nobler than a man with a greater proportion of 'Rajsic' or 'Tamsic' qualities. So we can say that sages, seers, prophets, scholars and generally enlightened persons have a high degree

of 'Satvic' qualities in them; kings and householders who live a noble life are example of those with higher amount of 'Rajasic' quality in them; while sinners, killers, drunks, rowdy elements, cheats etc. are those people with higher 'Tamsic' quality in them. These Gunas have direct bearing on the personality of a man.

To understand how the three Gunas affect the Atma, let's take two examples—that of a hot piece of iron glowing red with heat, and the potter moulding various pots from the same clod of earth.

The supreme pure conscious cosmic Atma subjects the Bhoot Atma of the individual creature to the 'radiation' of these 'Gunas'. These 'Gunas' are the three basic qualities present in all the creatures in different permutations and combinations. These 'Gunas' effect the 'Bhoot Atma' differently based on a number of factors—such as for example, the present status of the 'Bhoot Atma' vis-à-vis its past deeds, their cumulative affects, the caliber of its mind and intellect, the position it occupies in the ladder of spiritual evolution, its willingness to change or subject itself to the effects of such radiation etc.

The concept can be understood differently also. A piece of iron, when heated, shows the heat as a 'red hot glow' which fully pervades the iron piece and becomes an integral part of it. The whole piece appears to be one whole mass of something which is red, hot and glowing. When beaten by a hammer, the iron piece bends and can be shaped into any shape. Each new shape, when heated, will show the same glow of red hot fire inside it. Similarly, the Atma provides consciousness to the creature, making it active and lively, subject to receptions of stimuli in the form of various perceptions originating in the external world and received through the organs of perception present in the gross body. The 'heated' body (i.e. the Bhoot Atma made active by the Atma) now becomes susceptible to change (from the impact of the three Gunas) much like the heated piece of iron being hammered by the hammer. The 'hammering' by the three 'Gunas' (the inherent qualities present in every creature) help to cast the individual creature into various moulds or shapes having different characteristics. Even as cold iron is not easily malleable, the creature without the infusion of life injected into it by the Atma is as good as dead and is the least malleable. Here, the allegory is simple—the creature is the iron, the glowing consciousness is the fire, the impinging 'Gunas' is the blow of the hammer, and the Atma is the iron smith.

The wheel of the potter moulds the clay into various shapes, but the driving force of the wheel is the potter. Similarly, the three 'Gunas' mould the characteristic of the creature, but the Atma is the authority, the potter in this allegory, who drives the three 'Gunas'. Just as the potter is not the wheel, the Atma is not affected by the three 'Gunas', it is just an instrument, an implement to shape the character of the creature. Again, even as a wheel is needed by a potter to give shape to a shapeless clod of clay, the Atma needs the three Gunas to mould the characters of the creatures that constitute this creation.

And important point to note here is that 'Ahankar' (ego, false pride, arrogance, haughtiness, hypocrisy and the sense of 'I') is the root cause of demoting even the most exalted of souls to an existence equivalent to that of an animal. This is stressed in Jabalu-panishad of Sam Veda tradition which stresses that 'Isha' or the supreme Lord of creation had to become a 'Pashupati', Lord of animals, just because Ahankar cast its dark shadow on him. An exalted soul too becomes demoted as an animal if he has Ahankar in him.

The concept that 'I' is the body and not the 'pure conscious soul' leads to ignorance-based ego (Ahanakar). The constant concept of I vis-à-vis the body and this world leads to the sense of possessiveness in the creature. 'Pure consciousness' mired by ego becomes 'a conditioned consciousness' and fails to remain pure. This is why ego (Ahankar) has been likened to a minister of the king. It directs and regulates the actions of the consciousness which, under its influence, loses its independence. This 'conditioned consciousness'—working through the mind-intellect-ego combine

is called, inter-alia, 'Chitta'. The word also means memory. Hence this memory acts as a referral library for the intellect. The latter falls back on it and rely on it whenever it is in doubt. The quality of books in the library guides the student; similarly, the quality of inherent tendencies stored in the library of Chitta directly affects the inputs of the intellect, and through it, the mind and successively down the hierarchy to the body and its organs of perception and action.

Although the soul has nothing to do with this command chain, but for all practical purposes the Atma/soul is deemed responsible for it because of its sovereign nature. So, the sincere seeker/aspirant should delineate this conscious from the rest of the chain and break the nexus between them so as to allow the glory of the pure consciousness of the soul to shine through like the splendorous sun breaking through from behind a curtain of clouds. It is like removing the various veils or covers from around the candle so that its light shines through the darkness of the room and illuminates all the corners of it.

How the three Gunas were used by Brahm to create this world has been beautifully described in Paingalo-panishad, 1/7 and 2/3. Canto 2, verse no. 3 describes how Sata and Raja were used, while Canto 1, verse no. 7 narrates the use of Tama. The concept of Gunas affecting the Atma has been elaborately dealt with in various Upanishads, for example the Maitrayanyu Upanishad, 1/11, 2/5, 3/5, etc. of the Sam Veda tradition.

Besides the three primary Gunas, we have six other Gunas as follows—(i) Sham (शम—having self restraint and control; having peace, tranquility, serenity and quietness; being able to suppress desires, yearnings and natural instincts and impulses); Dam (दम —tolerance, forbearance, fortitude); (iii) Upriti (उप्रिति—renunciation, detachment, dispassion, indifference and non-involvement); (iv) Titksha (तिष्ठिष्ठा —endurance, patience, fortitude, sufferance, equanimity); (v) Samadhan (समाधान —solution, answer, lack of confusion or doubts, clarity of thoughts and conception); and (vi) Shraddha (श्रद्धा —having faith, belief, conviction, reverence and devotion).

⁵This is like the case of a building where its physical structure is determined by the physical grosser dimension of the construction materials used in its construction, such as bricks, steel, cement, sand, mortar, wood, iron, the paint used to colour it etc. Besides this, there is a subtle dimension of construction that depends upon the quality and not the quantity of these materials. Together they determine not only the exterior façade, the physical shape and presentation of this building but its inherent strength and quality. Then other factors come into play, such as the intention for which it was made and how actually it is being used, how it is looked after, who lives in it, how does it effect the surrounding landscape, what general ambience it has, whether it is foreboding and awe-inspiring or is welcoming and inviting, whether it is airy, lighted and comfortable or not, and such other small and big things. These are its hidden subtler qualities.

Likewise, the basic ingredients used at the time of conception of the creature in the cosmic egg, i.e. the ratio of the basic Gunas and the proportion of different elements would determine how each creature would become a unique sample even as no two buildings can ever be exactly the same in the true sense, for subtle variations are sure to creep in because of the nature of its independent construction work. That is also the reason why no two creatures are alike.]

11. That inherently pure, uncorrupted, supreme and transcendental Atma known as Parmatma, when it allowed itself to be submerged in or affected by such worldly notions as having Sukha and Dukha (i.e. when the Atma began to feel happy and sorrowful as a result of it erroneously identifying itself with the gross body and the material world which tossed it between the emotions of having elation and joy on the one hand, and threw it into the pit of distress and dismay, inflicting untold miseries to it on the other hand) it began to be called a Jiva Atma. This is how the Parmatma, the

Supreme Being, came to be known as the Jiva, the living being. [The word ‘Jiva’ literally means something that is alive, that lives, whereas Parmatma means the supreme Atma, the supreme consciousness. The former word in practice refers to all the living beings in this creation, including plants and animals, while the latter word refers to the Lord of creation, the God of all the gods.] (11).

[Note—The genesis of creation described here in very brief is elaborately explained elsewhere in the Upanishads, such as in the following ones--(a) Rig Veda tradition—Aiteriyo-panishad; Mudgalo-pansishad, Canto 2-4; (b) Sam Veda tradition—Chandogyo-pansishad, Canto 3, Section 19; Canto 4, Section 17, verse nos. 1-3; Canto 6, Section 2-10; (c) Shukla Yajur Veda tradition—Trishikhi Brahmin, Canto 1; Painglo-pansishad, in its Canto 1 and Canto 2, verse no. 1-10; Subalo-pansishad, Canto 1-2; Brihad Aranyak Upanishad, Canto 1, Brahmin 1-2, 4-5; Canto 6, Brahmin 4; (d) Krishna Yajur Veda tradition—Shwetashwetar Upanishad, Canto 4; Taittiriyo-pansishad, Valli (Canto) 2, Anuvak (sub-canto) 2 and 6.]

12-13. [These verses describe how and why the otherwise immaculate and non-dual single entity known as the Atma begins to appear to have numerous forms and exhibit as many varied characteristic traits as there are creatures of various genres and personalities, each so different from the other that no two are alike. Refer to Garbha Upanishad, para 3 which describes sixteen faults that surround the Atma; to Dhyana Bindu Upanishad, verse nos. 93/1-93/15 which uses the beautiful analogy of the Atma enclosed in a symbolic Lotus with tinted petals in the subtle heart of the aspirant and from where it looks at the world through these tinted petals, thereby not only distorting its view of the world but also allowing itself to be ‘coloured’—or getting corrupted, tainted and influenced by the myriad impure qualities that are the general characteristics of this world.]

Some of the numerous faults, weaknesses, imperfections, blemishes or shortcomings that affect the character of a Jiva (living being, the creature), causing it to be blighted and preventing his pure and uncorrupt self, the Atma, from retaining its primarily untainted, pristine pure and immaculate character, nature and form which is one and non-dual, called the ‘Kaivalya’ state of its existence, are the following—Kaam (worldly desires, passions and lust), Krodh (anger, indignation, spite and wrath), Bhaya (fear and consternation), Moha (attractions, attachments, delusions, infatuations, longing), Mada (arrogance, haughtiness and intoxication), Raja (the second of the three qualities creating worldly tendencies and desires related to this world), Janma-Mritu (the cycle of birth and death and its attendant horrors and agonies), Kripantaa (being stringy and miserly, specially in the field of religious duties such as giving alms and making charities, or supporting such activities; the word would cover miserliness of thoughts in the sense that one does not give the correct knowledge to others out of jealousy), Shok (sorrows, grief and agonies), Tandra (being sleepy, indolent, lethargic, lazy, careless and showing lack of energy and alertness), Kshudha (hunger, both physical such as for food and the insatiable desire for sensual gratification, as well as emotional such as the insatiable longing for worldly things), Trisha (desires, wishes and yearnings pertaining to the world) [12], Trishnaa (thirst, ambition, avarice and greed; the word is usually used in the negative sense; it pertains to a man’s insatiable desire and greed for worldly things), Lajjaa (shame, dishonour, ignominy), the constant fear of Dukha and its attendant Vishaad (i.e. being constantly tormented by the fear of sufferance from sorrows and grief of all kinds and the attendant agonies and miseries, distresses and a sense of despair and hopelessness and haplessness), Harsha (to feel elated and happy, to be glad and

joyous, to feel cheerful and exhilarated by certain situations which seem to be in favour, such as on receiving some good news), etc.

It is only when the creature is freed from the tainting effects of all these faults, blemishes, imperfections and shortcomings that the Atma can realise its one and non-dual pure conscious form, the state of existence called 'Kaivalya'¹ (12-13).

[Note--¹These shortcomings, blemishes or defects cast a shadow on the character of the Jiva, causing a blight on his character and inherently pure form, and makes it appear that his Atma, which is his true identity, has these respective shortcomings or defects or imperfections in it. In other words, the immaculate Atma appears to be blighted and tainted. This is because the Atma of the Jiva allows itself to be affected by any or all of these faults and imperfections, forgetting that this is not its true nature but an illusionary scenario created by ignorance of the truth of its primary nature, which is leading it to delusions and its attendant problems. Each fault or imperfection or defect or shortcoming enumerated in these two verses, in association with others and acting in coordination with them in various permutations and combinations create an infinite array and variety of traits of character, temperaments, habits, personalities, attributes, virtues and qualities in all the creatures. The resultant effect is that there is no similarity between any two of them. Thus, the Atma, which is one and the same in all the creatures, appears to be of as many varieties as there are number of creatures. It assumes a dual and varied form; it becomes multifarious and diverse; it loses its non-dual, indivisible and immutable nature. In other words, it has become tainted and full of faults associated with the worldly creature; it has lost its pristine purity and singleness.

The 'perfect' Atma has thus become 'imperfect'; the 'untainted' Atma has been 'tainted'.

Some of the Upanishads that describe these faults or imperfections that afflict the Atma are Mudgal, Canto 4, verse nos. 4, 6 of Rig Veda; Varaaha, Canto 1 of Krishna Yajur Veda; Mandal Brahmin, Brahmin 1, Section 2, verse no. 1 of Shukla Yajur Veda.]

14. [The following verses describe the ways to overcome the different faults and shortcomings enumerated above.]

Now I shall narrate to you the ways by which one can overcome the negative effects of the various faults, shortcomings, impurities and imperfections that taint the Atma. Say, how can Gyan (knowledge and wisdom) devoid of Yoga (meditation and coordination of the theoretical metaphysical knowledge with its practical spiritual application) ever be useful and successful in providing stable and permanent Moksha (emancipation and salvation, liberation and deliverance) to the creature and his soul from the torments of the trap in which the Atma has been allowed to fall due to ignorance? (14).

[Note—The Mandal Brahmin Upanishad of Shukla Yajur Veda, 1/2/2 describes the method to overcome these faults of the creature.

Various Upanishads enumerate different Vikaars which are the numerous faults, imperfections, impurities and taints that affect the primary nature and characteristics of the Atma of the creature and impinge upon his behaviour, thinking, temperament etc.

The Yogshikha Upanishad of Krishna Yajur Veda, in its verse nos. 10-11, lists the nineteen Vikaars or faults and shortcomings in the character and mental setup of the creature which prevents the latter from becoming one like the supreme Lord of creation because they act as drags on its spiritual upliftment, pulling the individual's soul towards this mundane world rather than going higher to reach for the sky of spiritual achievement. The Garbha Upanishad, in its paragraph no. 3 outlines the sixteen faults or flaws that the creature has.

The Shaarirako-panishad of Krishna Yajur Veda, in its verse no. 17, describes the eight 'Vikaars' or faults, shortcomings, imperfections and blemishes that cast a shadow on the primarily pure and immaculate nature of the Atma at the micro level of creation, as well as on Nature at the macro level of creation.

The Mudgal Upanishad, Canto 4, verse no. 6 of Rig Veda tradition as well as Adhyatma Ramayan of Veda Vyas, Lanka Kand, Canto 3, verse no. 29 list six Vikaars.

And the Mandal Brahmin Upanishad of Shukla Yajur Veda tradition, Brahmin 1, section 2, verse no.1 list only five Vikaars.]

15. Similarly, Yoga devoid of Gyan also cannot bestow Moksha. Therefore, those desirous of obtaining Moksha (i.e. those who wish to break free from the cycle of birth and death and its attendant miseries and torments, those who wish to attain emancipation and salvation for their self) should strive to establish a synergy, a harmony between both Gyan and Yoga. That is, they should employ both Gyan and Yoga in a well coordinated and synchronized manner to reach their spiritual goal (15).

16. It is out of Agyan (lack of correct and true knowledge about the reality; ignorance) that the world appears to shackle the creature. And therefore Gyan (true and correct knowledge as well as erudition and wisdom) is the instrument that can free one from this illusion of shackle and the cause of it, the world.

Gyan is the primary instrument needed not only for obtaining liberation and deliverance from the world and its attendant delusory affects, but also to wisely use the techniques of Yoga and put them to good effect in this direction. It was Gyan that had helped the initiation of creation at the very beginning itself (because to start anything as technical and complicated as the unfolding of this vast and mysterious creation with all its fine intricacies, one needs to be not only aware with its detailed process but be an expert and fully conversant in it besides having a practical knowledge of it in order to successfully proceed with it and attain the desired objective). Gyan is the medium by which one can successfully reach one's destination and accomplish one's objectives in life (which in the present case is obtaining Moksha for the soul, attaining spiritual upliftment and enlightenment leading to one's liberation from the fetters of delusions and ignorance that had trapped the soul in their net). It is Gyan that distinguishes the wise and enlightened creature and sets him aside from the rest of the multitudes (16).

17-18. [These verses emphasise what constitutes real and truthful Gyan. Refer Niralambo-panishad of Shukla Yajur Veda tradition, verse no. 14 which also describes what truthful Gyan is and what Agyan is.]

That Gyan (knowledge, erudition, wisdom, enlightenment and awareness) with the help of which one can know about one's truthful 'self' as well as unravel the profound mysteries of existence, is called the real and truthful form of Knowledge.

This Gyan helps one to learn about and experience such unique and eclectic spiritual concepts as Kaivalya¹ (the supreme stature of existence which is the one of its kind and the most exalted state of existence when nothing but the non-dual consciousness is discernible everywhere in the world by the enlightened creature), Param Pada (the supreme stature beyond which there is nothing better; the state of Kaivalya and Param Pada are synonymous and like describing the same thing using different words to highlight its various virtues or characteristics because both describe the same exalted state of non-dual existence of the consciousness or Atma of an

enlightened ascetic), Nishkal (one that has no variations and fractions; one that has no Kalaas or separate forms and attributes; one that has no imperfections, faults, blemishes and taints), and Nirmal (pure and pristine, immaculate and uncorrupt, untainted and without any blemishes, clean and free of any impurities). This true form of the Atma, or pure conscious 'self' of the creature, is an embodiment of true and eternal bliss and happiness.

True Gyan entitles one to know the truth and reality of the origin, the present establishment and the conclusion of this world, along with the underlying 'consciousness' and 'life-infusing and life-bearing factors' that brings all this about. [This is because only 'living' entities would take a birth, live a life and die. Since this does happen in this world, therefore there must be some imperceptible and hidden element that brings it all about. It is Gyan of the higher order that would enlighten the wise creature about this esoteric and mysterious element known as the pure conscious Atma that works a hidden dynamic force that turns the wheel of creation just like an ordinary science student needs to acquire expert knowledge and high skills to become a renowned scientist when he grows up and takes control of great projects of immense importance.]

Now onwards, I shall describe about Yoga (17-18).

[Note--¹The word *Kaivalya* means the 'only one' or the non-dual state. It is the supreme stature of existence which is the one of its kind and the most exalted state of existence when nothing but the non-dual consciousness is discernible everywhere in the world by the enlightened creature. There is non-duality and uniformity everywhere. It is a state of existence which is similar to the state of Samadhi in which the man goes about his daily life doing his chores in a routine way without getting emotionally involved in them and even remaining totally oblivious of what he is doing. He remains totally submerged in his inner self and thoughts. He appears in a virtual trance-like state of existence usually observed in realised ascetics and great philosophers. People regard such men as absent minded, but they are so much absorbed in themselves that they are not concerned with what others think of them. For them, the external world ceases to exist though they physically live in it and interact with it. This Kaivalya form of existence is tantamount to being liberated from the fetters that tie the creature to this body and the world because though he lives in the world he is totally indifferent to it; he is free from all worries, sufferings and sorrows as well as all forms of attachments, entanglements and involvements with the artificial and deluding world that are the usual features of an ordinary worldly man submerged in the world's entrapping charms. This state is comparable to the actual and physical liberation of the soul upon death when it is physically liberated from the bondages of the limitations imposed by the gross body; the only difference being that in the former case the man is alive and enjoys the privilege of having a body that allows the ethereal Atma to enjoy this physical world in a totally dispassionate and detached manner as if it is a neutral observer, while in the latter case he sheds the burden of the body altogether.

The Kaivalya state is considered superior because such a man lives a life of happiness and contentedness; he never suffers from any worldly miseries and worries; he treats the world around him as of no consequence, and remains indifferent to its deluding effects and their entanglements. On the other hand, the ordinary man might find emancipation upon death, but his life is a burden while he is still alive in it. Such a man has not truly understood the teachings of the scriptures; he has not understood the 'spirit' of spiritualism and metaphysics as enumerated by the Upanishads because their main aim is to give peace and tranquility to the tormented soul and help in its liberation from the deluding effects of the body and the world. This concept has been elaborately described in Mukhtiko-panishad of the Shukla Yajur Veda tradition. The concept has also been described in other Upanishads, such as Subalo-panishad, Canto 13, verse no. 1, and Mandal Brahmin Upanishad, Brahmin 2, section 3, verse no. 1 of

Shukla Yajur Veda tradition, as well as Sarva-saar Upanishad and Tejobindu Upanishad, Canto 4 of the Krishna Yajur Veda.]

19. From the practical point of view, Yoga has is said to have many branches¹, or it appears to possess many forms. [In other words, though Yoga is one composite science of spiritualism and its main purpose is to bring about a union or harmony between two units of the one single whole by removing imaginary disparities and false dichotomies between them which make them appear to be separate from one another, in order to facilitate understand of its finer nuances and comprehend it in its entirety it is broken up into smaller branches or sections or schools of thoughts and practice, giving the wrong impression that Yoga has so many forms or types. All this creates artificial distinctions between them. Resultantly, their main purpose is lost in futile debates, numerous paths and theories, and almost colliding philosophies.]

Some of the various types or branches of Yoga are the following—Mantra Yoga², Laya Yoga³, Hath Yoga⁴ and Raaj Yoga⁵ (19).

[Note--*Yoga* can be derived from two verbal roots—viz. ‘Yuj’ meaning to yoke, or to concentrate. Therefore it is that school of philosophy that helps a Jiva, the living being or the individual soul, to attain concentration on the Supreme Being or the cosmic Soul known as Ishwara. As the denser or more concentrated matter has a greater gravitational pull compared to the lighter and lesser denser one, the concentration results in the supreme Soul pulling the individual soul by the mere force of its attractive force so as to bring about the former plunging headlong into the latter to become one with it. This phenomenon is likened to the individual obtaining the state of Kaivalya or oneness with the Supreme Being so that only the latter is left behind and the former vanishes from existence for all practical purposes.

The word in several senses has been used first used in Rig Veda, 5/81/1.

The Philosophy of Yogdarshan in its basic metaphysical form has the following main elements. It accepts three fundamental realities—Ishwara, Purush and Pradhana or Prakriti. Purush is the individual soul of the living creature. They are of the nature of consciousness and are infinite in number. The existence of Ishwar, the Parmatma or Param Purush, can be known only through the knowledge of the scriptures. He is omniscient, omnipresent and omnipotent. He is ever free from the shackles of Maya (delusions) and Prakriti (nature). He is the primary and fundamental essence of this existence, the initiator, the progenitor, the creator, the sustainer, the concluder and the final resting place of it. He is designated or known by the ethereal word OM. It is by his will that the Prakriti (Nature) possessing the three basic Gunas (Sata, Raja and Tama) metamorphoses into the rest of the creation.

The Purush, the individual soul or creature, somehow forgets his real nature and heritage or lineage as pure consciousness, gets absorbed and mired in delusion which accompanies Prakriti as her companion, and thereby gets trapped in the cycle of transmigration consisting birth and death and their attendant miseries and problems.

However when he practices the various steps of Yoga, such as following diligently the eight-fold path shown by Yoga, called the ‘Ashtaanga Yoga’, he gets above the mundane and breaks thorough the veil of delusions and ignorance cast upon it and realises his true nature and essence. This result in self-realisation, and like the brilliant emerging from behind the bank of dark clouds, the person sees the brilliant Truth shining amidst the dark bleak and mortal world engulfed in a mist of delusions and ignorance. He becomes freed from the ignorance-fuelled delusory world of perishable material things and becomes established in the ultimate ‘truth’. Since ‘truth’ is always one and not two, he is said to have attained the state of ‘Kaivalya’, the state of oneness that transcends the world of duality and delusions.

²*Mantra Yoga* refers to practicing Yoga through Mantra. It is that Yoga in which constant repetition of Mantras steadies the mind. The Mantra of the chosen deity is

used as the standard common denominator and as medium to focus the mind and attention while practicing the eight-fold path of Yoga as prescribed by Patanjali, the greatest exponent of Yoga philosophy. This Yoga is called Astaanga Yoga, the Yoga with eight branches or organs.

According to Vaayaviya Sanhita, which is an important work on Shaivism, there are five kinds of Yoga, and Mantra Yoga is the first amongst them. As stated above, it is that Yoga in which constant repetition of Mantras steadies the mind. When this is associated with Pranayam or breath control, it is called 'Sparsha Yoga'. This develops into a higher state called 'Bhaava Yoga' when the repetition of Mantra stops automatically and involuntarily, leaving only the feeling of tender devotion and spiritual ecstasy in its wake inspite on one living in this world. When one rises higher in this practice, the world completely disappears and there is no feeling whatsoever, a sort of 'neutrality' or 'zero' effect is obtained. This is called 'Abhaava Yoga'. At the last stage of spiritual evolution, the union with Shiva, the ultimate Truth and the embodiment of Yoga, is obtained. This state or stage is called 'Maha Yoga'.

³Technically, the *Laya Yoga* has two meanings. One with a purely metaphysical dimension is the dissolution of the Chitta or mind and its various faculties so much so that the practitioner remembers the supreme Lord even while going about his daily life and its chores simply because his mind is completely dissolved in the remembrance of the Supreme Being and it is the physical gross body that does the various deeds associated with the world, resulting in the person remaining absolutely oblivious of what he has done or whatever is happening around him. This has been asserted in verse no. 23 of this Upanishad.

According to another interpretation based on Patanjali's Yogsutra, it is called 'Kundalini Yoga'. This is the physical aspect of Yoga by which various techniques are employed to kindle the latent energy lying dormant in the coiled subtle energy center at the base of the spine, called the Kundalini, and spiritual evolvment is attained. This method has been described in detail all major Upanishads detailing the eight steps of physical Yoga.

⁴*Hath Yoga* is the Yoga that teaches how to bring about the union of Pran (the breath, the vital wind that resides in the upper part of the body) and the Apaana (the wind that moves down in the body and helps in digestion and excretion, the vital wind that lives in the lower part of the body) by means of strict following of the eight fold path of Yoga such as observance of Yam, Niyam, Aasan, Pranayam, Pratyahar, Dharna, concentration and visualization of the presence of the Supreme Being in the point of the forehead where the root of the nose meets the middle of the eyebrows, and Samadhi. These have been enumerated in verse no. 24-25 below. It teaches the practical aspects of spiritual Yoga.

⁵*Raaj Yoga*—Hath and Raaj Yogas are the two sides of the same coin. Neither is possible without the help of the other. The Raaj Yoga which deals primarily with the control of the mind ultimately leading to the state of Samadhi is the primary form of the two, and Hath Yoga is merely an instrument to aid it. Thus we see that the Yoga propounded by Patanjali is the one which is known as Raaj Yoga because it fulfills the objective and definition of Raaj Yoga.]

20. Yoga has been classified universally as having four main stages or states—Aarambha¹, Ghat², Parichaya³ and Nishpati⁴ (20).

[Note—¹The word *Aarambha* means to begin, the initial phases of Yoga. This refers to the preparatory stage of Yoga.

²The word *Ghat* means a pitcher. Hence this refers to the stage when the vital winds are held inside the body and allowed to mix with each other. See verse nos. 65-66 below.

³The word *Parichaya* means introduction, and it refers to the sudden realisation by the practitioner of Yoga about his own stupendous potentials and his own pure

consciousness about which he was hitherto oblivious. The ascetic is literally introduced to his own self. What he had known about himself previously was a distorted version of his true self, but Yoga has introduced him to his real and true conscious and powerful almighty self.

⁴Finally, the word *Nishpati* refers to the completion of Yoga with a definitive degree of certainty. The ascetic is not in any doubt about what he has learnt and experienced. Thus, he would remain steady and unfaltering in his state of self-realisation.]

21-22. The signs of these four stages or phases of Yoga (as described in verse nos. 19-20) are being mentioned briefly now. An aspirant who practices Japa (repetition) of a Mantra¹, complete with all its components such as Maatrikaa² etc., for a continuous period of twelve years is able to acquire knowledge of the various mystical powers and divine potentials known as Siddhis such as Anima³ etc.

But this type of Yoga is done by people of low category whose intellectual development and spiritual aspirations is not of the higher level that is to be expected from true spiritual aspirants. Therefore, they are treated as the lowliest class of spiritual aspirants⁴ (21-22).

[Note—¹*Mantra* is a group of mystical letters or syllables or words or phrases that are used as an aid to concentrate and steady the mind and focus one's energy towards the successful completion of the process of Yoga. It is the sound symbol embodying the form, the power and the consciousness of the supreme Brahm or its various manifestations as the deities worshipped.

²*Maatrikaa* is the part of the Mantra dedicated to Mother Goddess symbolising the esoteric and powerful forces of Nature. It is useful in igniting and activating the latent subtle energy trapped inside the Kundalini, the coiled energy center at the base of the spine. Refer Brahm Vidya Upanishad, verse nos. 62-63 and its accompanying note for detail. This is Chapter 16 of this volume.

³The *Siddhis* are eight in number and are the mystical powers that come as a natural boon to the ascetic as part of his spiritual elevation. They give him super human powers and help him to accomplish astounding feats. Briefly these eight Siddhis are the following— (i) 'Anima' means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) 'Mahima' is to have majesty, glory and fame; to be honoured and acknowledged for one's achievements, knowledge and skills; (iii) 'Garima' is to have weight, stature, dignity, decorum, gravity and significance, (iv) 'Laghima' is to have simplicity and humility; (v) 'Praapti' is to be able to attain or obtain anything wished or desired; (vi) 'Paraakram' is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) 'Ishwatwa' is to be able to have lordship or sway over others; and (viii) 'Vashitwa' is to be able to control and subdue others.

⁴This is because Mantras and Yoga should not be used to acquire powers that give worldly fame and wealth which usually come naturally to those people who have certain super-natural occult powers. People flock to them from far and near seeking their blessings for their worldly problems and then donate huge largesse to them if their wishes are fulfilled. This should not be the aim of either the use of Mantra or of Yoga. Their main target should be self-purification, self-enlightenment and the realisation of the truth about the world, about the meaning and reality of this existence, about one's own self and the consciousness residing in one's bosom. It should be aimed at providing a gateway to spiritual liberation and deliverance rather than assembling a crowd of followers and blessing seekers, for in the latter case the ascetic would be tied down to this world instead of finding freedom from it. The delusions of grandeur, majesty, power and authority that accompany all worldly praises and honours, the hallucination that all worldly charms, pomp and pelf cause are very overpowering. That is why if a spiritual aspirant employs Mantra and Yoga to successfully acquire the Siddhis and thinks that he had done a great job by

harnessing the potentials of Yoga and Mantra by the dint of his hard practice and sacrifice, then he is a man of a low intellect and wisdom.

[Refer verse no. 56, 76-79 in this context.]

23. The dissolution of Chitta or mind is called Laya Yoga. [See note to verse no. 19.] It has been said to be of millions of types. For example, it includes the remembrance of the attributeless and formless Supreme Being, the lord God called Ishwar, while one goes about his daily chores in this world, such as while walking, sitting, waiting, sleeping, eating etc. [In other words, while the Brahm-realised person does the chores of his daily life, his mind should remain focused on the supreme Brahm instead of focusing on the chore. The resultant effect would be that he would be doing them in a mechanical manner, not getting either emotionally involved in them, hoping to reap any rewards or fear any punishments from these deeds, nor even remembering at all what he is doing or is supposed to do. He is in a complete oblivious state of existence vis-à-vis the world, while perpetually remaining engrossed in the ecstasy derived from self-realisation and Brahm-realisation at the same time. His mind and sub-conscious are dissolved in the sense that they become non-existent and defunct; hence the Atma or the true 'self' of the aspirant is not subjected to being constantly disturbed and interfered by the numerous sensory inputs from the world which is now practically shut-off because of the dysfunctional mind. Since the sub-conscious is also defunct, the Atma is freed from any vestiges of such sensory inputs in the form of memory and its subtle nagging. With the mind shut-off, the creature virtually sees, hears, smells, tastes and feels nothing. Therefore obviously there is no memory of the world and its fascinating charms.

With this cleansing, the Atma wipes off all vestiges of its links with the material world which relies upon the mind to influence the Atma. In other words, the Atma is freed from the clutches of the world and its delusions.

As is obvious, such a man would be a total misfit for the society; his acts and deeds and behaviour would be un-conventional and irrational for the world. The resultant benefit would be that the world would stop bothering him, thinking that he is a lost case. This would free him from so much mundane botherations and the necessity of observing social niceties. His mind or Chitta would not be troubled by the problems of the body or the world.] (23).

24-25. Thus, the above describes what is Laya Yoga. Now listen to Hath Yoga. *Yam*, *Niyam*, *Aasan*, *Pranayam*, *Pratyahar*, *Dharna*, to visualise the presence of Lord Hari (Vishnu, the supreme Lord) in the center of the eyebrows (at the site where the so-called third eye of wisdom and transcendental knowledge is located; the area of the cerebrum), and the neutral state of Samadhi (when one becomes oblivious of the surroundings and remains in a state of perpetual ecstasy and bliss of self and conscious realisation)—these are the various limbs of Yoga that comes under the definition of Hath Yoga (24-25).

[Note—The terms used above need brief introduction. According to Patanjali who is considered to be the greatest exponent of Yoga, the latter consists of 8-fold path. These are briefly the following—(1) *Yam* or self restraint of the senses; (2) *Niyam* or observance of certain sacrosanct rules; (3) *Aasan* or postures for meditation; (4) *Pranayam* or breath control exercises for purification of the body and mind; (5) *Pratyahar* or withdrawal of the mind and its control; (6) *Dharna* or having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path; (7) *Dhyan* or contemplation and concentration of the faculties of the mind and intellect, such as visualizing the presence of the supreme Brahm in the point of the forehead

between the two eyebrows; and (8) *Samadhi* or a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation. These eight fold path of Yoga have been listed in Tejobindu Upanishad, Canto 1, verse no. 16, Varaaha Upanishad, Canto 5, verse no. 12—12 ½ of the Krishna Yajur Veda tradition, as well as in Trishikhi Brahmin Upanishad, Canto 2, verse no. 28-34, and Mandal Brahmin Upanishad, Canto 1, verse nos. 2-10 of Shukla Yajur Veda tradition.]

26-27. The various Mudras (postures of the body while doing Yoga practice; the Vijay Tantra explains the esoteric meaning of Mudra thus—‘the company of the good leads to liberation and evil company to bondages; closure of evil company is termed as Mudra’.) and Bandhas (the closure of apertures of the body through which the vital winds could escape) are the following types—Maha Mudra, Maha Bandha, Maha Vedha, Khechari Mudra, Jalandhar Bandha, Uddiyan Bandha, and Mool Bandha. Besides these, there are three other Mudras such as Vajroli, Amaroli and Sahjoli.

With the help of these different Mudras and Bandhas, the ascetic should research, investigate and delve deeply into the esoteric and mystical aspects of Pranav (i.e. the supreme Brahm or cosmic consciousness represented by the ethereal word OM that is used during meditation as a Mantra and heard by the ascetic as a deep and resonating cosmic sound during meditation) by deeply inhaling breath, retaining it inside the body and gradually exhaling it (26-27).

[Note—The various *Mudras* and *Bandhas* have been described below in verse nos. 112-129 of this Upanishad.

Some of the other Upanishads that detail them are the following—Yogchudamani and Jabal Darshan (Canto 3) of the Sam Veda tradition, Trishikhi Brahmin and Mandal Brahmin (1/3/5 and 2/1/5, 8) of Shukla Yajur Veda tradition, the Dhyan Bindu Upanishad (verse nos. 73-93), Brahm Vidya Upanishad (verse nos. 69-70), Yogtattva Upanishad (verse nos. 26-27), Yoga Kundalini Upanishad (Canto 1, verse no. 41-52; Canto 2), Yogshikha Upanishad of Krishna Yajur Veda tradition (Canto 5, verse nos. 40-42), Varaaha Upanishad of Krishna Yajur Veda (Canto 5, verse nos. 44-45), and the Amritnaad Upanishad of Krishna Yajur Veda tradition.]

28-29. Oh Brahma! Now listen to the salient features of each of the different elements of Yoga.

Restrain over food habits and eating little (i.e. abstaining from over eating, indulgence in food, or eating restricted items) is the main component of Yam.

Similarly, non-killing and non-violence is the chief tenet amongst all the Niyams of Yoga.

The four main Aasans (sitting postures adopted during meditation or Yoga) are Siddha¹, Padma², Singh³ and Bhadra⁴ (28-29).

[Note—¹According to Trishikhi Brahmin Upanishad, verse no. 49 ½, the *Siddhasan* or *Siddha Asan* (literally, a posture that bestows mystical powers, or a posture that only accomplished experts can do) is when the ankle of the left foot is tucked under the suture (which is a fold of skin between the anus and the testicles) and the right foot is placed on the top of the genitals. The body is kept erect in this posture. To sit in this posture, the two legs are first stretched out. The left leg is then bent at the knee and folded in so that the heel touches the genitals and the sole lies flat against the inner thighs of the right leg. Then the right leg is folded in and the heel is placed in front of the pubic bone right above the testicles, and the sole touches the inner thigh of the previously folded left leg. The two hands are stretched out and the outer side of the wrist of each hand is placed on the bent knee-joint of the respective side. The palm is opened and the thumb is touched by the bent first finger to form a virtual ring, with the remaining three fingers held straight out. The practitioner sits perfectly in a

ram-rod straight position, with the spine, the neck and the head in a straight line. The mental sight is fixed on a spot in front of the nose, and this state of intense concentration is maintained as long as is feasible for the practitioner. Then the legs are gradually unfolded and after some period of relaxation, the process is repeated with the opposite leg being folded in first and placed below the other leg. [It is believed that this posture is one of the best postures to be adopted for Yoga amongst the eighty four lakh (84×10^5) postures of meditation. The fact that there are as many numbers of Aasans as there are species of living beings is endorsed by *Dyanbindu Upanishad*, verse no. 42 of the Krishna Yajur Veda tradition. This Siddha Aasan is capable of cleansing all the seventy two thousand Naadis (ducts in the body), and is so-called because it is possible to access the divine source of cosmic energy trapped inside the body as well as experience the cosmic power of the kindled Spirit by employing this Aasan. The word 'Siddha' implies one who has acquired stupendous mystical and supernatural powers that are beyond the parameters of the physical and mundane world.

²The *Padma Aasan* according to verse no. 39 of Trishikhi Brahmin Upanishad, is to sit cross-legged so that the upper part of the feet (i.e. the opposite side of the sole) along with the toes of one leg is placed on the thigh of the opposite leg (i.e. left toes on the right thigh, and right toes on the left thigh), is called *Padmasan* (literally to sit in a lotus posture). [The soles would be pointing outwards while resting on the thighs and the body would be held erect—i.e. the spine, neck and head would be in a straight line. The hands, with palms facing upwards and resting one on the top of the other, are placed on the folded legs in front of and below the navel. The chin is drawn in and held tightly near the base of the Adam's apple at the pit of the throat. This sitting posture is said to dispel/ameliorate all diseases and counter or antidote all poisons. That is, this sitting posture is very beneficial for the body.

³The *Singh Aasan*, according to Trishikhi Brahmin Upanishad, verse no. 44, means to literally sit like a lion. It involves sitting in a posture so that the 'siwani', or the fold of skin between the anus and the genitals, called the suture, is pressed by the ankle bones of the opposite side, and the body is lowered on the legs which are bent or folded in from the knees, while the hands are stretched out and the open palms placed on the bent knee of the same side so that the fingers stretch out like a palm-fan with the open palm resting on the bent knee joint. [Usually in this posture, the mouth is wide open and the tongue protrudes out, while the eyes glare at some point in the distance or at the tip of the nose. This is how a lion sits. This posture makes the body resemble a sitting lion. This is a posture adored by ascetics (Yogis) and it is dedicated to the memory of Lord Narsingh, the half man and half lion incarnation of Lord Vishnu to liberate his great child devotee Prahalad from the torments inflicted upon him by his own demon father. Amongst the benefits of this Aasan is that it clears the voice and removes foul breath.

⁴The *Bhadra Aasan*, according to Trishikhi Brahmin Upanishad, verse no. 45, is literally to sit like a gentleman. It involves sitting in an erect posture by placing the two ankle joints under the buttocks on either side of the suture, i.e. the junction point of the testicles and the anus such that they (the two ankle joints) touch each other, and then using the hands to firmly clasp the soles of the feet of the respective side from the rear side of the buttock (i.e. left foot by the left hand and the right foot by the left hand). [This posture can neutralise the ill effects of all diseases which cause the production of toxins in the body or which are caused by administration of poisons or other toxins in the body; it helps to get rid of diseases as well.]

30. Oh the four-headed one (Brahma, the creator of the visible world)! Even at the beginning of Yoga practice, some hindrances come into play and try to deflect the aspirant from his spiritual path of purity and undisturbed meditation. They are laziness, indolence and lethargy, self praise and deriving pleasure in hearing about

one's own greatness and majesty, talking deceitfully and being cunning, wily, guileful, fraudulent and crafty. Other difficulties that arise pertain to the proper and sanctified way of using the various complicated Mantras that strain the mind and undermine its ability to concentrate on other aspects of spiritual pursuit (30).

31. A sincere, wise, erudite and enlightened spiritual aspirant should forthwith forsake the following as symbols of hindrance that create obstacles in one's spiritual progress and elevation—material objects and things in this world (symbolising money and wealth), women, uncertainties, fickleness and restlessness. They are like the mirage seen in the desert because they appear to be very attractive and charming on their face, but would only lead to his ultimate demotion, degradation and fall from his exalted stature, and nullify any gains that accrue to him due to the positive effects of Yoga (31).

32. Guarding against these pitfalls, the wise and the most exalted spiritual aspirant should sit in the Padma Aasan and practice Pranayam (breath control exercises).

For this purpose he should erect a small thatched hut with a small door and no other openings (such as windows). [This would ensure that he is not disturbed by outside noise and light.] (32).

33. Then it should be smeared and plastered with a paste made from cow dung and made clean and reasonably attractive and conducive to spiritual pursuit and practice of Yoga. As far as possible, it should be cleaned of pests and insects such as bugs, mosquitoes, spiders etc. (33).

34. It should be swept and kept clean on a daily and regular basis. Some pleasant scent or sweet fragrance such as perfumed incense sticks called Dhup and Indian Bedellium called Guggal should be used to keep the atmosphere auspicious, healthy, pleasant and generally conducive to spiritual pursuits and mental peace. This is done by burning them inside the hut (34).

35. The seat on which the practitioner sits for the purpose of meditation should not be too high or too low. For the purpose of making a sitting-mat, one should spread some cloth, hide of a deer or a mat made of soft Kush grass (a sort of dark green reed). He should sit in the Padmasan posture on it (35).

36-37. The body should be kept erect and one should bow reverentially to the chosen deity who is to be worshipped. The thumb of the right hand should be pressed against the Pingla Naadi (i.e. the right nostrils), thereby effectively closing it, and breath should be inhaled through the left nostrils and held inside the body. This is called 'Kumbhak' phase of Pranayam (36).

38-39. After that, the breath should be exhaled gradually and easily through the Pingla Naadi (i.e. through the right nostril by removing the thumb and letting the air escape). [This is exhalation is called Rechak phase of Pranayam.]

Then the air should be inhaled through the Pingla Naadi (i.e. the right nostril instead of the left by closing the latter this time) and withheld inside the abdomen for as long as the ascetic can (during the Kumbhak phase of Pranayam). Then it should be gradually let out (through the left nostril) in a gradual and easy manner during the Rechak phase.

In this way, the air should be inhaled through the nostril by which it was exhaled (then held inside the body for certain time and then exhaled through the nostril of the opposite side) (38-39).

40. The time taken to move the hand gradually around the bent knee in a clockwise manner is called 'one Maatraa'. [The word Maatraa refers to one 'unit' as this will become a standard for the time to be taken in going through the various steps of Pranayam as described in the following verses.] (40).

41-42. To begin with, the air (breath) should be pulled in through the Ida Naadi (the left nostril) in a period of time which is equivalent to sixteen Maatraas. Then it should be withheld within the abdomen during the Kumbhak phase for a time equivalent to sixty four Maatraas (i.e. four times the time taken for inhalation). Finally, it should be exhaled through the Pingla Naadi (the right nostril) in a period of time equivalent to thirty two Maatraas (i.e. two times the time taken for inhalation).

The process should be repeated, but this time through the Pingla Naadi (the right nostril). And then the repetition is done alternatively using once the Ida and then the Pingla (41-42).

43. The entire process is called Kumbhak, and it should be repeated four times a day—morning, noon, evening and midnight. The number of times it is done should be evenly spread over these four periods, and attempt should be made to do eighty Kumbhaks daily. [That is, twenty cycles of inhalation-withholding-exhalation of breath in one sitting. The total would be $20 \times 4 = 80$ cycles during one day.] (43).

44. By practicing the above procedure for three continuous months, the various Naadis are cleansed of their impurities (i.e. they are de-clogged and de-toxified). With this purification of Naadis, relevant signs that indicate that it has been successfully done begin to show in the body of the practitioner (44).

45-46. [What are those signs? This is being answered now.] These signs are the following—the body feels light, the hunger is increased because the energy of the digestive organs is activated, and the body certainly loses its excess flab. At this time, one should avoid or totally forsake the food that can or does create any kind of obstacles in one's practice of Pranayam (45-46).

47-48. [These verses enumerate certain things from which the practitioner of Yoga should be better beware.] Food which has high salt and oil content, which is sour, too hot, very dry, sharp and pungent, green raw vegetables, spices such as asafetida, being near a burning fire to warm oneself (as is usually done during winter seasons), any matter related to women, excessive walking, taking a bath very early in the morning, fasting or any other kind of thing or activity that can cause any undue discomfort to the body should be best avoided.

In the early stages of practice, the best food is milk and clarified butter (called Ghee). [This is because this provides sufficient energy and nutrition to sustain the body.] (47-48).

49. Other staple foods that aid in the practice of Yoga (meditation) are wheat, the kidney bean or black gram, and rice. If practice is regularly done and above

restrictions observed, one is able to acquire sufficient energy and stamina to hold the air (i.e. do Kumbhak) (49).

50. A stage is reached when the ascetic does not feel the need for Rechak or Purak (exhalation or inhalation). This state is called 'Keval Kumbhak', i.e. only holding of the breath. At this stage, Rechak and Purak should be forgotten. [The ascetic becomes so submerged in meditation and contemplation in due course of time that he becomes oblivious of what is happening to his body; whether it needs to exhale or inhale. All physical movements and activities of the body cease, metabolism comes to a virtual halt, and it becomes one like an inactive corpse. The ascetic remains submerged in the ecstasy obtained by self-realisation and deep concentration.] (50).

51. After an exalted ascetic is successful in mastering the art of doing 'Keval Kumbhak', nothing remains impossible for him in the three worlds. [That is, he acquires formidable mystical and super natural powers that enable him to do whatever he wants or successfully accomplish all his wishes in the entire world consisting of the terrestrial, the celestial and nether worlds. Nothing remains beyond his reach.]

Whatever sweat is produced during the practice of Yoga (i.e. Pranayam here) should be rubbed off on the body itself (instead of wiping it with a towel) (51).

52. When the ability to hold the air gradually increases, a stage is reached when the aspirant sitting in meditation has subtle vibrations in his body. The body begins to shiver and shake (like when one has fever) (52).

53-54. As practice progresses, one begins to act like a frog. Just like the frog jumps or hops and comes back to the earth to regain its original sitting posture, the practicing ascetic sitting in a Padmasan posture (i.e. the lotus posture) begins to jump off or hop from the ground. With the progress of practice, he begins to levitate from the ground and literally stays afloat in the air (instead of coming back to the ground)¹ (53-54).

[Note—¹The scientific reason is the vital airs present inside the body get heated up during protracted Kumbhak when they are trapped inside and not allowed to be let out. Heated air is lighter than ordinary air as is evident in the case of hot-air balloons. So the body, full of this heated air, begins to lift up from the ground. In the beginning it hops because the heating is not up to the mark, but when the air is sufficiently heated the lifting becomes permanent.]

55. An ascetic (Yogi) sitting in Padmasan posture who has sufficiently reached the state of control of the vital winds during the Kumbhak phase is able to remain lifted or levitated from the ground for a given length of time.

In this state he attempts and is also able to do other super human deeds and perform super human activities (55).

56. An erudite and wise ascetic is one who does not show off his mystical and super natural or super human capabilities and prowess. Instead of it, he should employ them to encourage and inspire himself to do better and rise higher in his spiritual stature. This would give him courage and moral strength to overcome small or big problems, and they would not be able to inflict any pain or misery of any kind upon him (56).

[Note—In this context, refer verse nos. 76-79 of the present Yogtattva Upanishad, as well as Canto 1, verse no. 160 of the Yogshikha Upanishad which is Chapter 21 of this volume.]

57-58. The ascetic's urine and stool output as well as his sleep or the feeling of drowsiness reduces to a bare minimum. [Since he has eaten and drunk precious little, it is but natural that the urine and stool would be reduced. Light meals and regular practice of Yoga exercises keep the body fit and trimmed, and since his stomach remains almost empty, his sleep and the sense of lethargy and sleepiness also reduces proportionately.]

He is freed from such bodily filth and discharges as muck (i.e. faecal matters, vomit, pus from festering wounds etc.), nasal discharges and mucus as witnessed during coryza (cough and cold), saliva that is in excess and needs to be spit out, excessive sweating, foul smell from the mouth etc.

By constant and diligent practice and gradual enhancement of his mystical powers, the ascetic is able to harness greater spiritual and physical energy, strength and stamina to attain great powers and authority (57-58).

59-60. In this way, the ascetic is able to obtain expertise in mastering mystical powers that are available but difficult to access in this world by ordinary mortal creatures. The result is that, with these divine and mystical powers and authorities, he is able to exercise control over all the living beings (called 'Bhu-chars') who move on the surface of this earth (such as other humans, animals, birds, insects, worms etc.).

Even such wild animals as tigers, 'Sharabhas' (i.e. the monkeys, deer, camels and birds and other such animals of these species), elephants, the white-footed antelope or blue bucks, lions etc.—every one of them can die by simply being hit by him. [These animals are very strong, cruel and ferocious. It is difficult to even come near them, impossible to face them single handedly and unarmed, to subdue them, and absolutely unimaginable to hit them with bare hands hard enough to kill them. But the ascetic acquires such stupendous powers that this almost impossible and super human task is actually possible for him; he can actually kill them by striking them with his unarmed and bare hands.]

The physical features of that ascetic become as attractive and charming as Kamdeo-cupid (who is considered as the most beautiful and handsome, most charming and passion-arousing God of lust, love and passion) (59-60).

61. He becomes so attractive and beautiful to look at that numerous women wish and become eager to have contact with him, enjoy his company and have a desire to establish relationship with him. But if any ascetic fulfills their wishes and has conjugal relationship with them, his sperms (symbolising his spiritual energy, strength, vitality and achievements) would be destroyed. [In other words, the ascetic is advised to avoid the company of woman at all costs.] (61).

62. So, he must not think of or fantasize about woman at all, and instead remain steady and diligent in his practice of Yoga. When he is able to retain his sperms (symbolising his maintenance of chastity and celibacy which preserves his vital energy and stamina), a sweet fragrance begins to emanate from his body (62).

63. After that, the wise ascetic should sit in a calm and lonely place and do Japa of the Mantra for Pranav complete with its three Maatraas (syllables or sounds). [This Mantra is OM and the three Maatraas are A, U and M, the three letters that constitute the basic sounds of OM.] This helps in destroying the sins of past lives (63).

[Note—In this context, refer to Tejobindu Upanishad, Canto 1, verse no. 6; Dhyan Bindu Upanishad, verse nos. 9-17 and Brahm Vidya Upanishad, verse nos. 4-8 of the

Krishna Yajur Veda tradition, as well as Yogchudamani Upanishad, verse no. 74-79 and Jabal Darshan Upanishad, Canto 6, verse no. 3-10 of the Sam Veda tradition which elucidate upon the concept of OM in relation with Yoga.]

64. This Mantra of Pranav (i.e. the Mantra OM of the supreme Brahm known as Pranav) is potent and powerful enough to remove all types of hurdles and obstacles that come in the way of one's spiritual progress, as well as all the numerous faults, weaknesses, imperfections, blemishes or shortcomings that affect the character of the ordinary Jiva (living being, the creature), causing it to be blighted and preventing his pure and uncorrupt self, the Atma, from retaining its primarily untainted, pristine pure and immaculate nature and form. [Refer verse nos. 12-13 in this context.]

By practicing it regularly one can acquire all types of mystical powers, called Siddhis, in a gradual manner. These super human powers become accessible to him and come under his command (64).

65-66. After this (i.e. after practicing doing Japa with the help of OM Mantra so that the various faculties of the body become properly tuned and acclimatized to achieve success in meditation involving more rigorous exercises), the aspirant should practice holding the vital winds or airs inside his body (i.e. he should practice doing Pranayam). In other words, the phase of 'Ghata' (literally to become like a pitcher full of air; the Kumbhak phase of Pranayam) becomes easy for him.

During this phase of Ghata (Kumbhak phase), a mixing takes place and a uniform homogeneity is established between the following—Pran (the vital air or wind in the upper part of the body; the breath), Apaana (the vital air or wind in the intestines and lower part of the body and responsible for digestion and excretion), Mana (mind), Buddhi (intellect), Jiva (literally the living creature, but for all practical purposes the Atma or pure consciousness of that creature because the Atma is its true identity), and the Parmatma (the supreme Soul; the Supreme Being; the cosmic soul). In other words, all dichotomy and apparent differences and distinctions between these units of creation are removed, they begin to work in concert, and an uniformity and sameness is established which eliminates the concept of duality by creating homogeneity and oneness in all the various units as mentioned above. That is, 'non-duality' is brought to the fore by removing all sense of duality¹.

The eclectic signs of this higher state of Yoga are being enumerated in the forthcoming verses (65-66).

[Note—¹To understand this phenomenon we can take a simple illustration. Suppose we have five types of water soluble salts, or any other chemical or thing for that matter. When they are put in a pitcher full of water and stirred, all the differences between them are permanently removed and the resultant liquid is a homogeneous mixer of all the five ingredients. It would be impossible to differentiate one ingredient from the other, and equally impossible to separate them now. The water would acquire a unique character and quality which would be very different when the ingredients were not mixed in it. Likewise, these units of creation, such as Pran, Apaana, Mana, Buddhi, Atma and Parmatma, have their independent existence only till the time a man does not practice Yoga. Once he does and acquires reasonable success in it, the mixing takes place and all differences vanish. The resultant 'self' and the personality of the person would undergo a drastic change and it would be absolutely different from what he was known to be prior to the practicing of Yoga.

Whereas previously these units worked independently, thereby creating a vexing situation for the practitioner because of the tug and push of these units in various directions, but now they work in tandem, creating a harmonious environment for him. So, while previously he was like an unorganized man who feels at sea, now he is well

organized and well choreographed. There would be a complete overhaul and transformation in his personality and behaviour.]

67. The ascetic should now practice for a quarter of the time that he used to practice earlier. [In other words, once the required result is obtained, once the spiritual aim of doing Yoga is achieved, which in the present case is attaining success in bringing about a union between the basic units in the body of the ascetic such as his two vital winds, Pran and Apaana, the two components of the brain, the mind and the intellect, and his individual soul with the cosmic Soul, what is now needed is to keep it up and not allow this great and rare achievement to gradually wither or dissipate away. Regular practice ensures that the gains of Yoga are sustained and made stable. But the earlier rigorous discipline is now no longer needed; only maintenance is required. Regular practice keeps the body attuned and under control; the gains of Yoga are not lost and forgotten.]

One should practice Pranayam for only one Prahar (i.e. roughly for a period of three hours) at a time, whether it is the day or night. [Pranayam is to be done twice daily—once in the morning and once in the evening. The one done in the morning precedes various Aasans, while the one done during the evening follows the Aasans. The maximum time limit for one session is ‘one Prahar’—i.e. approximately three hours. It should not exceed this time, nor should it be hurried through. Refer Brahm Vidya Upanishad, verse no. 55.] (67).

68-69. The process of Kumbhak (holding of the inhaled air inside the body) should be practiced only once a day. While doing this, he should diligently pull or withdraw all his sense organs from their respective objects, and rein them in. This is called ‘Pratyahar’. Whatever is seen by the eyes at that time should be treated as nothing but the Atma or pure consciousness (68-69).

70. Whatever is heard by the ears and smelled through the nose should be accepted in their purest form and essence as a manifestation of the eclectic virtues of the Atma (70).

[Note—A wise and enlightened man should perceive the world and its sensory inputs from the spiritual perspective. He should marvel at the wondrous ability of the hidden ‘consciousness’ that enables lifeless entities such as the flower to have such astounding beauty and emit such sweet enchanting fragrances that keep one enthralled. Similarly, the gross body which smells the sweet fragrance and sees the beauty of the flower is also empowered to do so by the same ‘consciousness’. It’s such a wonderful spectacle as far as the enlightened aspirant is concerned. He is left awestruck at this miracle of creation.]

71. What is tasted by him by the tongue should also be treated as one of the many forms of the Atma. What is touched and felt by the skin should similarly be treated as the Atma (71).

[Note—In short, everything encountered by the enlightened man is perceived by him from a spiritual standpoint and not with the intention of deriving sensual pleasure or bodily comfort from them. Things in this world are to be viewed from the subtle angle and not from the gross perspective. For instance, when such a man eats anything, he marvels at the hidden ability of the ‘cooked’ food that has been subjected to immense battering during the process of cooking to sustain something called ‘life’ in his body which he is not able to see with his gross organ of sight called the eye, but is nevertheless experienced as being nourished and rejuvenated with this food. Even the treatment with the fire during the course of cooking couldn’t kill the

‘life sustaining’ properties of the food. That is, the vital spark of life that was present in this food in its raw form, the spark that is universally known as the ‘Atma’ of anything, could not be destroyed in this food even by subjecting it to the harsh process of cooking. It is such a miracle of life indeed that high temperatures of the fire used during the process of cooking could not eliminate the Atma from the food!

Similarly, such a wise man marvels at the ability of the Atma to enable the gross covering of the body’s skin to feel things with which it comes into touch, or the bundle of muscular fibers called the tongue to differentiate between various fine tastes even though this tongue does not feel or see the chemicals that produce these sensations.

Therefore, the wise spiritual aspirant changes his view of the material world and looks everything from a spiritual perspective. He picks up the sublime goodness and auspicious values from the material world around him while discarding the trash and the gross.

In the context of practicing Yoga, the ascetic should endeavour to remove all distinctions between any two units of the creation. Instead, he should automatically, without any prodding and cajoling, treat them as the non-dual Atma appearing in all these varied forms. In other words, the sight seen by the eye, the smell smelt by the nose, the sound heard by the ears, the taste tasted by the tongue etc. are to be treated as one of the other aspects or attributes of the pure conscious Atma. A sense of all-prevailing non-duality is established; all notions of separateness, distinction, dichotomy and difference are done away with. A universal uniformity of oneness is established. This is exactly the purpose of Yoga—to establish a union between the disjointed units of creation to create the one indivisible and immutable supreme entity that is the ultimate Truth, but which has been veiled by Maya resulting in so much delusions, consternations and perplexities.]

72. Similarly, the ascetic should transfer the activities of all the organs of action in his own inner self, and make the Atma as their object. [In other words, all his external organs of action such as the hand, leg, mouth, excretory and genital stop behaving and functioning like they are normally understood to be doing in an ordinary man. For example, he passes less urine and stool; he is not sexually aroused; he does not speak unnecessarily, so the mouth is used minimally; he remains calm and unmoving during the practice of Yoga, therefore the hands and legs also remain unmoving. Yet the Atma is very active; it is very agile and actively engaged in doing meditation; in deriving pleasure and ecstasy of self-realisation. Even when he is not doing active Yoga but involved in daily chores of the mundane life, his mind is focused in his own inner self and the Atma resident in it rather than in the external world and the functioning of the organs of action. This would also mean that he would remain oblivious of what his organs of action are doing; he wouldn’t know where the legs are taking him, what the hand is doing, what the mouth is speaking, what passes down the anus and kidneys etc. In other words, he is completely ‘lost case’ as far as this world of nice behaviour and rationality is concerned. This is the state of dissolution of the ‘Chitta’ or the mind and the sub-conscious. See also verse no. 23 which deals with this concept in detail.]

He should practice this process (of controlling his organs of action) regularly for a period of one Prahar (roughly three hours). [This is because he should be completely calm and undisturbed during the process of Pranayam. He should not allow his organs to be restless and fidgety in the least.] (72).

73-75. By regular practice of this Yoga, the ascetic’s ‘Chitta Shakti’, i.e. the transcendental powers of his mind and sub-conscious, are gradually aroused and

activated. This empowers him to gradually acquire divine and mystical powers which are magical, super human and astounding in nature. Such as for example, he can hear subtle and soft sounds from a great distance (i.e. he can hear things which are not normally heard; he becomes all-knowing); he can see things from a great distance, he can see through secrets and have a deep insight into the realm of the unknown (and therefore nothing remains hidden from him); he can arrive at a place from far away in a moment (i.e. he appears to be omnipresent); whatever he speaks become true; he can assume whatever form or shape he wishes at a short notice; he can become invisible; even iron can turn into gold by the touch of his urine and stool; he can move through the sky (like a bird or a God). Such mystical and super human powers begin to make their appearance in him; he begins to exhibit them in a gradual manner.

But he must be wary of getting deluded by this stupendous authority and super natural powers; he must not be swept off his feet by their accompanying pomp, pageantry, majesty, glamour, honours, praises, acclaim and fame. On the other hand, a wise and enlightened ascetic should remain focused on the spiritual aim and purpose of doing Yoga (rather than being carried away by the worldly fame and glory which are attendant to such attainment of mystical powers) (73-75).

76. All these Siddhis (mystical and super natural powers described in verse nos. 73-75) are impediments in one's spiritual pursuit and against the principal use for which Yoga is meant¹. Therefore, one should never disclose one's mystical abilities to others (because if he does so, it is bound to have a ricocheting effect, and it is unavoidable that boon-seekers would come in hordes to throng him from all sides. These people are selfish; they want to overcome their worldly problems by his intervention. But this would be at the cost of his own demotion and fall from his spiritual progress and high stature) (76).

[Note—¹The main purpose of Yoga is to bring about a union between the individual soul and the supreme Soul of creation; to ignite self-awareness in the practitioner; to bring about a harmony between the various subtle units of creation so that the creature's life becomes more productive and peaceful. If the gains of Yoga are diverted to worldly popularity and fame, to show off one's magical powers and gather a large crowd of boon-seekers, then the very first tenet of living in a serene and secluded place (a thatched hut with no opening except the doorway—see verse no. 32) would be violated. Adulation and being surrounded by a horde of worldly admirers and those seeking his intercession for solving their worldly problems is not the way a spiritual person would naturally like to live. These people are selfish and they come running to him for their own personal benefit, and not because they have any genuine honour and the wish for his welfare in their mind. See verse no. 78 below. This would disturb his calmness of mind and spirit, and cause avoidable nuisance. Being a human being after all, it would naturally affect him in the short or long run, thereby bringing to a naught all his spiritual gains.

In this context, refer verse nos. 56, 77-79 of the present Yogtattva Upanishad, as well as Canto 1, verse no. 160 of the Yogshikha Upanishad which is Chapter 21 of this volume.]

77. That is why, a wise and erudite ascetic should pretend to be like a fool, an ignorant person, or like a deaf. He should hide all his divine achievements and conceal every mystical power that he possesses in order to avoid publicity; he should remain unknown and all his achievements and powers should be undisclosed top secret (77).

78. The group of disciples would naturally and obviously keep him surrounded and plead with him for their selfish interests, requesting his intervention in the mundane affairs of life and for solving their own problems. But the wise ascetic is he who does not allow himself to become entangled in such mundane issues; he does not fall in the trap of getting engrossed or involved in their worldly problems and mundane concerns. On the contrary, he remains aloof and continues with his spiritual pursuit single-mindedly, unwaveringly and with an indifferent attitude towards everyone and everything else. He should not forget his main objective of doing Yoga (which is self-realisation, reaching the ultimate Truth, obtaining freedom from the fetters of ignorance that has tied him to this world of birth and death, and consequentially finding liberation and emancipation for his soul by merging it or uniting it with the supreme Soul of creation) (78).

79. That wise and sincere ascetic should concentrate what his teacher (who himself should be self-realised and a wise man of the highest order) has advised him, and shun all other types of activities and mundane affairs of the world. He should concentrate his attention and energy on doing and achieving success in Yoga (79).

80. In this way, by constant and diligent practice of Yoga, he is able to attain success in easily accomplishing the state of *Ghata*¹. This type of heightened state of Yogic accomplishment is only possible by regular and diligent practice. Mere talking and giving lectures is of no consequence; nothing can be achieved by it (80).

[Note—¹The word *Ghata* has been described in verse nos. 65-66. Basically it refers to the Kumbhak phase of Yoga (Pranayam). Such an ascetic is able to bring about a union between his own self and the Supreme Being of the creation. He not only understands the truth about himself but also about the whole creation because fundamentally all the creatures are moulded from the same mould and have the same basic truth identifying them. If this 'truth' or 'essence' in the form of the pure consciousness or Atma is removed, the whole world becomes one big huge mirage which has no substance and truth in it.

There is another connotation to this term *Ghata* in the context of the present verse. Here it is stressed that he should withdraw himself from the mundane affairs of the world, not even getting too involved with his disciples, and remain cocooned in his inner self, symbolised by the thatched hut with no opening. The pitcher with a lid to cover its mouth tight is the most appropriate metaphor in this case. The inside of the *Ghata* or pitcher is like the inside of the thatched hut or the inner self of the ascetic. When he literally shuts himself in it, when he remains submerged in contemplation and meditation, thinking of nothing but his own pure consciousness residing in his bosom, shunning any contact with the outside world and remaining aloof from it and behaving like an ignorant fool or a man hard of hearing (see verse no. 77), he is said to have obtained a 'Ghata state of existence'. It is a metaphoric way of saying that he has cocooned himself in his inner self.

It will be seen that if we put anything inside a closed pitcher and immerse the pitcher in water, its contents remain dry and unaffected. That is exactly what is meant here. Even though such an enlightened ascetic lives in this world and goes about his daily chores in a routine manner, he is not at all affected by anything related with the world.]

81-82. Therefore, an ascetic should concentrate on his main objective of life and regularly practice Yoga with due diligence and sincerity.

Now, the third step in the knowledge of Yoga is being narrated. It is called 'Parichaya' or introduction. [In other words, after having outlined the necessary

guards against the pitfalls that the aspirant may encounter in his meditation and spiritual practices, briefing him about what Yoga basically is, and how he should prepare himself for it, besides giving him a brief idea of its benefits and main objectives, now he is being introduced to the actual exercises of Yoga.]

Attempt is made to ignite the latent and hidden subtle energy hitherto trapped inside the Kundalini (the coiled subtle energy center at the bottom of the spine) by stoking it with the heated vital airs (which have been previously heated and mixed by doing Pranayam as outlined in the earlier verses) and concentrating it on this Kundalini.

The activated energy of the Kundalini should be eased into the Shushumna Naadi by unclogging its lower end and diverting or channelising the energy into it. [The Shushumna Naadi is a tubular duct that runs through the center of the spinal cord from the mouth of the Kundalini right up to the head.] (81-82).

83-84. Then the vital winds should be allowed to sneak inside the Shushumna Naadi (following its unclogging at its mouth at the Kundalini). This creates a thrilling and titillating sensation along this nerve. The mind should be focused on this process and follow it. The path of this Naadi is called the 'Maha Path', literally the grand avenue or highway. [This is because it is the grand 'royal avenue' or the highway of spiritualism that leads the ascetic to obtaining extreme bliss, ecstasy and self-realisation.]

An ascetic whose mind has virtually entered this Sushumna Naadi along with the vital winds (i.e. whose mind is concentrated on the eclectic, divine and mystical experience that is witnessed when the vital airs sneak up this nerve) is able to discern the distinctive forms of the five elements called the Panch Maha Bhuts and witness their personified forms in the shape of their patron deities or Gods called Panch Maha Devas. [The five elements are earth, water, fire, air and sky. The human body is made up of these five elements. Under normal circumstances their presence is not discernible because the body is a complex of all of them. But even as an expert chemist can immediately visualise what colour and form the ingredients of a given compound had in their individual forms before they combined to form the present chemical compound, the wise ascetic is able to visualise or perceive the subtle differences between the five elements that constitute the body. The five principal deities called the 'Panch Maha Devas' are enumerated in the following verses.] (83-84).

85. The earth element is present as a dominant force from the foot to the knees. This earth has four directions, has a subtle yellow colour, and its seed Mantra is the Sanskrit letter (Varna) 'La' (as in 'love'). [There is another connotation of this last part of the verse. The earth is said to contain large and infinite deposits of 'salts' as ores etc. The ocean is also salty. The last word of this verse, i.e. 'Lavarna', indicates this fact.] (85).

86. This is the place where the patron God of earth known as Brahma, the four armed and four headed¹ creator of creation, has his symbolic presence. [In other words, the earth is represented by the creator Brahma. This is because the entire living world as we know it is present here on earth and no other planet. The earth is the only known inhabited part of the entire creation where creatures having life and consciousness in them—right from the one-celled amoeba up to the most complex and intelligently developed ones like the humans—live.]

In order to witness his presence and have his (Brahma's) subtle vision, the ascetic should inject and cover the earth element along with its seed Mantra 'La' with the vital winds or airs so that they are blended and a harmony is established between them. This results in the revelation of Brahma with the above features and with the complexion of gold (86).

[Note—¹There is a lot of symbolism in Hinduism, and if it is not properly understood in the correct context, a lot of hilarious, absurd and ridiculous situations arise, such as this Brahma with 'four arms and four heads'. From a rational perspective, this is absolute rubbish. But if one were to understand the underlying symbolism and philosophy, things assume a rational meaning. The four heads of Brahma stand for the four Vedas he created or pronounced. These Vedas are the repositories of all knowledge that exist in this creation, and they are the Rig, Sam, Yajur and Atharva. The four arms stand for the four directions of the globe—the north, west, south and east. Since he is the creator of the visible creation, he is expected to take care of the entire earth because it is on earth that all living creatures created by him would live.

Therefore, his four arms are symbolic of his duty and ability of taking care of all the four corners of this living world, and the four Vedas indicate his all-encompassing and all-inclusive knowledge, wisdom and erudition that empower and enable him to do so.

The colour of gold indicates the colour of richness, prosperity and fertility. The egg's yolk is also yellow because it harbours life and is rich with all essential nutrients needed by the nascent creation in its miniature form as the embryo.]

87. By concentrating one's attention and doing meditation for a period of five Ghatis (two hours) in the above described manner, an ascetic is able to conquer or subdue the earth element; he becomes the Lord of this element. Such an ascetic never dies due to some kind of shortcoming, fault, weakness or imperfection of the earth element in the body, or any injury caused by it to the body (87).

88. The water element has a predominant presence in the region from the knee to the anus. It is symbolically shaped like a half-moon, and its seed Mantra is 'Vam' (as in 'vulgar + sum') (88).

89-90. This is the place of symbolic residence of the patron God of water known as Sri Narayan (Lord Vishnu), the four armed, exalted and high Lord who has a crown over his head¹ (indicative of his position as the Lord and emperor of the entire living world), who is pure as crystal (because he is untainted, without any blemish and cannot be demoted from his exalted stature in spite of the fact that he has to look after the routine chores of taking care of the mundane affairs of the multifaceted world ridden with corruption and blemishes of all imaginable types, being its sustainer, nourisher and protector), and who is wearing a yellow coloured cloth (symbolic of his ability to sustain, nourish and protect the world as its emperor).

In order to witness his presence and have his subtle vision, the ascetic should inject and cover the water element along with its seed Mantra 'Vam' with the vital winds or airs so that they are blended and a harmony is established between them. This results in the revelation of Narayan with the above features in his inner self. He should focus his attention and mind on this vision for a period of five Ghantis (two hours). This helps him in getting rid of all sins and their evil consequences (89-90).

[Note—¹Lord Vishnu is the sustainer, nourisher and protector of all creatures. His four arms are indicative of this unique ability of his. Now, let us see what are those four units of creation which he is supposed to look after.

There are four types of creatures—viz. (i) ‘Andaj’ (those born from an egg, e.g. birds; (ii) ‘Swadej’ (those born from sweat and dampness, e.g. bacteria, fungi and lice; (iii) ‘Udbhij’ (those born from seeds, e.g. plants; and (iv) ‘Jaraayuj’ (those born from an embryo inside the womb, e.g. a man).

Then we have four classes of people in the society, called the four Varanas, and each has four phases, called the four Ashrams. The Hindu society has been divided into four sections or classes by ancient sages to regulate its functioning by delegation of authority and clearly specifying the jobs each section is supposed to do to maintain order and system in the world, to prevent overlapping of functions and avoid anarchy and chaos. These four sections are— (a) Brahmins—the learned and teaching class; a wise one well-versed in the knowledge of the ultimate Truth about the supernatural Being called Brahm. They also presided over religious functions as priests, because these functions were central to life in the Vedic period; (b) Kshatriyas—they were the warrior, fighting, kingly class. They were assigned the job of giving protection to the society, dispensing justice and maintaining general law and order. (c) Vaishyas—they were the trading and farming class responsible for commerce and wealth generation. They provided for the necessities for a comfortable life. And finally (d) the Shudras—the service class of people whose main function was to free the other three classes from the humdrums of daily chores and concentrate their energies to the particular jobs assigned to those classes to which they belonged.

Finally, the four Ashrams are the following—(a) Brahmacharya—this is the 1st phase of life in which a person studies the scriptures under the tutelage of a wise teacher. This phase of life is marked by austerities, keeping of vows, observing celibacy, abstinence and continence as well as leading a regimental life style of a boarding school. (b) Grihastha—when a person has studied and prepared himself to face the world, he comes back to his house and enters the 2nd phase called Grihastha Ashram which is a householder’s life. He marries, raises a family, produces wealth and helps to carry forward the cycle of creation. This is the most important and enjoyable phase as well as the most tough one because on the one hand there are the comforts and pleasure of the world to be enjoyed, and on the other hand there are the various tribulations and miseries of a family life alongside the dealings with this deceptive world with all its accompanying horrifying problems. (c) Vanprastha—this is the 3rd phase when a man hands over the responsibilities of the world to his heirs and renounces his attachments to the house as well as the world, and heads for the forest, leaving the home for his next generation. It is now that he goes on pilgrimage and prepares for the final stage of his life, and (d) Sanyas—this is the 4th and last stage of life when there is complete cutting-off of all the ties with the world, spending time in contemplation and meditation, living a life of total renunciation, and begging for food for survival while single mindedly endeavouring for emancipation and salvation. This phase of Sanyas also has many stages depending upon the spiritual elevation and accomplishments of the aspirant, viz. Kutichak, Bahudak, Hansa, Paramhans, Turiyatit and Avadhut.

These four Ashrams, their characteristic features and virtues are described in detail in an Upanishad called ‘Ashramo-panishad’ belonging to the Atharva Veda tradition.

Thus we see that the four arms of Vishnu are indicative of his unique ability to protect the entire world of living creatures.]

91. After that, the ascetic need not fear from the water element in anyway, and neither would he die due to it (such as by drowning or by dehydration or thirst).

The fire element has its dominant presence from the anus to the heart region. [That is why all digestion of food and all the major internal organs that are responsible for the upkeep of the body and to continue the cycle of creation and

prevent its extinguishing, such as the intestines, kidneys, the reproductive organs, the pancreas etc. are located in this region. It is here that the Kundalini is also located at the base of the spine. Without the presence of the heat in the lower part of the body, the vital airs cannot be heated and empowered to lift the body of an ascetic as has been described in verse no. 53-55 above. In practical life also we observe that the fire is always present at the lower end of the oven and not on its top.] (91).

92. The fire element has three corners (i.e. it is shaped symbolically like a triangle), has a red colour and the Sanskrit letter 'Ra' (as in 'run') as its seed or root Mantra. This fire should be stoked and ignited by injecting the air or wind element into it. [This is a common day phenomenon that the fire needs air to remain burning.] (92).

93. This is the symbolic abode of Lord Rudra or Shiva. [That is, he symbolises the fire element.] One should meditate upon this Lord who has three eyes¹, who is the one renowned for granting boons (to his followers and devotees, and in the presence case to the ascetic), who is as splendid, illuminated and radiant as a sun which has just risen, and who has the ash of the fire sacrifice smeared all over his body (just like an ascetic, indicating that he is their great icon and patron deity of ascetics) (93).

[Note—¹As in the case of Brahma and Vishnu, the symbolism of Shiva having three eyes, which on the face of it appears to be an anomaly, is the following—his two eyes are the conventional eyes, and his third symbolises his deep insight and great wisdom and enlightenment. Shiva personifies the fire element which also has a symbolic significance. The fire is known to burn all impurities present in gold when it is put into it, thereby purifying the metal. Similarly, fire is used in blast furnaces to extract iron from its ore. Fire has the inherent ability to reduce to ashes all filth and garbage, which is a metaphoric way of saying that a person who has worshipped this element in the form of Shiva is supposed to have burnt all his faults, blemishes and shortcomings that taint his character and soul, thereby purifying his inner self. The ash is indicative of total renunciation and detachment from the world of materialism, because it is indicative of a renunciate way of life and symbolically stands for burning of everything into the fire pit. That is why Lord Shiva has been called the patron God of ascetics, hermits and Sanyasis who worship the fire element only.

Besides these points, Shiva is the God assigned the task of concluding the world which necessitates his being closely associated with the 'fire element' in the sense that he must be as unrelenting, merciless, powerful and ferocious as the latter in order to conclude this creation inspite of all the odds. He must reduce everything to ashes just like the fire does. And it is from this ash that the new creation would emerge in due course. Herein lie the magic of creation and its chief Lord, Brahm, the Supreme Being—the fact that a new creation rises from ashes!]

94. By meditating this way on the fire element and Lord Shiva for a period of five Ghatis (two hours), the ascetic cannot be tormented by the fire element so much so that it cannot burn or scorch him even if he is made to enter a fiercely burning fire (94).

95. The next vital primary element is the air element and it is primarily located in the body between the heart and the middle of the eyebrows in the forehead. It has a symbolic shape of a hexagon, is dark hued, and its seed or root Mantra is the Sanskrit letter 'Ya' (as in 'yearn'). The apex of this hexagon is at the point in the forehead where the two eyebrows meet, and where the third eye of wisdom is said to be located. That is why it is said to possess the quality of 'Bhaasvar', i.e. to be as bright as the sun during the day time (95).

[Note—In practical terms also, the primary wind that sustains life inside the otherwise dead and inane body is the breath that is inhaled thorough the nose and diverted to the lungs. Both these organs are located in the body in the region between the heart and the mid point of the eyebrows. If we join these organs, i.e. if a line is drawn linking the two lobes of the lungs, the triangular heart, the two shoulders and the root of the nose which has two openings, we will come with a rough shape of a hexagon. The lower-end point would be roughly the lower end of the sternum (i.e. the mid point between the heart and the lungs, the middle of the body where the ribs meet and the heart is felt to throb), and the other end is the root of the nose between the two eyebrows. Since the lower end is embedded in the abdomen, it is said to be ‘dark or Krishna’ in hue, while the upper end is said to be ‘Bhaasvar’ or like the sun because it is the location of the two eyes as well as the third eye of wisdom.]

96. The vital air or wind element is located in the body in the designated place marked by the letter ‘Ya’ of the Sanskrit language (as described in verse no. 95). The ascetic should always remember the all-knowing, omniscient and all-pervading Lord of all creation, known as Ishwar, in this region. This Lord is called ‘Vishwatomukham’, literally the face of the entire world¹ (96).

[Note—The Ishwar is called the ‘face of the world’ obviously because when we see anyone, we first see his face and the person is recognised by his face. Since the entire creation is the visible manifestation of the supreme Brahm, it is the visible face of Brahm or Ishwar. This Ishwar is also the all-pervading supreme Brahm in the form of the conscious Atma which resides in the individual creature as his true ‘self’, as well as in the form of the universal Spirit that is indistinguishable from the air or wind element which pervades throughout the world. Even as the air element is uniformly and universally present everywhere in this creation, this ‘spirit’ is therefore also present in equal measure everywhere. This spirit in the form of the air element is Ishwar or Lord of the world in the sense that no life is possible without it on this earth.]

97. If the ascetic meditates upon the supreme Lord called Vishwatomukh for a continuous period of five Ghatis (two hours), he can travel or move about in the sky just like the wind or air element. [In other words, he becomes as light as the air or wind element.] He has no fear from this element anymore and he never dies due to this element. [In other words, he never suffers from any disease related to the air or wind in the body such as from asthma, flatulence, improper movement of bowels, digestion, distribution of nutrients and blood inside the body, and all other functions that are governed by one or the other vital winds inside the body. He has not to suffer from suffocation and the fear from falling from a high place and dieing because in that case he would float in the air. Storms and other fierce forms of the wind cannot harm him also.] (97).

98. The sky element is located between the point midway of the two eyebrows and the top of the head. It is shaped like the sky (i.e. featureless, measureless and like an inverted parabolic transparent dish or bowl), is of the colour of smoke, and its seed or root Mantra is the Sanskrit letter ‘Ha’ (as in ‘hut’). It is illuminated with a diffused light like the sky is during the daytime (98).

99. The ascetic should inject the air or wind element into this sky element, and fill it with it, visualizing that Lord Shankar (Shiva) is present here, seated on the letter ‘Ha’¹. This Lord is a personification of the great Lord of all the Gods, and hence also known as Mahadeva², literally the great God. This Mahadeva is like a dot or point³ on

the one hand, and like the vast, endless, featureless and infinite sky⁴ on the other hand. In the latter form he is known as Sada Shiva⁵, i.e. the eternal and ever-present Lord Shiva (99).

[Note—¹There is a lot of brilliant symbolism here. The letter 'Ha' is the first letter of the word 'Hans', meaning the divine swan. This bird is said to be very clean and wise, and therefore is the vehicle of the goddess of learning and wisdom, goddess Saraswati. By saying that the patron Lord of the sky element sits on this letter 'Ha', it is meant that this Lord is wisdom, erudition, learning and knowledge personified, he has full command over them. Hence he is the supreme Brahm.

²By this logic, Shankar is another name of Brahm. Since Brahm is the one from whom the entire creation has emerged, he is the greatest of all the Gods and their Lord, hence he is called Mahadeva. Thus, Mahadeva and Shankar become interchangeable and synonymous.

³The origin of the creation was due to a vibration in the cosmic primordial gel much like ripples on the surface of a calm lake. This generated waves and these waves created energy to power the initial phases of the process of creation. But the vibration must have started from one single point. This is the 'dot' referred in this verse. It also refers to the fact that everything in existence has its origin from one 'point' source known as Brahm. The concept of Bindu and 'dot' have been explained in Dhyani Bindu Upanishad, verse nos. 2, 37, 39-40, and Tejobindu Upanishad, Canto 1, verse nos. 1, 5 of Krishna Yajur Veda tradition.

⁴Now, this Brahm is not limited to one single point, but it spread as far and wide as the vast sky could spread. It was diffused in the sky like smoke, and that is why the colour of the sky element is symbolically depicted to be like that of the smoke.

⁵'Shiva' means someone who is auspicious, truthful and beautiful, and 'Sada' means one who is always the same, is constant, perpetual, consistent, ever-present, uniform and universal. All these qualities are present in the supreme Brahm. That is why the latter is called Sada Shiva.

So in a nutshell, Shankar and Shiva is the same great God who is the Lord of all the Gods as well as of the rest of the creation, i.e. the supreme transcendental Brahm, the Supreme Being, personified, besides possessing all the qualities of wisdom, erudition, sagacity, knowledge, expertise, various skills etc. personified by goddess Saraswati riding on the Hans. The concept of 'Hans' has been elaborately explained in a number of Upanishads, viz. (a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyani Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, and Canto 6, verse no. 20, 52-54. (b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 82-83.]

100. This Lord Shiva is most holy, divine, pure and immaculate, and as clear and clean as pure crystal. He has a crescent moon tucked in the lock of hairs on his head. He has five mouths, is very sober, gentle and pleasant, and has ten arms and three eyes (100).

[Note—Since Lord Shiva is the patron God of Yogis or those ascetics who do Yoga, especially those who practice its exercises and rituals as propounded by Patanjali, and this Upanishad deals with Yoga, the supreme transcendental Supreme Being known as Brahm of metaphysics and Upanishad is personified here in him.

Lord Shiva has been depicted in the Purans as having a *crescent moon* on his forehead. The moon is said to have sixteen Kalaas or phases, symbolising the sixteen Kalaas or aspects out of the total of sixty four Kalaas of the supreme Brahm. These sixteen Kalaas represent the visible world which is one fourth part of the entire

creation consisting of the remaining of the Kalaas of Brahm. The visible world is called 'one Pada' or one leg or one aspect or Kalaa of Brahm. So, Shiva is the Lord who presides over the entire visible part of creation, and this world is his ornamentation in the sense that the Lord appears to be so beautiful if we consider the beauty of Nature as the astounding beauty and the expert craftsmanship of Shiva on display.

The *five heads* of Shiva stand for the 'Panch Vyom' or the five forms that the sky element is said to have. According to Vedanta, the concept of the sky or 'Akash' has many connotations. According to one interpretation, there are *five* subtle skies representing the space surrounding the five sheaths or *Koshas* present in the body of a creature. They are the sheaths that surround the Atma and are called 'Panch Akash'. These are the following—(1) the Food Sheath called Anna Maye Kosh; (2) the Vital Air Sheath called Pran Maye Kosh; (3) the Mental Sheath called Manomaye Kosh; (4) the Intellectual Sheath called Vigyan Maye Kosh; and (5) the Bliss Sheath called Anand Maye Kosh. Ref.-- Mudgal Upanishad, 4/5 of the Rig Veda.

The *ten arms* of Shiva stand for the ten forms of the subtle sky element. They are the following—(1) Ghatakash—the space inside a hollow pot; (2) Mathakash—the space inside a holy building, such as a holy shrine, a monastery, an abbey etc.; (3) Hridayakash—the subtle space inside the heart; (4) Akash—the vacant or blank space above the earth; (5) Suryakash—the space of the solar system; the space around the sun, or the solar system illuminated by the light of the sun; (6) Paraakash—the space above or beyond the solar system, it is said to burn with the celestial fire; (7) Mahakash—the great sky that is aglow with divine illumination, the heaven; that space which is radiant with a divine glow; (8) Paramakash—the supreme sky beyond the Mahakash, it is said to be very magnificent and encloses everything that exists, including all the other skies; that space which is illuminated, all pervading, all encompassing and full of bliss and felicity; (9) Tattwakash—the elementary space that is at the core of the concept of space, or the space that surrounds the basic elements of creation; by natural corollary it refers to the subtle, sublime, ethereal and supreme space where the eternal, transcendental Brahm has his abode because Brahm is the cause of all the basic elements of creation; there is complete beatitude and felicity there; that space which surrounds the essential truth known as Brahm; and (10) Anatariksha—the physical space where stars are present in deep space; the intergalactic space. Besides these, there is one more space called 'Swarga' which means heaven or the Duloka.

These skies have been ascribed different names just to facilitate understanding, and not because any one form of sky is fundamentally different from the other. For example, the space present inside the mud-pot, called the Ghata-kash, is the same as the space present outside the body of the pot. When the pot is broken, the demarcation wall of the body of the pot is removed, and both the space inside and outside of the erstwhile pot become indistinguishably and inseparably the same. Therefore, the various names are artificial and misnomers.

The *three eyes* consist of two normal conventional eyes and the third eye of wisdom and deep insight. The significance of the three eyes have been explained in note of verse no. 93 above.]

101. That Lord Shiva is armed with all types of weapons (as a symbol of protection against or to counter all sorts of worldly evils and faults that might attack a spiritual aspirant and attempt to pull him down from the exalted position that he has acquired by so hard effort). He is also decorated with numerous ornaments (as a symbol of his divine beauty and magnificence, as a token of his natural charm and a pleasant and appealing appearance). Goddess Parvati his divine consort and she literally is his other half. [That is, if Shiva is the supreme Brahm or Supreme Being, Parvati is his Prakriti and Maya. If Shiva is the Viraat Purush, Parvati is Mother Nature.] He is the

one who grants boons and is the root and primary cause of all conceivable causes and reasons that exist in this world (101).

102. If that Lord Shiva is meditated upon as a personification of the sky element and as being inherently present in this element, it is certain that the practitioner is able to acquire the mystical powers to move through the sky (like a bird or other sky-borne creatures).

By this meditation, the spiritual aspirant feels an immense sense of satisfaction and happiness no matter where he lives¹ (102).

[Note--¹This is because he feels the freedom to move about any where he likes, and is not constrained to the earth. Another interpretation is that he feels as light as the air or wind element because this is the only element that fills the entire space of the sky and can move in at its will. He feels unrestrained and free like the bird. He also feels untainted, unblemished, un-faulted and untarnished like the pure and colourless sky element. He feels infinite, vast, open, eternal and imperishable as the sky element. He feels himself as being all-pervading, omnipresent and all-covering just like the sky element. This notion and feeling would naturally be spiritually and emotionally uplifting and morale boosting for him; he would feel elated and accomplished.]

103. In this way, the body of an ascetic who has successfully achieved that state of Yoga when he can steadily and consistently meditate upon the five elements and visualise their personified forms as the five divine Gods (as described in forgoing verses) with unwavering conviction becomes sturdy, strong and robust. [This is possible because he has gained absolute control over the body and has been able to harness its natural energy, its inherent stamina and strength, its hidden potentials and powers to bring out the best in it. Since the body is made up of five basic elements such as earth, water, fire, air and sky, it follows that he is able to establish a symbolic control over these elements and rein in their individual as well as combined powers for his own benefit. Even in today's world, those who do regular physical training, do regular exercises and go to gymnasiums, have a well-built, muscular, handsome, strong and robust frame of their body as compared to those who are negligent in this aspect.]

With a well-tuned, strong and robust body, a vigorous constitution, properly channeled vitality and energy that is inherent in all the creatures but is usually wasted by negligence and over-indulgence, it is but natural that they have no fear from death (in the sense that they do not have serious diseases and lead a fruitful life till its natural end) (103).

104. Even at the time of the great flood during the dooms day, such an accomplished ascetic never has to fear from anything. He does not have any worry and mental torments even in this drastic situation. [This is obvious. He has already established lordship over the five elements, and therefore he has no fear from the 'water' that floods the 'earth'. Since the 'fire' element is latently present inside his own body in a latent form, he need not worry to keep warm either during the chill that follows the flooding of the earth at the time of the dooms-day. He has control over the 'air' and 'sky' elements, so he can not be drowned, as he would float in the air and go to any place that is safe for him by the sky route like a bird, and perch on some high ground till the water of the flood recedes. This is a remarkable scene taken directly from the great flooding of the Genesis of the Holy Bible. Not only himself, he would also save others who take refuge with him. He has acquired sufficient mystical powers to foresee the future and see the imminent flooding. So he can warn others and move to

safer place like a high ground on a hill or mountain till the water recedes. This is the physical dimension of this verse. The metaphysical and spiritual dimension is that he has become so enlightened that he sees no difference between death and life, and treats both equally as the wish of the Lord. And of course the Lord protects him as he had protected Noah during the great deluge.]

The ascetic should meditate upon the divine Gods who grant various boons and mystical powers for a period of six Ghatis (two hours and twenty four minutes) by holding breath inside the body (i.e. while doing Kumbhak) (104).

105. By meditating upon the Sagun forms of the Divinity (i.e. by meditating upon and worshipping the Supreme Being or the transcendental Brahm in the form of various Gods such as the Trinity Gods, Brahma, Vishnu and Shiva and their different manifestations) the ascetic is able to acquire the different Siddhis (mystical powers) such as Anima etc.

On the other hand, if he meditates upon the Nirguna aspect of the same Divinity (i.e. as the un-manifest subtle and sublime pure consciousness known as the Atma and the subtle aspects of creation in the form of Nature with all its sublime dimensions), he would attain the exalted state of Samadhi (which is a trance-like state of spiritual attainment and bliss) (105).

[Note—In this context, refer Dhyani Bindu Upanishad, verse nos. 30-36.]

106. A diligent and sincere ascetic can achieve success in obtaining the eclectic state of Samadhi in short period of twelve days only. Such an accomplished ascetic is able to achieve Mukti (liberation and deliverance) from this world even while he lives in it by steadying his vital winds (and thereby attaining peace from his natural restlessness and obtaining the eclectic state of Samadhi where he finds perpetual bliss of self-realisation) (106).

107. During the state of Samadhi, there remains no difference between the Jivatma (the individual creature in his true form as his pure conscious soul known as the Atma) and the Parmatma (the cosmic, all-pervading and all-incorporating supreme transcendental Soul of creation). In other words, a union is established between them, thereby removing any artificial distinction that might have been there till the point this stage of Yoga is reached. [After all this is the exact purpose of Yoga—i.e. to bring about a harmony and ultimate union between them; Samadhi is the successful culmination of Yoga.]

During this state, if one wishes to leave one's body then it is also possible to do it (without the fear of committing the sin of suicide) (107).

108-109. In this way, an expert and self-realised ascetic can dissolve himself or merge his own 'self' with the supreme transcendental Brahm (by establishing a union between his own consciousness and cosmic Consciousness). He does not have to take birth again.

On the contrary, if his body is dear to him and he does not wish to leave it, i.e. 'he', as his pure self, the consciousness or Atma, does not wish to discard his body and wish to retain it, then he can do so¹. He can acquire the various Siddhis (mystical powers) such as Anima etc. and go to any place he wishes where the body has no reach, so much so that he can become a God and live in the heaven if he so wishes² (108-109).

[Note—¹For all practical purposes as far as he is concerned, this would be equivalent to merging his soul with Brahm because the supreme Brahm resides in his own 'self' as his Atma or consciousness as well as his Pran or spark of life. Besides this, the very fact that he has reached this state of Samadhi itself indicates that he has crossed the earlier stages where any of the worldly corruptions can demote him and pull him away from his spiritually exalted stature. He would have realised that the body is not his 'true self' but it is the Atma, and that this Atma is the supreme transcendental Consciousness personified. How can anyone with such an enlightened view of the 'self' can ever be expected to be weighed on the same scale as his other brethren who treat their bodies as their 'self' and remain engrossed in this material world of sense objects. So, though he retains the body and appears to be of a lower category than the ascetic who has discarded his body to merge his 'self' with the supreme Brahm, basically there is no difference between the two. The former type of ascetic who retains the body is called 'Jivan Mukta', or the one who has obtained liberation and deliverance from the fetters of the world while still living in it because he has certain obligations to fulfill, and the latter is called 'Videha Mukta', or the one who has obtained the same liberation and deliverance by abandoning the body. The body in both the cases causes no hindrance for him, because even while he has retained the body as a Jivan Mukta if he prefers the option to do so, he already has acquired so much divine mystical and magical powers called the various Siddhis that he can perform super human and super natural deeds that anyone with a body cannot ever expect or hope to do. These have been enumerated in verse no. 73-74, 87, 91, 94, 97 and 102.

²But there is subtle catch here which must be closely observed. Earlier verse no. 21-22 and 76-79 have clearly stated that the use of various Mantras and obtaining Siddhis are impediments in obtaining the true fruit of Yoga; those who wish to acquire them and remain satisfied with them are of a very low type of Yogi.

Further, verse nos. 14-18 describe what constitutes 'true Gyan' or true knowledge and wisdom, and it is to obtain the only state of existence that can give eternity to the Atma, and it is called 'Kaivalya', and this is the merger of the self with the supreme Self. This is obtainable when the Atma discards the body and finds final liberation and deliverance, or ultimate emancipation and salvation. This is 'unconditional Mukti', while the one obtained while retaining the body would then naturally be a 'conditional Mukti' because while the body is still there, Mukti cannot be absolute; it is conditional and subject to certain parameters and conditions that naturally come when someone has an obligation to fulfill. The obligation in this case is towards the body because the Atma is obliged to remain inside it and it must pay its due respect and the dwelling 'rent' to it! Therefore, the Atma is under 'conditioned freedom' if the ascetic chooses to retain the body and remain inside it instead of discarding it and becoming 'absolutely free', in which case the Atma becomes 'unconditionally free'. The later state is called 'Kaivalya' Mukti. The body has to be discarded ultimately, sooner or later; the soul is therefore not 'absolutely' free if the ascetic retains the body as compared to the case where he decides to permanently abandon it once the window of golden opportunity arrives during Samadhi.

Therefore, the ascetic has two options open to him as already pointed out in verse nos. 105-107—i.e. either to obtain Kaivalya Mukti which is like the Videha Mukti, or to obtain Jivan Mukti. There is only a subtle hair-fine difference between the two. Refer verse nos. 17-18 and 23 in this context.]

110. With the acquisition of mystical powers, the expert ascetic can transform himself into a Yaksha (a kind of demi-god who is supposed to guard the treasury and garden of Gods) and vice versa in a moment's time. He is also able to assume the form of a lion, an elephant, a horse etc. at his free will (110).

111. When an ascetic has obtained the exalted and divine stature equivalent to that of Maheshwar (the great Ishwar, the great Lord, Lord Shiva, the supreme Brahm, which is possible at the successful culmination of Samadhi as clearly mentioned in verse no. 104-105 and 107), he is free to act and behave as he wishes. The difference is only on how the achievements or rewards of Yoga are practiced or utilised, and not in the basic nature of the achievement or reward itself¹ (111).

[Note--¹That does not mean he should become a reckless rogue and burden the creation with his wayward behaviour. That would kill the very spirit of Yoga. We have examples of such ascetics though who did severe Tapa (penance, austerity and observance of the strictest religious vows), which is another form of Yoga, to obtain various boons from different Gods, which are like obtaining various Siddhis, only to exploit these super natural powers to become reckless and cruel 'demons'.

So we come to a very interesting conclusion here—the difference between a mystic and a self-realised ascetic who is holy and pious and Brahm personified, and a demon, is the use to which he puts his newly acquired status and powers! The same authority and power can elevate him to Godhood and demote him to Demon-hood.]

112. [Now certain sitting postures to be adopted for the purpose doing Yoga to attain the benefits listed in this Upanishad are being described. Refer verse nos. 26-27.]

The practitioner of Yoga should sit in such a way that he presses his genital with the heels of his left leg and stretches the right leg straight in front of him. Then he should firmly clasp the big toe of this (right) leg with both his hands (112).

113. The chin is to be brought close to the chest. Sitting in this posture, he should pull in the air (i.e. breathe in air) slowly (i.e. do 'Purak') and hold it inside the body during the phase called Kumbhak as long as he can. Then this air should be gradually exhaled during the phase called Rechak (113).

114. This process should be repeated with the other side of the body. That is, after completing the cycle of inhalation-holding-exhalation of breath while the left leg is folded inwards at the knee-joint and the right leg stretched out, the process should be repeated with the right leg folded inwards at the knee-joint and its heels pressing against the genital, and the left leg stretched out and its big toes firmly clasped by both the hands. Thereafter, the breathing ritual is repeated once again.

Thus, the two steps of this exercise are alternated with each other for as long as the ascetic wishes to do Yoga (114).

115-116. This exercise and sitting posture is called 'Maha-Bandh'. The two ways mentioned above—i.e. one in which the genital is pressed with the heel of the left leg, and other when it is pressed with the heel of the right leg, are both called Maha-Bandh¹.

An ascetic who is sitting in this Maha-Bandh can withhold the air inside the body and prevent its escape from it by pulling in the muscles of the throat so as to close the opening of the upper end of the trachea, and at the same time constrict the nostrils to aid in the process² (115-116).

[Note—¹The word 'Bandh' means to close and restrict. Since the escape of Pran in the form of vital winds is closed in this and other such Bandhs, they are so named. The present Bandh is called 'Maha' because it is a 'great' closure.

²It must be noted that both his hands are tied in clasping the toe of the respective leg, and therefore they are not free to clamp the nostril to stop the air from forcing itself out as is usually done during normal breath control exercise called Pranayam.

Therefore he must constrict the muscles of the throat and the nostrils voluntarily to close the opening of the mouth and the nostrils to effectively block the escape of air.]

117-122. Those ascetics who have acquired various Siddhis or who have become experts in doing Yoga continue to practice the Maha-Vedha (Maha-Bandh) exercise regularly and continuously.

Now, the 'Khechari Mudra' is being described. During this Mudra (a posture or form in which the particular organ of the body is held during meditation), the tongue is inverted inwards and tucked inside the back of the mouth so as to close its rear opening. The eyesight is kept strictly fixed in the central point between the two eyebrows.

The 'Jalandhar-Bandh' is to constrict the opening of the throat by pulling its muscles taut, and holding the chin tightly and steadily above the chest. This sitting posture is so potent and effective that it virtually acts like a lion employed to conquer the elephant representing death. [In other words, the ascetic who practices this Jalandhar Bandh can easily overcome death.]

The Bandh which helps the Pran (i.e. the Apaana Vayu, the vital wind that is present in the lower part of the body) to lift itself and move up the Shushumna Naadi (the nerve that moves from the lower end of the spinal cord right up to the top of the head) has been called 'Uddiyan Bandh' by expert ascetics. [The word 'Uddiyan' implies something that can fly; here the epithet is apt for the reason that this process, if properly done and successfully accomplished, enables the practitioner to lift himself from the ground and float in the air—see verse no. 53-55.]

The 'Yoni Bandh' is done by constricting the genitalia by pressing it hard with the heels of the leg and pulling the muscles in the pelvic region inwards by conscious effort. At the same time, the Apaana wind (the vital wind present in the lower bowels) is pulled upwards and not allowed to move down and pass out through the anus as flatus by constricting the muscles of the lower bowels simultaneously with the pressing of the genital.

When this Yoni Bandh is practiced in conjunction with the 'Mool Bandh', which is literally the closing of the root, or closing of the lower apertures of the body such as the anus and urinary openings, then it is possible to mix the two vital winds such as Pran (the vital wind in the upper part of the body) and Apaana (the wind in the lower part of the body) and bring about a harmony between them and synchronise their vibrations so that the ascetic is able to hear the Naad (the cosmic sound emanating in ether) that appears to emanate from a point called a Bindu and radiating in all the directions from there. This Naad overwhelms the ascetic and he becomes drowned in its reverberations (which appear to massage his nerves and bless him with divine calmness and bliss). This Yoga (i.e. the process of meditation which brings about a union) is without doubt potent enough to grant definite success to the ascetic in obtaining the various Siddhis (as listed in numerous verses of this Upanishad).

Now, the special Mudra called 'Vipreet-karani Mudra'¹ is being narrated. This is said to destroy or eliminate all kinds of diseases and obstacles that the ascetic might be facing and tormented by (117-122).

[Note--¹The word 'Vipreet' means that which is against the conventional norm, or which goes against the criteria of normal behaviour. In the present case the movement of the vital winds has been reversed, i.e. the Pran has a normal tendency to come in and go out from the nostrils, and the Apaana continuously moves downwards and never upwards. With the practice of above Bandhs and Mudras as described in verse nos. 112-122, the normal movement of the vital winds is tampered with. They

are made to act against their normal behaviour. Hence, this process is compositely called 'Vipreet-karan', i.e. to make them behave against their natural pattern.

According to this Upanishad however, the Vipreet-karan is a different process as described below in verse no. 124. According to Patanjali's Yog Sutra, this is known as 'Sarwaang Aasan', literally the posture of Yoga that benefits the whole body. Obviously this terminology is also applicable to this process because if the digestive organs function properly and a man is able to digest food properly and derive nutrition from it, it is natural that his entire body would benefit.]

123. By practicing this Vipreet-karan Yoga, the practitioner's weakened hunger and the energy to digest food is re-kindled and rejuvenated, resulting in increase of appetite and the ability to digest more food (123).

124. The fire of hunger once stoked by this Mudra must be duly supplied with fuel in the form of food, for otherwise it would burn the reserve fuel of the body, resulting in emaciation.

To do this Vipreet-karan Mudra, the head is kept low and the both the legs are lifted up simultaneously. This posture is practiced for a few moments the first day. [For this purpose, the practitioner lies flat on the ground and raises the legs slowly upwards. This automatically would exert an inward and upward pull on the abdominal and intestinal muscles and strengthen them besides helping the Apan wind to move upwards through the Shushumna Naadi. Since the direction of the flow of the Apan wind is reversed, and the legs are so positioned that their level is above that of the head which is an unconventional position under normal circumstances for a body lying flat on the ground, this posture is so named as 'Vipreet-karan'.] (124).

125. From the second day onwards, the time for which this Vipreet-karan Mudra is practiced is increased gradually on a day to day basis (along with the angle of lifting of the legs, till the time they are held at right angles to the ground). This should be practiced for a minimum period of six months by the time of which the wrinkles on the body of the practitioner vanish and the graying of his hairs stop (125).

126. The ascetic who practices this (Vipreet-karan Mudra) for one Prahar (three hours) daily, he is able to subdue Kaal. That is, he is able to conquer death because his body becomes strong, sturdy and robust, he is able to digest and benefit from food eaten, and his body gets de-toxified.

This is also called the 'Vajroli Mudra'¹ because it makes him as strong, sturdy, robust and vigorous as Vajra, the invincible and strong weapon of Indra, the king of Gods. One who practices this Mudra daily is soon becomes an accomplished Yogi who is said to have mastered all the Siddhis (esoteric, eclectic and mystical divine powers) (126).

[Note—¹It is pertinent to note here that all these Aasans and Mudras are inter-linked and not detached from one another. They are inter-dependent and not mutually excluding. They form part of a comprehensive and composite process called Yoga which can bestow the mystical powers called Siddhis to the practitioner. Various Yoga texts depict variations in the way they are done, and sometimes there is a lot of confusion. For example, the Vipreet-karan Mudra as described in this Upanishad is different from how Patanjali has described them. In his description, the particular way this Mudra is done as per this Upanishad is called 'Saalamba Sarwaang Aasan'. Similarly, the Vajroli Mudra as implied here is different from the way the Vajra Aasan is done according to Patanjali. So, instead of getting confused with the intricacies and details of what this text says and what that says, the ascetic should

understand the hidden esoteric philosophy and the idea behind the exercise by understanding the meaning of the word and its broader implications and how is it to be applied in practice to benefit him. If the basic concepts are firmly grasped, the details can be adjusted according to individual needs and circumstances. See note to verse no. 117-122 in this context.

If we go strictly by Patanjali's version of Aasans, then 'Vajra Aasan' is the posture whereby the body is bent backwards to such an extent that the head rests on the upturned soles of the two legs that are bent inwards at the knee-joints so that the ankle-joint and heels are tucked underneath the buttock of the respective side and the weight of the body rests on the tucked-in legs. For this, the practitioner sits on the ground with his two legs bent inwards from the knee. He bends the body backwards like a bow so that the head rests on the sole of the feet pointing to the rear of the body. Viewed from a distance, the practitioner appears to be in a roughly ring shape.]

127. One who becomes well-versed in practicing this magnificent but esoteric art of doing Yoga as narrated here is deemed to have gained all the mystical, eclectic and divine benefits or rewards called the various Siddhis that automatically accrue to those who do such Yoga. That is, he acquires super natural and super human powers. As a result, he is able to know the events of the past as well as the future, and is certainly able to move through the sky. [Refer verse nos. 97, 102.] (127).

128. An ascetic who drinks 'Amari' (urine) daily and smells it along with doing the Vajroli Mudra is known as 'Amroli', i.e. the one who is an accomplished ascetic who follows the path of Yoga where urine (of the self or from the cow) acquires a central part of the purification process (128).

[Note—Drinking of urine should not be treated as a vulgar, repulsive and repugnant exercise. It has medicinal value and is often used as a self-created antidote to various poisons present in the body. There is a field of treatment called 'urine therapy' wherein urine is used in potency form like in Homeopathic drugs to cleanse the body of its toxins. It is like self immunization or auto-vaccine.]

129. When the ascetic is successfully able to do all the above exercises of Yoga, it is said that he has done 'Raaj Yoga'; there is no doubt about it. When he is successful in doing Raj Yoga, he need not undertake other harsher forms of physical exercises of Yoga that are described as 'Hath Yoga' (129).

[Note—The Raaj Yoga exercises are so called because they mark the high citadel of achievement in Yoga. The word 'Raaj' refers to the king, and therefore an ascetic who has successfully done all the exercises of Yoga is deemed to be like the king amongst those who aspire to reach a high level of spiritual attainment through the path of Yoga.

It is not that Raaj Yoga is less punishing and demanding than the Yoga classified as Hath Yoga, but the only perceivable difference is that now they need not go through the rigours of Yoga exercises for an extended period of time as mentioned earlier in verse no. 67 above. Whereas the word 'Hath' means forceful, stiff, obstinate and adamant, its relaxed form is called 'Raaj'. The exercises in which the body is forced to undergo ruthless stress and subjected to stiff penalty by twisting and turning it against its will is therefore called Hath Yoga. Compared to those exercises, the ones described as Raaj Yoga are mild and done to maintain practice and keep the gains of Yoga perpetual and everlasting.

When an ascetic is successful in doing Raaj Yoga, he need not worry about doing Hath Yoga any longer. This is because Raaj Yoga entails total control of the mind and intellect. Once this objective is achieved, i.e. once the restlessness of the body and its wayward sense organs are brought under control, there is apparently no

necessity for making special efforts to control them. These have been the cause of so much distress, restlessness and discomfort for the mind, and thorough it for the Atma of the creature. Once the mind is controlled, the body would automatically be controlled. The Raaj Yoga, which deals primarily with the control of the mind, ultimately leads to the state of Samadhi.]

130. A person practicing Raaj Yoga has easy access to Vairagya (a sense of detachment and renunciation for the deluding material world of sense objects, along with its sensual pleasures and material comforts) as well as Vivek (wisdom, common sense and erudition).

Lord Vishnu is the one who is Maha Yogi (the great ascetic who is accomplished and self realised). He is a personification of all the Bhuts (the primary elements of creation) and one who does great Tapa (i.e. he does great penances, observes austerities, keeps stern religious vows and generally suffers for the welfare of others). [Refer verse no. 2.] (130).

131. For a person who has stepped on the spiritual path called 'Tattva Marg¹' to reach his spiritual destination can see (visualise) that supreme and excellent Purush (i.e. the un-manifested Supreme Being in his manifested cosmic and all-inclusive form of the Viraat Purush known as Lord Vishnu) as a lighted lamp².

What a great irony it is that the man feeds himself (by drinking milk) from the same breast (of his mother) that he presses to derive immense sensual pleasure (during sexual encounters with his partner)³. [See verse no. 132 below in this context.] (131).

[Note—¹The *Tattva Marg* is the spiritual path that is business like and does not take one along a circuitous route to one's spiritual destination. It is a path that leads straight to one's spiritual goal. It's a philosophy that relies on to-the-point, well researched, clinically precise, empirically proven, effective and practical approach to spirituality and proven methods for reaching the citadel of spiritual elevation that culminates in liberation and deliverance of the soul from the continuous cycle of birth and death, and ensuring its emancipation and salvation for good. It is the eclectic spiritual way which is based on correct, proven and precise spiritual knowledge and its judicious and practical application which can fine tune one's approach to the actual and profound spiritual truths and reality as opposed to apparent or assumed truths and reality which are more often misleading and like a spiritual quagmire. It is the basic and essential path that any wise, erudite and sagacious aspirant would like to follow if he does not wish to waste his precious time and energy on debating as to which is the correct and effective way for spiritual elevation and realisation of the ultimate Truth that would provide him with final liberation and deliverance from this material world of falsehoods, delusions and entrapments. It is the noble path that would liberate the soul from the cobweb of birth and death and their accompanying horrors and pains, and lead him by the hand to the high ground of enlightenment and self-realisation from where the spiritual seeker stands to see clearly and witness first hand the presence of the supreme transcendental Brahm, the Supreme Being.

²The 'lighted lamp' is a metaphoric way of saying that against the background of a dark and foreboding world full of miseries and sorrows, of falsehoods and delusions, of myriad doctrines and philosophies that create a web of confusions and consternations that are tantamount to an all-covering veil of darkness that engulfs the spiritual aspirant from all sides, if he is wise and erudite enough to follow the correct path called the 'Tattva Marg' steadily without allowing himself to be confused in anyway, then he becomes fortunate enough to have a divine and reassuring vision of the Lord as the lamp of hope and salvation just like a ship caught in the choppy waters of a stormy sea observes the beacon of the lighthouse. The divine vision of the

light of the Lord is very reassuring; it indicates his august presence and it removes all forms of symbolic darkness that have been engulfing the spiritual traveler from all the sides, such as the darkness induced by ignorance, delusions, various worldly faults and taints etc. This light, by removing the fearsome darkness, cheers his heart and encourages him to move ahead with renewed zeal and vigour towards his chosen spiritual goal and speedily reach it. This goal is his spiritual emancipation and salvation, his liberation and deliverance from the fetters that had been shackling his self or his Atma, the pure conscious 'self', for many births and many generations. Once the light is visible at the end of the road, he races forward; previously he was moving slowly because he had to grope in the dark. This divine and sublime vision of the Lord as a lighted lamp is a sign that he has almost reached his goal, and the destination that the soul has been searching and yearning for countless generations and numerous births, is finally at hand.

³This is a remarkable observation. A man is so foolish that he forgets the reality and gets deluded by circumstances and their false charms. He forgets that the breast is provided by the Lord as a vessel or container to store the much-needed milk to feed the infant creature, and not as an instrument of deriving sexual gratification from it. The same breast is subjected to two different treatments, it assumes two opposite roles and appears to be different in two different contexts for the same man, for as a child he had fed from it and had even pressed it while suckling milk from it, while the same man does the same thing as an adult but his perception changes. There is a verse in Yagyavalkya Upanishad of Shukla Yajur Veda tradition, verse no. 17, dealing with the very concept of how the breast of a woman should not delude a man by its illusive charm. It says—"The breast of a woman severed from her body and lying unattended in a cremation ground, or lying randomly at any other place, is fed upon by stray dogs as if they were ordinary dog-feed or lump of meat".

Thus we observe how the same thing is seen differently by three different people when viewed by them from different angles and perspectives. The child sees the breast as the pitcher filled with the life sustaining sweet milk, the elixir of life for it. The lustful man sees it as an instrument to satisfy his sensual and carnal desires. The ascetic and a renunciate monk see it is a lump of flesh lying on the gross inane body which is eaten by stray dogs.

The basic object does not change; the basic truth about the breast that it is an instrument provided by Mother Nature to feed the infant child till it is able to take care of its self remains the same, but the apparent differences of how it is treated and viewed persist. Even those who are well aware of this anatomical fact that it is as much part of the female body as her anus still wish to enjoy the sensual gratification derived from this lifeless lump of flesh that is fed upon by stray dogs in the cremation ground. This is an ideal example of how a man gets deluded and is overcome by ignorance about the real sense and purpose of anything, of how he can be misguided if the same thing is seen under the wrong light. This is an indirect way of explaining what constitutes the Tattva Marg—i.e. the proper and correct way of looking at certain thing by concentrating one's attention on the basic and truthful essence of it, the underlying truth and reality behind it, instead of getting deluded and misled by its charming exteriors and superficial appearances, or by the myriad of ways it is being interpreted and described by numerous people creating a vortex of confusions that is most perplexing and mortifying for the aspirant.]

132. A creature continues to move in the same cycle of birth and death; it continuous to oscillate to and fro from one birth to another. A woman who is mother in one birth becomes a wife in another. Similarly, one woman who is one's wife in one birth becomes his mother in another (132).

133. A man who is someone's father in this life becomes his son in the next birth, and vice versa. In this way, this cycle of birth and death in this world is like the water-wheel used to water the farmer's field (133).

134-135. It is in this endless cycle that the creature continuous to move indefinitely, taking uncountable number of births as uncountable types of creatures that roam on the surface of earth in this world.

There are said to be three worlds¹, three Vedas², three Sandhyas³, three Swars⁴, three fires⁵, three Gunas⁶. [Refer Dhyan Bindu Upanishad, verse no. 36.]

Every thing in existence, including those that are metaphorically represented by these triads of creation as mentioned here, is included in the three imperishable letters (of OM)⁷; nothing exists outside of it. Hence, the wise ascetic should meditate upon and study the mystical and esoteric effect of these three letters as well as the half-syllable called 'ArdhaAkchar'⁸ on his spiritual progress (134-135).

[Note—¹The *three worlds* are the terrestrial, the celestial and the nether.

²The *three Vedas*, which are repositories of eternal knowledge, are the Rig, the Sam and the Yajur.

³The *three Sandhyas* are the three periods of time when one phase of the day meets the other and when the three sacramental prayers are said; they are the morning Sandhya done at dawn when the night meets the day, the midday Sandhya done at noon when the sun moves from one quarter of the sky to the other, and the evening Sandhya done at dusk when the day again meets the night.

⁴The *three Swars* are the basic vowel sounds in Sanskrit, and they are the following—the basic vowel sound that is made in the throat with the mouth open, such as the first alphabet letter 'A' (अ) as the article 'a' in English grammar (e.g. *a* man), the sound produced by opening the mouth wide open such as the second alphabet 'Aa' (आ) as in the word 'rather', and the sound made when the lips are in the form of a spout of a kettle as when pronouncing the alphabet 'O' (ओ) as in *oracle*.).

⁵The *three aspects of fire* are said to be the following—the terrestrial fire that sustains life on the earth, the fire of the heavens which is used by the Gods, and the fire of the nether worlds or hell which is used to punish sinners.

⁶The *three Gunas* are the three characteristic qualities inherently present in the creature. These three basic qualities or Gunas determine its nature, habits, temperaments and inclinations which in turn decide the behaviour, personality and outlook of each individual creature in this world. These three are briefly the following—(a) *Sata Guna* is the best quality present in a creature and it is marked by a predominance of auspiciousness, righteousness, virtuousness and noble qualities. (b) *Raja Guna* is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, desires, selfishness, expansionist tendencies, desire to sustain etc. All these pertain to this materialistic world, and they create an inherent affinity in a creature towards the material world of sense objects and their enjoyments rather than the world of spiritualism. (c) *Tama Guna* is the third quality which is the meanest and basest of the three types of qualities in a creature. It is marked by evilness, perversions and sinfulness. It is the most degrading, denigrating and contemptible of the three characteristics in a person, leading him to such negative traits as sins, vices, perversions, greed, avarice, haughtiness, pride, lust, attachments, yearnings, intoxication, wild behaviour, promiscuity, evils, utter disregard for anything which is righteous, ethical and noble etc.

⁷The *three letters* which stand for an entity that is imperishable are A, U and M, and pronounced together in this sequence they produce the sound equivalent of the

eternal word OM which is the sublime ethereal sound form of the imperishable and supreme transcendental Brahm.

⁸The fourth *half syllable* is the letter 'O' which comes between 'A' and 'U'. It is called half-letter or syllable because it is in silent mode and has no distinct sound of its own in the pronunciation of the word OM. It blends with all the other three letters and acts as a bridge between them.]

136-139. Everything in existence is strung together or held together by these three letters (of OM representing the supreme Brahm). They act like the common thread running through the beads of a rosary or the flowers of a garland holding the independent units together and giving the creation its formal meaning and shape. [This is because the creation has so astounding variation that no two units of it are similar. There must be something to hold such a vast array of diversities together and prevent the entire edifice from disintegrating and scattering around. The bonding factor and the only one common denominator in such a diverse world is the presence of Brahm. And the word OM consisting of the three letters A, U and M is like the symbolic thread that keeps the garland made of a large variety of flowers in place and prevents the flowers from scattering.]

The entity implied and referred to by these three letters is the eternal and imperishable Truth of creation that is Absolute and is known as Brahm or Pranav. It is the supreme stature that the spiritual aspirant aims for and endeavours to reach, it is a most exalted state of being that which is truthful and eternal, and it is called the 'Param Pada', i.e. the supreme spiritual attainment or achievement. [This supreme spiritual stature is realisation of the truth about the 'self' as a personification of the pure and truthful 'consciousness', as an embodiment of wisdom and enlightenment, as well as the fact that it is the same as the cosmic 'Self' or the cosmic Consciousness known as Brahm.]

This eternal 'absolute truth' (known as Brahm) pervades throughout the creation in a universal and uniform manner. It submerges, drenches and soaks the entire creation; it wafts and warps through it most subtly, imperceptibly and unseen just like the presence of fragrance in a flower, butter and fat in milk, oil in the sesame seed, and gold in its ore.

It is said that a symbolic lotus flower exists in the subtle heart of the creature. The head of this flower faces downwards but its stem is erect. In the center of it is the spot where the creature's Mana¹ is located. [Refer Dhyani Bindu Upanishad, verse no. 33.]

During meditation on the supreme Truth called Brahm represented by the word OM, when the breath is exhaled, i.e. when Rechak is done, the sound produced is equivalent to the first letter 'A' of the triad of three imperishable letters representing that imperishable Truth. That is, the letter 'A' of the three-letter word OM is being said. In the context of the lotus-like heart and the Mana inherently present in it as its integral part, this letter 'A' represents the vital forces of life present inside the body of a man as well as his Mana representing his subtle heart along with its inherent emotions, sentiments and desires. They are manifested when the man makes the most primitive form of sound in the throat, the sound equivalent of the letter 'A' which is the first letter of the divine and ethereal sound OM².

The subtle lotus present in the heart is literally pierced through or ruptured by the second letter 'U' of the ethereal divine word OM³.

Finally when the exhalation is complete, the mouth is closed, and the continuous humming sound heard is equivalent to the third letter 'M' of the word OM. The cosmic Naad is heard in this stage because its sound is very much alike this

sound of OM with a closed mouth. [It is a resonating, reverberating and grave sound of high density that vibrates through the brain and heart of the practitioner. Nothing else is heard against the background of this sound which drenches the ascetic like the sound emanating from the ocean at high tide which comes roaring in and sweeps the man standing on its coast in one sweeping wave.]

The Ardha Maatraa or the half syllable (which symbolises the subsiding of these sounds and also the link between any two of them) is pure and uncorrupt like crystal⁴. It has no particular form and sound specific to it. At the stage when it is heard, the ascetic is deemed to have reached a state of bliss and ecstasy that no corruptions and worldly faults anymore can taint him. It literally destroys his sins and their evil consequences (136-139).

[Note--¹This *Mana* is the emotional and sentimental aspects that control the functioning of the subtle aspects of the heart. It determines as to which things the heart would get attracted to and be infatuated with, and which it would treat with a sense of neutrality and even disdain. The Mana is usually regarded to be the subtle aspect of the mind also that controls such functions paying attention and remembering something. But we will observe here that the heart plays an all-important role, because unless the heart is interested in anything and gets involved in it, the mind alone would not be able to fix its attention on that subject for any length of time. A coordinated effort of the subtle mind and subtle heart are collectively called the Mana.

²When a man becomes emotionally aroused, or when his heart wants something or agrees with something, the sound that expresses it is equivalent to the sound of 'A' made in the throat, indicating the emotions of 'aye' or 'yeah' or 'yes' or 'oh'.

³This can be visualised in the example of the kettle with a spout. When the water inside is heated, the steam escapes out through the spout, making a subtle hissing sound. In the present case of Yoga, the heated vital airs rise up the body from its lower half and enter the heart through the stem of this lotus enroute to the head. Since the lotus is bent at its neck and facing downwards, thereby blocking the passage of the wind, it punctures a hole through it and moves upwards. It makes a hissing sound while escaping through it, which is compared with the second letter 'U' of the word OM.

⁴It must be noted here that the atoms of quartz crystals are known to vibrate and emit very subtle electrical impulses which are harnessed in quartz watches and other electronic instruments. The same thing probably happens here. The subtle electric energy present inside the heart not only keeps it beating normally while the ascetic meditates but also enhances the vibrations produced by saying OM silently. The resonance produced by these two sounds, i.e. the beating of the heart and the silent repetition of the Mantra OM, overlap each other and their frequencies are greatly enhanced, thereby multiplying their effect. As a result what was previously a subtle sound gradually becomes a roar like a ferocious ocean or the rumbling of a train passing over a bridge at night. This the 'Naad' heard by the ascetic.

The concept of 'Ardha Maatraa, has been elaborated upon in Brahm Vidya Upanishad, verse no. 9, and Dhyan Bindu Upanishad, verse nos. 17, 36, both of the Krishna Yajur Veda tradition.]

140-141. A wise and erudite man who does Yoga in the way described in this Upanishad is empowered to obtain Mukti, or find liberation and deliverance for himself. Even as a tortoise withdraws all its limbs and head in its shell, the ascetic who practices Yoga as described here closes all the exit points in the body, called the nine doors¹, through which the vital winds could escape when pressure is exerted on them. As a result, finding all escape routes blocked, the air is forced to move up in the body (140-141).

[Note—¹The nine exit points in the body, called the doors, through which the air could make its escape are the following—two ears, two eyes, two nostrils, one mouth, one anus, and one urethra. Refer Shwetashwatar Upanishad of Krishna Yajur Veda tradition, 3/18.]

142. Just like an oil lamp kept inside a hollow pitcher remains steady and lights up the whole inside of the pitcher, the self-illuminated consciousness is witnessed during the state of Kumbhak when the air is held inside the body. [In other words, when the mind is totally focused on meditation and free from all external disturbances, the ascetic is able to witness the presence of the eternal spark of divinity inside his own self in the form of his own Atma which is pure consciousness and as pure as crystal.]

In this Yoga, when all the nine doors are closed, the perfect silence is witnessed and the only entity that remains inside the body is the essence known as the Atma.

This is how this Upanishad has described Yoga. Amen! (142).

-----Shanti Paath-----

-----*****-----*****-----*****-----

Chapter 18

Dakshin Murti Upanishad

The Dakshina-Murti Upanishad is dedicated to Lord Shiva who is regarded as knowledge, wisdom and enlightenment personified, and therefore the most competent one to expound upon, teach and preach subjects related to the divine wisdom pertaining to the field of metaphysics and spiritualism. This Upanishad highlights the significance and importance of the ‘Shiva Tattva’ or the Shiva principle, the essence and basis for which Shiva is recognised as the greatest Lord, and worshipped as such. This realisation and knowledge of Shiva Tattva is akin to being wisened about the ultimate essence and truth of existence, the ultimate essence that is known as Brahm. This concept is reiterated in another Upanishad belonging to the Krishna Yajur Veda tradition, viz. the Rudra Hridaya Upanishad.

Iconographically, this form of Shiva has other names also besides ‘Dakshina-Murti’, such as ‘Dakshina-Mukhi’.

The word ‘Murti’ means a ‘form or image’, the word ‘Mukhi’ means ‘facing’, the word ‘Dakshinaa’ means ‘giving away liberally as charity or donation’, the word ‘Dakshin’ has three connotations here—viz. ‘south’, ‘right’ and ‘knowledge and wisdom’, and the word ‘Shiva’ of course means ‘someone who is a personification of such glorious virtues as auspiciousness, beauty, truth, knowledge, enlightenment, wisdom, renunciation, dispassion and detachment from all things material and false, someone who is meditative and contemplative, someone who is self-realised and Brahm-realised etc.’

So we have a comprehensive picture of what this Upanishad aims to worship—it does not aim to worship Lord Shiva as the God of death and destruction but as the most enlightened and wise teacher of the philosophy of Brahm whom he

personifies. Since Lord Shiva faced 'south' when he taught the ancient sages and seers who had approached him in some earlier time to gain divine wisdom and metaphysical knowledge which only he could impart to them, he was known as 'the Lord facing south'. Since the knowledge imparted by him was astoundingly unique and the most 'right or correct and precise knowledge' of metaphysics which granted 'a divine wisdom as well as vision' to its followers, it was called 'Dakshin'. Since he was liberal in giving it to the sincere spiritual aspirant, he was called 'Dakshina-Murti' or the 'one who is an icon of charity and donation, one who is very generous in giving away what is asked for without holding anything away from the alms seeker'.

What did he give away? He gave away 'knowledge and divine wisdom', and only one who has something can give it to others, therefore he is deemed to be a 'Murti', or an image, a personified form of such knowledge and divine wisdom. The word 'Dakshinaa' means 'giving charity and making donation', while 'Mukha' means 'mouth'. In other words, Lord Shiva has been extremely liberal and magnanimous in giving away whatever he has, and in this particular case he has given away knowledge and wisdom pertaining to the non-dual reality of the 'self' as a personification of Brahm. Since teaching is done by the 'mouth', hence this donation and charity that he made was through the mouth, entitling him to be called 'Dakshina-Mukhi'. This is evident in verse no. 30.

In other words, the Dakshin Murti is the form of Shiva as a wise teacher and preacher of divine knowledge which is meant to make the disciple aware of the actual principles and the truth in this world that exists behind the arcade of falsehood that is so typical of it. This knowledge enables him to attain a state of eternity and blessedness marked by eternal peace, happiness, beatitude and felicity. It's the correct and auspicious path to self and Brahm realisation.

Since it was first revealed by Lord Shiva himself, it is a revealed Upanishad.

The leading sage who was given this knowledge by Shiva was Maarkandey, who later revealed some relevant part of it when he was approached by other sages and seers led by Shaunak etc. who asked him nine questions which form the basis of the present Upanishad. The nine questions briefly are—what is the esoteric and eclectic knowledge of the Shiva principle, who is the deity worshipped in this principle, what are the Mantras (mystical and spiritual formulas in the form of words or letters), what is the kind of devotion needed for its success, how can that esoteric and eclectic knowledge be obtained, what is the instrument to felicitate it, what offerings are to be made, what is the appropriate time for doing it, and what is its ultimate goal.

Each of these questions is answered succinctly with stress on the importance of their metaphysical and spiritual quotient rather than on mere ritualistic aspects.

Lord Shiva has been depicted in five forms as Dakshin Mukhi or Dakshin Murti. These forms are basically the same but with slight variations. The basic form has him seated on high seat with four arms in various Mudras (postures) and holding different things as symbols of one or other virtues that he possesses. The five forms build up on this basic outline, and each has a distinct Mantra (a group of letters, words or phrases having mystical and divine powers which are used to activate these latent powers in Nature for the worshipper's benefit) dedicated to it. These five Mantras are listed in this Upanishad.

There is another very small Upanishad of merely three verses dedicated to Lord Shiva, called 'Rudra Upanishad'. It is not ascertainable to which Veda it belongs, but the tenor of its language very much resembles this present Upanishad. Hence, it has been added as an appendix no. 2 of this volume. Refer also to Yogattva

Upanishad, verse nos. 91-94, 98-102 as well as Braham Vidya Upanishad, verse no. 64 which also expounds this aspect of Divinity.

-----Shanti Paath-----

See appendix no. 1 for the meaning of this Shanti Paath.

1. Once upon a time, the great sages called Shaunak¹ and others started a great Yagya (fire sacrifice) under a huge Vat tree (the Indian fig tree or the Banyan tree) in the country called Brahmaavarta.

During this occasion, these sages approached the immortal sage named Maarkandey² with great devotion and a sense of submission and sincerity to acquire divine wisdom and thereby satisfy their quest for eclectic knowledge about certain metaphysical questions.

They said, 'Oh great sage! How have you found immortality (i.e. a virtually never-ending long life) and how do you enjoy eternal bliss and ecstasy? [Please unravel the secret to us for our benefit.]³' (1).

[Note—¹Sage *Shaunak* was a wise and learned sage and derived his name after his father sage *Shunak*. He is regarded as an incarnation of Indra, the king of Gods. He was an expert on the Vedas, especially the Rik/Rig Veda and the majority of his works revolve around this particular Veda. They are known as 'Anukramanika' (indices). His magnum opus is the 'Brihad-devta' which deals with the deities of the Vedas. He had a large following of disciples, the chief being *Ashwalyaana*. He appears in many ancient scriptures such as *Shatpath Brahmin*, 13/5/3/5; *Brihad Aranyak Upanishad*, 2/5/20; *Chandogya Upanishad*, 1/9/3; *Mundak Upanishad*, 1/1/3; *Kaushitaki Brahmin Upanishad*, 4/7.

²Sage *Maarkandey* was the son of sage *Maarkandu*. He was a great devotee of Lord Shiva, the patron God of death, so much so that when death approached him personified as *Kaal* when the sage was yet quite young because destiny had it that he would die still when young, he clung to the Shiva Lingam (the image of Shiva) with the greatest of devotion, surrender and urgency that comes with one facing certain death. Lord Shiva appeared and prevented Death from tying him in his snare and taking him away. The Lord blessed him with a virtual eternal life, blessing him that he would live for another 14 Kalpas (1 Kalpa = 1 day of Brahma or roughly 4.32 billion human years). His magnum opus is the 'Maarkandey Puran'. He had also edited and abridged the *Manusmriti*, the code of life and conduct as laid by the first human named *Manu* to regulate society and act as a constitution and manual for ready reference for the forthcoming human race, into eight thousand verses, and passed it to sage *Bhargava*. His reference comes in the *Mahabharat* epic when he approaches the *Pandavas* and taught them the principles of *Dharma* (code of righteousness, auspiciousness, probity, propriety and nobility). He was the one who had enlightened *Yudisthira* that *Krishna* was an incarnation of Lord *Vishnu* (*Vanapurva*, 189). In the same *Mahabharat*, he preaches the celestial sage *Narad* the laws of *Dharma* (*Anushaasan-purva*, 50-62).

³The sages were doing a religious deed dedicated to Lord Shiva. Like any intelligent, prudent and wise student, they did not just want to perform the rituals in a mechanical way but wished to know the esoteric secret behind the deity they were to worship along with its metaphysical and spiritual importance and significance. So they approached their senior *Maarkandey* who was taught this knowledge by none other than Lord Shiva himself. The Upanishad is called *Dakshin Murti* because Lord

Shiva had faced south while he had preached it, as well as to indicate the fact that in this capacity the Lord was acting as a wise and erudite teacher and preacher instead of his role as the concluder of creation.]

2-3. He (Maarkandey) replied, ‘The secret of my long life and perpetual state of bliss and ecstasy is the knowledge of the Shiva Principle (i.e. the ‘Shiva Tattva’).

The sages enquired, ‘What is the knowledge of Shiva Tattva of which you talk about? Who is its patron deity or Deva¹? What are the Mantras² used to worship and invoke its blessings? How is Japa (repetition) done with this Mantra (i.e. how is this mystical and esoteric group of letters or words having magical charm used to invoke the deity of this Shiva Tattva and attain it)? What Mudras³ are to be adopted for this purpose? What is having firm devotion and conviction in them? What are the means by which that great mystical, esoteric and eclectic divine knowledge and wisdom can be got or accessed? What is the equipment or instrument that can aid in its acquisition? What offerings are to be made to it or for it⁴? What is the appropriate time for doing it? And what is its ultimate goal (i.e. what is the final destination which a spiritual aspirant reaches if he pursues this particular line of philosophy)?’ (2-3).

[Note—¹The word *Deva* has three meanings here—(a) one is the conventional meaning ‘a God’ or the patron deity who is offered worship by its specific Mantras and other ritualistic forms such as elaborate fire sacrifice or use of charm geometrical instruments called Tantras. (b) The second is the implied meaning ‘one who shines’ or ‘one who shines in his glories and stands out among other such deities with its unique qualities and virtues which the worshipper intends to honour and invoke, the qualities which had inspired the worshipper to chose this particular deity over others’. Only one who ‘shines’ is regarded honourable and worthy of worship because he is not only pure and holy but his purity and holiness shines and lets others see their correct path in its illumination. (c) The third meaning refers to the ‘ability of such exalted deities to liberally and magnanimously shower their virtues and holiness upon their devotees so that they can benefit from them even as the sun gives its light to the whole world evenly for the benefit of all creatures.

²*Mantras* are mystical formulas having divine powers. They consist of letters, words or phrases and used to invoke the blessings of the chosen deity. Each deity has a specific Mantra just like each element in Nature has been assigned specific symbol in modern science. For example, hydrogen is recognised by the letter H, oxygen by O, nitrogen by N, carbon by C etc. The Yogtattva Upanishad of Krishna Yajur Veda, verse nos. 91-94 and 98-102 expound upon the fact that Shiva is the patron deity and a personification of the fire and the sky elements respectively. It also describes the Beej Mantras, the ways of worshipping etc. of Shiva in these elements.

³The *Mudra* is a special body posture and positioning of its various external organs such as the hands, legs, head, etc. along with the various modes in which the mouth, tongue, eyes etc. are held. These form an integral part of formal forms of ritualistic worship involving Tantras (charm instruments) as well as during Japa (repetition of Mantras). These Mudras are said to harness the latent subtle and divine energy inherently present in the body of the worshipper and harmonize it with the cosmic energy of the deity being worshipped in order to bring about an integration between them and enabling the practitioner to become one with the deity.

⁴There are many ways we can interpret this particular question. In the context of ritualistic forms of worship called Yajya using the fire sacrifice, or the Tantra, i.e. the magical charm instruments used in occult forms of worship, it would mean some kind of offering that is made to the sacred fire or the chosen deity. If it’s purely done from the metaphysical point of view, then acquisition of knowledge by studying of the scriptures and listening them from a teacher is treated as another form of Yajya, and it is called Gyan Yajya, or the hardships endured, disciplined maintained and strict

codes of conduct observed to acquire divine knowledge. The offering in this case, as is obvious, would be diligence, devotion, sincerity, conviction, faith, concentration and focus of the mind, restrain of the senses and the disciplining of the body etc.]

4-5. He (Maarkandey) began his discourse—‘That esoteric, mystical and eclectic divine knowledge and wisdom which kindles spiritual awareness and enlightenment in a spiritual aspirant and seeker, culminating in the revelation to him of the supreme essence pertaining to Lord Shiva who is famously known as ‘Dakshina-Mukhi or Dakshina-Mukha’¹, is the known as ‘Shiva Tattva’.

The supreme transcendental Lord who winds up the entire creation at the time of its end (i.e. at the time of its conclusion, called the ‘dooms-day’), retracting it and establishing it in his own Atma or pure conscious cosmic Self (i. e. in his own bosom just like an octopus withdrawing its tentacles or a tortoise retracting its limbs in its shell) is the patron deity or Deva of this knowledge².

This Lord (i.e. the supreme transcendental Brahm in his most elementary and truthful form known as ‘Shiva Tattva’³—the primary essence, the basic elementary truth, known as the ‘Shiva Principle’, of creation) remains perpetually blissful by submerging himself in his own consciousness known as the Atma. He is self-illuminated (because illumination and light are metaphors for consciousness, enlightenment and knowledge that are holistic, divine, holy and auspicious) (4-5).

[Note—¹The word *Dakshina-Mukhi* has two parts. The second part ‘Mukha’ means ‘face’, while the word ‘Dakshin’ has three connotations here—viz. ‘south’, ‘right’ and ‘knowledge and wisdom’. Since Lord Shiva faced ‘south’ when he taught the ancient sages and seers who had approached him in some earlier time to gain divine wisdom and metaphysical knowledge which only he could impart to them, he was known as ‘the Lord facing south’. Since the knowledge imparted by him was astoundingly unique, most esoteric and divine, besides being the most ‘right’ or correct and precise ‘knowledge’ of metaphysics which granted ‘a divine wisdom as well as spiritual vision’ to its followers, making them experts and skilled in this knowledge, it was called ‘Dakshin’.

The word ‘Dakshin’ is derived from the word ‘Daksha’ which means to be an expert and skilled in any field of knowledge. Since Shiva is an expert God in the knowledge of Brahm and the Atma, he is therefore the most competent and expert teacher and preacher of this subject. A wise and skilled teacher is one who can make even difficult and rare knowledge easily accessible to this students, and for this purpose he must have a first hand experience of its intricate details so that he can solve all the problems, satisfy their queries, and attend to other nitty-gritties.

In other words, the *Dakshina-Murti* is the ‘image’ (‘Murti’) form of Shiva as a wise and enlightened teacher as well as an expert preacher of divine knowledge which is meant to make the disciple aware of the actual principles and the secret truth hidden in this world behind the arcade of falsehood and deceptions that are so typical of this deluding material world so as to enable him to attain a state of eternal blessedness marked by eternal spiritual peace, happiness, beatitude and felicity. It’s the correct and auspicious path to self-realisation and Brahm-realisation. And since he had done so while facing south, he came to be known as ‘Dakshin Mukhi’—or the south facing Lord who also happens to be an erudite and wise teacher and preacher.

Again, if we take the other name *Dakshina-Mukha* it would mean ‘one who is a personification of the virtues of donation and charity’. The word ‘Dakshinaa’ means giving away charitably and making selfless donation, while ‘Mukha’ means ‘mouth’. In other words, Lord Shiva has been extremely gracious, benevolent, liberal and magnanimous in giving away whatever he has, and in this particular case he has given away eternal spiritual knowledge and wisdom pertaining to the non-dual reality of the ‘self’ as a personification of Brahm. Since teaching is done by the ‘mouth’, hence this

donation and charity that he made was through the mouth, entitling him to be called 'Dakshina-Mukhi'.

²Lord Shiva is regarded as the God assigned the duty of bringing about conclusion of creation. In fact, Shiva is another manifestation of the supreme transcendental Brahm, the Supreme Being, in his role as the concluder of creation just like there is Brahma the creator and Vishnu the care-taker, both being the same Lord in his various roles. The Shiva that is referred to in this Upanishad and the one who ought to be worshipped is not his external form as the ferocious and merciless 'God of death' but the hidden element of Truth and Reality that governs this creation and which acts as the dynamic Principal that works behind the scene to bring about the conclusion of this vast creation, retract it in his own bosom like a father would embrace his offspring to protect it from the impending danger, and then when the time is conducive, to make it re-emerge once again with a new mandate and a fresh lease of life. Obviously, such an entity is known by the name of Brahm in the Upanishads. In his role as the creator, this cosmic Principal is known as Brahma, as the sustainer, nourisher and protector it is known as Vishnu, and as concluder it is called Shiva. These three Gods of the Trinity represent the basic elements of creation from which the entire creation has come into being. In this context, the reader is advised to refer to Yogtattva Upanishad, verse no. 85-102 which basically describe how the five elements have personified as these three Gods.

³*Shiva Tattva*—The word 'Tattva' means truth, reality, essence, fundamental aspect, the primary and basic element, the real and truthful principle, while the word 'Shiva' stand for a host of eclectic virtues and divine glories exemplified and personified by Lord Shiva, such as the divine and grand virtues of spiritual beauty, auspiciousness, truthfulness, righteousness, nobility, dispassion, detachment, wisdom, knowledge, enlightenment etc.

Since the primary essence and the basic elementary Truth of creation that is absolute, pristine pure, uncorrupted, untainted, immutable, eternal, imperishable and universal, that is auspicious, righteous and noble, is known as Brahm, and since these virtues are undiluted, untainted and eternally truthful, since they are unchallengeable and irrefutable 'truths and reality' of existence, they are collectively called the 'Shiva Principle'. Lord Shiva is the ultimate Authority and Principal of creation who personifies these virtues.

The word Shiva refers to one is not only beautiful, auspicious, holy and truthful, who is not only most enlightened, wise, self-realised and Brahm-realised, but personify or embody these virtues in his own self. That is why Shiva is the universal teacher and preacher of the great principles and tenets of metaphysics and spirituality because there is no one more competent, more knowledgeable and wiser than him. This is also the reason why he is depicted always in a state of perpetual Samadhi—the state of perpetual meditation and contemplation, because he has tasted the nectar of eternal bliss and happiness that comes with realising the ultimate Truth of existence which fills the spiritual aspirant with an extreme sense of contentedness and ecstasy.

It must be remembered that all Upanishads rely on and unequivocally expound upon one basic philosophy, and it is the tenet of 'Advaitya' or 'non-duality'. They endeavour to establish by their teachings that the 'Tattva', or the fundamental essence behind everything in this living creation, no matter what its external form and quality is and what the context and circumstance are—is basically the one and the same entity that is known as pure cosmic Consciousness. Since the underlying essence is the same and it remains constant, unchanging, immutable, indivisible and universal inspite of the mind-boggling variations in which it is manifested in this visible world, since nothing can exist without this fundamental essence, and since it would outlast all known visible faces of creation that appear to be true on their face but are fundamentally flawed because they come to an end whereas 'truth' should be eternal and imperishable, it is known as 'Tattva', the great essence and fundamental 'truth' behind everything.

So, the Shiva Tattva being talked about here is the ultimate essence or Tattva that is 'Shiva' in nature. That is, the essence that is basically truthful, beautiful, auspicious, holy and divine in nature.

The main aim of all spiritual pursuit and study of the scriptures is to become aware of the supreme and irrefutable Truth that is Absolute in this creation along with the basic principles that define this Absolute Truth and form its eclectic essence. Since the concept of the Absolute Truth is too abstract to be comprehended by the mind, it has been personified as a deity or Deva. What is it? It is the eclectic, esoteric and mystical knowledge and awareness of the cosmic, universal and eternal divine Being who personifies this Truth, and who is the subject matter of all metaphysical research and spiritual practices. This Supreme Being is none other but Brahm, the cosmic Consciousness. The knowledge of this Brahm is known as the Shiva Tattva—the auspicious, holy and divine essence and principle that defines and governs the enigmatic and mysterious entity known as Brahm.

It is like the case of the hidden nucleus around which the electrons move in an atom, or the atom itself which is invisible but forms the basic building block around which all the molecules are constructed, and which in turn form the basis of all material things that have come into existence in this world. If we remove the nucleus or the atom, nothing would exist though no one has actually seen either of them.]

6. [Verse nos. 6-8 describe the first of the five Mantras listed in this Upanishad.]

Now the various aspects of the powerful and effective Mantra dedicate to this Dakshina-Mukhi Lord (Shiva) are being enumerated. Its Rishi (the one who had first created or conceptualized it and understood its esoteric and mystical powers and prowess) is Brahma the creator¹; its Chanda (the poetical style in which it is composed) is known as Gayatri²; and its Devta (the patron deity to whom it is dedicated and who is worshipped through it) is the Lord known as Dakshina-Murti (the form of Shiva that faces south and which is in a teaching mode).

The Mantra is to be used to do 'Anga Nyas'³ (6).

[Note—¹The *Rishi* of a Mantra is the one who had first visualised or conceptualized it, who had first discovered it, who had first composed its hymns and witnessed its powerful might first hand. He tested the mystical powers of this hymn and then taught about it to his disciples for their welfare. He was like a modern day scientist who does long research and arrives at some astounding discovery and tests its truthfulness and effectiveness. Then that discovery is named after him. Verse no. 32 of this Upanishad clearly asserts that it was Brahma who had first worshipped the supreme transcendental Brahm at the beginning of creation with these hymns called Mantras in order to start the process of creation. Hence, he is the Rishi of these Mantras.

²*Gayatri* is a type of poetical composition that has twenty four letters and syllables divided into three steps or stanzas.

³The *Anga Nyas* is a process of pledging utmost faith and conviction on the divine and holy Mantra's supernatural powers and potentials by invoking it and reposing it on the various locations of the body and its vital parts. The word 'Anga' means the body and its various parts, and 'Nyas' means to invoke, deposit, place, keep, repose, trust, pledge, entrust, to keep a thing in mind, etc. This is a ritualistic process in which certain parts of the body are touched and certain Mantras are said. It also means the purification of the individual parts of the body and the installation of the individual letter of the invoked Mantra, complete with its full potentials, at those points. It is like reposting the powerful dynamic forces of creation represented by the Gods of the Mantra on the different designated parts of the body so as to empower these parts with the inherent strength and divine powers possessed by these Gods in a symbolic manner. It also makes the body holy and sanctified because it is now the seat where Divinity is being invoked and placed. Since the Gods cannot be seated on a polluted and unclean place, it obviously follows that the body of a worshipper is

made clean and holy in as much as it must be made free from all sorts of sins, perversions and other corrupting influences of this world.

Thus, the process of Anga Nyas makes the body of the worshipper sinless, holy and free from evils that cast their all-enveloping shadow on this world. Anga Nyas is a virtual shield-like body armour that gives protection to the wearer.

The locations on the body where Anga Nyas is done have great metaphysical significance. According to Ramopanishad of the Atharva Veda tradition, canto 2, verse no. 43, these ten locations are the following—Brahm-randhra (which is the hair-like slit on the top of the skull), the forehead, the central point of the eyebrows (where the symbolic third eye of wisdom is said to be located), the upper palate, the two earlobes, the heart, the navel and the two thighs = 10 sites.

Primarily there are six sites according to the same Upanishad's verse no. 23 where the primary seed or root words, called the Beej Mantras, are invoked. They are the following—the Brahm-randhra (top of the skull), the central point of the eyebrows, the heart, the navel, and the two thighs.

According to its verse no. 83-85, there are five sites for doing Anga Nyas for a warrior. These are heart, forehead/central point of the eyebrows, the top of the head where the tuft of hair is located and which is the site of the Brahm-randhra, the body armour or shield, and the arms and armaments of the aspirant warrior.

The human body is a microcosm of the cosmos, because according to the genesis of creation, the Viraat Purush, the macrocosmic, all-encompassing and all-inclusive manifestation of the supreme transcendental Brahm, had metamorphosed in the shape of the human body, and therefore this body is a manifestation of the entire creation including all its Gods and all their astounding potentials.

The creation has been visualised as having three divisions which form the so-called three worlds—viz. the heavens represented by the head of the human body where the Brahm-randhra, forehead and the eyebrows are located; the terrestrial world or the earth symbolised by the heart and the navel; and the nether or lower world by the legs and the two thighs. It must be noted that the two earlobes stand for the two extreme directions of the cosmic globe. So, when the aspirant does Anga Nyas with any Mantra on these specific points, he symbolically purifies these points on his body and empowers them with the mystical and ethereal powers of the powerful forces of Nature which these Mantras embody as mystical formulas encrypting astounding dynamic energy and forces of creation. This is a perception which implies that the ethereal and mystical powers and potentials of the Mantras representing the stupendous forces of Nature that control creation, right from its conception to its development, growth, expansion, sustenance and conclusion, are invoked and established throughout the breadth and length of this visible creation manifested in the form of the body of the aspirant. In other words, the aspirant hopes that he would be empowered with all the glorious virtues and auspicious powers and stupendous potentials and majestic authority vested in the Viraat Purush at the cosmic level.

But at the same time this visualization of the body being a manifestation of the Viraat Purush carries a load of noble responsibility with it. If the worshipper is enlightened and wise enough so as to be doing the Anga Nyas with full understanding of its metaphysical and spiritual import, then he must also realise that he is not an ordinary mortal creature who indulges in the pursuit of worldly pleasures and comforts, or who thinks that success in this material world is the ultimate goal and criterion of success in life. On the other hand, he should endeavour to live a life of exemplary sacrifice and service, devoting his time on researching the ultimate Truth of his own self as well as the rest of creation; he must endeavour to fine out the way to free himself from the endless cycle of birth and death, and ensure that he gets final emancipation and salvation in this very life itself. He must aim and find the source that would give him eternal peace and happiness as well as contentedness and bliss of

fulfillment. Otherwise he would be wasting his precious time and energy in imposterism and meaningless perfunctory rituals.]

7. Now the *first Mantra* is being said—In the very beginning the word ‘OM’ (a word used both as a salutation as well as a reference to the supreme Brahman who is actually meant to be worshipped through the following Mantra) is pronounced. This is followed sequentially by the following words, ‘Namaha’, then ‘Bhagwate’, then ‘Dakshina’, then ‘Murtaye’, then ‘Mahyam’ which is singular of the fourth aspect of the Sanskrit word *Asmad* meaning the Supreme Being or supreme Purush or Brahman, then the words ‘Medham Pragayam’. After that, the Sanskrit letter ‘Pra’ (as in *Pray*) is said, followed by the letter the letter ‘Ya’ (as in *yearn*), both standing for the wind element, and then the combined word ‘CChha’ (consisting half letter ‘Cha’ as in *chain* or *charm*, joined to the full letter ‘Chha’ as in *catch* it). Finally, the word for making offerings to the fire sacrifice and meant for the deity worshipped, i.e. the word ‘Swaha’, is said.

This results in the construction of a twenty four lettered Mantra dedicated to Manu (the great original and primary God from whom the rest of the humans were born, a reference to the Viraat Purush who manifested himself as the visible creation) (7).

[Note—Thus, the twenty four lettered Mantra as outlined in this verse and dedicated to Lord Shiva is the following—‘OM Namoha Bhagwate Dakshina Murtaye Mahyam Medham Pragayam Prayacchha Swaha’. This Mantra briefly means ‘OM salutations! I bow before the south facing and most revered and wise Lord called Dakshin Mukhi who is an ultimate epitome and personification of the highest quality of intelligence, erudition, divine wisdom and knowledge in this creation. I offer this offering to you; I submit myself before you by saying ‘Sawaha’.

It must be noted that the word Swaha is usually pronounced while making offerings to the fire pit of the fire sacrifice, but more broadly it means submission, humility and offering the best that one has to the chosen deity. In the present case since no external fire sacrifice is apparently being done and the worshipper is meditating upon one or the other forms of Lord Shiva while doing a symbolic form of sacrifice involving his own body where the Mantras are established and their dynamic cosmic esoteric powers are reposted, the implied meaning is to offer one’s own self with the greatest of reverence and humility to the Lord.]

8. Next, the Dhayan, or the process of meditating upon this eclectic and divine form of the Lord Dakshina-Mukhi¹, is being narrated—‘I offer my prayers to Lord Dakshina-Mukhi (i.e. Lord Shiva) who is gloriously white complexioned like the pure crystal and silver. His hands are held in the Gyan Mudra (i.e. in the posture adopted while giving divine knowledge and wisdom to his devotees) which blesses the recipient with the truthful and the best form of knowledge of the essence of everything, the eclectic and divine knowledge which is the highest form of wisdom that can be had, and which acts like an elixir of eternal bliss and felicity called Amrit. He holds an Aksha Mala (a prayer rosary) made of pearls. [The symbolism of pearls should be noted here. Pearls are metaphors for purity and the best of anything; they are symbols of holiness, divinity and piousness. Lord Shiva personifies all these qualities.]

He has three eyes. [There are two conventional eyes and the third eye symbolic of his great insight into the most secret of knowledge and the ability to see things past their physical appearances. It stands for the highest level of erudition, sagacity, wisdom, knowledge and enlightenment. Refer also Yogtattva Upanishad, verse nos. 93, 100.]

His broad forehead gives shelter to the Moon God. [This moon is present in a crescent shape indicating the various Kalaas or divine aspects of the Lord. It is believed that there are sixteen divine qualities called Kalaas in a man that the sixteen phases of the moon symbolises, and its location on the forehead shows that these qualities adorn Lord Shiva permanently. Refer also Yogtattva Upanishad, verse no. 100.]²

Serpents are wrapped round his waist as girdles³. He is adorned by countless divine ornaments. [These ornaments are not physical ornaments made of jewels etc. but the many glorious virtues that adorn the Lord as has been pointed out in reference to the presence of the moon on his head. Besides these virtues, there are umpteen numbers of divine virtues that Shiva possesses as the Supreme Being personified.] (8).

[Note—¹The *Dakshina-Murti* Lord Shiva is a benign form of Shiva in his teaching mode. The word Shiva stands for such divine qualities as auspiciousness, purity, beauty, piety, truth, renunciation, dispassion towards and detachment from all material things, highest level of enlightenment, knowledge, wisdom and erudition etc. Lord Shiva personifies all of them at once. He has been depicted in the scriptures as having four hands—two at the front and two behind. These are symbolic only and not any anomalous growth on the body.

In iconography, Lord Shiva has been depicted in various forms based on this Upanishad. One of his forms, the *first version*, is being referred to here. This form has the two hands in the front are held in the following way—the right one is in Gyan Mudra or the posture of giving knowledge, and the left one is in Vara Mudra or the posture that indicates his granting boons and giving gifts. The gift in this case is the gift of knowledge and wisdom. The two hands at the back of these front hands are holding a rosary in the right hand, and the fire in the left hand.

Ichnographically, he is shown sitting on a pedestal with his left leg resting on the thighs of the right leg which rests on a reclining figure of personified ignorance and delusion, called Apasmaara Purush.

²The *Moon* present on Shiva's forehead stands for the various eclectic qualities called Kalaas that he possesses and which adorn him like the moon. Symbolically, the devotee is advised to follow the example of his chosen deity Lord Shiva and note the symbolism of the Moon on his head. These eclectic qualities should be as prominent as the moon on the head of Shiva and they should form an integral part of the character of the devotee if he wishes to place himself in the position of being called a sincere follower and worshipper of Lord Shiva. Now let us have a glimpse of these Kalaas. They are the various eclectic qualities or attributes that an exalted man should possess, and briefly they are the following—(i) Shraddha (श्रद्धा—faith, believe, conviction, reverence, respect, devotion), (ii) Pran (प्राण—life; the very essence of creation; the vibrations of life; the rhythm and essential functions pertaining to life), (iii) Akash (आकाश—the all-pervading, all-encompassing sky or space element), (iv) Vayu (वायु—wind, air element), (v) Tej (तेज—energy, splendour, radiance, glory, might, majesty and fire element), (vi) Apaha (अपः—water element which is the all-important ingredient for life), (vii) 'Prithivi' (पृथ्वी—earth element which is the base or foundation for all mortal creation), (viii) Indriya (इन्द्रिय—the organs of the body, both the organs of perception as well as of action), (ix) Mana (मन—the mind and heart complex and their stupendous potentials), (x) Anna (अन्न—food, the element without which life is simply not imaginable because it provides it with the basic nourishment and energy), (xi) Virya (वीर्य—semen, sperms, standing for courage, valour, potency, vitality and prowess), (xii) Tapa (तपः—austerity and penance, tolerance of hardship as a means of penitence, forbearance as well as carrying out strict religious vows in order to purify one's self) (xiii) Mantra (मन्त्र—the ability to give good advise, the power to contemplate and think, concentrate and focus, logically arrive at a

conclusion), (xiv) Karma (कर्म—taking actions and doing deeds), (xv) Loka (लोक—worldly interactions and behaviours), and (xvi) Naam (नाम—good name, fame, reputation, honour and glory).

Reference should be made to the Chandogya Upanishad, 6/7/1-6 of Sam Veda tradition in this context.

³The coiled *serpents* around his body indicate the fact that he constantly reminds himself of imminent death because serpents are very poisonous and symbolise immediate death. This helps him to remain focused on his spiritual aim of self-realisation instead of being attracted by the material charms of this material world of sense objects and getting deluded by them. The serpents also signify that Shiva is the Lord of death; he is death personified. Since he is able to wrap the serpents around his body and they cannot harm him, it indicates the fact that he has conquered death. That is why he is called 'Mrityunjay', the conqueror of death.

Again, the coiled serpents represent the Kundalini, the coiled subtle energy center at the base of the spine which when activated can entitle the spiritual aspirant to experience a burst of stupendous spiritual energy which provides him a glimpse of his own divine powers as well as the powers of the cosmic Consciousness present inside his bosom as his Atma. This Kundalini is activated by doing numerous Yoga exercises as described in the Upanishads on the subject of Yoga.

The coiled serpents may also represent cycles of time in the macrocosm and the basic energy of life in the microcosm in the form of sexual energy.

These reptiles are very ferocious, dangerous, poisonous, and a symbol of male potency. The symbolism is that Shiva is a very potent God who can be extremely ruthless and unforgiving towards sinful creatures. He has exercised extreme self control and has 'girdled' or readied himself in preparation for enduring the greatest of hardships and sufferance for self-realisation as well as to provide the world with liberation and deliverance. The serpents warn his enemies not to fool around with him. That is also why he has fire in one of his hands. This fire signifies his ability to reduce to ashes the entire physical world consisting of falsehood and sins as well as eliminate all impurities, imperfections, faults and shortcomings that cripple the creature's spiritual well being.

The Yogattva Upanishad of the Krishna Yajur Veda tradition, verse nos. 92-94 say that Shiva is a personification of the fire element and is its patron deity. It is no wonder then that he is surrounded by 'fire-spitting' serpents as a symbolism of this fact.]

9. The *second Mantra* of nine letters is now being said. It should be used to do Nyas (i.e. it should be used to invoke the divine powers and stupendous glories of the chosen deity, in this case Lord Dakshina-Murti). To start with, the ethereal word OM is said with a Visarga at its end. [The Visarga is equivalent to the English colon mark “ : ”]. It is followed by the five lettered word for the deity, i.e. the word 'Dakshina Murti' is said with a Visarga at its end. This is to be followed with the word 'Ataram'.

This is the nine letter Mantra¹ of the great Manu (the supreme Lord from whom the humans and all other creatures have come into being) (9).

[Note—The nine letter Mantra is—“OM Dakshinamurtir-ataram”. Briefly it means 'OM salutations! Lord Dakshina-Mukhi (Shiva) is the one who can provide liberation and deliverance to the Atma or soul'.

The Mantra which has nine letters is called *Aasuri Jagati Chanda* or *Aasuri Ekpadaa Jagati Chanda*. It is also called *Yaajushi Brihati* + (*Swaraat Brahmi Anushtup* + *Swaraat Brahmi Ushnik*) *Chanda*.]

10. Now, the Dhyana or doing meditation on the form of this Dakshina-Mukhi Lord is being described—'One (front) hand of the Lord is held in Abhaya Mudra (the posture

of giving blessings and granting the boon of fearlessness, possibly from death and its horrors). The other hand rests on his thighs. The other two hands (at the back of the front hands) hold an axe and an antelope¹.

He is sitting comfortably under the Vat tree (i.e. the Indian fig tree or the Banyan tree). Serpents are wrapped around his waist. The moon of the second night adorns his matted lock of hairs on his head.

His complexion is white as milk. He has three eyes and is surrounded by exalted sages and seers such as Shuk (the sage who was in the body of a parrot and was the son of the legendary sage Veda Vyas, the classifier of the Vedas).

I reverentially bow before Lord Shiva and meditate upon his divine form as narrated above. Let him purify my mind and thought, and let him bless me with divine wisdom and knowledge' (10).

[Note—¹As has been said in note to verse no. 8 above, iconography has depicted Lord Shiva in different forms based on this Upanishad. The present form is Shiva's *second form* which is called Dakshina-Murti. In this form he has four hands—two in the front two behind them. The right front hand is in Abhay Mudra to grant fearlessness. The left hand rests on the thighs. The rear two hands hold an axe in the right hand and an antelope in the left hand. The axe is indicative of his readiness to slay the evil and sinful ones, and the antelope symbolises wildness in character that is about to be sacrificed by the axe.]

11-12. Now, the Nyas of the *third Mantra* is done. Brahma is the Rishi of this Mantra. The word 'OM' is said first followed by the words 'Blumm' and 'Namaha'. Then the following words are said sequentially—the seed or root letter for Maya (delusion creating powers of Brahm; Mother Nature) which is 'Hrim', then the seed or root letter for voice or the faculty of speech which is 'Aiyang' (the ninth Sanskrit vowel 'Aiy' as in My or dye with a dot on top; this 'dot' produces a nasal sound of 'ang' as in rang or rung or of 'um' as in sum). This is followed by the word for the deity being worshipped, i.e. 'Dakshin' and 'Murtaye'. Then the words 'Gyanam' and 'Dehi' are said. Finally, the word 'Swaha' is pronounced.

This creates a Manu Mantra of eighteen letters¹. The worshipper should repeat this eclectic and divine Mantra with due diligence, faith and sincerity. Amongst all the Mantras, this is said to be most secret, esoteric and mystical (11-12).

[Note—¹The complete Mantra thus becomes—"OM Blumm Namō Hrim Aiyang Dakshina Murtaye Gyanam Dehi Swaha". Briefly it means—"OM salutations! I bow most reverentially to the Lord called Dakshin Murti (Shiva) who is the Lord possessed of the astounding powers of Maya and the faculty of speech. I beg you to give me eclectic knowledge, divine wisdom and highest level of erudition and enlightenment. I offer myself in all humility to you; I submit myself to you; Swaha".

The Chanda having eighteen letters is called *Saamni Brihati Chanda*. It is usually of two types—(a) one in which the verse has a total of 18 letters arranged in three lines of 6 letters each—6 + 6 + 6 = 18 letters in all, (b) one in which there are only two lines of 9 letters each—9 + 9 = 18 letters in all. The latter version is called *Saamni Dwipada Brihati Chanda*.

It is called Manu because it is dedicated to the primary Being from whom the rest of creation has evolved.]

13. [This verse describes the process of doing Dhyān or meditation on the form of Dakshina-Murti Shiva to whom prayer was offered in verse no. 11-12.]

His body is coloured white due to the ash of the sacrificial fire smeared all over it. He bears the crescent moon on his head. One of his hands is in Gyan Mudra (the posture of giving knowledge) while the other three hold a Rudraksha Mala (a

rosary of Rudraksha beads or the seeds of the *eleocarpus ganitrus*), the Indian lute and a book¹. He is adorned by the one-piece cloth worn by ascetics (the loin cloth).

He is seated on the 'Vyas Peeth', the seat where the preacher or teacher usually sits during the course of giving a discourse. [This seat is usually higher than the rest of the place where the disciples sit around the teacher.] He is surrounded by exalted sages and seers who have come to hear his discourses. He is in a cheerful and pleasant mood. He is adorned by serpents. He wraps the skin of the tiger around himself (like the forest-dwelling ascetics and hermits usually do).

Let that Dakshina-Murti Lord always protect me, give shelter to me and provide solace and succour to me (13).

[Note—¹As has been pointed out earlier in verse nos. 8 and 10, Shiva has been depicted in different forms. The present version is his *third form*. In this version, the Dakshin Mukhi Shiva has four symbolic arms as well. The front right one is in *Gyan Mudra*—a posture in which the palm is open and held at right angle to the wrist, the thumb and the first finger form a ring and the rest of the finger are held erect and touch each other. The *rosary of Rudraksha* is very dear to Shiva as this particular tree is said to have originated from the tear drops of Shiva while he was meditating. There is an Upanishad called Rudraksha Jabalo-panishad belonging to the Sam Veda tradition dedicated to this theme and it has been included as Chapter 14 of the volume in this series dealing with the Upanishads of that Veda. The *Indian lute* is the musical instrument associated with Goddess Saraswati, the goddess of knowledge, wisdom, speech and intelligence. Holding of this instrument signifies that Shiva is the Lord of knowledge and wisdom of the best quality. The *book* of course is an obvious symbol of knowledge, especially of the scriptures.]

14-15. Now Nyas should be done with the *fourth Mantra*. The Mantra is constructed as follows—in the beginning the divine word 'OM' is pronounced. This is followed sequentially by the seed or root letter for Maya, i.e. 'Hrim', then by the seed or root letter for Sri (worldly prosperity and wealth, majesty and magnificence represented by Goddess Laxmi), which is 'Sring' (as in *string*). This is to be followed by the word 'Saamba-Shivaaye' and 'Tubhyam'. Finally, the offering word 'Swaha' is said. This is the twelve lettered Manu Mantra¹ of Shiva.

Now Dhyana, i.e. meditation on the form of Dakshina-Mukhi Lord Shiva to whom this Mantra is dedicated is being narrated—He is holding a Veena (Indian lute), a book and the 'Aksha Mala' (the prayer rosary) in his (three) hands, while one hand (i.e. the fourth one) is held in 'Abhaya Mudra' (the posture which grants fearlessness to the worshipper)².

The colour of his throat looks charming with its dark bluish hue which resembles the dark clouds of the rainy season³.

The Lord is the most exalted and the most excellent of the Gods. The king of serpents adorns his waist area (because it wraps itself around it like a girdle). He is sitting under a Vat Tree (the Indian fig or Banyan tree). He is surrounded and served by sages and seers such as Shuk etc. I offer my humble prayers to such a Lord (14-15).

[Note—¹The twelve letter Mantra is called *Aasuri Brihati Chanda*. The composite Mantra is as follows—"OM Hrim Sring Saamba-Shivaaye Tubhyam Swaha". Its meaning in brief is as follows—"OM salutations! Lord Shiva is the one who grants the boon of the powerful powers possessed by the combined forces of Maya as well as Sri to his devotees (i.e. they become entitled to possess all the worldly pomp and pageantry, all the material comforts and pleasures that money and prosperity can buy and which is befitting of an emperor). He is eternally cheerfully and benevolent. I submit myself reverentially to you oh Lord; Swaha'.

²This is the *fourth form* of Shiva. The rest of the hand positions are the same as in verse no. 13, except the *Abhaye Mudra*—this is the forgiving and fearlessness assuring posture in which palm is held at right angles to the wrist and held in an open position with the thumb and the four fingers held erect. The prayer rosary called *Aksha Maala* has an entire Upanishad dedicated to it, and it is called ‘Aksha-maliko-panishad. It belongs to the Rig Veda tradition and has been explained in the volume dealing with the Upanishads of this Veda.

³The simile is remarkable. The rain-bearing dark clouds of the monsoon season brings immense amount of cheer and merry-making in the Indian sub-continent because they are the harbingers of life-sustaining rains on which agriculture, prosperity, a vibrant plant and animal life as well as general well being and resultant happiness and joys of life depend. So the darkness is not something to be afraid of, but an occasion to welcome, rejoice and exult. The dark throat of Shiva was caused because he had drunk the Halaahal poison, the most lethal and strongest of poisons to emerge during the legendary churning of the ocean by the demons and the gods in search of the elixir of eternal life called Amrit. No one was ready to risk his life by drinking it, but the Lord was so fearless and powerful as well as magnanimous and charitable that he said the name of his own Lord, who happens to be Lord Ram, and gulped it. The poison stayed in his throat, because if it had entered the stomach then the entire creation would have been scorched to death as it is believed that the Lord harbours everything in his own sac-like abdomen.

The bluish hue created by this poison resembles the colour of the sky, and it is said in Yogtattva Upanishad, verse nos. 98-102 which is Chapter 17 of this volume, that Shiva also is the patron deity of the sky element. The symbolism is very obvious and stark. This also explains why the ‘sky’ appears to be blue tinged—because it is a manifestation of Lord Shiva in his vast form that is visible and omnipresent but unreachable and beyond measure at the same time. The remarkable thing about this form is its all-inclusive nature because everything that exists in this creation lives within the space of the sky and not beyond it. It ought to be remembered here that the word ‘sky’ is not restricted to the blue parabolic covering that we see from the earth but includes the far reaches of the infinite, measureless and fathomless depths of the cosmos.]

16-17. Now the *fifth Mantra* is being described. The Rishi of this Mantra (i.e. the one who had first created the Mantra) is Lord Vishnu, the sustainer and protector of creation. The composition style is called Anushtup Chanda¹. Its Devta (the patron deity to whom it is dedicated) is Lord Dakshina-Mukhi (i.e. the south facing Lord Shiva).

The Nyas is done with this Mantra. [That is, various parts of the body are touched by the fingers while saying the Mantra and the mystical powers of it are established or deposited there.]

The Mantra is constructed as follows—at the beginning, the divine word ‘OM’ is said. Then the words ‘Namo Bhagwate Tubhyam’ are said, followed by the word ‘Vat-mool’. This is followed by ‘Vaasine’, then ‘Vaagishaaye’, then ‘Mahaa Gyan Daayane’, and finally ‘Maayine’. The Mantra should be wound up by saying the word ‘Namaha’² (16-17).

[Note—¹The *Anushtup Chanda* is a verse having thirty two letters.

²The composite Mantra becomes—“OM Namo Bhagwate Tubhayam Vatmoolvaasine Vaagishaaye Maahaa-gyaan-daayine Maayine Namaha”. Briefly, this Mantra means as follows—‘OM salutations! I bow reverentially to you who is the Lord residing under the Vat Tree (i.e. the Indian fig or Banyan tree), who is an expert orator and master of the faculty of speech, and who is the great giver of

eclectic knowledge, divine wisdom and highest enlightenment to me. I bow before him'.]

18-20. This Mantra composed in the style of an Anushtup Chanda is the best amongst its class of Mantras and is therefore called 'Mantra Raaj', i.e. the king of Mantras.

Now, Dhyan (meditation) of the form of Shiva to whom this Mantra is dedicated is being described. 'The Lord has one hand in the Abhaye Mudra (as described in verse no. 14-15), while his other hands hold the book, the fire, and the serpents that are as ferocious as the fire¹.

He has a cheerful and pleasant face and disposition. He is adorned by a garland of pearls. The crescent moon forms his crown. He is the one who removes the darkness caused by ignorance and delusions.

He cannot be known and understood by words and use of the faculty of speech. [In other words, no one can describe him and his divine glories to others in words so as to make them grasp the esoteric secrets of the Lord; he is beyond the reach and purview of words and the ability of the faculty of speech.]

He is the Adi Purush (the primeval, primary and most ancient supreme Lord from whom the rest of the creation has emerged). He belongs to all (i.e. he is not sectarian or bigot in his approach, for as a benevolent and benign Lord of the creation, he treats every unit of creation equally and with equanimity, without any distinction based on birth, class, creed, colour or beliefs. The entire creation is like his offspring; everyone has equal right over him because he is the Father of all).

He resides under the Vat Tree (the Indian fig or Banyan tree)².

We meditate upon and reverentially remember the Lord who is the supreme Guru, or the most exalted moral preceptor and the most enlightened and wise teacher for the whole world. We meditate upon and reverentially remember the Lord for the fulfillment of our hopes, aspirations and desires'.

Then the worshipper should become silent and contemplate upon his pure self with this thought—'I am that Lord myself'. [This eclectic vision of the 'self' is the climax of meditation on the essence of the cosmic non-dual supreme entity in Nature known as the pure Consciousness which is the essence of Shiva. It is the supreme transcendental Truth of creation known as Brahm personified in the form of Shiva as well as the pure 'self' of the worshipper as his Atma. It is the essential teaching of Upanishads which lay stress repeatedly on the non-dual nature of the supreme Truth.]

Having a firm, steady and unwavering faith in the truth of this eclectic and axiomatic maxim (that the supreme Shiva representing Brahm is none other than me in my true form as the pure conscious Atma), being fully and unequivocally convinced of its truthfulness, having no doubts about its veracity and irrefutability, and having sincere and deep devotion for this Divinity till the time of one's death (i.e. through the life), is known as true 'Nishtha' (18-20).

[Note—¹Iconographically, this form of the Lord, the Dakshina-Mukhi Lord Shiva, is the *fifth form* of Shiva. It depicts him as holding his right front hand in the Abhaye Mudra, the book is held in the left front hand, the fire in the right back hand, and the serpent in the left back hand.

²In earlier times, wise and learned, self-realised and enlightened sages, seers, ascetics and hermits used to live under such trees as a mark of their total abandonment of worldly life and its comforts. Disciples used to assemble around him and great spiritual and metaphysical discourses were held here under the tree.]

21. To regard the different Manu Mantras (as described above) as referring to one single non-dual divine entity which is supreme and transcendental, and to constantly

and persistently repeat these Mantras (to remind one of the aforesaid fact should one forget about it under the influence of this world of delusions and ignorance), i.e. doing Japa with those Mantras, is the way or medium or source known as 'Saadhan' by which Gyan (true knowledge, divine wisdom, highest erudition and holistic enlightenment) can be obtained (21).

22. To be completely focused on that truthful, supreme and transcendental Divinity with full devotion and concentration of the mind, intellect and heart, paying full and un-diverted attention on it, is called the instrument or 'Upkaran' by which it can be accessed or attained. In other words, total surrender and single-minded pursuit of one's spiritual objective in life is the only instrument or vehicle which can deliver the required results to him (22).

23. To repeatedly and diligently exercise strict restraint on the wayward tendencies of the body and its sense organs, and instead divert their efforts and energy towards things having an eclectic, divine, holy, auspicious and righteous dimension, is called 'Bali' or making of sacrifices. [To make the body and organs suffer by forcing them to give up their indulgent ways of self gratification and yearning for the pleasures and comforts of the world and its material sense objects, and sacrificing them on the altar of spiritualism and self-realisation is indeed the greatest sacrifice that a spiritual aspirant can ever hope to make.] (23).

24. To strike a perfect balance and establish a perfect harmony and equanimity of the three Gunas (i.e. the Sata, Raja and Tama Gunas inherent in the creature is varying ratios that determine his individual character and personality as well as his mental setup and demeanours) is like Kaal or the death-knell of variables and dichotomies that create innumerable distortions, confusions and perplexities that occur in the world in its three dimensions of time (such as the past, the present and the future) (24).

[Note—The varying ratio of the three basic qualities of Sata, Raja and Tama in a person determine his individuality, and since the chances of these qualities mixing with each other is phenomenally large, we have countless types of men with no two individuals having everything in common. But suppose a situation is brought about when these three Gunas neutralise each other, as the case was before the beginning of creation when they were present in Brahm but lay in a neutral state, it would result in the elimination of all disparities and differences seen in this world. That is, the state of non-duality, homogeneity and uniformity would be reached. All variations and changes would cease to matter—what is now would also be in the future, and it was the same in the past. This is the basis of the theory of non-duality, i.e. that what was then is present now and would be there in the future and beyond. Since only 'truth' does not change, the entity targeted by this Upanishad is this ultimate 'absolute truth' which it prefers to call the 'Shiva Tattva'. Refer to verse nos. 2-5 and their accompanying note, as well as to verse no. 30 in this context.]

25. The final destination of all meditative and contemplative efforts made by the ascetic to access the supreme Truth is the subtle heart said to be like a divine lotus having a twelve petals. Since it is here the sublime Atma lives in the bliss sheath, it is the abode which provides eternal peace and tranquility (25).

26. Those devoted sages and seers once again asked the exalted sage Maarkandey, 'How is that eclectic divine entity manifested? What is its form? Who worships it?' (26).

27. He (Maarkandey) replied, 'It is the seen or visualised in the light of enlightenment arising from a lamp of Gyan (knowledge, wisdom and erudition) which is full of oil representing Vairagya (the virtues of renunciation and dispassion towards this world of material sense objects and sensual pleasures), whose wick represents Bhakti (total and sincere devotion, faith, surrender and submission), and whose light is enlightenment and self-realisation. When this light is shown, the all-pervading and all-encompassing, the omnipresent supreme transcendental Consciousness known as the Truth and the auspicious Divinity is seen in the form of the self-illuminated sublime Atma present in the aforesaid lotus-like pure subtle heart (27).

28-29. When the darkness of Agyan (ignorance and delusions) is removed by the medium of the light of shown by Gyan (truthful knowledge and wisdom), Bhakti (devotion and faith) and Vairagya (dispassion and detachment from falsehood and deluding world)—it is only then that the lamp of self-realisation springs to life on its own. That is, the self-illuminated Atma begins to show its divine presence.

One should use one's Gyan (knowledge and wisdom) as the upper part of the Arani¹ which is used as a rubbing rod to vigorously arouse Vairagya (the grand virtues of dispassion and detachment) which acts as the lower end of the Arani to produce the fire of enlightenment and total dispassion or non-involvement with things that are not real and true so that this 'light' can remove the darkness of Moha and Agyan (delusions and ignorance) that act as impediments or obstacles in the awareness of the supreme Tattva, i.e. in the realisation of the ultimate reality about the pure consciousness which is the true 'self'. These two—Moha and Agyan—are equivalent to death of the creature because they create extreme fear and confusion for him.

That supreme transcendental Tattva (essence and fundamental truth) is realizable only by the means of constantly pursuing the path of Gyan and Vairagya as well as doing Yoga (meditation and contemplation). [Like in the field of modern science, research and diligence is to be continuous process and not an ad-hoc approach. Like the case when remains healthy if one eats a balanced diet for the whole of his life and not gorge upon food once and then fast for a long time to compensate for it, meditation and contemplation, learning and experimenting should be a continuous process to fine tune one's efforts and have better and finer experiences of spiritualism through life.]² (28-29).

[Note—¹The *Arani* consists of two pieces of wood used to self-produce the fire during fire sacrifices by vigorously rubbing them against one another. The lower piece is rectangular in shape with a hole or indentation in the middle; it is made of a softer form of wood, usually of the Ashvattha tree (*Ficus religiosa*). It is called the lower Arani or the 'Adharaani' and is likened to the female uterus. The upper piece of wood is in the form of a churning or rubbing rod made of hard wood, usually Shami tree (*Acacia suma*), and it is called 'Uttararaani'. It is equivalent to the male phallus. The upper piece is inserted in the hole of the lower piece and vigorously turned with the help of a long string or cord. This rubbing generates heat and results in the creation of fire at the point of friction. This fire is the offspring of this union of the cosmic male and female.

In the present example, the upper part of the Arani which is vigorously turned is the Gyan, while the lower part is represented by Vairagya. The idea is that with proper use of Gyan or truthful knowledge, an aspirant can ignite the fire of renunciation and detachment from this world and its material charms, and this light of

enlightenment would in its wake remove the darkness of delusions that they have cast upon him.

The analogy of the Arani has been cited in a number of Upanishads of the Krishna Yajur Veda, e.g. Kathwalli Upanishad, Canto 2, Valli 1, verse no. 8; Brahm Upanishad, verse no. 18; Kaivalya Upanishad, verse no. 11; Shwetashwatar Upanishad, Canto 1, verse no. 14-15, Canto 2, verse no. 6; Dhyan Bindu Upanishad, verse no. 22.

²The same idea has been expounded in Yogatattva Upanishad, verse nos. 14-18 of the Krishna Yajur Veda tradition.]

30. Not to think of and contemplate on the supreme Truth is equivalent to the fetter that shackles the creature to this world. [This is because the mind cannot stay quiet, and neither can the organs remain idle. So if their energy and restlessness is not directed or channelised properly to something spiritually better and constructive, they would automatically and naturally gravitate or swerve towards their natural habitat, which in this case is this material world of delusions and artificiality, a world full of sense objects that keep the creature trapped in their snare by their magical charms, in an instinctive manner. This happens due to ignorance about the truth and reality of existence. The creature erroneously and out of ignorance thinks that the pleasures and comforts of the world are for real as much as the fallacious conception that he has about the gross and perishable body as being his ‘true self’ instead of the Atma. Falsehood and deception are like fetters that tie the creature’s soul to this world of birth and death because he would be entangled in its vice-like grip. He would be under the impression that the deeds done by the body are being done by ‘him’—and that therefore he is entitled to reap the fruits of such deeds. He forgets in the process that what he considers as ‘him’ is not the ‘real self’ of his but only a temporary dwelling in as much as the ‘real self’ is the pure consciousness called the Atma that merely resides in this gross body and is not involved in any of the deeds done by the latter. This Atma is eternal and imperishable as opposed to the body, and therefore all the miseries to which the creature is subjected to in this world are actually limited to the body and do not affect the Atma. This Atma never dies or takes birth, and the quagmire in which it has found itself in the present is due to its ignorance about this fundamental Truth of existence. Delusions, ignorance and their attendant hallucinations, vexations, perplexities, miseries and torments are tantamount to tying the creature in fetters because a bonded man is never at peace with himself no matter what material comforts he might be enjoying.]

Those who are tied to this fetter are the ones who are tormented and scared by the notion of duality or Dvaita in this world. [They are utterly confused as to what is true and what is false. They are not certain if the world they see and believe in is true or not, and whether the Atma actually exists. They are also not sure what kind of Mukti, or liberation and deliverance of the soul or Atma is known as the ‘final Mukti’ or the Kaivalya Mukti. They toss around and hop between theories and philosophies, never finding any firm ground to rest and have everlasting peace.]

When one becomes aware of the fact that one’s ‘true self’ is the pure consciousness and a personification of the supreme Truth of existence called the ‘Shiva Tattva’, that they are one and the same, it is then that he finds freedom from all sorts of fears and consternations. That is, when a wise and self-realised person realises that his ‘self’ is the universally conscious Atma which is the microcosmic counterpart of the macrocosmic Consciousness called Brahm, he feels a sense of great spiritual achievement as he would then have found or discovered the greatest of spiritual and metaphysical Truths in existence.

This eclectic knowledge and enlightenment steadies the spiritual aspirant by helping him focus on his own 'self', in his own Atma, which is the truthful essence known as cosmic Consciousness that is synonymous with the supreme transcendental Divinity known as Brahm or the 'Shiva Tattva' (30).

[Note—Refer verse nos. 4-5, 24, 28-29 in this context.]

31. To impart eclectic knowledge and divine wisdom to the eager disciple which would entitle and enable him to know about the supreme transcendental non-dual Truth of existence known as Brahm and become self-realised himself like his enlightened teacher is the best form of donation and charity that can be made by a wise, self-realised and enlightened preacher and teacher. Hence, it is the real and true form of 'Dakshina', meaning 'donation, charity and gift given to someone as a matter of religious duty'. [In other words, Dakshina is the selfless imparting of knowledge that is eclectic, auspicious, divine and complete in every form and would help the spiritual aspirant overcome the dark shadow of ignorance and its attendant delusions in order to see the 'light' of truth and reality at the other end of the dark-tunnel like world. This would fill him with new hope and lighten up the dark days of his life full of miseries and worries regarding his long-term fate and welfare. This is the greatest gift that the wise teacher can give to the disciple or an eager student. This 'giving of Dakshina' involves sharpening the aspirant's intellect and inculcating in it the habit and ability to be able to be incisive, discriminating and wise so that this intellect can penetrate deep into and unravel the greatest of esoteric secrets pertaining to the supreme transcendental Truth of existence known as the cosmic Consciousness. This knowledge and ability can enlighten the spiritual aspirant about his own 'self' as well as the truth of the surrounding world around him. This is the best and the purest form of Dakshina that can be given. Showing of 'light' and removing of 'darkness' is the most treasured gift that can be given and received by anyone.]

To become aware of that Brahm, to know who or what that Brahm is so that one is able to witness its presence and recognise it, one has to attentively listen to eclectic teachings pertaining to that Brahm, because it is only through hearing and listening about something from someone who has a first hand knowledge of it that one comes to know and learn about anything at all. Since teaching and explanation as well as answering of relevant questions to remove all doubts and confusions can be done only by the medium of the mouth, the latter is regarded as the Mukha or the instrument that helps one to know about Brahm. It is the virtual 'face' or 'mouth' of Brahm.

Since Lord Shiva is such a self-and-Brahm realised teacher as enumerated in this Upanishad, and since he is the one who has taught about the supreme transcendental cosmic Truth that is absolute and real to sages and seers, he is known as 'Dakshina-Mukha' Shiva (30).

32. At the beginning of creation, the grandfather of creation known as Prajapati Brahma had worshipped this Supreme Being (by using the hymns called Mantras as enumerated in this Upanishad above) to empower himself to initiate the process of creation. It was due to this worship that he got sufficient energy and strength to go about the arduous task of creation and fulfill his ambition of creating this world. This made him fulfilled and happy because he was successful in his desires. That is why Prajapati Brahma is deemed to be the Supreme Being's original worshipper¹ (32).

[Note—¹Refer verse no. 6 and 12 where it is said that Brahm is the Rishi of the Mantra dedicated to the Dakshina Mukhi Lord. The Rishi is the person who first

visualises or conceptualizes the Mantra, then composes a particular hymn which is to be called the Mantra, and then preaches it to others or reveals this secret to them. Thus he becomes the Mantra's first exponent, teacher and preacher.]

33. Those who read about this most secret, mystical and esoteric knowledge pertaining to the essence and truth of Shiva, called the 'Shiva Tattva', are freed from all sins, taints, blemishes, faults, impurities, shortcomings, imperfections and other demeaning and demoting qualities that cast a dark shadow over them.

Those who study it deeply and grasp its essence are able to obtain the ultimate form of liberation and deliverance for their soul that is called 'Kaivalya', or the form of emancipation and salvation that is only one of its kind. It is the final liberation and deliverance of the soul so much so that it does not have to take a birth again. It's the final 'dissolution'.

This is what this Upanishad asserts; this is the great spiritual teaching of this Upanishad. Amen! (33).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 19

Skanda Upanishad/Skando-panishad

Extolling the principles of Non-duality, this Upanishad stresses that there is no basic difference between Hari (Vishnu, the sustainer) and Shiva (the concluder), on the one hand, and Shiva and the Jiva (the living being) on the other. In other words, the three are one and the same; they are like the three corners of a triangle known as creation. They are manifestations of the same divine non-dual entity known as Brahm which has assumed three distinct forms to perform three distinct functions in this creation. These facts have been clearly brought out in verse nos. 8-9 and 4-6 respectively.

This Upanishad is a sort of an extension of the Dakshina-Mukhi Upanishad (Chapter 18) which says that Shiva is the only ultimate truthful Lord called Brahm, and therefore Shiva and the Atma of a creature, the Jiva-Atma, are one and the same. This Upanishad is expounded to remove any kind of doubts in the minds of devotees of both Vishnu and Shiva that their Lord is being demeaned in anyway whatsoever when they learn that either of them has been treated as being the Supreme Being in the scriptures, an unfortunate situation that would lead to un-intentioned and unnecessary tensions and doubts in the mind of spiritual aspirants. This Upanishad brings to rest any disparity and differences on this count and removes any idea of dichotomy and an illusion of duality that appears to be artificially and un-intentionally created between Shiva and Vishnu. Refer also to Rudra Hridaya Upanishad in this context; it is Chapter 26 of this volume.

Thus, this Upanishad espouses the cause of uniformity and universality of Divinity and the principle of Absolute Truth of creation, though this Truth and Divinity may be known by different names under different circumstances.

The body of the Jiva is regarded as the temple of Shiva where the Lord resides as the pure conscious Atma. [Verse no. 10.] Therefore the body should be kept clean as one keeps the temple clean, and it is inside one's own self that the ultimate Truth should be searched and worshipped. The various steps of keeping this metaphoric temple clean and sanctified have been outlined, emphasizing the need to make spiritual worship more practically oriented.

A glorious hymn called the 'Vishnu Sukta' appearing in the Shukla Yajur Veda, 5/15-21 is added as a separate appendix no. 3 of this volume to complement the assertions made in this Upanishad that there is no difference between Shiva and Vishnu. It would also complement the 'Rudra Shukta' which appears as appendix no. 2.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. [This proclamation comes from the person who has become self-realised and Brahm-realised after having understood the esoteric meaning and the fundamental essence of the word Shiva as enunciated and expounded in earlier Upanishad—the Dakshina-Mukhi. So, he makes this statement as a gesture of thanksgiving to his Lord.]

'Oh Lord Mahadev (Shiva, the great God)! Even a tiny fraction of your divine grace upon me has made me fortunate and privileged so much so that I am blessed with great virtues and eclectic qualities that has empowered me to remain steady and unfaltering in my present exalted stature and my high state of being without the fear of getting demoted or become fallen. Your divine grace has enabled me to become an excellent fount and a vibrant and exuberant point-source that exudes the nectar of eclectic knowledge and divine wisdom known as Amrit, and to become an embodiment of Shiva himself. What more can I ask for; what more can I want?' [That is, by the Lord's immense grace and benevolent blessings, the spiritual aspirant has become self-realised in as much as he has understood that his 'true self' is nothing but the eternal Shiva Principle personified as his Atma or pure consciousness. Being an embodiment of Shiva, he is deemed to have beautiful virtues of auspiciousness, righteousness, truthfulness, dispassion, detachment, enlightenment, wisdom and erudition—because these are some of the magnificent eclectic qualities of Lord Shiva. Once having attained this exalted stature, there is nothing that a wise aspirant would wish to have.] (1).

2. When the spiritual aspirant has risen to a higher state of realisation when he forgets about his gross body and gross existence (i.e. when he stops treating his gross body as his 'self' or as his true identity), and instead treats his inner subtle self, his inner sublime being as his true and self-illuminated 'self' (i.e. when he begins to treat his pure, radiant and self-illuminated consciousness called the Atma as his 'real self' instead of the external body in which this Atma dwells), he is deemed to have reached that privileged, enlightened and wise state of existence when he can see the same radiant illumination (of the pure conscious Atma) in others as he sees it inside his own self. [That is, a self-realised and enlightened aspirant is deemed to have understood the principle of non-duality in its essence, and when he applies it in practice he finds

that all the creatures with the gross body that he observes in this world around him have the same self-illuminated and radiant Atma in them that also resides in his own body. He does not see the gross body but has acquired the divine and mystical powers to peep behind the external façade and see the reality. It is like the modern x-ray machine that peeps behind the artificial man-made clothes and even the natural covering of the body in the form of the skin to see the bone structure of our bodies.]

When he observes this phenomenon of the self-illuminated Atma present everywhere, his notion of his own independent individuality ends (because he sees no distinction between himself and the rest of the living creation; he stops seeing himself as a special entity which is separate and distinguishable from the rest of the creation). Instead of distinguishing between any two individuals, i.e. instead of having the notion of ‘I’ and ‘you’, he begins to see the same Hari (Lord Vishnu; the supreme Brahman; the pure conscious Atma that is universal and uniform) everywhere. [This is the height of his spiritual elevation when he begins to apply the eclectic principles of ‘non-duality’ in practice and in every sphere of life. All his ego and self pride has ended; he does not anymore treat himself as someone more wise and great than his fellow brethrens. He becomes an epitome of humility and piety.] (2).

[Note—Exposition of the magnificent glories and divine virtues of the Atma has been a constant theme in all the Upanishads. Some of them are the following—(a) Krishna Yajur Veda’s Brahm Vidya Upanishad, verse nos. 17, 81-110; Tejo Bindu Upanishad, Canto 2, verse nos. 1-43, Canto 3, verse nos. 1-51, 60-64, Canto 4, verse nos. 2-30, 69-79, Canto 5, verse nos. 1-75, 90-96, Canto 6, verse nos. 1-72; Yogtattva Upanishad, verse nos. 7-8. (b) Shukla Yajur Veda’s Adhyatma Upanishad; Subalopanishad, Canto 3, 5, 7 (verse no. 1), and 9 (verse no. 16); Paingalo-panishad, canto 4, verse no.18; Brihad Aranyaka Upanishad, Canto 5, Brahmin 1. (c) Rig Veda’s Atma-poojo-panishad. (d) Atharva Veda’s Atmo-panishad.]

3. ‘What better can it be that now I have realised that my true identity is established in the truthful Atma (instead of the body, as I had believed till now). That is why I feel myself as having no birth, and as being immortal and eternal (because these are the divine and magnificent qualities of the Atma).

Aside of this Atma (which has a truthful existence, which is sublime and subtle, and which is immutable and imperishable), the rest of the world appears to be like an illusionary dream; it is gross and perishable (3).

4. He who is the witness and observer of the entire creation—both the gross and inane on the one hand, and the subtle and sublime on the other—is the supreme Lord who is Achutya (i.e. who is steady and unfaltering, is eternal, imperishable, unchanging, unwavering, uniform and universal) and a divine embodiment of Gyan (truthful and eclectic knowledge, erudition, wisdom and enlightenment). This Lord is indeed known as Mahadev (Lord Shiva, the great God) and Mahahari (Lord Vishnu, the great sustainer, the great nourisher and the great protector of this creation) (4).

[Note—This verse unequivocally establishes a uniformity and non-duality between Shiva and Vishnu. Refer also to verse nos. 8-9.]

5. He is the primary source of all ‘Jyotis’ (lights). [Here the word ‘Jyoti’, which literally means ‘light’, refers to the something that illuminates the entire world and removes its darkness. Therefore, it stands for life-giving consciousness and dynamic energy on the one hand, and wisdom, erudition, sagacity and knowledge that sustains and furthers the development of this creation on the other hand. Besides this, this symbolic light emanating from the lamp of knowledge and wisdom removes the

darkness created by ignorance, thereby eliminating all the phantoms symbolising delusions that exist in such darkness.]

He is the Parmeshwar, the supreme Ishwar and the great Lord. He is the supreme transcendental Brahm. I (as my pure self, the Atma which is pure consciousness) am also that Lord—there is no doubt about it (5).

[Note—This verse establishes a unity between the Atma of the individual creature and the supreme Atma of creation known as Brahm. See also the following verses.]

6. The Jiva (the living being who has a gross body in which its Atma, the pure consciousness, resides as its ‘true self’ that forms its truthful identity) is indeed Shiva (the auspicious and truthful Lord, the supreme Brahm personified, the Supreme Being), and Shiva is also indeed Jiva. Indeed, the Jiva is undiluted and wholesome Shiva personified. [That is, they are one and the same; they are non-dual entities; they are synonymous with each other; there is no difference between them; they are interchangeable.]

They (Jiva and Shiva) bear the same relationship with each other as the grain of rice which has two names. It is called ‘Vrihi’ when the husk is not removed from the grain, and ‘Chaawal’ when the husk is separated from the grain. [The same grain of rice has two names, but they do not refer to different cereals or two distinct types of food grains; both the names apply to the same food grain called ‘rice’. Similarly, the Jiva and Shiva are essentially the same. In this example, the Shiva is the rice grain, while the Jiva is the husk. The entity that has real worth is the grain of rice and not the husk; it is the rice that is eaten and not its husk. The husk is merely a covering that has to be discarded to reveal the grain of rice hidden inside it. Likewise, the body of the creature forms a covering around its true self which is the Shiva hidden inside in the form of the Jiva’s pure consciousness known as the Atma. The gross body is of no worth if there were no Atma inside it even as the husk without rice inside is worthless. The husk is also like the layer of ignorance that surrounds the essential element of worth, i.e. the grain of rice.] (6).

[Note—Refer verse nos. 7, 9 also.]

7. In this way, that pure consciousness and divine entity becomes a Jiva when it gets tied in fetters or covered in a veil (of ignorance and delusions, thereby forgetting its pristine pure existence and divine heritage which has a magnificent sublime and subtle form).

The same divine entity becomes Sadaa Shiva (the auspicious and holy Truth that is eternal, unchanging, imperishable and constant) when all the shackling affects of its past deeds are done away with. In other words, when the creature is tied in fetters, it is called a Jiva, while the same creatures freed from its fetters is called Sadaa Shiva¹ (7).

[Note--¹That is, when the creature is able to understand that this world as well his gross body that lives and interacts with this world are not the real things because both are always changing and both are ultimately perishable, he would disassociate himself from getting involved with them. Who is this ‘himself’? Is it the body or something else? Herein comes into play divine wisdom and true knowledge of the reality. The wise and self-realised creature would understand that his ‘true self’ is his Atma and not the body, that it is the gross body that does all the deeds and not the subtle and sublime Atma, and the deeds are done by the physical body in a physical world. When the world itself is regarded as illusionary and delusory, the very question of doing physical deeds becomes debatable because one cannot do physical things in an imaginable and illusionary world just like one cannot find physical water

and physically drink it in the imaginary mirage seen in a desert. So the very foundation of doing deeds itself becomes shaky and untenable.

Besides this point, the creature's true identity is the Atma which resides inside the body, but the deeds are not actually done by it; they are done by the body. This body lives in the world. As is well established in the Upanishads, the world is like a mirage created by the mind, and anything that exists in a mirage and acts in it is also a mirage. Hence, the body is also a mirage because it exists in the world and acts in it. When this knowledge is acquired by the wise and self-realised spiritual aspirant, he becomes freed from the encumbrances caused by the deeds because the body is not his 'true self', but it is the Atma that is. This Atma is pure and truthful; it is not the mirage like the body. It is eternal and imperishable unlike the body and the world. Hence, it is like the Sadaa Shiva principle.

Refer to note of verse no. 13 below and to Dhyan Bindu Upanishad, verse no. 93/15 of Krishna Yajur Veda which unequivocally affirms that Mukti or final liberation and deliverance for the soul is available when the creature understands that his Atma and the supreme Brahm are one non-dual entity, and that the body is not his 'true self'. In fact, the entire verse, from no. 93/1 right up to 93/15 explains how the Atma appears to be tainted by the faults of the world.

Amongst the Upanishads that deal with the concept of the Atma being affected by the deeds done by the body when the former erroneously thinks that they are being done by it are the following—The *Adhyatma Upanishad* of Shukla Yajur Veda tradition describes the concept of doing deeds and its effect on the spiritual liberation or bondage of the creature in fine detail in its verse nos. 49-60. The 'Karma Chakra' or the giant wheel of deeds and their consequences has been described in the *Shwetashwatar Upanishad* of Krishna Yajur Veda, in its Canto 6, verse no. 3. The three Paths followed by a creature according to the deeds done by him are referred to in *Shwetashwatar Upanishad*, 4/7. The *Varaaha Upanishad* of Krishna Yajur Veda, in its Canto 2, verse no. 48 describes how one can become free from the fetters created by 'deeds'. The *Niralambo-panishad* of Shukla Yajur Veda, in its verse no. 11-12 describes the concept of Karma. The *Sarwasaar Upanishad* of Krishna Yajur Veda, in its verse no. 6 describes the concept of how and why the creature becomes the doer of deeds

These concepts and the fact that a creature's destiny depends upon the deeds done by him have been elaborately described elsewhere also in (i) Rig Veda's Kaushitaki Brahmin Upanishad, Canto 1; (ii) Shukla Yajur Veda's Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 33, 36, 5/10-5/11, 6/1/1-6, 6/2/2,14-16, etc.; *Adhyatma Upanishad*, verse nos. 57-58, 66; (iii) Sam Veda's Chandogya Upanishad, Canto 5, Section 3-10; Canto 7, Section 21; (iv) Krishna Yajur Veda's Taittiriyo-panishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3; Dhyan Bindu Upanishad, verse no. 93/15; Skanda Upanishad, verse no. 7.

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1. The *Trishikhi Brahmin Upanishad* of Shukla Yajur Veda tradition, in its Canto 2, verse nos. 23-26 defines what constitutes of true 'Karma Yoga'. The *Mandal Brahmin Upanishad* of Shukla Yajur Veda, 2/4/2-3 describes the philosophy of Deeds.]

8. Lord Shiva is an image or a manifestation of Lord Vishnu, and similarly Lord Vishnu is an image or a manifestation of Lord Shiva. There is no distinction, disparity or duality between them. [In other words, there is no difference between them. Both are the supreme transcendental Divinity known as Brahm personified. The only apparent difference is because of the two functions that Brahm carries out in these forms—viz. as Vishnu he sustains and protects the creation, and as Shiva he brings it

to its end. The divine entity that does all this is neither Vishnu nor Shiva, but Brahm. The two names are only indicative of the two duties the same authority performs.]

Lord Vishnu resides in the heart of Lord Shiva, and Lord Shiva resides in the heart of Lord Vishnu¹ (8).

[Note--¹In other words, though Vishnu seems to be engrossed and pre-occupied in the job of taking care of this vast kingdom of creation and totally absorbed in its affairs, looking as if he is a worldly being who rarely finds time to do self introspection and who is engulfed in all sorts of worldly cunning and deceit, internally he is as dispassionate and detached from all this drama as Lord Shiva is. Therefore internally Vishnu is an image of Shiva, i.e. he is as truthful, pure, uncorrupt, wise, self-realised, enlightened, renunciate, dispassionate, detached, non-involved, ever contemplative and meditative as Shiva. Though externally Vishnu remains worried about the welfare of his subjects put under his care, internally he is as care free, neutral and detached from them as Shiva.

In the same vein, though Shiva is said to be the lord of death, bringing to an end what is so arduously created by Brahma the creator and so painstakingly sustained and protected by Vishnu, internally he is very merciful, kind, benevolent and graceful like Lord Vishnu himself because the latter is the eternal protector and sustainer of creation. This is borne by the fact that Shiva utters the divine Mantra called the 'Tarak Mantra' which can give eternal liberation and deliverance to the soul of a dying man in his ears. Had Shiva only been vindictive, vengeful, merciless, unrelenting, cursing and wrathful in nature, epitomizing anger and cussedness, deriving sadistic pleasure in death, destruction and mayhem, he wouldn't have ever thought of the emancipation and salvation of the soul of the creature by either uttering the Tarak Mantra in his ears at the time of his death or preaching the profoundest principles and tenets of metaphysics to enlighten one about his true self and his oneness with the supreme Brahm as evidently he has done in his form of Dakshina-Mukhi Shiva. Besides this, Shiva is always in a state of meditation and contemplation; he is an epitome of bliss and tranquility—characters quite the opposite of the Lord known to preside over anger, wrathfulness and short temper which causes havoc, death and destruction. Refer also verse no. 4 in this context.]

9. Just like Lord Vishnu is a personified form of Shiva, Lord Shiva is too a personified form of Vishnu. When I (i.e. the wise and enlightened spiritual aspirant who has become self-realised) do not perceive any difference between them, I too become a personified form of auspiciousness and divinity represented by either of them¹.

Indeed, there is no duality and difference between Shiva and Keshav (Vishnu)² (9).

[Note—¹At the time of creation, the Viraat Purush, the macrocosmic, all encompassing gross body of the supreme Brahm, revealed himself in the form of the living being, forming the latter's gross body at the microcosmic level of creation. The Shiva principle is treated as the cosmic Consciousness operating inside the Viraat Purush at the macro level of creation, and as its counterpart the Atma in the individual living being at the micro level of creation. Thus, both are essentially and basically the same. Refer verse nos. 5-7 in this context. Refer also to Adhyatma Upanishad, verse no. 20 of Shukla Yajur Veda tradition.

²Refer verse nos. 4,8 in this context.]

10. Those who are expert in the fundamental tenets of metaphysics assert that the body is the temple or shrine where the only enlightened and divine Supreme Being to be worshipped by the creature resides in the form of Shiva (i.e. in the form of the pure

consciousness that is enlightened, divine, truthful, eternal, auspicious, uncorrupt and untainted).

To do true worship one has to have a clear vision of the deity to be worshipped, and this untainted and undistorted view of the holy deity residing inside one's own self is possible only by abandoning the tainting and distorting effects caused by ignorance and delusions of all sorts. [These are caused by worldly faults, improprieties and imperfections that act like a darkening veil on the immaculate self, preventing the spiritual aspirant from having a divine vision of the holy entity residing in his bosom as his Atma.] (10).

[Note—The Pran Agnihotra Upanishad of the Krishna Yajur Veda also emphasizes the importance of treating the body as the holy site where the supreme Brahm resides. In fact, it advocates the performance of the fire sacrifice internally by visualizing the body as the sacrificial pit in which the vital winds called the Prans are offered as offering to honour the supreme Brahm residing inside it.

The Yogshikha Upanishad of Krishna Yajur Veda, in its Canto 1, verse no. 168, and Canto 5, verse nos. 2-5 also reiterates this point that the body is a holy temple where Lord Shiva resides. Refer also to Adhyatma Upanishad of Shukla Yajur Veda, verse no. 1.]

11. True Gyan, i.e. to have real knowledge, erudition, sagacity and wisdom, is to have a uniformly view the presence of the non-dual Divinity known as Brahm in all the living beings in creation (as the pure consciousness known as the Atma which happens to be the true 'self' of all the creatures).

Similarly, real Dhyān, i.e. to be truly contemplative and meditative, is to have no attraction towards and be non-involved in all the objects of the senses in this material world.

True Snaan, i.e. to take a bath for the purpose of cleaning oneself before worship, is to abandon all the impure and inauspicious thoughts that occur in the mind and taint the heart.

Likewise, real Shauch, i.e. real cleaning, is to keep the sense organs under constant restraint (or, exercising self-restraint) (11).

[Note—These stanzas highlight the real essence of worship. Far from mechanical rituals and perfunctory formalities, it stresses the real form of worship. It would be noted that if one follows the instructions laid down here, he would not only be doing an ideal form of worship, he would also be improving himself in a practical way and in a holistic manner. His approach towards life would change, and instead of remaining restless and unhappy, he would find steady peace and happiness.

An enlightened man would not need to do costly and time consuming external forms of ritualistic worship or read extensive scriptural tomes becomes the 'real thing' has become known to him. He would not have to search the entire stack of hay when he has found the gold he had set out to find!

If one individual can improve himself, the whole society would be affected just like the case when one bad character can ruin the whole society. The beginning has to be made, and then the laws of Nature would take care of the rest.]

12. After having drunk the elixir of Brahm realisation (i.e. after having experienced the spiritual bliss and ecstasy that comes with being acquainted with the great truths as enunciated by the Upanishads about Brahm), one need only eat sufficient enough to sustain the body in a healthy manner¹.

He should abandon the idea of duality and remain submerged in meditating upon one supreme Consciousness. He should live a secluded life in a lonely place. [In other words, he should remain focused in his spiritual pursuit and not get distracted by

the disturbances created by this world, or get entangled in the snare of worldly attractions.]

Only a person who remains steady in this path and follows these instructions diligently is the one who finds final liberation and deliverance for his self—i.e. he finds ‘Mukti’ (12).

[Note--¹That is, he should eat proper food to maintain a health body because the body is like a temple in which he can worship the deity. But at the same time he should not start to worship the body by pampering it with tasty and too rich forms of food by becoming an indulgent eater because his object of worship is not the body which is merely a temple but the deity residing in it in the form of the Atma. This Atma is not hungry for worldly tastes and delicacies.]

13. I bow and pay my obeisance to the Supreme Being who resides in the supreme abode called the ‘Param Dham’¹. Let me be blessed by his grace. Let me have a long and fruitful life.

Oh Lord Narasingh² who is a personification of the Trinity Gods consisting of Brahma the creator, Vishnu the sustainer, nourisher and protector, and Shiva the concluder! By your divine grace, I am able to recognise that supreme transcendental Brahm in my own Atma; I have begin to see that Brahm as a manifestation in my own pure consciousness known as the Atma, my pure self. That Brahm is marked by such glorious virtues as ‘Achintya’ (one who is beyond comprehension and thoughts, one who is beyond the reach of the mind and intellect), ‘Avyakta’ (one who is unmanifest, unseen and without any attributes), ‘Anant’ (one who has no end and limits; one who is infinite and eternal), ‘Avinaashi’ (one who does not perish and die; one who cannot be demoted, demolished and ruined), and is ‘Vedatmak’ (an embodiment of the Vedas; a manifestation of the divine knowledge contained in the Vedas) (13).

[Note--¹Here there is a play on words. The ‘supreme abode’ is the subtle and sublime heart where the conscious Atma resides. This Atma has already been said to be Shiva personified, this Shiva is the ultimate and absolute Truth of existence or creation personified, and the ultimate Truth is the ‘Supreme Being’ known as Brahm, or cosmic Consciousness. The supreme abode is also the heaven where the three chief and primary manifestations of Brahm have their abode in the form of the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder. In other words, the man himself is the one who has created this myriad world, it is he who is responsible for its existence, and it is he who can conclude it. This observation has tremendous metaphysical significance. This world is false and full of miseries but the man voluntarily remains neck deep submerged in it and whole-heartedly engrossed in it inspite of this knowledge that it is he who is to blame for all his sufferings having their genesis in this world. It is his own mind that has created this world for him because he was enticed by the magnificent vision of its alluring but imaginary charms and wished to enjoy them. Once he tastes the world, his sense organs get hooked to it and then they push-propel him to remain going ahead in this direction, i.e. to remain engrossed and submerged in the ocean-like world in the hope of discovering newer methods of enjoying it. In this, he even suffers a lot but sweeps these sufferings under the carpet and bargains them for momentary happiness that is got by sensual gratifications. But to his dismay he finds that all his pleasures and enjoyments are short-lived, his sufferings are like insurmountable huge waves of the ocean which throw him off the boat so often that he has become weary and tired of trying to recover from his ordeal, that all his attempts to obtain respite from his worldly sufferings are momentary, and that he would never find eternal rest and peace unless he seeks the true remedy for all his ailments. He is like a fish splashing and floundering around nervously and in utter

dismay once it finds itself trapped in the net by being enticed by the bait and greedy enough to bite it.

Then the trapped man begins his search for ways of finding freedom and deliverance from the quagmire in which he has allowed himself to land in. He seeks his salvation and emancipation by studying the scriptures and consulting wise teachers. Once becoming aware of it, he pursues his spiritual goal, and if he is careful, prudent, steadfast and wise he would ultimately reach it. Having known what the 'truth and reality' are, he would shun falsehood and delusions like the plague because he would have realised by now that the crux of all his sufferings and problems lies in his ignorance and misconceptions. He realises that the cause of all his torments was the ignorance of the truth and the existence of the deluding world which he now endeavours to get rid of. He finds that real and meaningful peace and happiness can come only when he detaches and disassociates himself from getting emotionally and mentally involved in this artificial world. In other words, he himself begins to dismantle the world that he had so arduously and painstakingly constructed earlier, or begins the process of concluding his involvement with this world. The world would come to an end for him; it would cease to exist for him. He is freed from the fetters that shackle him to this world and everything associated with it, including his body and the cycle of birth and death, and the theory of deed and their consequences.

The Jiva or a living being, a man for example, is himself responsible for all his problems and he should not blame others for it. Refer also to note of verse no. 7 above.

That is, the man is the creator, sustainer and concluder of the world himself. Or, he is indeed that Brahm who can bring about all this to fruition. He is Brahm personified. Almost all the Upanishads endorse and espouse this basic axiomatic maxim of metaphysics and spiritualism. Some of such Upanishads are Brahm Vidya, Brahm, Tejobindu, Atma Prabodho, Atma, Atma Bodh, Ishawasya, Shuka Rahasya, Maho-panishad etc.

²It is to be noted in this verse that *Narsingh* has been regarded as an incarnation of the three Gods of the Trinity, and then the general tenor and language of the verse clearly indicates that it is the supreme transcendental Brahm that is being referred to here. In other words, Lord Narsingh is a manifestation of Brahm itself; he is the revealed form of the dynamic and forceful powers of Nature to get rid of evil and negativity in this creation.

Narsingh is the half lion and half man incarnation of Lord Vishnu to slay the demon Hiranyakashipu who had been tormenting Prahalad, his son, because the latter worshipped Vishnu. This 'half lion and half man' form of the Lord is a visible image that has a cosmic counterpart as the 'half man and half female' manifestation of the Lord that is known as 'Ardha-Narishwar'. This cosmic form of Brahm as Ardha-Narishwar has two components—the right half is depicted in iconography as being a male representing Shiva, the great God, the other half is female representing his divine Shakti known as Parvati or Uma. This Shakti represents the dynamic energy of Shiva. When this applies to Brahm, the male aspect refers to the Supreme Being himself while the female aspect applies to Maya which is the dynamic power that Brahm employed to initiate this magical creation. This depiction is basically envisioned to drive home the point that Brahm and Shakti are inseparable in the context of the creation of the world. This elementary method of reproduction is known as 'asexual reproduction' and is depicted by many asexual plants and animals even today. For instance, the one-celled amoeba reproduces itself by cleavage. On the other hand, if we were to regard Brahm in its purest form as the cosmic Consciousness, then Brahm would not need the other half of the Maya, and would only be one and universal entity which has no definite and describable form and shape, it has no attributes and qualities. This form of the sublime and most subtle Brahm is known as either the Hiranyagarbha or the Viraat Purush depending upon the

level of subtlety and grossness which is assigned to it, the former being more subtle than the latter.

The 'lion' part is a metaphor for the grand qualities of unmatched stupendous strength, physical prowess and complete sway over the entire domain of the forest and its inhabitant wild animals that the lion possesses and which are symbolic of the inherent stupendous might of the supreme Brahm as the unquestioned Lord of this forest-like world inhabited by myriad variations of creatures just like a dense forest infested by wild animals. Similarly, the 'man' part symbolises the fact that Brahm is the most highly placed Lord much like a human being who represents the highest level in the ladder of evolution.

In other words, even as the lion is the unquestioned lord of the wilds and the man of all the living beings, the supreme transcendental Brahm is the unquestioned Lord of all that exists in all its variations, whether in its primary form represented by the wild animals of the jungle or in its more evolved and developed form represented by man.

Lord Narsingh is the fourth incarnation of the Supreme Being who had taken various forms to ward off and overcome evil forces in creation when they become ascendant and overcame the good and the righteous. The Lord did this to maintain order in the creation which is like his offspring.

So when one of his great devotees known as Prahalaad was being extremely tormented by his own father, the demon Hiranyakashipu, the Lord appeared as Narsingh—or as a half lion and half man form—from the pillar to which he was tied by the demon to prove to him the omnipresence and all-pervading form of the Supreme Being. Narsingh is a personification of the grand virtues of power, energy, valour and strength, and hence is worshipped by warriors and rulers in general. The Mantra of this Lord is believed to be very powerful and effective against enemies and opponents.

Iconographically, there are many forms of Narsingh. Some of them are as follows—as seated (Aasin), as standing (Sthaanak), as boon-giver (Vardaayak), as ferocious and angry (Ugra), as striding (Yaanak), in the company of Laxmi, the Goddess of wealth and the divine consort of Vishnu (Laxmi-Narsingh), as seated in Yoga or doing meditation like Shiva (Yoga-Narsingh), as a resident of a mountain (Girija), etc.

His images depict him in either two hand form or in four hand form. In the latter case, the two back hands hold a conch and discus like the case of Vishnu. The two front hands are shown as killing the demon Hiranyakashipu by forcing the latter on his lap and tearing his abdomen and yanking his entrails out by his sharp nails.

An entire Upanishad called the *Narsingh Tapini Upanishad*, which is the 7th Upanishad of the Atharva Veda, is dedicated to him. An entire Puran called 'Narsingh Puran' is likewise dedicated to this Godhead. This Puran glorifies Narsingh as an incarnation of Vishnu, and is synonymous with Narayan, the Supreme Being called Brahm. Lord Vishnu himself is a macrocosmic, all-inclusive and invisible form of the supreme transcendental Brahm, and therefore Narsingh is a de-facto visible form of Brahm.

The *Shuka Rahasya Upanishad* of Krishna Yajur Veda, verse no. 27, while describing the process of invoking one of the components 'Asi' ('is) of the Maha Vakya (the great saying of the Vedas) 'Tattwamasi' ('that essence is you) says that the Shakti (dynamic energy) of this individual component 'Asi' is Narsingh.

14. Those who are spiritually enlightened and wisened about the truth of Brahm always remain contemplative and meditate upon the divine abode of Lord Vishnu. As such, they are virtually having a constant view of this supreme abode where the Lord lives; they are constantly keeping sight of this divine vision before their eyes. They keep the sight of Lord Vishnu's divine abode constantly before their eyes¹ (14).

[Note--¹In other words, they keep their attention focused on their spiritual well being and their target of attaining liberation and deliverance from the deluding world of numerous spiritual hurdles and pitfalls inspite of going about their routine worldly affairs. They remain focused not on the world but on the primary target of life which is to obtain emancipation and salvation in this life as a human being itself because such chances are rare to come by.

The phrase 'to keep the heavenly abode of Vishnu always in sight' is a figure of speech to emphasise the fact that they remain steady and steadfast in their spiritual progress and never falter from it; they think and see only that which is auspicious and holy. The result is that their eyes reflect the image of Vishnu like the sun getting reflected from the mirror; their eyes shine with a divine radiance and the glorious light of self-realisation. This light of enlightenment and realisation removes all darkness of ignorance and delusions that surround them, and it lights up the path for them much like the lighted lamp that shows the path to travelers during the night. That is also why the eyes are said to be the symbolic abode of the Sun God because the sun is the lamp of the cosmos and the eye is that of Brahm residing inside the body as his 'temple' or holy abode. This fact is endorsed in verse no. 10.

In other words, a wise and enlightened spiritual aspirant remains steady and vigilant in his path; he does not falter or flounder in the wake of delusions and myriad forms it takes in the world where he lives.

The fact that Yoga helps in having a divine vision of Lord Vishnu has been affirmed elsewhere also, such as in Trishikhi Brahmin Upanishad of the Skukla Yajur Veda, Canto 2, verse no. 100.]

15. The wise and enlightened ones who have accessed the truthful knowledge of Brahm obtain access to the supreme abode of Lord Vishnu, enter it and finally get lost in it. That is, once they have entered the state of Brahm-realisation and tasted its nectar-like blissfulness and eternal happiness, they prefer to remain in that state and never attempt to get out of it and show their faces in this world again. They adopt this heavenly state of existence as their permanent abode and prefer to remain incognito in it lest anyone recognise them and pull them back into the slippery slush and filth of this material world. They virtually voluntarily allow themselves to get lost in that divine state of existence of blessedness and holiness that is a metaphor for the heaven where Vishnu lives.

This is the complete instruction for obtaining Nirvan (emancipation and salvation) of the soul as prescribed by the holy Vedas. This is their tenet and axiomatic principle. This is what is called the Upanishad pertaining to this Nirvan. Amen! (15).

[Note—The 'Vishnu Sukta', a devotional hymn dedicated to Lord Vishnu as it appears in the Shukla Yajur Veda, 5/15-21 is added as appendix no. 3 of this volume.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 20

Shaarirak Upanishad/Shaarirko-panishad

This Upanishad basically deals with the profound secrets of creation, the Genesis of Creation vis-à-vis the individual creature. It describes the fundamental basic elements or units of this creation and the way they mutated and underwent changes, expanding and developing into such a complex structure as the individual creature that it defies definition. In its twenty verses it encapsulates the entire process in a clear and step-by-step format. Treating the individual creature's body as a microcosm of the vast cosmos, and then dividing this body into its basic ingredient units, it goes on to systematically analyse how the different parts of the body were manifested from these basic elements at the micro level and how it expanded to incorporate the entire world at the macro level from the different offshoots of these basic elements. It describes the two aspects of creation, the gross and the subtle, with the example of this body.

The body is classified into two, the subtle and gross, each having its own set of organs. The external gross body has the gross sense organs, while the inner subtle body has subtle organs. How they are formed and what their functions are have been outlined in a precise manner. Then there are certain Gunas, or inherent virtues and qualities of a creature that determine its character and unique individuality; they have been described. The four symbolic states in which life exists are outlined along with their metaphysical import and relevance for the individual creature as well as the world at large.

So what started out with essentially one, non-dual, indivisible, immutable and neutral unit of creation at the very beginning, called the ultimate and Absolute Truth or Brahm, gradually transformed and metamorphosed into five elements which later on expanded, by way of mutations and branching out into offshoots, into seventeen and then to twenty five elements. These elements are called Tattvas, and by the uncountable number of ways that they mixed together in various ratios and in different permutations and combinations, this vast creation came into being. The possibilities of these elements of mixing were so great that the resultant creation had no two units alike; each was a unique individual with his exclusive characteristic qualities and features.

Hence, this Upanishad succinctly outlines how the entire complex creation came into being from one single immutable non-dual unit known in metaphysics as Brahm.

Besides the above points, another remarkable feature of this Upanishad is that it presents precise definition for a number of metaphysical terms in a succinct manner so much so that it sort of acts as a ready reference manual for such terms. Some of the things it outlines are the different elements of creation and how they combined to form this complex creation, what are the Anthakarans or the components of the inner self, what is the body of the creature made up of, what are its characteristic features from the perspective of metaphysics, what are the different Gunas and the types of Gyan (knowledge) in relation to these Gunas and how they define an individual's personality and character traits, what are the different stages of existence of consciousness, who is the Jiva Atma vis-à-vis the Parmatma, what is the Linga Deha of the creature, what are the Tattvas or the elementary units of creation, and other such finer points. In this, it supplements and compliments the Niralamba Upanishad

of the Shukla Yajur Veda because what one has not defined has been done by the other.

Ideas similar to this Upanishad have also been elucidated in Paingalopanishad, Canto 2 of the Shukla Yajur Veda tradition.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. [This verse describes the very primary elements or units from which the creation is made, and how they transformed themselves into the different components of the creature's gross body. Refer verse no. 5-6 of this Upanishad below. Besides this Upanishad, there is another Upanishad belonging to the Shukla Yajur Veda tradition, viz. the Paingal Upanishad which narrates almost identical concepts in its Canto 2. This Upanishad appears as Chapter 12 of volume no. 3 that deals with the Upanishads of this particular Veda in this series.]

OM salutations! This gross body of the creature is a combination of the five basic elements in creation called the 'Pancha Mahabhuts', such as earth etc. (the others being water, fire, air and sky)¹.

The solid, thicker, denser and heavier part of the body is made up of the earth element. [For example, the bones, skin, nails, hairs etc.]

The fluid part is made up of the water element. [For example, blood, lymph, semen, mucous, urine, semi-solid stool etc.] The heat and warmth in the living body is the fire element. [A dead body is ice-cold, and since the fire element is missing in such a body, it cannot live and is deemed to be lifeless.]

The constant movement and restlessness that is so typical of any living organism is a manifestation of the air or wind element. [This movement may not be externally visible, but is always there in some form or the other. For example, the heart continues to beat and the blood flows uninterruptedly even while a man sleeps; all the internal organs such as the kidneys, lungs, intestines, brain etc. continue to function during this state though externally there is no activity. A man breathes continuously though 'breath' cannot be visibly seen. Breath is nothing but the air element in its life-giving role. The Trishkhi Brahmin Upanishad of the Shukla Yajur Veda, Canto 1, verse no. 8 says that the movement of the consciousness inside the body is through the different Naadis or ducts such as nerves, veins and the like. This consciousness is metaphorically represented by the different 'Gods' that are said to moving in these Naadis and controlling their respective functioning. These Gods who personifies various forces of Nature are also metaphors for the Pran's different forms because they regulate life in a living body. In other words, the 'consciousness' and 'Pran' or the wind element are synonymous with each other and together are equally responsible to keep the body alive. The body of any living being cannot survive without either of them. Even immobile forms of living creation such a plants continue their activities day and night without resting for a moment. The importance of air for the life can be proved by keeping someone in a vacuum—sure enough he would die immediately. In fact, life and movement are synonymous with each other; only a dead body shows no movement in the real sense. Similarly, life and air are also synonymous with each other.]

The hollow space present in the body in a very subtle and invisible form (such as the space between the organs and the inter-cellular space, and even the space inside the cell between its constituent parts, the pores on the skin, the hollow of the nostrils, the auditory canal, the hollow of the mouth and anus, the air passage of the lungs and the food passage of the digestive canal et al.) is made up of the sky or space element (1).

Note—¹The five primary elements called the ‘Tattvas’ came into being at the very beginning of creation. The Tattvas are the primary or fundamental elements or units or dimensions or aspects of creation which act as the building blocks of creation, not only as its brickwork but also to decide the shape its exterior façade would take as well as the interior character and quality of the construction.

We have *primary elements* that were formed at the time of creation, and the *secondary elements* that developed later on as offshoots to the process of creation. Primarily there were five basic elements—such as the sky, air or wind, fire or energy, water and earth in increasing order of density or grossness. From them came the secondary elements. These latter vary according to the level and dynamics of creation one is dealing with in terms of metaphysics. These elements can be compared to the elements of material science of the modern world, such as the elements calcium, magnesium, potassium, selenium etc. which are heavier and grosser in nature as compared to other elements such as the gases oxygen, nitrogen, hydrogen, helium etc. which are lighter and subtler. Then there is carbon which is the base of an entire field of chemistry called organic chemistry, much like we have Atma in metaphysics, that in association with different other elements form a vast array of organic chemicals and material products of daily use. If carbon is compared to the basic unit called the Atma in metaphysics, then the other elements that combine with it are the various Gunas, Vikaars, Vasanas and Vrittis that surround this Atma to give rise to an uncountable number of creatures of different virtues, nature, temperaments, characters and personalities.

In this scenario, Brahm would be like the primary Atom which left to itself is neutral and inactive. It is only when certain changes take place in its core, such as the shift in the position of its electron or change in the number of its protons and electrons etc. that the chain of reaction starts that would ultimately result in not only producing newer elements that combine in mind-boggling permutations and combinations to create an endless array of material things, but also releasing energy in the process or absorbing matter from the surrounding atmosphere. At the cosmic level this is seen in exploding stars or formation of huge black-holes.

The Atma would be more like the atom of carbon which is at the heart of all organic compounds that exist in this world, while Brahm would be the primary form of the atom, i.e. the atom of the first element of the Periodic Table with atomic number 1, or even the nucleus of other heavier atoms of the higher elements of this Table from atomic number 2 onwards.]

2. [This verse describes the different organs of perception of the gross body and their functions. Refer verse no. 6. It ought to be noted that the Supreme Creator had delegated different duties to different organs so as to ensure optimum usage and that they do not overlap producing duplicity of effort which would be a colossal waste of energy and time from the macrocosmic perspective, but also to see that they do not clash with each other over jurisdiction and authority. This delineation of duties and functions were primary tool used by the Supreme Being to manage the huge structure of the living world. This is the first example we have of the theory of ‘delegation of authority’ in Nature. It ensured that the wheel of creation moves smoothly and continuously for ever. It is like the case of a chariot (representing the body) having five horses (representing the five organs of perceptions and actions). If the horses are

kept in control by the charioteer (represented by the mind-intellect complex), the chariot moves ahead and reaches its destination in one piece, and the passenger (represented by the Atma or the pure conscious 'self') himself is secure, happy and fine. Otherwise not only would the chariot topple over but the passenger would be mortally wounded! This analogy of the chariot has been beautifully cited and elucidated upon in Katho Upanishad of Krishna Yajur Veda, Canto 1, Valli 3.]

The five sense organs of perception are called 'Gyan Indris', such as ears etc. (the others being eyes, nose, tongue and skin).

The ears represent the sky element; the ears are the manifestations of the sky element. [The ears have the function of hearing, but it can hear only if the sound reaches it. Sound would need open space and an ethereal medium to travel and reach the ear because it does so in the form of waves. That is why the ears turn towards the direction in the sky from where the sound comes. The ears are like the modern day radar that is made to turn and rotate in order to optimize the reception of sound. That is why we cannot hear anything if there is a solid obstruction between the origin of sound and the ears because it would obstruct the path of the movement of sound waves traveling in the ether present in the space of the sky between the origin point of the sound and the ear.]

The skin represents the air element; the skin is the manifestation of the air or wind element. [The skin has the function of feeling the sense of touch. When a soft breeze blows over our skin, it can immediately feel being subtly and softly massaged by the former. The excellent ability of the skin to exhibit the subtle sense of touching and feeling anything in its subtlest form is manifested when it can feel the air or wind blowing over it, because this air or wind is not physically seen but its presence nevertheless 'felt and known'. Similarly, when a fire is burning fiercely, one gets scorched by its heat though one does not actually touch it. This happens because the hot air coming in from the fire touches the skin and makes it feel scorched and hot. This feeling and sensation is the exclusive domain of the skin, for the ears, eyes, nose and the tongue can't do so. Their sphere of activity and functions are different from one another.]

The eyes represent the fire element; the eyes are the manifestations of the fire element. [The eye can see anything only if the latter is illuminated, or there is light in the general surrounding area; it cannot see anything in dark. The fire element has light as one of its integral characteristic feature—where there is a fire burning, there would be light. That is why a fire is lit in the forest to ward off wild animals because they are scared by its light and leaping flames. The fire element has heat and energy inherent in it too, and the eyes can perceive the existence of anything if the fire element manifests itself even in its non-visible form as heat and energy as is evident from modern day night-vision instruments such as night-vision goggles etc. which precisely exploit this phenomenon of the ability of the eye to perceive the existence of anything if there are subtle components of fire element present in the thing viewed. The infra-red rays that are emitted by anything not frigid cold are translated into vision by these specialised instruments. In the absence of the light in the visible spectrum, the eye utilizes the subtler components of fire, such as heat and energy and the infra-red rays emanated by anything that is warm or hot, to perceive things. Similarly, modern day weapons which have so-called smart electronic eyes can home on to their targets relying upon heat emanating from them.]

The tongue represents the water element; the tongue is the manifestation of the water element. [The tongue can taste anything only when the enzymes of taste present

in the saliva dissolve the chemicals present in the food tasted. Suppose a piece of iron is put on the tongue. Would it enjoy its taste as much as it longs for a delicious sweet dish? This is because the water element is not present in the solid piece of iron that can enable the enzymes of the saliva to taste iron like it would taste, say for example, a piece of dry fruit or a grain of rice which are also relatively hard as compared to cooked soft food. Even uncooked and raw food does not appeal to the tongue as much as properly cooked food for this precise reason—the chemicals of uncooked food do not sufficiently dissolve in water present in the saliva to interact with the enzymes of taste. Until the water has softened the food, the latter cannot be gulped; it would get stuck either in the mouth or in the throat. That is why of all the external organs of the body, it is the tongue that is the moistest and supple.]

The nose represents the earth element; the nose is the manifestation of the earth element. [The nose has the main function of smelling, and smell has its origin in anything that is gross and that has an affinity to the earth by preferring to be near it. This is evident from the fact that there is no smell in outer space; we smell things only when we land on the earth. Even on earth, places that are symbolic of life and fertility, such as green and moist areas rich in fauna and flora give out a fragrance, whether likable or not, but dry and parched areas of the same earth, such as arid deserts and snow covered mountains do not harbour smell. A garden is full of fragrances of flowers and the sweet aroma of fruits which spread over large areas in the surrounding place, even carried to far distances by the wind, but if we were to rise above the surface of the earth, say in a hot air balloon, the smells would not be smelt by us high up in the sky. In other words, smell has a direct affinity to earth and things that this earth harbours. That is why we have such terms as ‘earthy smell’, such as the one that comes out from earthen pots and mud houses. Wherever there is earth element, there would be a subtle and sublime ‘smell’ typical of life in all its forms.]

The respective senses or perceptions of these sense organs are word (sound—pertaining to the organ known as the ear), touch (feeling—pertaining to the organ known as the skin), form and shape (sight—pertaining to the organ known as the eye), the various genres of taste (pertaining to the organ known as the tongue), and smell (both the sweet and the foul—pertaining to the organ known as the nose).

All these perceptions and their organs have their origin in the five basic elements of creation, called the ‘Panch Maha Bhuts’. [Refer Prashno-panishad of Atharva Veda, question (Canto) 4, verse nos. 8-9.] (2).

3. [This verse describes the different organs of action of the gross body and their functions.]

The organs of action are the following—the organ of speech (i.e. the mouth), the hands, the legs, the anus and the genitals.

Their functions are respectively to speak (mouth), to take and give (hand), to move and go to some place (leg), to excrete waste products from the body (anus), and to reproduce (genital).

All of them have their origin in the Maha Bhuts such as the earth element etc. (the others being water, fire, air and sky elements). [This is because since everything in existence has its origin in these five elements which act as the fundamental building blocks of creation, the bricks of the edifice known as creation, nothing exists that does not have one or the other of these five basic elements playing a role in its existence.] (3).

4. [This verse describes the ‘Antahakaran’ which refers to the components of the subtle body of the creature just like the sense organs of perception and action make up the gross body. The word would therefore briefly mean the inner self, the sub-conscious and the conscience.]

The Antahakaran¹ (the inner self consisting of the subtle body; the conscience; the sub-conscious) consists of the following four units—viz. the Mana² (mind), the Buddhi³ (intellect), the Chitta⁴ (the faculty of reasoning, thought, understanding, attention, the sub-conscious etc.), and Ahankar⁵ (ego, pride, haughtiness and the accompanying arrogance and hypocrisy; lack of humility, simplicity and piety).

Their characteristic features are respectively the following—(a) The Mana typically is inclined to have various ‘Sankalps and Vikalps’, i.e. the mind has a natural tendency to make different vows, resolutions, have ambitions, volitions etc, and seeking alternatives and having doubts and confusions pertaining to their success and correctness.

(b) The Buddhi is characterised by the virtue of ‘Nishchaya’, i.e. it has a natural characteristic or habit or inclination of making certain deductions and arriving at certain conclusions, and then taking decisions based on them followed by a determined action to implement those decisions. The intellect does not believe in dilly-dallying and procrastination; it does not believe in having doubts, confusions and perplexities. It on the other hand believes in analyses, rational logic and discrimination between what is correct and what is not, in taking a decisive action and on resolute functioning unlike the nature of the Mana (mind) which swings from object to object in an undecided manner. That is why we have such phrases as ‘wild swings of the mood’ indicating the fickle and floundering nature of the mind as compared to the robust and self-confident attitude of the intellect.

(c) The Chitta is characterised by the virtue of ‘Avadharana’, literally meaning to have a firm and clear conception of anything and helping one to determine and decide on any given subject. It helps the intellect and mind in their functioning by aiding the mind to become fixed on the subject and abandon its naturally fidgety nature, and the intellect to arrive at a fixed conclusion.

(d) The Ahankar² has ‘Abhiman’ (meaning ego, pride, vanity, arrogance, hypocrisy and exaggerated sense of self-importance) as an integral part of it; indeed both the terms are synonymous with each other. This is because if one has a predominant trait of having ego and pride, he would be inclined to develop arrogance and haughtiness in life as opposed to the eclectic virtues of humility, piety, grace and simplicity shown by a man who has no trace of Ahankar in him. Such a person would become a hypocrite and is jealous of others. These negative traits in his character would affect his overall character, temperament, nature and personality. This element of Ahankar would cast its evil or dark shadow even on the Mana (mind), Buddhi (intellect) and the Chitta (sub-conscious). Consequentially, even though these components of his inner self would warn him that a certain thing or deed is harmful for his long term good and is best avoided, the Ahankar would veto their advice and compel the man to heed its own advice instead. As a result a man more often than not does things out of a sense of misplaced self-importance and to satisfy his inflated ego and uphold his false pride. He compromises on rationality and the value of the action on the altar of Ahankar and Abhiman. Therefore, Ahankar and Abhiman are the greatest of pollutants for the inner self.

[Now, the symbolic places where these five subtle units have their dominant presence, and from where they play their respective roles in moulding the individual’s character, are being enumerated.]

The Mana has its dominant presence in the upper region of the throat; it is here that the Mana reveals itself; it is its playground. [This is because a man expresses his doubts and confusions by making uncertain sounds in the throat, such as humming, murmuring or making muffled comments. He speaks in hushed tones because he is not certain of what he is to say or what the correct thing is. If he is mentally upset, he weeps and sobs; if he is very happy, he exults and expresses his emotions not in articulate words but sound gestures indicating his happiness or sorrows as the case might be. Besides this, the word Mana also has an element of involvement of the heart along side the mind. The heart has predominant qualities of emotions and sentiments, and the latter are never articulate in their expression as compared to the expression of the intellect which uses forceful logic, rational thinking and powerful words. The sounds and words of the Mana are soft, subtle and supple. An emotional man dominated by the Mana would strum some music or stutter when speaking as compared to the case when the intellect is driving him.]

The Buddhi reveals itself in the mouth; it is here that it is symbolically located and has its area of influence; it is the mouth that is the playground of the Buddhi. [As discussed above, the mouth is the organ by which one speaks out about various things. The man's intellect prowess and level of erudition and wisdom is known only by what he has to say on any given subject. The intellect helps him to participate in debates, discussions and negotiations. The intellect helps one to express wise words and advise others judiciously; it helps to overcome any doubts that the mind might be having by way of speaking cohesively, coherently and articulately. Since the mouth is like the loudspeaker of the brain, it also serves as the spokesman for the intellect. That is why it is said that a stupid man makes himself known by opening his 'mouth'—and not his throat or any other organ for that matter!]

The Chitta has its primary location and dominion in the area around the region of the navel. [The navel is the area from where all the vital Naadis (the sensory nerves) radiate out from their base in the Nabhi Kanda, the knot of nerves in the region of the navel, to all other parts of the body. These Naadis are central to the proper functioning of the entire body and keeping each unit lively with the flow of current of consciousness in them. It is only when the whole body is peaceful, if there is no pain and sufferance in any part of the body that the mind and intellect would be able to think of anything worthwhile. Otherwise, their entire concentration would be focused on the pain and suffering part of the body. This phenomenon is symbolically said here by saying that the navel is the playing ground of the Chitta—i.e. the concentration and attention of the mind can be fixed and the intellect can work properly in its prime form only when the nervous system of the body functions properly. These nerves have the Nabhi Kanda as their central controlling center. Hence the Chitta would depend on the good condition of this navel area; it has its working center around the navel area.]

Similarly, the Ahankar has its fertile play ground in the heart. [For example, when a man does anything difficult and achieves success in it, he says my 'heart' is overjoyed, my 'heart' feels proud of my achievement, etc. He would not say that his mind is proud of the achievement, or that his intellect is joyful at the success. When someone dear to him makes some great achievement, he says that his 'heart' is glad and overwhelmed to hear this good news, his 'heart' feels exhilarated and proud of the person so dear to him for obtaining this great success, but he never says that the mind or the intellect felt glad or happy over it or proud at the achievement. Therefore, the entity that would develop any trace of pride and arrogance from such achievements and successes would naturally be the 'heart' as opposed to the mind and

intellect because it was the one to feel happy, and exulted about it. Hence, the element of pride and ego and their attendant arrogance and haughtiness have their seat in the 'heart'.] (4).

[Note—¹The word *Antahakaran* literally means the 'inner instrument' of the creature by which his mind works and receives the world. The word has two components—viz. 'Antaha' meaning 'inner', and 'Karan' meaning 'instrument that causes the mind to work'. The external organs of the body such as the eye, ear, nose, tongue and skin which are the organs of perception physically receive the inputs from the external world, but their actual functioning is due to this Antahakaran or the inner instrument of the subtle body consisting of the mind and intellect complex because if the latter malfunctions the former are useless.

Out the three states of existence of the creature, viz. the waking, the dreaming and the deep sleep states, the mind is active in the first two states only, and therefore the Antahakaran is related to only the first two states of existence. But even here its main field of activity is internal and not external as is implied in the word 'Antaha' itself which means 'inner'. Therefore, the external organs of the body such as the organs of perception and action are only subsidiary and play an ancillary role only vis-à-vis the activity of the 'inner self' consisting of the mind, intellect and sub-conscious as well as the subtle heart which is the seat of various sentiments and emotions. This is simply because the inner self receives inputs from the outside world through the instrument of the external organs, and all the activity of the inner self in relation to the world in which the creature lives depend upon these external organs directly or indirectly.

The Antahakaran functions in four different ways and gets four different names according to these four functions. (1) It is called Chitta or sub-conscious mind and its ability to receive information and remember while performing the function of reception and retention. (2) It is called Mana or logical mind when it performs the function of questioning, doubting and willing. (3) It is called Buddhi or intellect when deducing, deciding and determining. And (4) it is called Ahankar or ego, self pride, arrogance of knowledge when it identifies itself with each of these functions—when it thinks that it has the ability to remember, to question and debate, to decide and will.

The word would therefore briefly mean the inner self of the creature consisting of the subtle body rather than the outer self consisting of the gross body. It is said to be one of the 19 Tattwas or essential elements that came into being at the very commencement of creation.

Depending upon how one interprets the word 'Antahakaran', it is said to have one, two, four or five components.

The Antahakaran *one dimension or aspect* is called the Mana, but this Mana itself has two subtler aspects—viz. the mind and the heart because the notion of Mana as it affects the inner self of the creature revolves around the various tugs, pulls, pushes and prodding that the different hues of character traits such as emotions, sentiments, impulsiveness, spontaneity etc. exert on the creature. The word 'Mana' cannot be restricted to the dictionary version of the term as meaning only the mind, because the heart plays an equal important role in the entire setup. This fact has been elaborately described in Tejobindu Upanishad of Krishna Yajur Veda, Canto 5, verse nos. 191-192.

The Antahakaran with *four dimensions* is described in the present Shaarirako-panishad, verse no. 4 above. They are briefly Mana (mind), Buddhi (intellect), Chitta (sub-conscious) and Ahankar or Abhiman (pride, ego, arrogance, haughtiness, hypocrisy, vanity, false self-importance etc.). Again it would be noted that the subtle component of the heart play a secret role in this setup because the ingredient of pride, ego, haughtiness and arrogance along with their sentimental and emotional quotient are very closely related with the heart.

The Antahakaran with *five dimensions or aspects* is described in Trishikhi Brahmin Upanishad, Canto 1, verse no. 6, and in Paingalo-panishad, Canto 1, verse no. 9, and in Canto 2, verse no. 3—both of the Shukla Yajur Veda tradition. The five components of Antahakaran are—(a) Mana (mind), (b) Buddhi (intellect), (c) Chitta (the faculty of concentration and memory; knowledge and consciousness), and (c) Ahankar (ego, pride, arrogance). Their attendant Vrittis (inherent character, traits, habits, inclinations and temperaments of a creature) decide the basic nature of a person and the way he would react to a given circumstance, the way he would deal, behave and interact with the world, the way he would interpret things, the way he thinks, the things that would appeal to him and the things he would abhor etc.—all depends upon the mental setup tinged with the fundamental character traits that are firmly ingrained in him.

Since the mind, intellect and the sub-conscious are involved in the definition of Antahakaran, it would follow that the following too would be included as the five components of Antahakaran—(a) Pramaan—knowledge that helps to establish the truth; (b) Vipratipatti—ignorance, delusions, illusions such as imagining a snake in a piece of rope; this is erroneous knowledge; (c) Vikalp—alternatives; that knowledge which is acquired by hearing of it but may not present the correct picture, such as for example a wooden puppet—there seems an apparent difference between plain wood and the puppet, but they are basically the same and defined with the same word ‘wood’; this knowledge is neither is true nor false for to say that the puppet is different from an ordinary piece of wood because of its distinctive shape and value would be as much true as saying that it is plain wood; (d) Nidra—meaning sleep; when a man remains oblivious of any truth just like anything gets hidden in darkness though it is very much there, that man is likened to a man sleeping soundly in spite of the goings on around him and therefore remaining unaware of them; and (e) Smriti—literally meaning memory; it refers to that knowledge which is based on experience and witnessing so that it is etched in memory; such knowledge becomes robust and gets soundly established in mind with the passage of time.

²*Mana*—The word Mana has a broad meaning, covering the combined apparatus of the subtle subjective mind and the emotional heart that has emotions and sentiments. This is because they both work in conjunction to determine how and what a man thinks, believes, imagines and is attracted to. Mana refers to the various emotions and thoughts; the dispositions and inclinations; the intentions, ideas and purpose of the mind; the wishes, attractions and desires of the heart; the attractions that tempt the the mind, causing it to fix its attention in these attractions, thereby also dragging the heart along which begins to love it and get attached to these attractions. All these factors have a composite effect on the sub-conscious. [Refer—Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39; the concept has been elaborately described in Chandogya Upanishad, canto 7, section 3.]

Heart is the center where all types of emotions and sentiments have their origin. On the other hand, the subjective mind and the objective intellect are the two components which are like the two limbs of the brain and they work in close cooperation with each other, being the controlling center where all sorts of thoughts and decisions are centered. The Mana plays a pivotal role in the creature falling into the trap of worldly delusions or being liberated and delivered from it. Further, all Mantras have had their origin in the mind and heart of ancient sages and seers when they contemplated upon any aspect of Divinity and arrived at some profound spiritual Truth in this creation. The great Maha Vakyas were then ‘revealed’ to them in their meditative trance. Hence the importance and primary source of everything in this creation as the Mana cannot be neglected or even over-emphasised.

The Mana is to be distinguished from Buddhi, for the former refers to the mind and the latter to the intellect. The most important component of a creature’s body is his brain. It is the level of development of the brain that determines in which rung of evolutionary hierarchy the creature stands. The brain has two components—the

grosser mind and the subtler intellect. The mind is always in a state of flux, remaining undecided and running hither and thither like a mischievous child let loose, while the intellect is marked by stability and is like an adult who knows what to do and what to choose. When the child, the mind, is put under the care of his parent, the adult intellect, it would have a proper upbringing and would not commit some grave error, while an uncared child would be a nuisance for the society. Likewise, the mind when it is under the supervision and guidance of the intellect is under leash and such a mind can be very productive for the man just like a properly raised child can give a lot to the world when he grows up.

The Yog Kundalini Upanishad, Canto 3, verse nos. 5-6 of the Krishna Yajur Veda tradition describes how the Mana or the mind can be a source of both entanglements with the world as well as the source of liberation and deliverance from it. The Tejobindu Upanishad, Canto 5, verse no. 98-105 of Krishna Yajur Veda tradition establishes that the Mana is the root cause of all miseries that torment the creature and rob him of his peace. The Subalo-panishad, Canto 9, verse no. 11 of the Shukla Yajur Veda tradition describes the Mana and its effect upon the emotional bearing and structure of the creature. The Dhyan Bindu Upanishad of Krishna Yajur Veda, in its verse no. 25 asserts that it is the Mana that is the cause of the entire creation. The importance and significance of Mana has been extensively expounded upon in Brihad Arankya Upanishad of the Shukla Yajur Veda tradition, Canto 1, Brahmin 5, verse nos. 4-7, 9, 12; Canto 3, Brahmin 7, verse nos. 20 ; Canto 3, Brahmin 9, verse nos. 10-17; and Canto 4, Brahmin 1, verse no. 6. The Taittiriya Upanishad of Krishna Yajur Veda tradition, in its Valli 3, Anuvak 4 describes the importance and significance of Mana as a manifestation of Brahm.

³*Buddhi*—The intellect, reasoning, analysing and discrimination faculty of the mind of a creature; the rational thoughts, intelligence, wit, comprehension, sagacity and erudition. It is the intelligent and analytical mind that helps to intelligently analyse anything and determine its truth and eliminate falsehoods which distinguishes a creature having 'Buddhi' from one who lacks it. Buddhi is also the thinking mind which remembers and ponders and determines upon something or its different aspects relying upon the data collected and previously stored in the sub-conscious part of the brain. [See Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39.]

The Varaaha Upanishad of Krishna Yajur Veda tradition, in its Canto 2, verse nos. 59-60 describes how Buddhi helps the man to see the reality. The Subalo-panishad, Canto 9, verse no. 12 of Shukla Yajur Veda tradition describes Buddhi, its influence on the creature and how it can be controlled and channelised for constructive purposes. Subalo-panishad, Canto 14, verse no. 1 describes how the Buddhi (intellect) is superior to Mana (mind).

⁴*Chitta*—the word Chitta refers to the faculty of reasoning and thought of the mind-intellect complex; the ability to pay attention and fix concentration upon a chosen subject which leads to understanding and a sharp memory; the conscious intellect as well as the sub-conscious mind; the powers of discrimination, understanding, paying attention, memorizing, and the ability to recollect and store information that are characteristics of the conscious powers exhibited by the mind and intellect apparatus; the sub-conscious and memory, along with its power to remember anything as depicted when the man involuntarily reacts to any given situation depending upon his memory-bank; the ability to concentrate and focus the mind on anything. (The concept has been elaborately described in Chandogya Upanishad, canto 7, section 5; Sanayso-panishad, canto 2, verse no.42-46).

The power of the Chitta is called 'Chitta Shakti'. The word Shakti means power and authority, potentials and energy that any entity possesses. Therefore, the combined stupendous powers exhibited by 'Chitta' are called Chitta Shakti.

The Subalo-panishad, Canto 9, verse no. 14 of Shukla Yajur Veda tradition describes Chitta in detail. The concept has been elaborately described in Chandogya Upanishad, canto 7, section 5; Sanayso-panishad, canto 2, verse no.42-46.

A related concept is the 'Chitta Vrittis'. The Vrittis are the inherent tendencies, the natural inclinations and inborn habits of the Chitta, and the Tejobindu Upanishad of Krishna Yajur Veda, in its Canto 3, verse no. 67, Canto 4, verse no. 53-54 describes how to overcome the various habitual faults of the mind, called the Chitta Vrittis.

⁵*Ahankar*—his is the notion of having false ego, self-pride, self-assertion, vanity, boastfulness, self-righteousness, arrogance, haughtiness; a sense of false prestige and false pride; to think that one is the doer and achiever; to erroneously believe that success is obtained by one's efforts alone and that one is superior to others in many respects etc.

The concept that 'I' is the body and not the 'pure conscious soul' leads to ignorance-based ego and a sense of false pride and prestige, called *Ahankar* (अहंकार). The constant identification of 'I' (me) with the body and this material world of sense objects lead to the sense of possessiveness in the creature. 'Pure consciousness' mired by ego becomes 'a conditioned consciousness' and fails to remain pure. This is why *Ahankar* has been likened to a minister of the king—it directs and regulates the actions of the consciousness which, under its influence, loses its independence. This 'conditioned consciousness', working through the mind-intellect-ego combine, is called, inter-alia, 'Chitta' (चित्त). The word also means sub-conscious and its memory bank. Hence this memory of the sub-conscious acts as a referral library for the intellect. The latter falls back on it and rely on it whenever it is in doubt. The quality of books in the library guides the student; similarly, the quality of inherent tendencies stored in the library of Chitta directly affects the inputs of the intellect, and through it, the mind and successively down the hierarchy to the body and its organs of perception and action.

Although the soul has nothing to do with this command chain involving Chitta (sub-conscious and memory)—Vrittis (inherent tendencies and inclinations, nature and temperament) and Vasanas (passions and desires)—Buddhi (intellect)—Mana (emotions and notions, the emotive thoughts)—Sharir (body)—Karma (action and deeds)—the result of deeds and actions—more experience—stored in memory—and the chain continues, but for all practical purposes the Atma/soul is deemed responsible for it because of its sovereign nature.

So, the sincere seeker/aspirant should delineate this conscious from the rest of the chain and break the nexus between them so as to allow the glory of the pure consciousness of the soul to shine through like the splendorous sun breaking through from behind a curtain of clouds.

It is like removing the various veils or covers from around the candle so that its light shines through the darkness of the room and illuminates all the corners of it.

Example of a sleeping man—*Ahankar* is generally associated with the body when the creature thinks that he has so many achievements to his credit and that he has achieved them with his body. He erroneously begins to have a notion of possessiveness and belonging to this world; he starts to conjure up imaginary relations that have their relevance only as long as there is the body, for once a man dies these relations snap even without notice, and even in the case the ignorant Atma wished to retain them it cannot because the same son and wife whom he loved so much are eager to get rid of the dead body which is causing pollution in the household! So, when a man snuffs out *Ahankar* from his mental radar, he becomes as indifferent and dispassionate as a sleeping man who is unconcerned with the external world.

For example, if the house is on fire, a sleeping man wouldn't be bothered at all as long as he is asleep because he is totally disassociated with the house. He does not bother because he is not attached with his 'possession'; a sleeping man just cannot think that the house that he had built on his own strength and effort is getting destroyed. But once he gains consciousness, he is struck with grief and dismay. Similarly, when a wise man realises that the world is not related to him, and his true

identity is his Atma and not the body, then he isn't bothered either with the body or the world with which the body is related and the various relations that exist only because of the existence of the body. The Atma has no relationships whatsoever. Absence of Ahankar eliminates all these at one go.

For all practical purposes, a wise man is as good as asleep as far as the external world is concerned. Even as a sleeping person forgets all about the outside world because his sense of belonging to and identification with the world, of calling the world mine and your, of having love or hatred, of having attachment or detachment, of having animosity/enmity or endearment and friendship, of having happiness or grief—all such emotions are literally 'asleep' with him. Similarly, a person who does not have Ahankar is freed from such emotions that are directly related with his sense of involvement with the world through the medium of the body, though he appears to be awake and active in this world.

The Atma or soul is pure and these things have got nothing to do with it. But because there is the false belief that the creature is the gross body and not the pure consciousness and pure self which is called the soul or Atma, all the external actions done by the body appears to have been done by the creature which, in fact, is an erroneous conclusion.

Ahankar has been described in the context of the Antahakaran (the inner self of the creature) as being one of its main components elsewhere in other Upanishads, such as Paingalo Upanishad of Shukla Yajur Veda, Canto 2, verse no. 3; and Trishikhi Brahmin Upanishad of Shukla Yajur Veda, Canto 1, verse no. 6.

Paingalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse 6 describes the concept of Ahankar in the context of the genesis of creation, and how it was able to influence even the supreme Brahm, in his grosser cosmic manifestation of Lord Vishnu, to get involved in the creation of this delusory world.

How Ahankar affects the creature's nature and temperament has been succinctly described in Niralamb Upanishad, verse nos. 11-12, 20. How it affects path of spiritual liberation and deliverance of the creature has been explained in Yoshikha Upanishad of Krishna Yajur Veda, Canto 1, verse nos. 34-37.

Other references—Subalo-panishad, Canto 9, verse no. 13 of Shukla Yajur Veda.]

5. [This verse now elaborates upon verse no. 1 to describe how the five basic elements such as earth, water, fire, air and sky transformed into various units of the body.

The ideas expressed and expounded upon in verse nos. 5-6 are reflected in Prashno-panishad of the Atharva Veda tradition in its fourth question, verse nos. 8-9.]

The bones, skin, veins and other tubular ducts of the body such as arteries, nerves etc., the hairs and flesh—these are manifestations of the earth element. They have been made or crafted from the earth element. They represent the grossest part of the body.

The urine, mucous, blood, sperms and semen, sweat—these are manifestations of the water element. They have been made or crafted from the water element. [That is, all things that have a fluid dimension must have water element inherent in them.]

Hunger, thirst, laziness and indolence¹, attractions and passions², and sexual activity³—these are manifestations of the fire element. They have been moulded out of the fire element. [¹This is evident during very hot seasons when one becomes lethargic and dozes off to sleep. ²That is why we say that certain passionate things are done 'in the heat of the moment'. Attraction of the opposite sexes is also due to the presence of the fire element because it generates intense passions. Heat in any form creates restlessness and makes the man uneasy, just like passions of any form—such as

having a ‘passion’ for reading, traveling, cooking, sports etc. or any other activity that is dear to one’s heart—must have the concealed fire element in it to keep the drive and energy alive and kicking. Similarly, when we receive someone enthusiastically and affectionately, we say that he is welcomed ‘warmly’, thereby implying the role of the fire element because ‘warmth’ comes from fire and not from ice.³ Sexual activity is obviously a manifest form of the fire element. It involves intense degree of romance and passions in general and such physical actions as hugging, kissing, caressing, intercourse etc. all of which generate heat, increased heart beat and a general increase in the flow of impulses of lust, wanting and passion in the nerves which must be addressed for otherwise they are so overwhelming that they make the man besides himself. This ‘heat’ makes him more often than not even lose control over his senses and wisdom.]

To expand, to run and move, to walk, to fly, the movement of the eyelids etc.—these are manifestations of the air or wind element. They have been crafted out of the air or wind element. [This is because the air or wind element is always mobile; it cannot remain static. A man breathes air continuously without rest; even a balloon filled with air is never at rest. If the Apan wind, the one responsible for movement of food in the intestines, stops functioning, the results would be catastrophic for the living creature. Indeed, even as air in the form of breath is synonymous with life, movement in any form so characteristic of the air or wind element is a definite sign of life, because only a dead body would not move.]

Kaam (lust, yearnings and worldly desires), Krodh (anger, wrathfulness), Lobh (greed, rapacity), Bhaya (fear and consternation) etc.—these are manifestations of the sky element. They have been made from the sky element. [The symbolism here is obvious. All these qualities have no limits; they are as endless as the sky. They cannot be precisely defined and delineated like the vast sky.] (5).

6. [This verse now elaborates upon verse no. 2 to describe how the five basic elements such as earth, water, fire, air and sky transformed themselves into various perceptions of the gross body.]

Word (hearing, sound), touch (feeling), shape and form (sight), taste and smell—these are the five activities which are described as the characteristic virtues displayed by the earth element.

Word (hearing, sound), touch (feeling), shape and form (sight) and taste—these are the four activities which are described as the characteristic virtues displayed by the water element.

Word (hearing, sound), touch (feeling), and shape and form (sight)—these are the three activities which are described as the characteristic virtues displayed by the fire element.

Word (hearing, sound) and touch (feeling)—these are the two activities which are described as the characteristic virtues displayed by the air or wind element.

And word (hearing and sound) is the only one activity which is described as the characteristic virtue displayed by the sky element (6).

[Note—Refer explanation given in verse no. 2. The verse clearly outlines the pyramidal structure of the primary elements in creation. The ‘earth’ being the grossest and heaviest is at the base, while the ‘sky’ being the subtlest and lightest is at the top, with the rest of the three elements, viz. the ‘water’, the ‘fire’ and the ‘air’ being arranged in an ascending manner clearly show their declining grossness and increasing subtlety.

To understand how one element can transform itself into so many forms, we can take the example of *isomerism* in chemistry. The word ‘iso’ means the ‘same’, and

‘meros’ means ‘parts’. Hence, isomerism refers to the phenomenon whereby two or more compounds that are composed of the same chemical formulae, i.e. they have the same molecular composition but different three dimensional structures; they differ in physical or chemical properties. Such things are called ‘isomers’ of the principal element.

Extended further, this phenomenon of isomerism would apply to the concept of the same Atma residing in all the living beings having a mind boggling variety of physical structures, besides the fact that all the creatures have the same Atma as well as the same basic elements as their essential identity.

Then there are two types of isomerism—i.e. *structural isomerism* and *stereo isomerism*. The concept of structural isomerism refer to those isomers which have the same molecular formulae but different structural arrangement of atoms or groups of atoms around the central atom or ion called Structural Isomers and this phenomenon is called structural isomerism. This would be like different species of living organisms which have the same Atma at the core, the same set of fundamental five elements set up around this basic core, and then comes the arrangements of secondary elements around this basic core to give rise to varying structural variations in the species as they evolved. Stereo isomerism is when the same molecular formulae represent two or more compounds which differ in the spatial arrangement of atoms or groups of atoms. Such compounds are called Stereo Isomers. In this case, we deal with one given species such as the human species which have all the gross features the same but the internal geometric patterns in which the secondary and tertiary elements exist determine the individuality of a particular man and set him aside from all others of his ilk.

A related concept is *isomorphism* wherein there is apparent similarity of form between individuals belonging to different races or species. In the field of chemistry it refers to the existence of two or more chemical compounds with the same crystal structure; they differ in chemical composition but have the same crystalline structure. This would be like speaking of the entire human race, or of all the mammals for instance who would exhibit similar external features but have different internal chemistry in the sense that all have their own set of characteristic qualities, virtues and values, their own independent personality, intelligence, emotional quotient etc. Their mental and intellectual setup, their emotional and sentimental quotient, their inherent natural temperaments and inclinations etc. would differ from one individual to another depending upon the combination in which the three Gunas (Sata, Raja and Tama) exist in them.

In this context, the three Gunas that determine the individual character of the creature, that determine his ‘individuality’ as compared to the general character of the group to which that individual belongs, are like the *isotopes* in chemistry. The isotope refers to the phenomenon wherein one of two or more atoms of the same chemical element that contain the same number of protons but different numbers of neutrons in their nuclei and therefore have the same atomic number and chemical properties but different mass numbers and physical properties. For example, two brothers have the same genes and the same inheritance, but the presence of the three Gunas in different ratios between them changes their personality and thought processes. One may be a highly righteous man while the other might be just the opposite. Their parents are the same, their upbringing is the same, they have attended the same school and ate the same food, but there is a deep chasm when it comes to their character as individuals.

The metaphysical concept of Bhuts, Tattvas and Dhaatus as being the primary or secondary or tertiary building blocks of creation and their contribution in the process of creation seems to be too abstract to be a reality, but if we relate them to our modern knowledge of chemistry they become very easy to understand, very rational and very evidently possible.

All the elements in existence have been classified into a Periodic Table in chemistry, called the ‘Mendeleev Periodic Table of Elements’. The elements are

arranged in it based on their atomic weight (the average mass of a chemical element's atom) or atomic number (the number of protons in the atom of a chemical element's nucleus). The one with atomic number 1 is at the top of the list, and currently there are said to be 116 elements in the list. The increase of atomic number would be like increase in the weight of that element which we can liken to increasing degree of grossness and decreasing degree of subtlety in metaphysics.

The orderliness in Nature can be well gauged from the fact that all the elements behave in a fixed, pre-destined and pre-determinable manner depending upon their place in the table. Those in the same group or column show similar chemical behaviour.

The primary elements are those that have atomic numbers 1 (hydrogen) to 83 (bismuth). The secondary elements would be those having atomic number 84 onwards till 92 (uranium). The tertiary elements would be the ones having atomic numbers above 93 and till 110, and by later additions to 116. These tertiary elements are the trans-uranium elements (i.e. those with atomic numbers higher than 92) and all of them have been produced in the laboratory. This phenomenon is similar to the concept of evolution of newer Tattvas and Dhaatus, newer forms of Kalaas and Gunas that kept on developing by mutations of the primary and secondary elements.

These naturally occurring elements exist in varying forms. For instance, eleven are in the form of gases (hydrogen, nitrogen, oxygen, fluorine, chlorine, and the six noble gases—helium, neon, argon, krypton, xenon and radon). Two are in liquid form (bromine and mercury). The rest are solids of varying textures and forms. Again this is not enough—for we have some as hard solids (copper, iron), some as soft and not so hard solids (lead), some as viscous fluids (mercury), some as waxy non-metallic elements (phosphorus), some as solid non-metallic elements (sulphur), some that are stable (elements having atomic number 1-83) and others that undergo constant decay and destruction over a period of time, called their 'half lives', e.g. those with atomic number 83 to 92, and then still others that are synthetic such as those having atomic number 93-116 in the present list of the Periodic Table.

Some elements are permanent such as the ones having atomic number 1(hydrogen) - 83 (bismuth), while those above it have a transient life, called radioactive elements. Some elements are abundantly available such as carbon, while some are precious because of their rarity such as silver and gold, while still other are still rarer and present only in trace, called the trace elements such as selenium, magnesium, potassium etc.

Then there are the 'isotopes' of the same element, i.e. elements having different number of neutrons but the same number of protons in their nucleus and hence the same number of electrons in their shells, thereby showing the same basic chemical behaviour—e.g. tin (which has an astounding 10 isotopes) and carbon (with numerous isotopes).

This single entity 'carbon' proves how the supreme creator was versatile and astoundingly creative when he set about for the mammoth task of creation. The atomic number of carbon is 6; it has many isotopes of which carbon-12 and carbon-13 are said to be stable, while carbon-14 is said to be the most stable amongst its radioactive isotopes because it has a half-life of 5730 years approx. Carbon exists in many natural forms and has four known allotropes—e.g. diamond, graphite, carbon black (coal, coke and charcoal) and fullerenes (hollow cage molecules). Carbon is the most versatile of all elements in creation and it forms more chemical compounds than all the other elements taken together, giving rise to an entire branch of chemistry devoted to it called the organic chemistry. There are millions of known carbon products.

This ubiquitous carbon can be regarded as the most important, most handy, most adaptable, very flexible and highly useful tool in the hands of the cosmic creator which helped him not only in creation but for the planning for its future upkeep, because all the essential ingredients needed to sustain life in this living world are

carbon-based. Carbon is the core of proteins, carbohydrates, lipids, nucleic acids—all essential chemical ingredients needed to sustain life and make it viable, besides in the form of hydrocarbons found in coal, petroleum and natural gases which would be needed for the upcoming creation for its daily needs. It exists in the earth's crust as carbonate rocks as well as dissolved in the ocean.

Some molecules of compounds are as simple as water molecule having two atoms of hydrogen and one of oxygen (both gases), then a slightly higher level of combination results in the formation of different salts. These salts are formed when the hydrogen of an acid is replaced by a metal or its equivalent—the most common form of salt is the table salt (sodium chloride), and other common names which are more complex such as sodium bicarbonate, silver nitrate, calcium carbonate etc.

The carbon chemistry opens a mammoth vista of chemical compounds such as ketones and aldehydes, formaldehydes and resins, simple and complex polymers etc.

The general idea of the above narration is that if such a variety is possible in this world which has a physical limitation of its resources and their application, one can well imagine what astounding possibilities can exist when we consider the unimaginable vastness of this creation in which the known world in which we live is but like a speck of dust or sand on a beach by the ocean. So the authenticity and truthfulness of the manner the Upanishads speak about this creation and its Bhuts, Dhaatus, Tattvas and Kalaas should never be doubted. That we do not understand anything is no proof of its non-existence or veracity; it is the limit of human knowledge and mind that things which are beyond his comprehension or imagination seem absurd to him. The same man thousands of years ago would not have known chemistry as it is understood today, and suppose the present concepts were explained to him then by some wise man who would have been fortunate enough to have the deep insight and a sharp analytical mind to know or interpret certain event or observations in the context of science and then had tried to explain his observations to those primitive societies, he would have been ridiculed, irrational and thought to be outright mad. But with the benefit of hindsight and introspection we would now realise that what he had taught then was indeed the truth, albeit spoken in a language in vogue at that remote point of time which is now incomprehensible for us, and therefore creating skepticism in modern times.]

7. There are said to be three inherent qualities or Gunas that determine the basic character and fundamental nature of all living beings. These three are Sata, Raja and Tama (7).

[Note—The *Sata* is the best Guna as described in verse no. 8-9, the *Raja* is the medium one as described in verse no. 10, and the *Tama* is the basest and meanest of the three Gunas as described in verse no. 11 below.

The character of all the living beings in the entire creation is dependent upon three primary qualities called the Gunas. They are Sata, Raja and Tama.

(a) The *Sata Guna* is the best of the three qualities present in any creature. It is a positive quality and is marked by a propensity for following the path of nobility, auspiciousness, probity, propriety, virtuousness, holiness and righteousness. Creatures that have a predominance of Sata Guna are inclined to do selfless service, be benevolent, merciful, kind and gracious, have coolness of head and a rationale and balanced mind, be contented, have humility and piety etc. Such creatures are devoted to good values in life and have a desire to acquire knowledge that would help them reach higher spiritual goals in life.

This Sata Guna is marked by high standards of ethical and moral existence that makes the bearer of such qualities highly respected in society. Such people have a spiritual dimension to their personality. This quality is spiritually uplifting and gives a divine halo to those who possess it and practice it.

The Vasanas that have the Sata Guna or quality dominant in them are like a veil covering the lamp or like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort.

(b) The second quality is the *Raja Guna* and it makes a man more attracted to this material world and its charms, and less spiritually inclined. The Raja Guna is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It makes a creature inclined towards the material things of the gross world and their enjoyments, towards creation of wealth, its enhancement and protection, and generally having a desire for growth, development and expansion etc. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, selfishness, expansionist tendencies, a desire to acquire, retain and develop such acquisitions even to the detriment of one's long term spiritual welfare and even if such actions cause pain to others. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Vasanas that have the Rajsic Guna or quality dominant in them can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality.

(c) The third quality is called the *Tama Guna* and is the meanest and the basest of the three Gunas. It is a demeaning quality in a creature that leads to his downfall and perpetual entanglement with things that are considered improper and unethical. It creates an inclination for committing all sorts of sins, misdeeds and demeanours. It leads the creature towards negativity and inspires him to acquire negative qualities such as various vices, evils, sins, perversions etc. It makes him inclined to be greedy, rapacious, haughty, arrogant, lustful, intoxicated, vile and wild to the extreme. Such a creature with a predominance of Tama Guna has utter disregard for propriety, noble virtues and ethics, for righteousness and morality.

In brief, it is the most degrading, denigrating and contemptible of the three characteristics in a person, and leads to such behaviour which is utterly immoral, denigrating and depraved, marked by grossness, crassness and recklessness. It therefore leads to his downfall, ignominy and ruin as well as ignorance, delusions, gloom, inertia, anger, frustration etc.

The Tamsic Guna or quality is like the embryonic membrane that covers the foetus in the womb. They cannot be removed easily and require great diligence, effort, persistence, dedication and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, and the worst type to possess.

The Vasanas that have the Tama Guna in dominance are regarded as the 'bad Vasanas' or better still the 'worst type of Vasana' that any individual can have.

The varying quantity and intensity of these three in any given individual would decide his specific character and how he is inclined to deal with the world and a given circumstance. The various permutations and combinations of these three qualities create a particular nature of an individual, giving him his individuality and his special personality which are unique to him; they determine his temperament, behaviour, thought process, et al. Two individuals having the same external form of the gross body might look very much alike but they vary immensely in their nature, habit, temperaments, inclinations, behaviour, thinking, outlook, the way they act and do their deeds, the way they tackle the problems of life, the level of their wisdom and intelligence, their personality and their general way of living.

This is also the reason why it is believed that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual and countable specific number of births that the creatures have to take, but only symbolise

the huge possibilities of individual characteristics that are determined by the differing ratios of these three Gunas, and the immense number of individuals that exhibit these characteristics in this creation.

The three Gunas that determine the individual character of the creature, that determine his 'individuality' as compared to the general character of the group to which that individual belongs, are like the *isotopes* in chemistry. The isotope refers to the phenomenon wherein one of two or more atoms of the same chemical element that contain the same number of protons but different numbers of neutrons in their nuclei and therefore have the same atomic number and chemical properties but different mass numbers and physical properties. For example, two brothers have the same genes and the same inheritance, but the presence of the three Gunas in different ratios between them changes their personality and thought processes. One may be a highly righteous man while the other might be just the opposite. Their parents are the same, their upbringing is the same, they have attended the same school and ate the same food, but there is a deep chasm when it comes to their character as individuals.

Since each individual is like an independent piece of mosaic that completes the entire picture in conjunction with other such pieces, this individual creature's nature and character helps to determine the overall shape of the creation. These Gunas keep the creation in a state of constant change, because numerous creatures die every moment and new ones are born. The Supreme Being has to be constantly on the alert because of this flux.

The various permutations and combinations of these three qualities create a particular 'nature' of an individual giving him his individuality and his special characters which are unique to him; they determine his temperament, behaviour, thought process et al. Two individuals having the same external form of the gross body—e.g. two men—might look very much alike but they vary immensely in their nature, habit, behaviour, thinking, outlook, action and deeds, wisdom and way of living. This is what is meant when it said that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual, countable specific number that there are actually and physically 84 Lakh types of bodies of living beings; it only symbolically refers to the huge possibilities that are possible with these three 'Gunas' and their different combinations that can imaginably produce a myriad variety of creation that can be created with these three basic qualities and their various sub classes of qualities.

The proportion of the three Gunas decides the nature, natural temperament, tendencies, habits and inclination of the creatures. For example, a person with a greater proportion of 'Satvic' (noble) characteristic will be considered nobler than a man with a greater proportion of 'Rajasic' or 'Tamsic' qualities. So we can say that sages, seers, prophets, scholars and generally enlightened persons have a high degree of 'Satvic' qualities in them; kings and householders who live a noble life are example of those with higher amount of 'Rajasic' quality in them; while sinners, killers, drunks, rowdy elements, cheats etc. are those people with higher 'Tamsic' quality in them. These Gunas have direct bearing on the personality of a man.

The first quality of Sattva is concerned with creation and enhancement of knowledge and wisdom. For this, one has to remain alert and vigilant like Brahma. The 'Jagrat state' also corresponds to that state when the creature is awake and interacts physically with the external world, imbibes whatever knowledge and information that comes to it, gains experience, and physically reacts to that knowledge and information. Further, such people are regarded as seniors in society, and they are best depicted in the form of the old patriarch Brahma the creator. They remain so engrossed in the world that they forget who they actually are, what their true identity is, and the very basic fact that what they are thinking to be real is actually not.

Next comes the 'Swapna state' in which a man dreams, and it is a metaphor for imagination and visualization of things based on the experience and knowledge

gained during the Jagrat state. In this state a man lives and does things in a virtual manner in a virtual world of dreams. He sustains and nourishes his imaginations, fantasies and conceptions in a world of dreams which is far away from the harsh realities of life in the physical world. He suffers and enjoys in his dreams, then when he wakes up, he sometimes forgets what that imaginary world was like, but at other times there have been incidents wherein he has got new insight and new inspiration while he was dreaming. This is how Vishnu sustains and nourishes the creation created by Brahma. For all practical purposes, a dreaming man appears to be in a state resembling the state of Samadhi, or a state when an aspirant is in deep meditation and engrossed in contemplation, because he remains aloof and oblivious to the external world, and remains absolutely motionless. But this state is temporary, because he would revert back or wake up to the Jagrat state. That is why Lord Vishnu, who represents this quality of Raja, is depicted as perpetually reclining contemplatively on the bed of the coiled legendary serpent floating on the celestial ocean of milk called Kshirsagar. Since without a vision and imagination one cannot grow, develop and rise, Vishnu is regarded as a maverick player of fantastic tricks in order to sustain and enhance his interests of looking after the creation. Out of these Trinity Gods, it is Vishnu who assumes so many forms and adopts so many tricks to do the needful.

The third quality of Tama is represented by Shiva, and that is why he shows certain traits which are so typical of this quality—viz. being short tempered, and destroying at the shortest notice; his external behaviour and attire also represents the excess of this lowest quality in him. The Sushupta state that he represents stands for being totally oblivious of the external world, and remaining in total bliss. This is exactly how Shiva has been depicted—he remains in a perpetual state of meditation, completely indifferent to the external world, unconcerned and detached from the attractions of the enchanting outside when he can find complete bliss inside his own bosom. The Tama quality marks the presence of ignorance in a greater ratio, and this is depicted by Shiva when he remains ignorant of the niceties of worldly behaviour, notwithstanding his exalted stature of being the greatest amongst the Gods.

To understand how the three Gunas affect the Atma, let's take two examples—that of a hot piece of iron glowing red with heat, and the potter moulding various pots from the same clod of earth.

The supreme pure conscious cosmic Atma subjects the Bhoot Atma of the individual creature to the 'radiation' of these 'Gunas'. These 'Gunas' are the three basic qualities present in all the creatures in different permutations and combinations. These 'Gunas' effect the 'Bhoot Atma' differently based on a number of factors—such as for example, the present status of the 'Bhoot Atma' vis-à-vis its past deeds, their cumulative affects, the caliber of its mind and intellect, the position it occupies in the ladder of spiritual evolution, its willingness to change or subject itself to the effects of such radiation etc.

The concept can be understood differently also. A piece of iron, when heated, shows the heat as a 'red hot glow' which fully pervades the iron piece and becomes an integral part of it. The whole piece appears to be one whole mass of something which is red, hot and glowing. When beaten by a hammer, the iron piece bends and can be shaped into any shape. Each new shape, when heated, will show the same glow of red hot fire inside it. Similarly, the Atma provides consciousness to the creature, making it active and lively, subject to receptions of stimuli in the form of various perceptions originating in the external world and received through the organs of perception present in the gross body. The 'heated' body (i.e. the Bhoot Atma made active by the Atma) now becomes susceptible to change (from the impact of the three Gunas) much like the heated piece of iron being hammered by the hammer. The 'hammering' by the three 'Gunas' (the inherent qualities present in every creature) help to cast the individual creature into various moulds or shapes having different characteristics. Even as cold iron is not easily malleable, the creature without the infusion of life injected into it by the Atma is as good as dead and is the least

malleable. Here, the allegory is simple —the creature is the iron, the glowing consciousness is the fire, the impinging ‘Gunas’ is the blow of the hammer, and the Atma is the iron smith.

The wheel of the potter moulds the clay into various shapes, but the driving force of the wheel is the potter. Similarly, the three ‘Gunas’ mould the characteristic of the creature, but the Atma is the authority, the potter in this allegory, who drives the three ‘Gunas’. Just as the potter is not the wheel, the Atma is not affected by the three ‘Gunas’, it is just an instrument, an implement to shape the character of the creature. Again, even as a wheel is needed by a potter to give shape to a shapeless clod of clay, the Atma needs the three Gunas to mould the characters of the creatures that constitute this creation.

An important point to note here is that ‘Ahankar’ (ego, false pride, arrogance, haughtiness, hypocrisy and the sense of ‘I’) is the root cause of demoting even the most exalted of souls to an existence equivalent to that of an animal. This is stressed in Jabalu-panishad of Sam Veda tradition which stresses that ‘Isha’ or the supreme Lord of creation had to become a ‘Pashupati’, Lord of animals, just because Ahankar cast its dark shadow on him. An exalted soul too becomes demoted as an animal if he has Ahankar in him.

The concept that ‘I’ is the body and not the ‘pure conscious soul’ leads to ignorance-based ego (Ahanakar). The constant concept of I vis-à-vis the body and this world leads to the sense of possessiveness in the creature. ‘Pure consciousness’ mired by ego becomes ‘a conditioned consciousness’ and fails to remain pure. This is why ego (Ahankar) has been likened to a minister of the king. It directs and regulates the actions of the consciousness which, under its influence, loses its independence. This ‘conditioned consciousness’—working through the mind-intellect-ego combine is called, inter-alia, ‘Chitta’. The word also means memory. Hence this memory acts as a referral library for the intellect. The latter falls back on it and rely on it whenever it is in doubt. The quality of books in the library guides the student; similarly, the quality of inherent tendencies stored in the library of Chitta directly affects the inputs of the intellect, and through it, the mind and successively down the hierarchy to the body and its organs of perception and action.

Although the soul has nothing to do with this command chain, but for all practical purposes the Atma/soul is deemed responsible for it because of its sovereign nature. So, the sincere seeker/aspirant should delineate this conscious from the rest of the chain and break the nexus between them so as to allow the glory of the pure consciousness of the soul to shine through like the splendorous sun breaking through from behind a curtain of clouds. It is like removing the various veils or covers from around the candle so that its light shines through the darkness of the room and illuminates all the corners of it.

The Shwetashwatar Upanishad of Krishna Yajur Veda, in its Canto 4, verse no. 10 describes the relationship between Prakriti, Maya and Gunas in a very succinct manner.

The Upanishads symbolically refer to the three primary colours when they describe these three basic qualities in the creature. They are white for the Sata Guna, red for the Raja Guna, and black for the Tama Guna. Refer—Shwetashatar Upanishad, 4/5; and Paingalo-panishad 1/3.

The Chandogya Upanishad, 3/5/4-3/9 and 6/3-4 uses these three colours to describe the different types of characters called Sata, Raja and Tama defining the three basic types of creatures and their individual personality traits and temperaments that exist in this creation.

The Paingal Upanishad, 1/3-9 of the Shukla Yajur Veda clearly states that these three colours were the ones with which Nature representing creation was born and how the supreme creator had subtly entered the entire creation to be uniformly present in its very minutest of corner.

How the three Gunas were used by Brahm to create this world has been beautifully described in Paingalo-panishad, 1/7 and 2/3. Canto 2, verse no. 3 describes how Sata and Raja were used, while Canto 1, verse no. 7 narrates the use of Tama.

The concept of Gunas affecting the Atma has been elaborately dealt with in various Upanishads, for example the Maitrayanyu Upanishad, 1/11, 2/5, 3/5, etc. of the Sam Veda tradition.]

8-9. The following are described as the characteristic traits of those people who have the first Guna, the Sata, in predominance—Ahinsa (non-violence, non-killing or non-harming in any way, physical and mental), Satya (truthfulness in all its broad connotations, including such noble traits as trustworthiness and honesty), Asteya (non-theft, non-stealing, non-deceit, non-subterfuge, non-sleight and non-slyness), Brahmacharya (celibacy, continence, abstinence, self-restraint, self-control of the organs and the self), Aparagriha (renunciation and detachment, non-hoarding, giving away of superfluous and excessive wealth to those who are needy, making of liberal charities and donations, giving of alms), abandonment of Krodh (forsaking anger and wrathfulness), serving one's Guru (i. e. a person who is one's moral preceptor, teacher and guide), Shuchitaa (cleanliness and purity in all their broad connotations involving the mind, intellect and body), Santosh (contentedness, satisfaction and feeling fulfilled with whatever that is available, without yearning for more endlessly, and feeling restless, agitated, insatiate and greedy as a consequence), Amaanita (lack of pride, ego, haughtiness and arrogance; having humility, piety and simplicity), not to have Dambha (i.e. not to have the negative trait of excessive show of self pride and arrogance; not to be a hypocrite; not to be a bragger, a coxcomb, a boastful and loud-mouthed man, not to be deceitful, sly and an imposter), to have Aastiktaa (i.e. to have firm faith, unwavering conviction and steady belief in the Truth enshrined in ancient wisdom and the tenets of the scriptures; to have unfaltering faith in one's self and one's auspicious goals in life), and to abhor violence of all kind etc. (8-9).

10. The following are described as the characteristic traits of those people who have the second Guna, the Raja, in predominance—to have the notion of being a doer of things, to feel that being the doer of deeds one has the right to enjoy their consequent rewards as fruits of one's labour, to feel that one is the speaker and orator (i.e. one is a wise and scholarly man who is well versed with letters and everyone is eager to hear his wise council on a variety of subjects). In short, to be proud of one's achievements and successes in this world comes under the purview of Raja Guna (10).

11. The following are described as the characteristic traits of those people who have the third Guna, the Tama, in predominance—Nidra (excessive sleep and be drowsiness, leading to inattentiveness and lack of concentration), Aalasya (laziness, lethargy, indolence), Moha (worldly attractions, delusions and their attendant hallucinations), Aasakti (to be greatly infatuated with and mentally and emotionally so intensely attached to the things of this material world that one's whole being is overshadowed by its thoughts), Maithun (to have a conjugal relationship; to constantly delve in sexual subjects and thoughts; to establish a union which does not necessarily mean a sexual union, but involves any kind of infatuation with the material things and sense objects of the world and yearning for sensual gratification; to allow the mind and intellect to continuously think of nothing else but these objects is tantamount to being in constant physical contact with them or having sex with them), and Chaurya (to do things stealthily, to be sly, deceitful, have underhand

dealings, the trait of sleight and subterfuge, to commit theft and steal something not rightly belonging to one's self, etc.) (11).

12. The Sata Guna is regarded as the best quality, the Raja Guna of a medium quality, and Tama Guna as being of the lowest and meanest quality (12).

[Note—In the beginning the elements were neutral. Anything that is 'neutral' does not do anything; it remains dormant and latent no matter how powerful it is. So, when the first spark was injected in the neutral elements by way of creative energy, there was some subtle electric activity in its neutral structure and their atoms began to get polarized just like we have the an-ions and cat-ions when electrolysis of a neutral liquid is done with the help of electrodes. The negative charges of the 'cosmic electrode' are metaphors for the grosser parts of creation and represented by the Tama Guna. At the other extreme are the positive charges forming the subtlest parts of creation and represented by the Sata Guna. In between lie the area of mixed charges symbolising the spread of characters and qualities defined as 'Guna' in varying proportion and hue of colours and characteristic features in a diffused manner—with one end of the spectrum being the positive charges and the other end dominated by the negative charges. Hence, the Raja Guna may be dominated by the Sata or Tama Gunas depending on which of them is the dominant factor in the mixture. So a creature may be doing worldly deeds because of the Raja Guna, but the way he does them and the way he enjoys their rewards would vary widely depending upon which of the two Gunas, the Sata or Tama, is dominant. These Gunas do not exist in watertight compartments or one in exclusion of the other, but they form a complex structure, a complex matrix of Gunas where each has some role to play. How the creature carries himself and uses the knowledge and wisdom available to him depends upon this matrix.

This situation can also be likened to loadstone or natural magnet. It knows only to attract as is proved by the earth which is one big natural magnet. The earth pulls everything that comes within its gravitational and magnetic jurisdiction, and never the opposite—i.e. it would never throw things out into space on its own. But when the same loadstone is given an elongated shape of a bar magnet, it begins to have a north and south poles which attract the opposite pole and repel the similar one.]

13. The knowledge of the eclectic, non-dual, immutable, eternal and absolute Truth of existence (i.e. the knowledge of the cosmic Consciousness that pervades uniformly everywhere and without no notion or concept of 'life' has any meaning) is regarded as Satwic Gyan (or the best and the excellent form of spiritual knowledge and enlightenment which paves the way for a man's self-realisation and his ultimate liberation and deliverance from this world of birth and death marked by ignorance, delusions, horrors and torments that are never ending). This aspect of knowledge and erudition is called 'Satya Gyan' or knowledge of the Truth.

The knowledge pertaining to Dharma (i.e. that knowledge which enlightens the man about his moral obligations, duties and responsibilities as well as making him aware of what are considered as noble, righteous and auspicious virtues, deeds or things in this world) come under the category of Rajsic Gyan (because such knowledge would automatically and naturally inspire him to get involved in doing good deeds and avoiding the bad ones). This aspect of knowledge and erudition is called 'Dharma Gyan' or knowledge of Dharma.

But that knowledge that is covered by a veil of darkness signifying ignorance, stupidity and delusions, leading to all sorts of misconceptions and illusions about the truth and reality, the darkness in which phantoms and ghosts are seen, comes under

the category of 'Tama Gyan', or the knowledge dominated or tainted by darkness (13).

[Note—The word 'Gyan' broadly means knowledge, wisdom, erudition, enlightenment and being aware and informed about anything. The knowledge which tells one the truth and reality of anything or situation would be the 'Sata Gyan' because it does not hide anything and makes an honest and truthful declaration. The Sata Gyan would involve looking at the positive aspect and constructive side of anything or situation. A wise man with the Sata Guna in a dominant ratio would pick up the good part of the body of knowledge or information available to him; he would look at the brighter side of things and research how life can be made better by this knowledge, not only for himself but for the rest of the society as a whole. On the other extreme hand is the Tama Gyan which would be that knowledge that is acquired with an eye to all the negative aspects of anything or situation, how to exploit them for one's vested self interest, even at the cost of others. A man with a predominance of Tama Guna in him would have a natural tendency at picking up the negative and destructive part of the available body of knowledge or information. In between is the Raja Guna which inspires a man to live in this world and take care of it as mandated by the Supreme Creator. If he does it in a righteous and auspicious manner, then it would be 'Dharma Gyan'; otherwise it would be no better than Tama Gyan.]

14. The four states of existence of the consciousness are the following—Jagrat (the waking state), Swapna (the dreaming state), Sushupta (the deep sleep state) and Turiya (the post deep sleep state marked by perpetual bliss as opposed to ordinary deep sleep state which is transient and the creature reverts to his earlier states).

During the Jagrat state of conscious existence of the creature, there are fourteen components of his existence that remain active—viz. the five organs of perception (ear, eye, nose, tongue and skin—see verse no. 2) + the five organs of action (hand, leg, mouth, anus and genital—see verse no. 3) + the four Antahakarans (Mana, Buddhi, Chitta and Ahankar—see verse no. 4) = total of fourteen units.

During the Swapna state of existence of the creature, there is only the Antahakaran having four dimensions (verse no. 4) that remains active, while the other components have been rendered redundant. [This is because when a man sleeps, the external body becomes inactive, and consequentially the five organs of perception and five organs of action too become redundant.]

During the Sushupta state of existence of the creature, only the Chitta remains active. [This is obvious because when a man is sound asleep, even his mind ceases to function as he not even dreams. But he is not dead; all his internal organs are very much alive, active and functioning. This is brought about by the Chitta remaining active. It has already been said in verse no. 4 that this Chitta has its center of activity in the region of the navel from where the different Naadis radiate out to all corners of the body, taking and bringing vital impulses of life to and from distant corners of the body. So the sub-conscious aspect of life remains awake even while the conscious aspect of existence sleeps.]

Finally, during the Turiya state of existence of the creature, even the Chitta becomes redundant, and what remains is the pure conscious Atma of the creature, the pure enlightened 'self' of the creature called the Jiva-Atma (14).

[Note—The four states of existence of the consciousness have been elaborately described in a number of Upanishads, for instance (a) Shukla Yajur Veda—Subalopanishad, Canto 4 full as well as Canto 9, verse no. 1-7; Paingalo-panishad, 2/11-15; Mandal Brahmin Upanishad, 2/4-2/5; (b) Krishna Yajur Veda tradition—Varaaha Upanishad, Canto 2, verse no. 61-64; Canto 2, verse no. 61-64; Brahmo-panisha,

verse no. 1, 20-21; Kaivalya Upanishad, verse no. 12-14; Dhyan Bindu Upanishad, verse no. 93/12-93/15; Sarwasaar Upanishad, verse no. 4.]

15. The state of existence that prevails between the two extreme visions of life—one in which the eyes are fully opened in a symbolic manner like in the case of the waking state and the creature sees the world of astounding charm and remains lost in it, and the other in which the eyes are totally closed and one sees nothing at all as in the deep sleep state of existence—is said to be the habitat of the Jiva-Atma, or the consciousness of the creature.

The first state when the eyes are open is when the consciousness interacts with the gross world using its gross organs of perception (such as the eyes to see, ears to hear, tongue to taste, nose to smell and skin to feel and touch) and gross organs of action (such as hands to receive, legs to go and move around, mouth to speak and eat, excretory to eliminate waste, and genitals to reproduce and enjoy). It is when the consciousness is deemed to be alive and living in this world, and therefore it is called 'Jiva'—literally meaning the living being, someone who has life and shows activity.

During the dreaming state, the consciousness might not be actively involved in the physical world with the medium of the gross body, but its subtle body, i.e. the mind-intellect complex, is very much active and involved in creating a world in dreams which might be even more fascinating than the one physically present. The consciousness playing around in this world has no physical involvement of the gross body as it is asleep, so instead of being called an ordinary Jiva, it is now called 'Jiva-Atma' to indicate a transitory stage between the Jiva and its primary form as the Parmatma. The consciousness in the dreaming state has the same emotions and activities as during the actual waking state, it is equally restless and agitated, but the only factor that is missing is the direct involvement of the gross body.

The dreaming state is like the half awake and half asleep state of consciousness or the Atma; it is like the state with eyes half closed and half open. In the dreaming state, the man neither sees this world and remains active in it, nor is he totally devoid of its awareness and remains inactive. This is because even while his gross body is inactive during the dreaming state of sleep, he is very much active on the mental plane or in his subtle level of existence. In other words, though his physical gross body is inactive, his subtle body is very much active in the world of his dreams. But what he sees in his dreams is not remembered by him when he wakes up from his sleep. This fact is expressed in the expression 'half open eyes', while the fact that he remains oblivious of what is happening in the physical world in which he actually lives and which forms the background and basis for his dreams by influencing the sub-conscious is metaphorically represented by the term 'half closed eyes'.

The deep sleep state is when the consciousness does not even dream and the mind-intellect-sub-conscious complex has become defunct along with the gross body. In this state, the consciousness is called 'Parmatma' because the Atma or the pure consciousness exists in its true and real form of having no awareness of the world and being in an extreme state of blissfulness and contentedness, remaining engrossed with its own eternally blissful and contented 'self' which is nothing but the ethereal and divine Consciousness.

Now, in the first case when the eyes are wide open (i.e. the waking state), the Atma (the pure consciousness which is the true identity of the creature) assumes the role of an ordinary Jiva—i.e. a living being who lives and interacts with the gross material world of sense objects as has been stressed above.

In the second case when the eyes are totally closed as in the deep sleep state of existence, the same Atma assumes the role of the supreme Brahm who is not at all concerned with the material world and its delusions and illusive charms but remains in a state of perpetual bliss and contentedness. The Atma assumes a transcendental role here and therefore it is called Parmatma.

Then there is mid-level of existence which is between the two extremes—the so-called state with ‘half open and half closed eyes’. It is symbolic of the state in which the Jiva-Atma lives. To understand this state, we have to understand how and why the Atma is called by three names—viz. the Jiva, the Parmatma, and the Jiva-Atma.

On the one hand is this Atma which acts like an ordinary Jiva (living creature) by enjoying the world and remaining engrossed in it through the medium of the body consisting of the gross and subtle components. This Atma is identified with the body, and hence it is synonymous with the Jiva who remains totally ignorant of its basic exalted nature as the supreme consciousness. This state is symbolised by the ‘open eyes and its equivalence in the waking state of existence’.

On the other extreme end is the consciousness that remains in its pristine pure form as a neutral entity unconcerned with what the body does and is regarded as an image of cosmic Consciousness known as Brahm. This is the pure form of the Atma and it is symbolised by the closed eyes and the deep sleep state of existence which makes the Atma shut-off all delusions created by the world. This Atma is called Parmatma because it exists in a transcendental state of existence.

In between them is the ‘Jiva-Atma’, i.e. the Atma which oscillates between acting like a Jiva on the one end and like the Brahm or Parmatma on the other hand. It shows the character of both the worldly creature by remaining engrossed in the world and enjoying the pleasures derived by the body during the waking state, and also as the wise Atma that is unconcerned with and unencumbered by the world as the situation that prevails while the creature is sound asleep in the deep sleep state of existence when there are no dreams. This middle state of the pure and true ‘self’ is called Jiva-Atma (15).

16. [The following verses narrate how the earlier five basic elements of creation mutated and branched out to create more elements. Thus, from these five elements there arose seventeen at the micro level, and then expanded to twenty five ultimately.]

The body of the creature is called the *Linga Deha*. It consists of the following seventeen dimensions or units or elements—the five organs of perception (ear, eye, nose, tongue and skin) + the five organs of action (hand, leg, mouth, anus and genital) + the five Prans (the five subtle forms of the vital winds present inside the body—such as Pran, Apaana, Samaana, Vyan and Udaana) + one Mana (mind) + one Buddhi (intellect) = seventeen units or elements of creation at the micro level or the level of the individual (16).

[Note—These seventeen units or elements of creation are like the secondary elements that came into being as the process of creation moved forward. They formed the gross body of the creature representing the microcosm. Out of these, five gross organs of perception and five gross organs of action form the ten elements or units of creation which are considered comparatively gross in nature. The other seven, i.e. the five winds, one mind and one intellect are the subtle elements or units of creation at the microcosmic level. Therefore, the former is called the ‘gross body’, and the latter is called the ‘subtle body’.

The phrase *Linga Deha* literally refers to the ethereal form of the corporal body of a creature. But in the context of the Atma which is itself ethereal in form and most

sublime and subtle in nature, it would mean the physical body that it assumes, a body that has gross components as well as subtle components existing side by side.

The Paingalo-panishad, canto 2, verse no. 4 of the Shukla Yajur Veda tradition describes how this Linga Deha came into being. It states that the supreme Lord created five Koshas or sheaths. They are the following—‘Annamaye Kosh’ or the food sheath, ‘Pranmaye Kosh’ or the vital wind sheath, ‘Manomaye Kosh’ or the mental sheath, ‘Vigyanmaye Kosh’ or the intellect sheath, and ‘Anandmaye Kosh’ or the bliss sheath. [These sheaths cover the Atma or pure conscious self like various coverings or shrouds wrapping any object.]

The Annamaye Kosh is that which was created by the intake of food, was nourished and developed by food, and at the end it finally disintegrates into the basic ingredients that constitute food and merges with the earth element from where the food has derived its original ingredients. This forms the gross body of the creature.

The Pranmaye Kosh consists of the five vital winds (Pran, Apaana, Vyan, Udaan, and Samaan) along with the five organs of actions (hands, legs, mouth, excretory and reproductive).

The Manomaye Kosh consists of the mind and the five organs of perceptions (ears, eyes, nose, tongue and skin), while the Vigyanmaye Kosh consists of the combined apparatus made of the intellect and these five organs of perceptions.

A combination of these three sheaths, i.e. Pranmaye Kosh (vital wind sheath), Manomaye Kosh (the mental sheath) and Vigyanmaye Kosh (the intellect sheath) is what is known as the ‘Linga Deha’ of a creature, or the ethereal form of the corporeal body. This is the subtle body of the creature.]

17. Now the elements or units of creation at the macrocosmic level are being enumerated. Since the creation at this macro level is known as Nature or Prakriti, these are therefore the units of the latter. They are the following—one Mana (mind) + one Buddhi (intellect) + one Ahankar (pride and arrogance) + one Akash element + one air element + one fire element + one water element + one earth element = total of eight elements that cast their shadow on the purity of Nature (just like the shadow of the earth casts its shadow on the bright moon to result in the lunar eclipse).

These elements are called the eight ‘Vikaars’ (literally meaning faults, errors, shortcomings or imperfections) that are present in Nature¹.

Besides these eight Vikaars, there are said to be sixteen more Vikaars of Prakriti or Nature² (17).

[Note--¹This is because primarily and in its basic form, Nature is immaculate and uncorrupted and neutral. When this creation began to take its shape in the cosmic bowls of Nature, the former began influencing the latter and certain subtle changes started to make their appearances in it just like a lady begins to show physical anatomical changes when she becomes pregnant. The immaculate and pristine pure form of Nature becomes affected by the unique attributes of its offspring which was developing in its womb just like a pregnant lady undergoes changes in her body. Now, as the embryo of creation developed, it changed shape continuously, and from the first single cell of the egg and the sperm it develops into a complex structure of the body of the creature. What was a single-cell organism in the beginning of creation (such as the amoeba, paramecium, algae, fungi, bacteria etc.) gradually underwent mutations and transformations, under the influence of various physical and biological evolutionary forces, to grow and develop into the highly complex organisms we have today (such as the human species).

This is a metaphoric way of saying that the primary five elements (verse no. 1) gradually mutated and underwent profound changes, giving out new branches and offshoots, to develop into more and more elements as the cosmic embryo developed. Finally there came into being twenty five elements (verse no. 18-20).

Let us very briefly analyse why the different organs formed out of the basic elements and their relevant functions are classified as ‘Vikaars’ or faults and imperfections vis-à-vis the Atma at the micro level and the Prakriti or Nature at the macro level. For this, one example of the eye is taken. The eye sees things by two methods—either directly or through a viewing glass. Suppose the viewing glass is tinged green, then it is obvious that the entire scene seen by the eye through this glass would be influenced by this colour, and it would be vastly different than what it sees without it. The entire process of seeing is not such a simple mechanism however, for a number of other factors impinge upon it to bend one’s perception of what is seen. Such as for example the factor of mental alertness and whether the mind is focused on the thing seen or it is diverted elsewhere, for in the latter case the brain would not register anything seen at all. Besides this, the general temperament and attitudes of the seer, his general health and especially of the eye, his education, knowledge and level of wisdom, the way he interprets the sight and the importance he assigns to its different aspects, the inherent quality and exterior features of the thing seen and other physical factors such as light and distance etc.—all play their part in the eye seeing anything.

Each slight variation in any one factor would consequentially produce a distorted picture of the real form and nature of the thing seen by the same eye. The result is obvious to imagine—the observer or seer of the sight, i.e. the Atma which is the pure self of the man and the actual entity that does the seeing through the medium of the gross organ of the eye and the subtle organ of the brain, gets various versions of the same scene seen at different times and under different circumstances. This creates confusions for the seer. This idea has been beautifully enunciated in Dhyān Bindu Upanishad of Krishna Yajur Veda tradition, verse nos. 93/1-93/15, which describe how and why the immaculate Atma appears to be tainted itself, and why it sees the world as tainted. It uses the analogy of the Atma living in a lotus of coloured petals like someone living in a cell or glass house with coloured walls, and then seeing the world through these tinted walls as much as he himself is being watched by others through the same walls. Obviously, the real colour of the world viewed by the Atma through this enclosure would be tainted by the colour of the petal or wall of the Lotus in which it lives as much as its own pristine and immaculate from getting corrupted when seen by others for the same reason.

Then again, what one makes of a particular sight would invariably vary from what another person makes out of it. For example, a lady is seen as a mother by one man, while another sees her as his wife and still someone else as his sister. So the perception changes, and with it the entire way a creature deals with this world. Refer also to Yogtattva Upanishad of the Krishna Yajur Veda tradition, verse no. 131.

This logic applies to all other elements mentioned in these verses.

²The Yogtattva Upanishad of Krishna Yajur Veda, in its verse nos. 12-13 presents a list of sixteen other faults or imperfections that afflict the creature and thereby taint its otherwise immaculate Atma.

Some of the numerous faults, weaknesses, imperfections, blemishes or shortcomings that affect the character of a Jiva (living being, the creature) and prevent his pure and uncorrupt self, the Atma, from retaining its primarily untainted, pristine pure and immaculate nature and form which is one and non-dual, called the ‘Kaivalya’ state of its existence, are the following—Kaam (worldly desires, passions and lust), Krodh (anger, spite and wrath), Bhaya (fear and consternation), Moha (attractions, attachments, delusions, infatuations, longing), Mada (arrogance, haughtiness and intoxication), Raja (the second of the three qualities creating worldly tendencies and desires related to this world), Janma-Mritu (the cycle of birth and death and its attendant horrors and agonies), Kaarpanya (being stringy and miserly, specially in the field of religious duties such as giving alms and making charities, or supporting such activities; the word would cover miserliness of thoughts in the sense that one does not give the correct knowledge to others out of jealousy), Shok

(sorrows, grief and agonies), Tandra (being sleepy, indolent, lethargic, lazy, careless and showing lack of energy and alertness), Kshudha (hunger, both physical such as for food and the insatiable desire for sensual gratification, as well as emotional such as the insatiable longing for worldly things), Trisha (desires, wishes and yearnings pertaining to the world) [12], Trishna (thirst, ambition, avarice and greed; the word is usually used in the negative sense; it pertains to a man's insatiable desire and greed for worldly things), Lajjaa (shame, dishonour, ignominy), the constant fear of Dukha and its attendant Vishaad (i.e. being constantly tormented by the fear of sufferance from sorrows and grief of all kinds and the attendant agonies and miseries, distresses and a sense of despair and hopelessness and haplessness), Harsha (to feel elated and happy, to be glad and joyous, to feel cheerful and exhilarated by certain situations which seem to be in favour, such as on receiving some good news), etc.

It is only when the creature is freed from the tainting effects of all these faults, blemishes, imperfections and shortcomings that the Atma can realise its one and non-dual pure conscious form, the state of existence called 'Kaivalya'.

These shortcomings, imperfections, taints, blemishes or defects cast a shadow on the character of the Jiva and makes it appear that his Atma, which is his true identity, has these respective shortcomings or defects or imperfections in it. This is because the Atma of the Jiva allows itself to be affected by any or all of these faults and imperfections, forgetting that this is not its true nature but an illusionary scenario created by ignorance of the truth of its primary nature, which is leading it to delusions and its attendant problems. Each fault or imperfection or defect or shortcoming enumerated in these two verses, in association with others and acting in coordination with them in various permutations and combinations create an infinite array and variety of traits of character, temperaments, habits, personalities, attributes, virtues and qualities in all the creatures. The resultant effect is that there is no similarity between any two of them. Thus, the Atma, which is one and the same in all the creatures, appears to be of as many varieties as there are number of creatures. It assumes a dual and varied form; it becomes multifarious and diverse; it loses its non-dual, indivisible and immutable nature. In other words, it has become tainted and full of faults associated with the worldly creature; it has lost its pristine purity and singleness.

The 'perfect' Atma has thus become 'imperfect'; the 'untainted' Atma has been 'tainted'.]

18-20. [These verses describe the twenty five elements or units or dimensions or aspects of creation.]

The five gross organs of perception present in the body such as the ear, skin, eye, tongue and nose make up the five gross units or elements of creation at the micro level of the body of the creature. [Total 5 organs of perception.]

Then there are the five organs of action such as the anus, genital, hand, leg and speech (mouth). These are the five gross organs which add their count to the number of elements or units or dimensions that exist in this creation at the micro level. [Total 5 organs of action.]

Besides these, there are the five subtle sense perceptions such as the perceptions of hearing (relevant to the ear), feeling or touching (relevant to the skin), seeing various forms and shapes (relevant to the eye and the faculty of sight), taste (relevant to the tongue) and smell (relevant to the nose). [Total 5 senses of perception.]

Thus the tally comes to twenty three elements of creation as follows—8 Vikaars (of verse no. 17) + 5 organs of perceptions + 5 organs of action + 5 senses of perceptions (as enumerated in verse nos. 18-19) = total 23 (18-19).

The twenty fourth element or unit or dimension of creation is said to be the invisible and un-manifest cosmic Nature. [This brings the tally to $23 + 1 = 24$.]

And finally, there is the ultimate chief Authority of creation, called the supreme Purush, the Supreme Being, who forms the last unit of creation. This entity is immutable and indivisible, it is non-dual and eternal, it is infinite and imperishable, and it is all-pervading, all-incorporating and all-encompassing. Therefore there is nothing beyond it to count; it is the final frontier; there is nothing that exists beyond it that can be counted as an independent entity superseding the Chief Purush.

Thus we come to the total tally of twenty five elements. [The tally is arrived as follows—23 elements + 1 invisible and un-manifest cosmic Nature (as described in verse no. 18-19) + 1 Supreme Being (as described in verse no. 20) = total 25 elements*.]

In this way, the entire universe or cosmos is made up of twenty five elements.

This is the teaching of this Upanishad; this is what this Upanishad proclaims and unequivocally asserts (20). [18-20].

[Note—The gross body can be studied at various levels depending upon the classification used to study its constitution and structure. The structural elements are variously called the Bhuts, the Dhaatus and the Tattvas.

(a) The *Primary level* of the elements—This consists of the five primary elements called the 'Pancha Mahabhuts'. They were formed at the beginning of creation, and consist of earth, water or fluid, fire or energy, air or wind and sky or space elements in increasing degree of subtlety.

They can be studied at two levels—one at the very core level, and the other at the more general level.

(a) (i) The study of the body at the core level of the five Bhuts consisting of the five primary elements consisting of the sky or space, air or wind, fire or energy, water or fluids, and earth. Refer verse nos. 1-2, and 5-6 of this Upanishad above.

(a) (ii) The next level would be the various Koshas or Sheaths that are made of a combination of these five elements. They are the following—Anna Maye Kosh (the food sheath), Pran Maye Kosh (the vital wind sheath), Manomaye Kosh (the mind sheath), Vigyan Maye Kosh (the intellect sheath), and Anand Maye Kosh (the bliss sheath). These Koshas are also like the elements or units that decide the complexities of the creature's body and its position in the hierarchy of evolution.

All the living organisms can be classified into the following five types depending upon the number of Koshas they have—(i) Udbhij—these are those life forms that are born from seeds, such as members of the plant kingdom. These have only one Kosha, the Anna Maye Kalaa. In other words, they depend on food and become food for others higher up in the evolutionary ladder. (ii) Swedaj—they are those which are born from dampness and sweat, such as fungi, algae, bacteria, germs, mosquito, lice, flies etc. They have two Koshas, viz. Anna Maye and Pran Maye. That is, they are formed from food, they live for food and they die as food. Besides this, they also exhibit signs of life, e.g. the mosquito and lice have life like any other member of the animal kingdom. (iii) Andaj—they are placed higher up in the evolutionary ladder, and are born from eggs, whether inside the mother's womb or outside. Such birds as pigeon, sparrow, parrot, peacock etc. come under this category. They have three Koshas which are Anna Maye, Pran Maye and Mano-maye. The last Kosh refers to the fact that such creatures have a mind and heart which enables them to think, albeit in a primitive level. (iv) Jaruyuj—these are the creatures that are born as embryo that develops inside the mother's womb. Under this class come the animals such as horses, cows, dogs, elephants etc. They have four Koshas, such as Anna Maye, Pran Maye, Mano-maye and Vigyan Maye. The last Kosh refers to their ability to have a higher level of thinking ability called intelligence. The human being comes under this last category with the added benefit of having five Koshas. Besides the four Koshas

mentioned above in other creatures of this category, the man has the fifth one and it called the Anand Maye Kosh. It is only possessed by a man and not by other creatures in the sense that the man can realise the true meaning of the terms ‘bliss and happiness that is eternal and substantial’ by the virtue of his attaining higher level of intelligence and his ability to delve into the secrets of the concept of truth itself and then realising that kind of happiness and bliss that is not superficial and which is not limited to enjoyment of the sensual pleasures of the body and the material comforts of the world, but which has a holistic and all-inclusive dimension that incorporates the spirit or the soul.

(b) The *secondary level* of study of the body and its structure would be at the level of the Tattvas. It consists of the Linga Deha made up of the seventeen Tattvas which are seventeen dimensions or units or elements that constitute it—the five organs of perception (ear, eye, nose, tongue and skin) + the five organs of action (hand, leg, mouth, anus and genital) + the five Prans (the five subtle forms of the vital winds present inside the body—such as Pran, Apaana, Samaana, Vyaana and Udaana) + one Mana (mind) + one Buddhi (intellect) = seventeen units or elements of creation at the micro level. [Reference Shaarirako-panishad, verse no. 16.]

The gross body can be further classified as consisting of twenty three elements. They are the following—

(1) The five gross organs of perception present in the body such as the ear, skin, eye, tongue and nose make up the five gross units or elements of creation at the micro level of the body of the creature. [Total 5 organs of perception.]

(2) Then there are the five organs of action such as the anus, genital, hand, leg and speech (mouth). These are the five gross organs which add their count to the number of elements or units or dimensions that exist in this creation at the micro level. [Total 5 organs of action.]

(3) Besides these, there are the five subtle sense perceptions such as the perceptions of hearing (relevant to the ear), feeling or touching (relevant to the skin), seeing various forms and shapes (relevant to the eye and the faculty of sight), taste (relevant to the tongue) and smell (relevant to the nose). [Total 5 senses of perception.]

(4) The eight Vikaars such as one Mana (mind) + one Buddhi (intellect) + one Ahankar (pride and arrogance) + one Akash element + one air element + one fire element + one water element + one earth element = total of eight elements that cast their shadow on the purity of Nature (just like the shadow of the earth casts its shadow on the bright moon to result in the lunar eclipse). These elements are called the eight ‘Vikaars’ (literally meaning faults, errors, shortcomings or imperfections) that are present in Nature and affect the basic nature of all living beings.

Thus the tally comes to twenty three elements of creation as follows—5 organs of perceptions + 5 organs of action + 5 senses of perceptions + 8 Vikaars = total 23. [Reference Shaarirako-panishad, verse no. 17-19.]

(c) The next level of study of the body is the *tertiary level*. The tertiary elements that constitute the body all living beings would be the following nine—the three Gunas such as the Sata which the best quality in creation, the Raja which is the medium quality, and the Tama which is the lowest quality (refer Shaarirako-panishad, verse nos. 7-13), and the six aspects of Anatahakarans which is the inner self of the creature consisting of the sub-conscious or conscience that governs his innate character. The five aspects of Anthahakaran are the following (1) Mana or mind, (2) Buddhi or intellect, (3) Chitta or the faculty of concentration and memory; knowledge and consciousness, (4) Ahankar or ego, pride, arrogance, (5) Vrittis or inherent character, traits, habits, inclinations and temperaments of a creature based on these basic components of the subtle body—refer Paingalo-panishad, Canto 2, verse no. 3), and (6) the various Vasanas (worldly passions, lusts and yearnings—Muktiko-panishad, Canto 2). The total comes to 3 + 6 = 9. These nine decide the inherent character and basic nature and temperament of the creature.

(d) The 7 Dhaatus—The structural features of the gross physical body consists of the so-called seven Dhaatus. These stand for the structural constituent of the body which supports and sustains its existence. According to ancient Indian system of medicine, they are the following—(1) Rasa (lymph and mucous; sap), (2) Rakta (blood), (3) Maansa (flesh), (4) Meda (fat and muscles), (5) Ashthi (bones and cartilage), (6) Meja (marrow), and (7) Shukra (semen).

According to other interpretations, these seven Dhaatus which form the structural features of the gross body and give it its shape and support it are the following—(1) all forms of fluid ingredients such as blood, urine, mucous, lymph etc, (2) bone and cartilage, (3) marrow, (4) flesh, fat and muscles, (5) abdominal organs such as stomach etc, (6) skin, and (7) Naadis (arteries, veins, capillaries and nerves).

(e) The structure of the body as explained in the Upanishads can be easily understood when we analyse it in the context of modern science of chemistry. This gross body of a creature can be compared to the molecular structure of any chemical substance or any thing in this world for that matter that is made up of certain basic elements. The molecules are also not visible to the naked eye just like the ingredients of the body mentioned above except some of them such as the skin and mucous much like the external features of the finished chemical product.

At the next level comes the atomic structure, or the subtle level of constitution of the body. It is like the atoms of any chemical molecule that make up the basic building blocks or units of that molecule. For example, Benzene has a hexagonal structure which would be like the gross structure of the creature's body called the Dhaatu, while the Carbon and Hydrogen atoms (C_6H_6) that go in to form the basic and fundamental ingredients of Benzene are like its subtle structure called the Bhut.

To understand how one element can transform itself into so many forms, we can take the example of *isomerism* in chemistry. It has been explained at length in note of verse no. 6 of this Upanishad above.

*The Maho-panishad of Sam Veda, in its Canto 1, verse no. 5 gives a list of the twenty-four Tattvas in the specific sequence as follows—the five sense organs of perception (eye, ear, nose, tongue and skin) [these are the 1st five Tattvas]+ the five sense organs of action (hand, leg, mouth, excretory and reproductive) [these are the 2nd five Tattvas]+ one Mana (mind) [this is the 11th Tattva] + one Ahankar (pride and ego) [this is the 12th Tattva] + one Pran (vital airs or life-giving winds) [this is the 13th Tattva] + one Atma (consciousness) [this is the 14th Tattva] + one Buddhi (intellect) [this is the 15th Tattva] + the five Tanmatras (the five subtle senses of perception such as sight, hearing, taste, smell and feeling or touching) [these are the 16th to 20th Tattvas] + the five primary elements called the Panch Bhuts (earth, water, fire, air and sky) [these form the 21st to 25th Tattvas] = total twenty five Tattvas. {5 + 5 + 1 + 1 + 1 + 1 + 1 + 5 + 5 = 25.}

Refer Taittiriya Upanishad of Krishna Yajur Veda tradition, Valli 1, Anuvak 7 in this context.]

Chapter 21

Yogshikha Upanishad/Yogshikho-panishad

The Yogshikha Upanishad has six elaborate Cantos dealing with the concept of Yoga. The word 'Shikha' literally means 'a peak, a crest, an apex, a flame, the highest point'. Hence the composite word obviously refers to the knowledge which helps the wise person who possesses it to reach the climax of spiritual achievements that is possible by employing Yoga as a tool for this purpose. This eclectic knowledge ignites the hidden potentials in him like a flame of light that removes the darkness of ignorance and its attendant delusions.

Yoga and Gyan are the two famous paths of Brahm realisation or becoming knowledgeable about the ultimate, immutable and absolute Truth of creation. This Brahm realisation is equivalent to 'self' realisation because the Atma or the pure consciousness of all living beings and the cosmic Consciousness known as Brahm are one and the same. This Upanishad presents a magnificent judicious mix of metaphysical philosophy of Yoga based on the principles of Vedanta along with the Tantra philosophy of Yoga and its practical aspect of exercises and meditation techniques.

This Upanishad is one of the 'revealed Upanishads' because it was revealed by Lord Shiva to Brahma the creator. Shiva is an expert ascetic and the patron God of all ascetics as well as the Lord who controls the function of bringing the creation to a conclusion; he is regarded as the greatest spiritual teacher, highly self-realised, most enlightened and the wisest amongst the Gods.

This Upanishad is very similar to other Upanishads on Yoga, such as Jabal Darshan, Yogchudamani, Paingal and Yogkundali. The Yogtattva Upanishad, which is Chapter 17 of this volume, is of special interest because both these two Upanishads are revealed ones—the present one, the Yogshikha, is revealed by Lord Shiva who is not only the greatest ascetic himself but also the patron God of all ascetics and is considered as the universal moral preceptor or Guru of all living beings in this creation, while the other one, the Yogtattva was preached by Lord Vishnu who is the protector and sustainer of this creation besides being the Viraat Purush himself personified. In both the cases however the one who is preached is Lord Brahma who is the creator of this visible world as well as all knowledge required to guide the creatures and encoded in the form of the Vedas. Therefore, with such enlightened and all-knowing teachers and a disciple who himself is no less wise, these two Upanishads act as the two prime treatises on Yoga.

Another interesting spin-off of this fact is that all the concepts of Yoga as narrated in this Upanishad are pregnant with both the Vedanta philosophy as well as the Tantra philosophy—in fact it presents a comprehensive amalgam of both of them, and herein lie its beauty. It brings under one umbrella various Yoga concepts which have been mentioned in a brief and succinct language because the listener is Brahma who himself was wise and learned and needed no great explanation at length. So elaborate notes have been appended to the verses as and when required for the purpose of our study so that these concepts are easily understood by the reader as he goes along with the main text.

The probable reason why Brahma approached Shiva to preach him on Yoga though Brahma was himself no less wise as he had created the Vedas which are considered as the repositories of all knowledge is the fact that Shiva was an expert

Yogi and therefore considered as the wisest teacher on the subject who had put into practice the teaching of the Vedas created by Brahma who had only a theoretical knowledge of the subject. Shiva was deemed to be more competent and expert on the subject of Yoga with all its different connotations. Besides this, this format of question and answer was a standard method of collating and bringing together in a cohesive, comprehensive and easy to understand format a vast array of information and knowledge pertaining to any given metaphysical subject which was otherwise spread across the large volumes of the numerous scriptures and therefore hitherto inaccessible for an ordinary person. Hence, this Yogshikha Upanishad is like a pocket ready-reckoner on the subject of Yoga taught by Shiva, the wisest and most enlightened teacher of the subject being the patron God of all ascetics, to Brahma the creator who himself was an equally wise and enlightened disciple God as he is the one who has created all the four Vedas which are repositories of all available knowledge in creation, but who has assumed a role of a disciple for the sake of knowledge.

The very fact that Brahma had thought it fit and proper to approach Shiva to hear and learn the secrets and profound tenets of metaphysics and spiritualism inspite of being the creator of the world and all its knowledge himself proves that Shiva is superior to him and therefore fits the bill of being Maheshwar or the 'Great God' perfectly. It also shows that knowledge is not an exclusive domain of any single person matter how enlightened and wise he might be, and a truly wise man is one who continues to seek knowledge from whatever source it is available and in any form throughout his life; there should be no element of shame in it or the feeling of being inferior to others in terms of the level of knowledge.

Amongst the numerous interesting facts narrated in this Upanishad are the genesis of the spoken word and the different notes of music as described in verse nos. 2-9 of Canto 3 along with the concept of Bindu and Naad which have been elaborately dealt with in Canto 1, verse nos. 105, 167, 178, Canto 2, verse nos. 6, and Canto 3, verse nos. 1-10. An astounding array of metaphors and analogies has been cited in Canto 4 to describe what Brahm is. The human body is treated as a holy city and the abode of both Lords Vishnu and Shiva. This city has ten doors, ten avenues, ten life forces moving on these avenues, six city circles called Chakras, six forests or green belts, four Peeths or pedestals, four lamp posts and two signs. These have been described in Canto 1, verse nos. 72, 165-167, and Canto 5, verse nos. 2-5.

The importance of Gyan (truthful knowledge) vis-à-vis Agyan (ignorance or lack of knowledge), and their relationship with Yoga (meditation and bringing about a fusion between the various aspects of Truth) have been elaborately explained in Canto 1, verse nos. 1-80. The detailed process of Yoga with all its various limbs and branches have been discussed in the rest of the verses of Canto 1. Canto 2 describes why and how a Mantra is regarded as a symbol or Linga of Divinity here represented by Lord Shiva. Canto 3 elucidates upon the finer aspects of Naad (the cosmic vibrations from which the dynamic energy of creation emerged) as a symbolic manifestation of Brahm; Canto 4 deals with the metaphysical question of relationship between Brahm, the Supreme Being, and the individual creature called the Jiva; it explains the concept of non-duality or Advaitya by citing various instances. Canto 5 is a sort of reiteration of what has been said in the four preceding Cantos.

Canto 6 deals with the concept of Naadis and the movement of Pran in them, the activation of the various Chakras, the location of different divine Shaktis (energies) in the body itself, how one does an involuntary Japa (repetition) using the Mantra 'Hans' and the significance of it, importance of Mana (mind) and Chitta (sub-conscious), the role of Ahankar (ego and pride), and how the practitioner of Yoga can

achieve true Mukti (liberation and deliverance, emancipation and salvation) and ‘dissolution of the self’ by following its tenets.

It would be also observed that Canto 5 has an uncanny resemblance to Canto 1, verse nos. 162-178, Canto 2, verse nos. 12-22, and Canto 3, verse nos. 1-12. The fact that the same concepts are repeated once again shows one of two probabilities—either Shiva had preached Brahma on two separate occasions, or he had repeated the concepts to drive home their great importance and significance.

-----Shanti Paath-----

Please refer appendix no. 1 for the meaning of this Shanti Paath.

Canto 1

1. Once, Brahma (the creator) went to Lord Shiva (the expert ascetic and the patron God of all ascetics as well as the lord of conclusion of creation; the greatest spiritual teacher, one who is self-realised, and is regarded as the wisest amongst the Gods) and politely asked him, ‘Oh Lord! All the creatures are tied in strong fetters created by Maya (ignorance-caused delusions and their attendant problems in this world). These fetters trap them in a web or net of Sukha and Dukha (i.e. in a continuous cycle of happiness, pleasures, comforts and joys on the one hand, and sorrows, miseries, agonies and grieving on the other hand). They are not able to break free from this net, are constantly buffeted by them and suffer as a consequence.

Please describe the way that they can find liberation and deliverance from it (1).

[Note—Refer Yogtattva Upanishad, verse no. 4-5 of Chapter 17 of this volume.

The concept of Maya has been explained at length elsewhere in other Upanishads of the Krishna Yajur Veda tradition in this volume—viz. as a note of verse no. 13 of Kaivalya Upanishad which is Chapter 4, Brahm Vidya Upanishad, verse no. 87 and its note which is Chapter 16, and Tejobindu Upanishad, Canto 5, verse no. 33 and its note which is Chapter 14.]

2. Tell me that path which is a panacea of all ills, the path that bestows all successes and Siddhis (mystical powers that one automatically acquires upon spiritual elevation), that is powerful enough to break the fetters created by Maya (delusions) and liberate the trapped creature, that can eliminate such horrors as birth, death, old age and various diseases that torment him, and which can provide happiness and spiritual comforts to the creature’ (2).

3. When Hiranyagarbha (Brahma) asked this question, Lord Maheshwar (literally the great Lord, the great Ishwar, Lord Shiva) replied—‘The best form of liberation and deliverance which is rare and only one of its kind is called ‘Kaivalya’—the only one. This supreme stature of existence for the creature’s soul is called ‘Param Pada’, the most exalted and eclectic state of existence. There are not myriad of ways to reach it; there is only one way. If attempt is made to take numerous paths to reach this eclectic stature, it becomes all the more difficult to attain it; it goes beyond reach. [This is like

the case of jumping from boat to boat in order to reach the other side of the river, or the case of too many cooks spoiling the broth.] (3).

[Note—Refer Yogtattva Upanishad, verse no. 5-6 of Chapter 17 of this volume..]

4. Oh the one created out of the divine lotus¹ (i.e. Brahma)! This Kaivalya Pada is obtainable only by following the path called ‘Siddhi Marg’ or the path that is spiritually liberating and paves the way for acquisition of certain divine and mystical authority, power and prowess that are natural to such spiritual attainment. There are no other alternatives.

A person who thinks himself to be intelligent and learned gets entangled in the web created by the numerous scriptures and the various versions of the same path shown by them. He tries to be logical and derive rational ways to achieve his goal by delving in the voluminous tomes of the scriptures and spending his lifetime trying to unravel their secrets, without reaching any conclusion. This creates confusion and perplexities for him; he gets bogged down with uncertainties, gets flummoxed with contradictory interpretations of the scriptures and their doctrines, and consequentially instead of crossing the ocean he gets drowned in it (4).

[Note—¹According to Purans, the mythological ancient histories of the Hindus, Brahma the creator of the visible world was born atop a divine lotus that emerged from the navel of Lord Vishnu, the macrocosmic manifestation of the Supreme Being, while he lay reclining on the bed of the huge serpent floating on the surface of the legendary ocean of celestial milk called the ‘Kshir Sagar’.]

5. The supreme entity (known as Brahm) that is the target of all spiritual research and practices is self-illuminated (like the celestial sun). Say, can it ever be illuminated by the scriptures? Can anyone ever hope to see that eternal source of light by the help of a candle light?

That supreme transcendental entity is ‘Nishkal’, i.e. it is without any blemishes, taints, faults and corruptions that are the dominant characteristics of this world. It is ‘Nirmal’, i.e. it is immaculate, pure, clean and taintless. It is ‘Shaanta’, i.e. it is peaceful, tranquil, serene, calm, unruffled and rested. It is ‘Sarwateet’, i.e. it is transcendental and beyond everything in existence. It is ‘Niramaye’, i.e. it is free from all the symbolic ailments that afflict and torment the rest of the manifested world and its creatures; it is free from all spiritual diseases and warts that ail and deform the rest of the creation (5).

[Note—Refer Yogtattva Upanishad, verse no. 7-8 of Chapter 17 of this volume.]

6. When the same immaculate and neutral, supreme and transcendental entity which has no gross forms and worldly attributes assumes the role of a Jiva (a living being with a gross body), it gets surrounded by the veil cast by deeds and their consequences¹.

The supreme transcendental cosmic consciousness called the Parmatma, the supreme Soul, is eternal and non-dual. Say how can it become a Jiva?

[That is, even the Supreme Being who created this myriad and colourful world himself, if he allows himself to be charmed by its deceptive nature and lured by its enticing attractions, and get confused by doubts as to what is the reality and what is not, he would become like an ordinary Jiva or an ordinary living being who lives in this mirage-like world and remains perpetually trapped in its web of illusions and delusions. It is like the case of the presence of water in the mirage seen in a hot desert—the water is obviously not there, but a man who sees that mirage would swear by his life that he is actually seeing real water.] (6).

[Note—¹The Skanda Upanishad succinctly describes this concept of Jiva and Brahm. Refer Chapter 19. Briefly, when the supreme consciousness, which is essentially ethereal and formless, begins to think that it has a gross identity marked by the presence of the gross body and the world around it, it gets mired and entangled by the web of deeds done by the body and the various relationships that it develops with this artificial and deluding world. As every action will necessarily have a relevant reaction, there is created a chain of deeds and their consequences. This acts like an iron-shackle for the otherwise pure, ethereal and inherently liberated consciousness, bogging it down like an ordinary creature of the world called a Jiva.

Refer also to Yogtattva Upanishad, verse nos. 9 and 11 of Chapter 17 of this volume.]

7. That great Lord called Mahadev (referring to the Supreme Being) is beyond the reach of the world created by various elements called *Tattvas*¹; he transcends the definitions of the world bounded and limited by various *Tattvas*.

He is beyond the purview and reach of all material things as well as all places in existence. [This is because he surrounds everywhere from the outside like a boundary wall, and there is no creation outside the limits created by this Mahadev.]

He is beyond all notions and concepts, as well as of honours and epithets. He is an embodiment of Gyan (truthful knowledge, wisdom and enlightenment). He is without any blemishes and faults (7).

[Note—¹The various *Tattvas* have been described in Yogtattva Upanishad, verse nos. 12-13 which is Chapter 17, and in Sharrirako-panishad, verse nos. 16, 18-20 which is Chapter 20 of this volume.]

8. [This verse describes the initial phases of creation. Refer also to Yogtattva Upanishad, verse no. 9.]

In that neutral cosmic ethereal entity which primarily had no sign of activity, there appeared some form of subtle and almost imperceptible wave-like movement as it is usually seen in the movement of air. [When the static air begins to move, it is so subtle and soft that it almost passes notice until the time it gathers sufficient energy and speed to be felt by the skin as breeze. No one can actually 'see' the waves in the air, but it is an undeniable fact of science that sound travels from one point to the other point in the form of waves in air. When these waves gather speed, we can actually hear their movements in the form of a howl of wind blowing across our ears, and we can actually feel its movement against our faces.]

The next thing to happen was the creation of 'Ahankar', i.e. the subtle element that marks such traits as having a sense of pride, ego and haughtiness that are hidden in the bosom of the creature and influence his character. [It should be noted here that Ahankar is also one of the four components that make up the inner self or the Antahakaran of all living beings or Jiva. Refer Shaarirako-panishad, verse no. 4 of Krishna Yajur Veda.]

Then came into being a Pinda or an egg-like entity (the cosmic embryo) consisting of five primary subtler elements (such as the earth, water, fire, air and sky), and enclosed by the shell of grosser elements (such as blood, flesh, bones, marrow, veins and nerves etc.)¹.

Since there was a definitive shape and structure of this cosmic egg, however invisible and subtle it was, it was bound to have certain Gunas, or virtues and qualities, which were characteristic to it, and which would determine the unique nature, personality and character of the would-be offspring that would emerge from this cosmic egg in due course². (8).

[Note—Refer Yogtattva Upanishad, verse no. 10, 12-13 of Chapter 17 of this volume.

²These Gunas are three in number, such as Sata, Raja and Tama. They have been briefly outlined in Sharrirako-panishad, verse no. 7-13 of Chapter 20 of this volume.]

9. When this happened, the supreme primary entity that primarily had been neutral and without any attributes tainting its inherently immaculate nature and pristine pure character now got tainted and was influenced by so many factors that it got deluded into thinking that it is assumed a form with certain Gunas or attributes and qualities (as described in verse no. 8 above). It began to think that something has come into being with a definite character and attribute.

What was that which came into being? It was an egg inside which there was an embryo with a certain shape and form and texture (as described in verse no. 8), and it was surrounded by a shell. This embryo later hatched into a living being or creature with a body. So the supreme Brahm or Parmatma began to identify himself as a Jiva with a gross body. [The shell of the cosmic egg transformed into the grosser protective layer of the skin, flesh and bones of the newly born Jiva or the living creature, and the embryo itself formed this Jiva. Naturally therefore, all the ingredients that helped give the embryo its shape and identity transferred themselves into the new Jiva. How the elements shaped the body of the Jiva have been clearly described in Sharrirako-panishad, verse nos. 1-13.]

Hence, the very thought of the Parmatma, the Supreme Being or Brahm, that he has got such and such qualities or possesses certain attributes made him believe that he was a Jiva, the living being. Otherwise, the Parmatma is supreme and transcendental, remaining free from any limitations and definitions that are artificially created when some or the other attribute or quality is assigned to any given entity. The Parmatma is beyond the purview of any kind of definition and attribute which act like taints upon his immaculate nature. [Something that is perfect and absolute, that is infinite, indescribable and beyond comprehension would be scarred by being delineated, encased and limited if one were to assign certain specific attributes to it because each quality or attribute has its inherent limitations and gives a fixed idea of what it means, and would therefore imply that the entity under study is limited by this particular attribute, that the attribute in question defines it and draws a line around it, that this particular attribute is its defining quality which dominates its character and is more important than the other qualities. This sort of limits something that is limitless; it sort of limits something within certain definitions and criterions. For instance, if we say that there is light in the room, then the question arises what type of light is it, what is its intensity and colour, what is the source, was there darkness before it, is it sufficient etc. Suppose one says that the Supreme Being is all-knowing, then the question arises why is this particular quality being highlighted? Does it mean that the Supreme Being's main quality is being all-knowing and the other qualities are of lesser significance? If we say the ocean is salty then someone would say 'how salty'? In short, something that cannot be defined is best left alone as being indefinable, and no specific attributes ought to be assigned to it because this would be tantamount to imposing limitations on it and drawing a defining parameter wall around it] (9).

[Note—The very fact that the Parmatma lost his neutrality and began to think in terms of possessing the three Gunas (Sata, Raja and Tama), or having a gross body that lives in this world and interacts with it, a body that can enjoy or suffer and that does deeds and expects results from such deeds, or that the world actually exists at all inspite of being omniscient and all-knowing about the truth of creation, and so on and so forth, it is natural that he fell from his exalted stature of being 'supreme'. It is then that this Parmatma becomes a Jiva or an ordinary living being. Conversely, if the Jiva

realises the truth and disassociates himself from the delusions created by this world and the body, if he is able to overcome the various taints and imperfections typical of this life and as enumerated in the Upanishads, then it is natural that such a Jiva rises to the exalted stature of being a Parmatma. In brief, when the Atma is engrossed in the world and its accompanying delusions, it is called a Jiva, and if it is able to realise its true nature by 'self-realisation' it elevates itself to the exalted stature of a Parmatma.]

10-11. [These two verses list the numerous faults and shortcomings in the character and mental setup of the creature which prevents the latter from becoming one like the supreme Lord of creation because they act as drags on his spiritual upliftment, pulling the individual's soul towards this mundane world rather than allowing it to go higher to reach for the sky of spiritual achievement.]

Some of the inherent faults, shortcomings, imperfections and drawbacks that mire the creature's spiritual progress and pull him down from reaching the high of spiritual achievement that would make him equivalent to the supreme Soul of creation are the following—Kaam (worldly desires, lust, passions etc. and the attending greed, yearnings and aspirations that they create in their wake), Krodh (anger, indignation, wrathfulness and a sense of vengeance when desired results are not obtained and aspirations are not fulfilled), Bhaye (fear, consternation and perplexities arising out of uncertainties, confusions and other factors such as fear from death and enemy, fear of failure and its attending shame, fear of sufferings of the body due to old age and diseases etc.), Moha (delusions that create a sense of attachment, infatuation and belonging to this material world and attractions for the illusive charms that its sense objects offer, along with their sensual pleasures and comforts), Lobha (greed, rapacity and yearnings), Mada (arrogance, false pride, hypocrisy and haughtiness), Raja (the quality of remaining engrossed in this world of material objects, to think that one is the doer of deeds and therefore is entitled to the rewards of these deeds etc.), the problems associated with the cycle of Janma and Mrityu (birth and death), Kaarpanya or Kripantaa (to be miserly and pinch-fisted, shallow-hearted and small-minded, frugal, illiberal, niggardly, avaricious, stingy), Shok (grief, sorrows, miseries and agonies of all kinds), Standra (sleepiness, lethargy, indolence, drowsiness, sluggishness and lack of alertness especially when doing some important or dangerous work requiring concentration of mind, vigilance and alertness of the faculties), Kshudha (hunger) and Pipasa (thirst) [10],-----

-----Tirshnaa (thirst for acquiring and enjoying worldly things and desire for self gratification; greed, avarice and rapacity for the material world and its sense objects and their enjoyments), Lajja (shame at doing something dishonourable and ignominious) and its attendant fear of losing face, self respect, dignity and position in society, all sorts of Dukha and Vishaad (sorrows, miseries, agonies, grieving, lamentations, feeling of gloom and guilt, melancholy, sadness, depression, dejection, low-spirited etc.), and Harsh (the opposite of Dukha and Vishaad; the feeling of elation, happiness, joy, ecstasy and exhilaration; to feel glad, cheerful and joyous).

These are the shortcomings or imperfections that cast their shadow on the otherwise immaculate and perfect Atma of the creature, thereby miring it in a number of unwarranted problems and separating it from its pure nature. Until the creature is freed from their clutches or tainting effects, he cannot ever hope to become as pure as the Shiva, i.e. the creature cannot attain his true primary nature which is pristine pure, uncorrupt, truthful, auspicious, neutral and beautiful like the form of Shiva [11]. (10-11).

[Note—These two verses list 19 faults that mire the creature's Atma. Refer also Yogtattva Upanishad, verse no. 11-14 of Chapter 17.]

12. Therefore it is essential to get rid of these faults and destroy them. Now I shall tell you the ways to do so. Some say that only Gyan (knowledge) is the proper instrument to effect this riddance. But simply Gyan is not sufficient to do so; it cannot alone provide the mystical powers necessary to achieve success in self-realisation and understanding the pure nature of the pure conscious Atma (12).

[Note—Refer also to verse no. 48 of this Canto as well as to verse no. 14 of the Yogtattva Upanishad which is Chapter 17 of this volume.]

13. Gyan devoid of Yoga is also equally incompetent to provide liberation and deliverance from the horrors of the above faults. Similarly, Yoga devoid of Gyan is also equally incompetent to do so. In other words, they have to go hand in hand if the spiritual aspirant is serious about obtaining success in his spiritual venture (13).

[Note—Refer also Yogtattva Upanishad, verse no. 14-15 of Chapter 17.]

14. Hence, those who are sincere about spiritual liberation and deliverance should painstakingly practice both Yoga and Gyan with equal steadfastness and diligence. [This is because if Gyan can enlighten a person about the Truth, follow up action in the way of practicing what has been learnt from the reading of the scriptures is equally important. Simple knowledge is as useless as mere blind pursuance of any line of action. The word 'Yoga' means to bring about a union or fusion of two entities. Hence, if Gyan can enlighten a man about the Truth and Reality of existence from the metaphysical perspective, Yoga would help him to actually reach this Truth and Reality by making diligent and synchronized efforts and maintaining a steady progress on this path. What good is any knowledge if it is not actually practices, and how can one practice if one does not know the correct way and the detailed method to be followed?]

The importance of Gyan in attaining Brahm cannot be underestimated or undermined. The reason is as follows—The attainment of the supreme transcendental Truth known as Brahm as well as the reality about one's own 'true self' as the pure conscious Atma is only possible by following the correct path and having the correct knowledge as to what they really mean and actually constitute of. This is known by the medium of Gyan and no other means. Therefore in a sense and metaphorically, Gyan and Brahm are synonymous with each other. If one has true spiritual knowledge or Gyan it is implied that he knows about Brahm and is a self-realised person. Others who pretend to have Gyan and do not have this knowledge are mere fraudulent pretenders and cunning imposters.

The way to such an eclectic and divine holy entity known as Brahm and the Atma is by the path of Gyan. It is holy path that is knowledge-based. [One cannot hope to reach one's goal by following a wrong path that is not compatible to one's aim. For example, one cannot hope to become a medical doctor by studying engineering. So if one wishes to become aware of Brahm, one has to follow the correct path that leads to it, and that path is acquisition of correct knowledge of what or who Brahm is. For, if one does not have the basic knowledge, erudition and wisdom, neither would he know what to do and how to reach his goal, nor would he recognise the symptoms of his progress in the correct direction, and whether or not he has actually obtained success when he has reached his spiritual goal of Brahm-realisation and self-realisation.]

Hence, primarily Gyan is the basic path or means to Brahm. It is Gyan which enlightens the spiritual aspirant as to what or who Brahm is, what methods are available to reach this divine spiritual goal of life, which option is the most suitable for the individual, what are the benefits of following this path and what rewards await him on attaining or reaching his spiritual destination known as Brahm (14).

[Note—Refer also Yogtattva Upanishad, verse no. 14-15 of Chapter 17.]

15. A person desirous of Moksha (spiritual liberation and deliverance, emancipation and salvation) should first understand what is ‘Agyan’ (ignorance and lack of correct knowledge of the reality and truth; the reverse of Gyan). Once one knows what constitutes Agyan, then the latter no longer remains Agyan; it becomes a sort of Gyan (knowledge)¹.

When the ignorance about one’s true self and its nature are removed, one becomes aware of the pure and supreme nature of the ‘self’ and its most exalted and eclectic stature. It is such a unique entity that it has no match and parallel, hence it is incomparable and unmatched. Therefore it is called ‘Kaivalya Param Pada’, i.e. the only state of existence of the ‘true self’ that is the best and supreme in nature, and is consequentially free from the various faults that have been enumerated above (in verse no. 10-11). This is true spiritual ‘Gyan’² (15).

[Note—¹When one becomes aware of anything, he does not come within the ambit of the word ‘ignorant’. So when a spiritual aspirant becomes aware of the fact that he lacks certain knowledge, then he cannot be described as a completely ignorant man—for he is aware of the limitations, shortcomings or imperfections. If he is a wise man, he would now endeavour to remove them. But the first step towards this endeavour is his knowledge that he has these limitations, shortcomings and imperfections. Therefore, in the primary stage he might be ‘ignorant’ of the path and the goal and hence labeled as an ‘Agyani’ or an ignorant man who is not aware of this path and the goal, but technically he is not an Agyani; he indeed ‘has knowledge’ of his shortcomings and limitations. This would make him feel humble and eager to overcome his lack of knowledge. In a similar vein, suppose a man has an expert knowledge of everything but he is full of pride, ego and an exaggerated sense of self-importance and vanity which makes him arrogant and haughty of his erudition, skills, wisdom and sagacity, then he is worse off than a totally ignorant man. In fact, such a man comes within the definition of being an Agyani—an ignorant man.

If one is not aware of one’s goal, he would not even attempt to reach it. This is the height of ignorance. When one becomes aware that one is unaware of this knowledge of one’s goal, then this marks the first step towards knowledge, for then one would strive to find out what the goal is. The next step would be to find out the path or the way to reach that goal. This is where the role of Gyan comes in—to enlighten one about his true spiritual goal in life and how to reach it. But merely knowledge wouldn’t take one to the goal, for action is needed. This is where Yoga comes into play. The exercises of Yoga and the contemplation and meditation that it incorporates in its ambit are the tools in this spiritual pursuit. Yoga means ‘union’, hence it brings about a union between the traveler and the destination; it establishes a link between the spiritual aspirant and his goal of spiritual enlightenment and self-realisation leading to Moksha which is liberation and deliverance of the soul from the endless cycle of birth and death and its attendant horrors, and its final emancipation and salvation. This is the main function of Yoga in the spiritual sphere.

If the Gyan (knowledge) is imperfect, for example if the man chooses the wrong destination or boards the wrong train, the entire exercise proves a nuisance for him; he was better off being ignorant because in both the case he never finds his real goal. He was better off being totally ignorant because he was at peace with himself as the sub-conscious wasn’t nagging him as he was unaware of his lack of knowledge and

therefore could be excused due to his innocence. But once he becomes aware of his shortcomings, he must make efforts to remove them for after becoming aware he cannot be excused of his shortcomings on the ground of being innocence. Now, if he follows the wrong path and incompetent advice, it is obvious that he is wasting his time, energy and efforts in vain. This is where Gyan plays a crucial role—it would show him the correct path, the correct way to follow this path, advise him to avoid the pitfalls, the symptoms of progress and success. This is where proper guidance of the scriptures and their correct and judicious interpretation comes in handy. Since there may be a number of trains to the designated destination and one must choose the most suitable one, this is like selecting the most apt path to reach one's spiritual goal.

Further, knowledge of one's destination enables one to recognise it when it is reached. So the knowledge of what or who is Brahm is as important as being aware of its existence. But there are degrees of knowledge—one of the best standards of knowledge would enlighten the spiritual aspirant that that Brahm whom he has embarked upon to attain is not somewhere in far distant corner of the universe which is beyond his reach, resulting in him feeling frustrated, dismayed and disheartened at its inaccessibility. For true and high standard of Gyan would tell him that Brahm resides in his own inner self as his pure conscious Atma residing in his subtle heart. So he has just to turn inwards to see and witness Brahm and experience the latter's divine and holy presence.

Thus, Yoga has brought about a meeting place for the ignorant Jiva, i.e. the living being, the worldly creature, and Gyan, i.e. the wise intellect and mind that enables the treasure of knowledge to be unfolded before the creature to remove his darkness of ignorance and its attendant delusions that had been miring him for so long. Yoga helps to forge a relationship between them, leading the creature by the hand on his spiritual journey of discovery.

'You know that you know nothing. Find out that knowledge. This is Mukti (liberation and deliverance from ignorance)'—Ramanna Maharishi.

'I am better off than he (a man reputed for wisdom) is, for he knows nothing, and thinks that he knows. I neither know nor think that I know—the truth is, O men of Athens, that God only is wise'—Plato.

'The Yogi (ascetic) whose intellect is perfect contemplates all things abiding in himself and thus, by the eyes of knowledge, he perceives that everything is Atma'—Adi Shankaracharya.

'He who knows and knows he knows, he is a wise man—seek him. He who knows and knows not that he knows, is asleep—wake him. He who know not and knows that he knows not, he is like a child—teach him. He who knows not and knows not that he knows not—he is stupid and ignorant, shun him'.

'There are things which are 'known knowns', i.e. we know about them; we know we know about them. Then there are things that are 'known unknowns', i.e. we do not know anything about them; there are some things we do not know about. Then there are 'unknown unknowns', i.e. things which are very uncertain and about which we do not know anything; we are ignorant even about their existence'.

Refer also Yogtattva Upanishad, verse no. 16-18 of Chapter 17.

²The *Kaivalya Param Pada* is the ultimate destination for a spiritual aspirant and a seeker of emancipation and salvation. The phrase consists of three words, viz. 'Kaivalya' meaning the only one of its kind, 'Param' meaning the supreme and transcendental, and 'Pada' meaning stature, designation, destination and state of existence. It is the culmination of all spiritual exercises such as Yoga and acquisition of knowledge called Gyan. It is 'self-realisation' or enlightenment about the true nature of the pure conscious Atma, and 'Brahm-realisation' or the eclectic truth about the supreme transcendental Brahm which is the eternal cosmic Consciousness from which the entire creation or existence has come into being. Besides having this Gyan (knowledge), the aspirant must also practice Yoga as an essential tool to bring about unification between the Atma and Brahm which alone would give him true

emancipation and salvation because then he would not have to take a birth again. This is the combined purpose of Gyan and Yoga.]

16. The pure conscious Atma which is the truthful identity of the Jiva (the living being, the creature) is primarily ethereal, pure, untainted and uncorrupt in nature (as opposed to the physical body in which this Atma resides, for the body is impure and corrupt). But this same Atma, under delusions caused by ignorance of its truthful identity and immaculate nature, begins to call itself a Jiva, i.e. a living being or creature which has an external physical gross body that is inherently subjected to numerous faults that are associated with this mortal and material world which is illusionary but appears to be very real.

Consequently, the Atma begins to identify itself as a 'Jiva' that is surrounded by all the faults inherent and natural to this physical gross world marked by imperfections and taints. In other words, being in the wrong company and having a wrong identity, the Atma is now called a 'Jiva' surrounded by such faults as Kaam (worldly passions, lust and yearnings), Krodh (anger, indignation), Bhaye (fears of all sorts) etc. (16).

[Note—Refer verse nos. 5-6 of this Canto 1. Refer also to Yogtattva Upanishad, verse no. 12-13; Dhyani Bindu Upanishad, verse no. 93/1-93/15.]

17. Since everything in existence is a manifestation of the same universal Atma which is revealed as the true 'self' of the Jiva, the living being, at the micro level, and as the ubiquitous all-pervading cosmic Soul, called the Parmatma, at the macro level, it follows that Gyan (all forms of knowledge, erudition and wisdom) is also a manifestation of the Atma¹. This Gyan is therefore wholesome and all-encompassing like its parent body the Atma.

Similarly and for the same reason, even negative traits such as Kaam (worldly passion, lust and desires) and Krodh (anger, indignation, spitefulness and wrath) are also a part of the same 'self' as nothing exists that is not the 'self' in the form of the Atma² (17).

[Note—¹This is because verse no. 14 has already established that Gyan and Brahm are synonymous with each other. And it is a universally established principle of the Upanishads that Atma and Brahm are the same, they are 'non-dual'.

²This is because the entire creation is a manifestation of the supreme transcendental Brahm whose micro level form is the Atma of the individual who is one unit of the complex structure of the mosaic that forms this vast existence. Since everything in existence must live within the boundary of existence as nothing exists outside of it, it follows that the good and the bad both must exist side by side in this creation as manifestations of the Sata and Tama Gunas respectively. Again since everything in existence is a manifestation of Brahm, it follows that the good and the bad are also included in this wide definition. Therefore, the negative traits mentioned in this verse and in earlier verse no. 10-11 must co-exist with the positive traits as manifestations of Brahm.]

18. Wholesome Gyan (wisdom and enlightenment) is that stage when one rises above narrow-minded considerations regarding what is acceptable and what is not. In this stage, he becomes full of equanimity and grace, treating everything alike and with the same degree of tolerance and broad-heartedness. That is, as long as the distinction of one thing being good and the other being bad is there, or till the time the person thinks that this thing is mine and that is yours, or the very notion of 'this and that' and 'me or mine and you or yours' is there, true enlightenment has not been achieved. When all

artificial distinctions and differences are erased, when complete equanimity and uniformity of vision is attained, when the eclectic state of non-duality is obtained, when a high degree of neutrality, non-involvement, non-partisan attitude and detachment become a norm rather than an exception, it is then said that one has obtained 'true Gyan', he has reached its pinnacle, he has understood the real purpose and intent of pursuing Gyan. This happens because true Gyan teaches one to be wise enough to be able to peer behind the exteriors and look at the reality behind it as the external façade might be misleading. The external world which is said to 'living' essentially consists of 'non-living' ingredients. For instance, the body of the creature consists of bones, flesh, blood, mucous, urine, stool, veins and capillaries, skin etc.—none of which have inherent factor of life in them. So surely there must be some factor that infuses 'life and consciousness' in such inane and lifeless entities. This vital factor is known as the Atma which is uniform and universal. It is the same Atma which injects life in one body as it does in the other body and the next. The bodies may vary but the Atma is ubiquitously the same. A person who understands this basic concept of existence is said to have acquired spiritual knowledge called Gyan.

Such a wise, erudite and highly enlightened man is eternally freed from all the fetters that shackle a creature to this artificial world of delusions and ignorance; he is deemed to have obtained Mukti or liberation and deliverance from all its traps (18).

19. Oh the one emerging from the divine Lotus (i.e. Brahma)! This state of eclectic realisation (when all distinctions and sense of duality are removed or erased) is true enlightenment (Gyan), and it marks the state when the Jiva (creature) has understood his universal, true and wholesome 'self'.

This is the ultimate truth about the 'true' nature of the creature. When he attains this exalted state of enlightenment, all his imperfections and worldly faults are got rid of, and he is deemed to be fulfilled and complete (19).

20. The 'Kali'¹ is very unsteady, ever changing and fickle. When the creature comes in contact with it and begins to interact with it, it is bound to be influenced by the latter. Hence, the creature becomes veiled in all the doubts and confusions that are so characteristic of Kali inspite of the fact that the primary nature of the creature is to be free from all such negative traits as he is a personification of Brahm² who is 'Nishkal', i.e. is without any taints, faults, shortcomings and imperfections, who is 'Nirmal', i.e. is pure, uncorrupt and immaculate, and who is like the 'Gagan'³, i.e. is like the sky element in its virtues of non-attachment and non-involvement inspite of being pregnant with so many impurities¹, its vastness, eternity and infinity (20).

[Note—¹The word *Kali* literally means some entity that is dark and foreboding, something that is tainted and tarnished, a character or quality that is marked by negativity such as delusions and ignorance that are the hallmarks of this artificial material world. In the present context, the word refers to the existing world called the Kali Yug which is the fourth era of the 4-era Hindu celestial cycle of birth and death. This era called Kali Yug is dominated by negative qualities called Tama Guna—which is a metaphor for darkness and ignorance causing delusions and creating phantoms. It causes spiritual degradation and general denigration of the creature. Since the living being called the 'Jiva' has to live in this environment, it is influenced by its inherent traits as enumerated in this verse.

²The virtues of Nishkal, Nirmal etc. have been described above in verse no. 5 of this Canto 1.

³The sky is full of so many things such as planets, stars, sun and the moon, asteroids and cosmic debris as well as with dust, gases and a horde of other forms of

impurities. But the sky always remains non-attached with them. It is proved by the fact that we see a cloud sky one moment, and a few hours later the sky becomes absolutely clear.

The sky or space is the subtlest of the five elements—viz. earth, water, fire, wind/air, space/sky. It pervades everywhere but is uncorrupt, unpolluted and faultless in all respects. The blemishes, faults, vices, evils, sins, corruptions, misdemeanors and all sorts of digressions present in the world are like suspended dust particles, smoke, moisture, clouds, the numerous other things such as the various birds and the celestial bodies high up in the sky which create an illusion of a sky that is spotted or dotted or polluted or coloured or overcast with these uncountable objects that are extraneous to the sky, that are not integral to it but nevertheless appear to be a part of the sky. The sky has nothing to do with them; it remains absolutely unconcerned with and untainted by them, for once they are removed from the scene the sky is uniform and spotless from one end of the horizon to the other. This example is very practical and can be observed by anyone. That is why 'sky' is used as a metaphor to describe anything that remains free from the influences of those things that appear to be an integral part of it but are in actual fact not related with it by even any remote chance.

The sky has the opposite types of characteristics present in it. For example, the space of the vast cosmos has no form but the space inside a bottle or a pot takes the shape of the bottle or the pot respectively. Similarly, the vast sky in its basic and truthful form is spotless and without any colours, but it appears to be spotted with so many stars and specs of clouds and smoke of different colours as well as with birds of different forms, colours and shapes flying here and there. The colour of the sky during the evening or morning hours present a canvas of so many colours which appear to be real, but they are obviously a reflection of the colours of the light of the sun as reflected from the various impurities present in the otherwise spotless sky.

This is what is meant here—though the Atma or Brahm are inherently and basically pristine pure and clean, but when they come in contact with this world, the different flaws and faults of the latter cast their shadow and make them appear to have some or the other kind of spots in them.

The sky has such grand and majestic attributes as being vast, measureless, uniform, immutable, spotless, clean, colourless, calm, all-pervading, all-encompassing etc. The sky is the measurement of Brahm in the sense that if it was ever possible to measure the length, breadth and depth of the sky, it would then have been possible to measure Brahm. But that is not at all the case. The calmness of the higher reaches of the sky is experienced by Para gliders and can even be witnessed on top of mountains which are high above the ground and located somewhere in the space around the earth, symbolised by the sky, where there is an eerie silence. The sky has no colours of its own; whatever colours that we see are actually the scattered sunlight.

Everything that exists does so in any one of these spaces. Every nook and corner where there is no solid or liquid is filled with space or 'Akash', which is a synonym of sky. It is omnipresent, all-pervading and all-encompassing. That is, these three forms of the skies, viz. the outer, the inner and that which is present inside the heart, are all the same; there is no distinction or demarcation or boundary or fundamental difference between any two skies. The apparent boundary or limitation imposed on the sky by the physical body or the membrane of the heart is only deceptive in nature. Once a person dies, for example, his body perishes, and the space present inside the heart merges indistinguishably with the space present inside the body when the body is cremated or decays when buried, and they together merge with the vast space present outside the body.

The 'sky', which was originally conceived as something that was 'void' or 'nothing', gets filled with 'air', simply because void can't exist, and the creation which came into being in this void needed some base for its origin and coming into

being. The molecules or atoms of air are in a state of continuous agitation and flux; they collide with each other, they form a chain of molecules which give rise to different layers or strata of air which extend from the surface of this earth to the stratosphere. This continuous turmoil produces 'sound'. Various physical and chemical processes come into play, producing gases of varying density and characteristic features. Air has particles of dust and different gases, which produce the perception of touch. Friction of the various molecules present in the air produces static electricity which is observed as a scintillating display of atmospheric discharge of electrically charged particles in the sky often observed at the poles. This sparkle of static electric discharge is synonymous with 'fire'. Perhaps the Upanishadic sage got this brilliant idea when he observed a meteor shower during the night. The two elementary gases hydrogen and oxygen combine to form the molecule H_2O commonly known as 'water'. With all these essential ingredients in place, the solidifying and cooling down process of nature starts its effect and produces soil and rocks which are symbolised by the 'earth' element. Then gravity and magnetic forces come into play, giving density, gravity and grossness, indicative of the grossness or heaviness of not only the earth but also of the air around it. Previously, before gravity and other forces of nature came into play, this air was subtle and very light; it spread universally and uniformly to all the corners of the cosmos. But with the gradual formation of different celestial bodies from the primordial cosmic gases, each having its own gravity and other natural physical and chemical forces, the air was pulled or sucked in, leaving the rest of the space beyond the reach of these celestial bodies into a big void.

The sky is pregnant with a wide variety of impurities. It is full of celestial bodies besides cosmic debris. It has the burning furnace of the sun as well as the cool pitcher of nectar symbolised by the moon. The black clouds of a storm with its stabs of ferocious lightening coexist with white fluffy clouds floating lazily across the calm sky. There are birds of prey and there are harmless kites flying in it. There is the polluted haze of the city as is the pristine clear atmosphere of a village and the mountain. There is the brightness of the day and the foreboding darkness of the night. But the wonder is that none of these really affect the sky at all—it remains clear and untainted in its basic nature and form. All these things cited here are extraneous to the fundamental nature and characteristic of the sky. The sky treats all of them with the same magnanimity and kindness. Similarly, a wise man treats all the creatures with whom he has to interact in this world with the same equanimity and fortitude as the sky.]

21. When the supreme transcendental Consciousness abandons its state of being all-knowing and omniscient, it gets trapped in the web of ignorance and delusions. As a consequence, it forgets its eternal, imperishable and infinite nature and thinks in terms of having a birth or origin, having an existence, and then coming to an end. It oscillates between these states of existence and never finds peace; it swirls, wobbles, tumbles and tosses about in the ocean represented by this cycle.

But why has it come to this sorry state of affairs? [This is because the consciousness or the pure 'self' of the creature thinks that it has a body and lives in the world, that the world is its home, that it does the various deeds and therefore must either enjoy their rewards or suffer from their consequences, and being identified with the body necessarily means that it would be subjected to all the incumbent problems that are so typical with the body. In short, it loses its pristine pure, neutral, eclectic and divine form and instead gets mired in all the shortcomings, flaws, imperfections or faults associated with and characteristic of the world.] (21).

22. Oh Mahabaho (the great, able-armed and exalted Brahma)! Being shorn of Gyan, this consciousness or Atma is subjected to the toss and flip caused by such opposing and contradictory emotions as feeling miserable, sorrowful, tormented and agonized on the one hand, and feeling happy, joyous, elated and ecstatic on the other on the other hand. The Atma gets torn between them. It is engulfed in and mired by uncountable delusions and their accompanying perplexities and confusions. Consequentially it begins to behave like an ordinary mortal creature that is rapacious and lustful about this world of sense objects and yearns for self gratification. This is the way it lives in this world, remaining perpetually restless and agitated in the turmoil created by this delusory world of artificiality and ever-changing illusions (22).

23. Therefore, if a man regards himself learned and wise but remains engrossed and submerged in pursuing this material world, if he has not been able to overcome his worldly desires and lust for its sense objects and their attendant pleasures and comforts, then he is no better off than a person who is openly ignorant and deluded. He is deemed to be a worldly man who is shackled to it rather than a liberated soul free from its fetters (23).

24. If one remains like an ordinary ignorant man who is unaware of the delusory and trapping nature of this artificial material world, the world which is an ocean of problems and unhappiness, then say what is the use of his acquiring Gyan (by studying the scriptures and attending religious discourses for instance)?

Only those who have resolutely inculcated in themselves the glorious and eclectic virtues of detachment, dispassion and renunciation, who are honest, steadfast and diligent in following the righteous, auspicious and noble path called the path of Dharma in their daily lives, and who have been able to control their sense organs in a comprehensive manner—only such people are able to have a firm foothold in the field of Gyan¹ (24).

[Note--¹This is because the charms of the world would not be able to sway a wise and enlightened man from his chosen spiritually exalted path of righteousness, auspiciousness, truthfulness, honesty, selflessness as well as exemplary nobility of thought and conduct. His life would be exemplary, it would be like a beacon for others, and in spite of having to live like an ordinary creature in this world, his true 'self' never allows him to get entangled in the world. A wise man cannot avoid the world for the simple reason that the Atma resides in the physical body during its sojourn in this material world due to its past ignorance of its true nature, but such a man would not repeat his previous mistakes by getting engrossed or entangled in this world of artificiality ever again. Instead, he would treat this body as a God-sent opportunity to strive hard to reach his goal of finding a way out of this quagmire, and find liberation and final deliverance from the endless cycle of birth and death and their attendant miseries. Once he makes this decision, he has crossed one important milestone in reaching the state of enlightenment. The rest follows as a natural progression if he is steady and resolute in his decision. Herein comes the role of self control and renunciation—because it is very hard and difficult to overcome natural urges of the senses which resist being controlled and which have an innate tendency to move towards their objects in this material world. The world is also difficult to rebuff because it pretends to be one's most precious possession, and of course its charms and pleasures are too enticing, convincing, strong and robust to resist.]

25. Oh Vidhe (Brahma, the creator who formed the codes of conduct for his creation, and hence the name 'Vidhe'—the formulator and giver of laws)! The creature cannot find Moksha, i.e. he cannot hope to obtain liberation from this gross physical body in

which the Atma is trapped, without the aid of Yoga (meaning physical exercises, actions and efforts in this direction).

Creatures with physical gross bodies are of two types—‘Paripakwa’ or those who are mature in wisdom and have the proper aptitude and mental preparedness for Yoga, and ‘Aparipakwa’ or those who are immature and do not have the correct aptitude and inclination to follow the tenets of Yoga (25).

26. Those who do not follow the path of Yoga are called ‘Aparipakwa’, while those who have Yoga as their chosen path are called ‘Paripakwa’¹.

The fire of Yoga makes the gross body subtler and lighter; it makes it cleaner and purer by removing its grossness, impurities, imperfections and other faults. The fire of Yoga helps to remove all sorts of problems associated with the body that torment the creature constantly² (26).

[Note—¹The ignorant people do not even know what Yoga is, and they do not bother about it because they do not wish to let their pampered body to suffer a bit. They would rather enjoy the comforts and pleasures of this material world and remain engrossed in seeking gratification for their sense organs. Their ignorance prevents them from even attempting to look beyond the body and its comforts—for them the world and the body is all there is to it in this world. They have no idea that there is something called the pure consciousness or Atma which is trapped in the body and from which entrapment it longs to break free. So who bothers, they think! Such people fall under the category of ‘Aparipakwa’. The concept of the Atma is too abstract for them to comprehend and grasp vis-à-vis the physical world and the gross body both of which are physically tangible and verifiable quickly; the presence of the body and the world can be witnessed first hand in material terms as compared to the presence of the Atma which requires a specially tuned mind-intellect and a high level of wisdom and enlightenment to be acquainted with. Therefore for ordinary persons it becomes a difficult exercise to neglect what is evident in the face of it, viz. the body and the world, and believe in the existence of something that is difficult to ascertain in physical terms.

Compared to them, there are wise and enlightened people who have realised who they actually are, that the main spiritual goal is not the pursuance of the material world and gratifying of the sense organs but to break free from this jail and let the Atma fly off to freedom from its encasement, from its bondage. How does the chick break free from the hardened shell of the egg? This example is before them. The chick has to make a diligent effort to break free from the hardened shell of the egg, for the egg’s shell would not break out of its own free will to allow the chick to walk out to freedom. The same thing happens here—in order to break free from the fetters of the body, the wise ascetic has to make efforts, and the ‘effort’ made is the following of the various codes of conduct, the different exercises and obeying of the pristine philosophy of Yoga. The codes of conduct help them to regulate their body and life, the exercises tone-up their bodies and prepares them physically by harnessing sufficient energy to enable their Atma or soul or pure consciousness to launch itself on to its onwards journey towards eternal liberation, and the philosophy prepares them mentally and intellectually. To obtain final deliverance, all the three legs or steps are necessary, for otherwise there are good chances of falling back or slipping even after the first few steps have been successfully taken to obtain freedom. It is just like the case when the rocket that is to be sent to distance planets must be provided sufficient energy and thrust so as to break free from the gravitational pull of the earth and go onwards on its outward journey; otherwise it would fall back on the earth even before reaching its outer atmosphere.

²This is just like warming cold water or food to kill its bacteria and making them lighter and agreeable for the body. It is observed that as the water is warmed, the

heated part of the water rises to the surface and the colder part sinks to the bottom of the vessel. In the cases of gases, heating makes them lighter and subtler so that they rise up. Extending this analogy to the body of the creature, practice of Yoga generates heat which not only cleans up the body of all trapped toxins by ejecting them out from their age-old niches in the body and eliminating them through the breath, sweat, mucous, urine and stool, but also activates the dormant energy reserves in the body by unclogging the various nerves and veins and other such ducts of the body, thereby making the practitioner of Yoga more healthier and disease free. A healthy body is not only happy and comfortable for the creature but it also allows him to pursue his goal more vigorously and diligently because the mind would not be engaged in various problems associated with a diseased body and would have the time, energy and freedom to pursue its objectives with greater tenacity, vigour, energy and concentration.

Yoga Upanishads detail how Yoga helps the practitioner to easily conquer the various hurdles created by the body, they list the numerous benefits of practicing Yoga, and how liberation and deliverance of the soul is possible through it.]

27. The physical body made up of the gross organs of action and different perceptions is called 'gross and mortal' (because it is subjected to all the grossness, faults, impurities, imperfections and shortcomings associated with the 'earth' and other grosser elements, including their natural propensity for decay and destruction). [In the absence of Yoga, it is this body that torments the creature no end.]

With the body's constant nagging and persistent gnawing, other mediums of obtaining liberation and deliverance such as Dhyān (contemplation and meditation upon the divine and holy deity) and other such means also become impractical. This is obviously because the mind and intellect are too pre-occupied by the various agonies and miseries that exert their push and pull on the gross body and its organs to find sufficient time and energy for more subtle and sublime issues. [For example, when one has a severe headache, it is impossible for him to concentrate on his studies. Or the case when one is hungry and thirsty, then his entire attention is diverted towards eating and drinking and not towards doing meditation or even any other physical activity such as doing household chores or running errands. The basic idea of Yoga is to clean the body internally, to over-haul it in order to optimize its functioning in a proper way without creating unwarranted problems for the creature. When the body is at ease and feels rested and rejuvenated, the mind-intellect would automatically be freed to divert its energy and attention to higher goals of life. Otherwise, the mind-intellect would be so entangled in and overwhelmed by the numerous demands of the body and meeting them that it would be exhausted of its energy and completely worn out.] (27).

28. It so happens sometimes that even if one is able to exercise self control over the organs of perception and action he still continues to suffer from heat and cold and other such external factors that are beyond his control on the one hand, and on the other hand from such emotional factors as sorrows and miseries or joys and happiness which together never allow his mind to rest and find peace, serenity and tranquility.

These are the hindrances which are like the different ailments that afflict both the body and the mind, and they constantly continue to bother the spiritual aspirant or the ascetic (28).

29. The mind and body of a man are constantly being tormented by numerous other factors of this world, such as the various problems created by other creatures, various

implements that are used to threaten and inflict injuries upon him, as well as the problems created by the elements such as fire, water and wind¹ etc. (29).

[Note—¹The ‘fire’ has to be constantly guarded against, for a little carelessness would be devastating. Similarly, ‘water’, though an essential element of life, causes floods on the one hand and its lack causes draughts on the other hand, keeping a man constantly worried about it and on his toes. ‘Wind’ in the form of severe storms uproots huts, trees etc., damage crops and cause widespread havoc; on the high seas it can upturn boats and affect maritime trade and commerce. In short, the man is kept on his tenterhooks because of these factors which are boons for his existence on the one hand, and his tormentors on the other.]

30. Finally, due to some reason, the time comes for a man to die. At this time also he is not left in peace, because death is associated with horrors unimaginable for him—his Pran (i.e. his life forces represented by the vital winds or airs) become agitated and restless, making the dying man extremely restless, agitated, anguished and tormented. His agonies and sufferings of life are compounded, and he begins to worry more and more as death approaches. [He recounts his past life of enjoyments and pleasures, he worries about his unfinished tasks and his family and assets, he thinks about the bleak and dark future and the yawning mouth of death staring on his face. How can anyone in this situation hope to find rest and peace? The prospects of death and its attendant horrors are too overwhelming for any man. They send shivers down his spine and leave him cold and dry so much so that if given a chance he would bargain anything or everything he has just to avoid death. Herein lie the beauty of the philosophy of life as expounded by the Upanishads which stress that the body that is suffering and is about to die is not the ‘true self’ of the man; this ‘self’ is the pure consciousness called the Atma which is eternal and imperishable, and hence beyond the reach of death. Therefore, ‘death’ occurs to the gross body and not to the Atma.] (30).

31. At the time of death, whatever the creature thinks and has in his mind, he takes a new birth accordingly. The memories and thoughts of the last moment of the present life are the base and cause for the new and next birth (31).

[Note—The eternal question ‘how does the Atma get entangled into the cycle of birth and death’ has been answered in Shwetashwatar Upanishad, 5/10-12 of Krishna Yajur Veda.]

32. What would happen after death, which new life would one get, where would he be born¹—no one can know it for certain. Then it appears that pursuing Gyan (making efforts to acquire knowledge and becoming enlightened) and Vairagya (renunciation and detachment from all worldly things and attachment with them) is a fruitless exercise; all efforts made in this direction is a waste of time and energy² (32).

[Note—¹These questions have been answered in a number of Upanishads—e.g. Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/36, 4/4/1, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Chandogya Upanishad, Canto 5, Section 3-10; Kaushitaki Brahmin Upanishad, Canto 1; Taittiriyo-panishad, Valli 2, Anuvak 6; Kathopanishad, Canto 1, Valli 1, verse no. 20; Canto 1, Valli 2, verse no. 1-6; Canto 2, Valli 2, verse no. 6-8; Canto 2, Valli 3, verse no. 4-17; Subalo-panishad, Canto 11. What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1. The *three great Truths* to be remembered at the time of *death* have enunciated in Chandogya Upanishad, 3/17/6. They are—(1) You are eternal and imperishable; (2) You cannot be demoted, degenerate, become fallen and digressed; and (3) You are basically most sublime, subtle, atomic and a microcosmic image of the vast and macrocosmic supreme Brahm. The metaphor of the *tree* has been brilliantly

employed to explain 'what happens after' death in Brihad Aranyak 3/9/28, and in Chandogya 6/11/1-3.

²Such questions are asked by skeptics and doubting Thomases who do not bother to think long term; they do not take the effort to peer behind the curtain to find the truth concealed behind it. They call themselves rationalists, secular and modern in outlook. They are ignorant of subtle things of existence which defy physical laws of material science and are beyond definitions based on them. This is because the mind-intellect of such people is dominated by the deluding effects of the gross material world and its physical dimension so much so that it cannot be tuned to hear the call of the transcendental and sublime. Their 'radio set' would just not catch these frequencies!]

33. If an ant bites anyone, he becomes extremely agitated and his concentration on the work he was engaged in is affected. Then say how he can remain calm, poised, unruffled and undeterred when a scorpion bites him, for the torments of death are no less horrendous and painful than a scorpion bite (33).

34. Thus, that entity which is enigmatic, mystical and esoteric as well as transcendental in nature, which is beyond the grasp of comprehension and senses (such as the Atma is), cannot be understood by those people who are skeptical, argumentative and pre-maturely judgmental in their attitude. It cannot be grasped by those who try to understand it by physical laws and application of worldly logic. Such people rely more on the strength of their intelligence and rational mind to understand things and unravel esoteric secrets. But they forget that everything cannot be physically verified and understood; there are certain things which need a different set of mental qualities other than mere application of logic and intelligence to be understood; there are certain sublime and subtle aspects of this creation which are too complicated, too transcendental to be within the reach of the intelligent mind. There are certain things that can only be experienced and witnessed, and cannot be explained by logic and material proofs.

The way to this eclectic spiritual knowledge is different. The first step in this direction is the trouncing of 'Ahankar' (the sense of ego, pride and haughtiness about one's intellectual and physical prowess and strength; the pride that one has about his body and his intellect). That is, one must overcome the sense of pride in one's intellectual ability and mental prowess to know and ascertain something that is basically extremely mystical, esoteric, sublime, subtle and transcendental, something that is beyond the purview of worldly logic, arguments, proofs, rationality, debates and other laws of material science that are applicable to all material things of this physical world. There are certain things that cannot be determined by even the mind and intellect which are themselves subtle as compared to the body and its other organs which are gross in nature. When an ordinary man is not even able to see his own mind no matter how hard he tries, how can he expect to see something that is even subtler than the mind and extremely sublime? But does the fact that he is not able to see the mind mean that the latter does not exist—the answer is obviously 'no'. Therefore, the supreme transcendental Brahm whom he is not able to perceive, the Brahm that is beyond his conception and imagination, does indeed also exist inspite of his not being able to fathom and understand the latter (34).

35. The concept of Ahankar (i.e. ego, pride, vanity, exaggerated sense of self-importance) is very closely related to the gross body of the creature. So it is very essential to overcome Ahankar if one is to really make any tangible progress in one's

spiritual journey because it acts more like a cumbersome millstone around one's neck, not only hindering his spiritual progress but actually dragging him down in the opposite direction. When Ahankar is destroyed, the gross body is also deemed to have lost its importance. When Ahankar is eliminated, the dependence upon the powers and abilities of the body is also eliminated, thereby removing the importance of the body from the scene altogether. When the body is removed from interfering in one's spiritual pursuit, then all the ailments and problems associated with the body (and outlined in verse nos. 27-33) are also done away with¹.

The pure conscious Atma, which is the true identity of the man (or for that matter of all living beings) and which is the one implied when we talk about him, is not at all affected by any of the ailments that afflict the body².

When the body is removed from the scene for all practical purposes, then how can weapons, fire, water and wind ever hope to interfere in one's spiritual progress and disturb one's internal peace and calmness of demeanours? They simply cannot! (35).

[Note—¹A man is very proud of his body and its abilities. He thinks that his body can and has achieved great things and successes in life; the body can do astoundingly difficult tasks and achieve stupendous success. He is proud of his body both at the gross level as well as the subtle level. At the gross level he is proud of the body's physical strength, stamina, powers, virility and beauty, and at the subtle level he is proud of the magnificent and most majestic powers of the mind and the intellect. He believes that he is superior to other creatures of this creation because of this body and its mighty powers. His sense of over-confidence on the abilities of the body extend to the realm of spiritualism because he believes he can rival the supreme Lord of creation know as Brahm and lord over the world because the scriptures themselves say that he is a manifestation of Brahm. He believes that he can successfully do intense Yoga (meditation) involving rigid and difficult exercises by employing this body, thereby acquiring immense mystical powers that would invest him with the same authority and powers that are possessed by the Supreme Being. He believes that his true 'self' and identity is the body instead of the pure consciousness called the Atma or the inner self, and therefore feels proud in the achievements of the body. He believes that he can use the body and its faculties to reach the pinnacle of spiritual success and find emancipation and salvation from the torments and horrors of this world. In short, he has Ahankar in relation to the body. The question why the body cannot actually help him in his spiritual pursuit has already been answered in verse nos. 27-34 of the present Canto 1 above. This body is itself perishable and gross to the highest degree, so it cannot be instrumental in lifting one to a high pedestal of spiritualism; it is rather like a cumbersome millstone around one's neck, dragging him down and pulling him back instead of aiding his upliftment. So it is deduced that it is very essential to overcome Ahankar pertaining to the body if one is to really make any tangible progress in one's spiritual journey.

²In the previous case when Ahankar was not removed, the Atma had relied on the body and the mind to achieve its objective of finding liberation and deliverance by the path of Yoga and Gyan. But it had forgotten in the process that both these paths rely heavily on the prop of the body and the mind. The body and the mind themselves are a problem, so how can one entity that is a problem itself can remove other problems? So it becomes necessary to remove this primary hurdle that is the basic stumbling block for spiritual emancipation and salvation of the creature. How is it to be done? The answer is provided in this verse—remove Ahankar. With the removal of Ahankar, the reliance on the body and mind ceases, and then the Atma, the true identity of the creature, the true 'self', realises its astounding potentials.

Here it is relevant to note that when Brahm decided to create this world, i.e. when he voluntarily allowed himself to get trapped in the web represented by this vast

creation, the first element that came into being was 'Ahankar'. It is then from this seed that the rest of the Gunas, Vasanas and Virittis emerged which would together mould the future creation and give each unit of it its unique character traits. The Gunas are the different character traits and virtues that are inherent to all living creatures, while the Vasanas and Virittis are the different passions, desires, temperaments, habits and tendencies natural to them.

Had there been no Ahankar, the chain reaction would not have started in the first place. This fact proves that all the problems faced by the Atma have their genesis in Ahankar. Refer verse no. 8 of the present Upanishad as well as to verse no. 10-11 of Yogtattva Upanishad which is Chapter 17 of this volume.]

36. Sometimes it happens that the subdued Ahankar begins to rear its head once again, it begins to stage a come back with a vengeance. In such cases all the benefits derived by Yoga and other spiritual pursuits are lost. All the previous horrors of the world and the body re-emerge. [Hence, one should be on the guard against resurgence of Ahankar.] (36).

37. There cannot be any event without a cause. Without Ahankar, there cannot be any agonies and miseries associated with the body (in the field of spiritualism). [It is a sense of pride and ego in one's ability that one feels dismayed and distressed by failures. It is due to these negative traits that one does not acknowledge one's limitations and shortcomings. Unless one realises that he has certain shortcomings, imperfections and faults, he would not make an attempt to remove them. If one thinks that he has studied all the scriptures and knows all that is to be known, then he is proud of his knowledge and intellectual prowess; he is so stupid that he forgets that mere letters of the scriptures would not give him spiritual liberation for he would be more concerned with showing off his intellectual abilities and acumen and getting recognised for them that he would never like to retire to seclusion and turn inwards to seek that 'truth' of which he has learnt from the scriptures and has gone to town boasting about, but had lost the real gem (i.e. the 'truth') in the process of being proud and haughty of his knowledge. He would like to be surrounded by knowledge seekers, by a crowd of disciples instead of spending quality time at being peace with his own self. This could also happen later on when, as a reward of Yoga, he acquires certain mystical powers called the various Siddhis. Then he would become proud of his newly acquired divine powers and swept off his feet by the praise and adulation accompanying these Siddhis. This pitfall has been expressly mentioned in Yogtattva Upanishad in its verse nos. 51, 56. 60-62, 73-79. In short, a man with the dominant factor of Ahankar in him is proud of the achievements and successes that he has acquired with the help of his body, and since he is under the delusion that the body is his true identity, he wishes to show them off. The world is swept off its feet by people who possess some sort of super-human powers, and therefore the Siddhis or mystical powers displayed by an ascetic result in his gaining instant fame and name. The accompanying adulation and honours literally 'go into his head'; he becomes so intoxicated that he loses his bearings. He falls from the high moral ground and the exalted stature that he has gained so painstakingly with great labour, and instead lands in the marsh of this world from where he had planned to extricate himself when he had decided to do Yoga in the beginning. Ahankar becomes his greatest enemy, undercutting all his spiritual progress and proving to be his nemesis.] (37).

38. The physical body is the medium by which one can subdue and conquer all others in this world; it is the body by which one conquers vast lands and forces other

creatures into submission. But the wise ascetic is one who practices Yoga and utilizes its stupendous powers to subdue and conquer this body itself. [By conquering the body, he proves that he is more powerful than the body because only one who is superior to the other can he subdue the latter. By doing so, he literally declares himself the 'emperor' of the world, for obviously now he can order the body—which has been subjugating all other subordinate creatures in the evolutionary ladder of this creation till now and lording over them—to do what he wants, to obey his commands. The body is difficult to control, and should the ascetic be able to control it he would have virtually conquered the world because it is the body that ties him down to this world and its material charms.]

Once subjugated and brought under control by the ascetic, the body becomes his subordinate and subservient to him. Thereafter, the body can no longer trouble him; it would be easy for him to free himself from the constant nagging by the body because now he has become the master and lord of the body (38).

39. Those who practice Yoga are able to conquer or subdue all their sense organs (i.e. they are able to exert self control over them). Resultantly, they are also able to conquer and subdue Mana (mind) and Buddhi (intellect), as well as the different negative character traits as Kaam (various worldly desires and passions), Krodh (anger, indignation, wrathfulness, spitefulness etc.)

By this symbolic conquest, he becomes an undisputed leader of all; he becomes an invincible power. He cannot be shackled by any force then (39).

40. By the virtue of his progressive powers and authority, a Yogi (an ascetic who practices Yoga) is able to subdue and put under tight leash all the five primary elements and other secondary elements¹ in creation. [Since the entire creation has been formed out of these five primary elements along with the secondary elements, by symbolically exerting his authority over them he establishes control over the entire animate as well as the inanimate creation.]

This gross body is physically like a cage constructed out of seven ingredients called the Dhaatus which form the structure of the physical gross body of the creature². Since it is also a part of this creation, it naturally follows that when an ascetic had conquered the rest of the creation he would automatically have subdued this body and its organs. Not only this, the fire of Yoga would burn this body for him so that this cage is eliminated and his soul can fly off to freedom³ (40).

[Note—¹The five primary elements are sky, air, fire, water and earth. The various secondary elements have been listed in Sharrirako-panishad, verse nos. 16-20. This Upanishad is Chapter 20 of this volume.

²The gross body can be studied at two levels—the gross level consisting of its structural features called the *Dhaatus* which can be compared to molecular structure of any substance, and the subtle level consisting of the basic elements of Nature that constitute the fundamental units at the atomic level, called the Bhuts.

The Dhaatus are said to be seven in number. These stand for the structural constituent of the body which supports and sustains its existence. According to ancient Indian system of medicine, they are the following—(1) Rasa (lymph and mucous; sap), (2) Rakta (blood), (3) Maansa (flesh), (4) Meda (fat and muscles), (5) Ashthi (bones and cartilage), (6) Meja (marrow), and (7) Shukra (semen).

According to other interpretations, these seven Dhaatus which form the structural features of the gross body and give it its shape and support it are the following—(1) all forms of fluid ingredients such as blood, urine, mucous, lymph etc, (2) bone and

cartilage, (3) marrow, (4) flesh, fat and muscles, (5) abdominal organs such as stomach etc, (6) skin, and (7) Naadis (arteries, veins, capillaries and nerves).

This level resembles the molecular structure of any chemical substance or any thing in this world for that matter that is made up of certain basic elements. The molecules are also not visible to the naked eye just like the ingredients of the body mentioned above except some of them such as the skin and mucous.

At the next level comes the atomic structure, or the subtle level of constitution of the body. It is like the atoms of any chemical molecule that make up the basic building blocks or units of that molecule. For example, Benzene has a hexagonal structure which would be like the gross structure of the creature's body called the Dhaatu, while the Carbon and Hydrogen atoms (C_6H_6) that go in to form the basic and fundamental ingredients of Benzene are like its subtle structure called the Bhut.

Thus, the five elements that constitute the body of the creature are the five elements that came into being at the time of creation. They are sky, air or wind, fire or energy, water or fluid, and earth. The Shaarirako-panishad of Krishna Yajur Veda, in its verse no. 1-2 and 5-6 describe in detail how these five elements developed into the complex structure of the body.

Refer also to verse no. 56, 68 and 147 below of this Canto 1.

³It must be noted here that Yoga involves rigid exercises directed to ignite internal energy hitherto lying dormant in the body of the practitioner. When this energy is ignited, it is like firing the firewood stored in a wooden box or cage—how can this box survive the fire raging inside it? It's obvious that the wooden box or cage would be reduced to ashes by this internal fire. This is exactly what happens by practicing Yoga. In practical terms, when one fasts and observes other austerities, forsakes pampering the body and subjects it to rigours it is not accustomed to, it naturally withers and become thin and lean. Worldly people would call such a man emaciated and suffering from lack of nutrition, but there unaware of the stupendous mystical powers that such a man possesses. From the practical point of view also, a thin and well toned body creates the least problems by the way of various diseases such as upset tummy, joint pains, malfunctioning internal organs etc.]

41. A Yogi becomes astoundingly powerful and mystically empowered. Even the exalted Gods are not able to fathom his spiritual powers and prowess. He possesses numerous mystical qualities and spiritual virtues, knows the secret of what constitutes happiness and what is sorrow in the real sense, and is liberated from the endless cycle consisting of birth and death along with its incumbent problems. Consequentially, he becomes synonymous with and one like the divine entity (known as Brahm) that is eternal, imperishable, eclectic, supreme and transcendental, and which also possesses uncountable number of mystical and esoteric powers as the ones possessed by the said ascetic. [That is, an ascetic who sincerely, painstakingly and diligently practices Yoga and observes its strict tenets becomes spiritually exalted and acquires such astounding mystical powers that he becomes no less powerful than the supreme Brahm himself. None of the numerous Gods can match him and his authority and powers. This is because these individual Gods represent one or the other aspect of Brahm's divine attributes, but the concerned ascetic becomes a personification of all the divine attributes of Brahm in their entirety.](41).

[Note—Refer Yogtattva Upanishad, verse no. 51, 53-54, 59-60, 73-75, 87, 91, 94, 97, 102, 105-130.]

42. The body of a practicing ascetic becomes as pure, untainted, cleansed, holy and unattached with any thing in this world like the sky. In fact, it becomes purer, cleaner, holier and more detached than the sky itself¹.

He acquires such mystical and divine powers that he might become the grossest and heaviest thing in existence in the first moment, and then as easily turn into the subtlest and most sublime one in existence in the next moment. In fact, even while having a gross body like ordinary creatures and acting most oddly and unconventionally at times, he still remains very subtle and sublime internally in the form of his 'true ethereal self'² (42).

[Note—¹Refer Yogtattva Upanishad, verse nos. 98-102. The sky has a unique quality—it harbours the entire creation in its bosom as nothing that exists lies outside the outer periphery of the sky, but still it remains completely detached from each and every thing present inside it. The sky remains unaffected, uninfluenced, unattached with and untainted by anything that it harbours or shelters. Whatever visual attributes that one sees in the sky, such as its blue or azure haze, the changing colours at different times of the day, are only optical illusions created by various factors of Nature. Even the clouds or the sun in the day time and the stars and the moon in the night do not effect the neutral nature of the sky because while the sun is there the sky appears to be bright and sunny, and when the moon rises the same sky assumes the colour of the moonlight with no indication that it was so bright earlier. The overcast sky with dark clouds becomes crystal clear when the clouds go away, and the darkness of the night sky dotted with umpteen numbers of stars can give no indication that it would be brightly lit during the day with no trace of any single star. The plumes of pungent smoke being belched into the sky by factories and fires do not effect the bland and neutral form of the sky, for the sky absorbs them all with great equanimity and fortitude without being affected by them at all.

Everything in existence needs the sky to develop and grow. The fire needs space representing the sky to burn, the air needs it to flow, the earth needs it to remain in its place and move around the sun which in turn regulates the seasons and other environmental factors, the plants need it for their growth and development as is proved by the fact that they become stunted and die in the want of space to grow and spread their branches, the creature needs it to breathe, stand and grow, and so on and so forth. The air can be sucked out from an enclosed space to create a vacuum, but the 'sky' would still be there. The world would die and go into oblivion along with all its components, including the other four elements (earth, fire, water and air) at the time of conclusion of creation, but the sky would still be there; in fact it is in the vast bottomless pit of the sky that the creation would vanish then. And when the time comes for the emergence of the new creation, it would do so in the bowl of the sky. Nothing exists beyond the sky.

From the metaphysical angle, Brahm and sky are often regarded as being analogous because they exhibit almost identical properties and attributes—such as being fathomless, vast, eternal, imperishable, infinite, all-pervading, all-encompassing, incorruptible and untainted etc.

The sky or space is the subtlest of the five elements—viz. earth, water, fire, wind/air, space/sky. It pervades everywhere but is uncorrupt, unpolluted and faultless in all respects. The blemishes, faults, vices, evils, sins, corruptions, misdemeanors and all sorts of digressions present in the world are like suspended dust particles, smoke, moisture, clouds, the numerous other things such as the various birds and the celestial bodies high up in the sky which create an illusion of a sky that is spotted or dotted or polluted or coloured or overcast with these uncountable objects that are extraneous to the sky, that are not integral to it but nevertheless appear to be a part of the sky. The sky has nothing to do with them; it remains absolutely unconcerned with and untainted by them, for once they are removed from the scene the sky is uniform and spotless from one end of the horizon to the other. This example is very practical and can be observed by anyone. That is why 'sky' is used as a metaphor to describe anything that remains free from the influences of those things that appear to be an integral part of it but are in actual fact not related with it by even any remote chance.

The sky has the opposite types of characteristics present in it. For example, the space of the vast cosmos has no form but the space inside a bottle or a pot takes the shape of the bottle or the pot respectively. Similarly, the vast sky in its basic and truthful form is spotless and without any colours, but it appears to be spotted with so many stars and specs of clouds and smoke of different colours as well as with birds of different forms, colours and shapes flying here and there. The colour of the sky during the evening or morning hours present a canvas of so many colours which appear to be real, but they are obviously a reflection of the colours of the light of the sun as reflected from the various impurities present in the otherwise spotless sky.

The sky has such grand and majestic attributes as being vast, measureless, uniform, immutable, spotless, clean, colourless, calm, all-pervading, all-encompassing etc. The sky is the measurement of Brahm in the sense that if it was ever possible to measure the length, breadth and depth of the sky, it would then have been possible to measure Brahm. But that is not at all the case. The calmness of the higher reaches of the sky is experienced by Para gliders and can even be witnessed on top of mountains which are high above the ground and located somewhere in the space around the earth, symbolised by the sky, where there is an eerie silence. The sky has no colours of its own; whatever colours that we see are actually the scattered sunlight.

Everything that exists does so in any one of these spaces. Every nook and corner where there is no solid or liquid is filled with space or 'Akash', which is a synonym of sky. It is omnipresent, all-pervading and all-encompassing. That is, these three forms of the skies, viz. the outer, the inner and that which is present inside the heart, are all the same; there is no distinction or demarcation or boundary or fundamental difference between any two skies. The apparent boundary or limitation imposed on the sky by the physical body or the membrane of the heart is only deceptive in nature. Once a person dies, for example, his body perishes, and the space present inside the heart merges indistinguishably with the space present inside the body when the body is cremated or decays when buried, and they together merge with the vast space present outside the body.

The 'sky', which was originally conceived as something that was 'void' or 'nothing', gets filled with 'air', simply because void can't exist, and the creation which came into being in this void needed some base for its origin and coming into being. The molecules or atoms of air are in a state of continuous agitation and flux; they collide with each other, they form a chain of molecules which give rise to different layers or strata of air which extend from the surface of this earth to the stratosphere. This continuous turmoil produces 'sound'. Various physical and chemical processes come into play, producing gases of varying density and characteristic features. Air has particles of dust and different gases, which produce the perception of touch. Friction of the various molecules present in the air produces static electricity which is observed as a scintillating display of atmospheric discharge of electrically charged particles in the sky often observed at the poles. This sparkle of static electric discharge is synonymous with 'fire'. Perhaps the Upanishadic sage got this brilliant idea when he observed a meteor shower during the night. The two elementary gases hydrogen and oxygen combine to form the molecule H_2O commonly known as 'water'. With all these essential ingredients in place, the solidifying and cooling down process of nature starts its effect and produces soil and rocks which are symbolised by the 'earth' element. Then gravity and magnetic forces come into play, giving density, gravity and grossness, indicative of the grossness or heaviness of not only the earth but also of the air around it. Previously, before gravity and other forces of nature came into play, this air was subtle and very light; it spread universally and uniformly to all the corners of the cosmos. But with the gradual formation of different celestial bodies from the primordial cosmic gases, each having its own gravity and other natural physical and chemical forces, the air was pulled or

sucked in, leaving the rest of the space beyond the reach of these celestial bodies into a big void.

The sky is pregnant with a wide variety of impurities. It is full of celestial bodies besides cosmic debris. It has the burning furnace of the sun as well as the cool pitcher of nectar symbolised by the moon. The black clouds of a storm with its stabs of ferocious lightening coexist with white fluffy clouds floating lazily across the calm sky. There are birds of prey and there are harmless kites flying in it. There is the polluted haze of the city as is the pristine clear atmosphere of a village and the mountain. There is the brightness of the day and the foreboding darkness of the night. But the wonder is that none of these really affect the sky at all—it remains clear and untainted in its basic nature and form. All these things cited here are extraneous to the fundamental nature and characteristic of the sky. The sky treats all of them with the same magnanimity and kindness. Similarly, a wise man treats all the creatures with whom he has to interact in this world with the same equanimity and fortitude as the sky.

²It is often observed that a self-realised man acts most ordinarily and seems to be submerged neck-deep in worldly affairs. He may do things not expected of a sane man. For instance, he may speak incessantly for a long time like a chatterbox, appear to be most affable and malleable in one instant and then suddenly become silent like a reclusive monk, turning stubborn, taciturn and recalcitrant in his behaviour in the other moment. His behaviour is unpredictable because he is not bothered about what the world thinks of him, and also because he is not even aware of what his body does, because all deeds and behaviours are limited to the body and have nothing to do with the soul. His external behaviour does not reflect his internal 'self' in the least. It is only when one identifies oneself with the body that he becomes responsible for the deeds and actions of the body, but this does not apply to the ascetic who has virtually abandoned the body and identifies himself with the pure consciousness or Atma which does nothing and remains merely a neutral observer of what the body does. So the deeds and actions of the body neither affect him nor can they be linked to him.

Refer Yogtattva Upanishad, verse nos. 51, 107-111.]

43. An expert ascetic who has mastered the art of doing Yoga acquires astounding mystical powers that enable him to assume whatever form he desires¹.

He becomes free from all bodily ailments, especially continuous decline of the body and problems associated with old age (and such other physical ailments as well as mental, emotional and other psychological problems). He becomes immortal and not subjected to death as it occurs to other mortal creatures².

As a result, he can freely go anywhere he wishes in the three Lokas (the terrestrial, the nether and the heavenly worlds)³ (43).

[Note—¹Refer Yogtattva Upanishad, verse nos. 51, 73-75, 108-110.

²Refer Yogtattva Upanishad, verse no. 45, 57-60, 87, 90-91, 94, 97, 104, 107-110, 127, 140-141.

³Refer Yogtattva Upanishad, verse no. 73-75, 102, 105, 109-110.]

44. The mystical and enigmatic powers that the ascetic acquires are beyond imagination. He has acquired full control over all his sense organs. He not only is able to assume any form he wishes but also to change it by reverting to his original form or assuming a new form. (44).

[Note—These mystical powers are collectively called 'Siddhis'. They are eight in number, such as (i) 'Anima' 'अणिमा' means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) 'Mahima' 'महिमा' is to have majesty, glory and fame; to be honoured and acknowledged for one's achievements, knowledge and skills; (iii) 'Garima' 'गरिमा' is to have weight, stature, dignity,

decorum, gravity and significance, (iv) 'Laghima' 'लघिमा' is to have simplicity and humility; (v) 'Praapti' 'प्राप्ति' is to be able to attain or obtain anything wished or desired; (vi) 'Paraakram' 'पराक्रम' is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) 'Ishwatwa' 'ईश्वत्वं' is to be able to have lordship or sway over others; and (viii) 'Vashitwa' 'वशित्व' is to be able to control and subdue others.

Refer verse no. 138 and 149 of Canto 1 of this Upanishad which says that all these Siddhis are possible when the ascetic is able to successfully complete the four steps of Yoga—i.e. the Mantra, Hath, Laya and Raaj Yogas. Refer also to Yogtattva Upanishad verse nos. 73-74, 104-111.]

45. Such an expert and acclaimed Yogi (ascetic) does not die in the conventional sense of death for he has already burnt his gross body and its sense of existence in the symbolic fire of Yoga¹. What has already been dead or burnt cannot die again or be burnt again².

So when he wishes to die under traditional meaning of the term 'death', he would do so by doing 'Hath Yoga'³ voluntarily rather than clinging greedily to the body, not wanting to abandon it, and suffering the horrors of death (as described above in verse no. 28-33). That is, he would not like to stick around till the time the body itself decays after it has almost outlived its tenure because of the fact that it is made of decayable matter and has to come to an end one or the other day; it is not eternal and imperishable as the pure conscious Atma. So, rather than wait for the body to start decaying as is its natural wont, the wise ascetic himself abandons it by doing the rigorous exercises of Yoga, called 'Hath Yoga', and voluntarily discards the body like the serpent discards its outer cuticle when it is ripe and old (45).

[Note—¹This 'death or burning' of the body and its organs is of great symbolic value for the ascetic, for now as long as he lives he feels as free as the 'ethereal spirit' can hope to be. This means that he has realised that 'he' is none but the 'eternally free ethereal spirit' called the 'sublime Atma or soul' that was trapped in the gross body from which it has now found liberation and deliverance by the means of Yoga. That is also why he can assume any form he wishes, and go wherever he wants. It is obvious that he wouldn't be able to do so if the body had been there with all its attendant practical restrictions and limitations. Refer Yogtattva Upanishad, verse nos. 81-109.

Conventionally a man dies when his body gets old and decays gradually to a stage when it is no longer able to sustain itself and all its organs fail to function and come to a standstill. This type of death is very painful and tormenting for the Pran or life forces present inside the body. This Pran is sort of torn off forcefully from the flesh and bones of the body much like an animal's hide is skinned or wool sheared from a sheep. The Pran tries its best to cling to the body but it is compelled to leave it, resulting in extreme agony for the creature. Now, who is this 'creature'? Herein lies the secret that an enlightened ascetic is privy to—it is the Atma and not the body; the pure self of the ascetic is his consciousness called the soul or Atma. That is why by burning the body with the fire ignited by Yoga he is not harming the 'self' but only burning the cage of the body in which it is trapped. Refer verse no. 40 above of this Canto 1.

This 'death' is the glorious interpretation of the term death as well as of Yoga; it has a metaphysical implication more than physical aspect of Yoga and death. The latter aspect is explained in the next stanza when it is said that the ascetic finally sheds his physical gross body by the process of 'Hath Yoga' after having symbolically eliminated the body and burning it in the fire of wisdom and enlightenment obtained by becoming acquainted with the profound philosophical and metaphysical teachings of Yoga that has led him to realise his true 'self' and its

astounding divine and mystical potentials. That is, he practices the physical exercises of Yoga, controls his vital functions and collects all the vital winds called the life-giving Pran from all the corners of the body, diverts them up the Sushumna Naadi, the central nerve going up to the top of the head from its base in the Kundalini, the coiled subtle energy center at the base of the spine, to finally reach the head. In the process, the consciousness called the Atma joins this Pran, riding piggy back on it, and ultimately both of them make their exit from the body through the Brahm Randhra, the hair-like slit on the top of the head, to merge with the wind and sky element outside the body and become one with the latter. Meanwhile, the body disintegrates into its constituent parts, such as the earth, water and fire elements which it was formed. The breakdown is completed and final Mukti, i.e. liberation and deliverance is obtained. This is called Kaivalya form of Mukti.

Refer Yogtattva Upanishad, verse nos. 106-109.

²So what has already died or burnt cannot die again or be burnt again. For all practical purposes the ascetic has already burnt his body when he has burnt his Ahankar (refer verse no. 35-37). That is why under traditional norms, the body of a dead ascetic is not cremated by fire but directly immersed in the water of a river. If that is not feasible, it is buried under ground. This is because his 'dead gross body' is just like the ash that remains after a normal human body is cremated by burning it on the funeral pyre after his death. The ash is collected and immersed in holy rivers or buried in pots underground if this emersion is not practically possible to indicate the merger of the elements that constituted the body with the primary elements of Nature.

³Refer also to verse nos. 133-134 of Canto 1 below in the present context. The concept of Hath Yoga has also been explained in Yogtattva Upanishad, verse nos. 19, 129. Basically it involves rigorous physical exercises of breath control and other exercises such as the various Mudras and Aasans as enumerated in verse nos. 81-130 of Yogtattva Upanishad which is Chapter 17 of this volume as well as other Upanishads dealing with the concept of Yoga.]

46. That state which is regarded by ignorant worldly people as 'death' is deemed to be the state of 'life eternal' by the Yogi (practicing ascetic), while that state which is traditionally regarded by people as the 'living one' is deemed to be 'death' by him (46).

[Note—Traditionally to 'live' means remaining active in this material world, remaining engrossed in myriad worldly deeds and activities, establishing odd relationships and forging newer ones, procreating and then striving to provide for the new generation, acquiring wealth and generally contributing to material enhancement and growth of this material world, and in the process enjoying and suffering all the consequences that attend this involvement. This 'living' entails the involvement of the gross body in a world which is perishable and the cause of spiritual miseries.

Now, for a spiritually evolved ascetic, such involvement would be tantamount to killing his soul; it would destroy the very purpose for which his 'self' has obtained this gross body, which is to find spiritual liberation and deliverance instead of re-entering the cycle of birth and death once again by losing the golden opportunity which the body provides. How does the body provide him the golden opportunity? It is by the means of the human body that Yoga can be done and Gyan can be acquired; animals, insects, worms and plants cannot avail of this chance even though they also come under the category of living beings. So by allowing himself to be engrossed in this material world, the ascetic has virtually killed once in a lifetime opportunity to break free from the cycle of birth and death and its attendant horrors and delusions.

On the other hand, when the body becomes lifeless (i.e. when it stops showing signs of consciousness, life and mobility), or when Pran and other vital life forces leave the body and the latter becomes limp and a lifeless bundle of rapidly decaying skin, tissues, flesh and bones, it is regarded conventionally as 'dead'. But

metaphysically the creature has not died; it has not perished at all. The reason is that the body was not the 'true self' in the first place, because it is the conscious Atma or the soul which is inherently eternal, imperishable and immortal. When the physical body dies, it actually means that this 'true self' or the conscious soul of the person has simply left it for some other destination just like one leaves his home to find some new home after migration to a new country. Obviously therefore, there is no question of 'death or dying' for a self-realised and wise ascetic when the gross physical body is shed by him, either voluntarily as done by Hath Yoga when the ascetic decides to pull out his Pran out of the body willingly by rigorous meditation exercises, or involuntarily as done during Samadhi, the immortal, transcendental and trance-like sublime state of 'non-being' in this physical gross and mortal world. During 'Hath Yoga' he is doing rigorous exercises such as different Aasans and Mudras (sitting postures), Bandhas (closure of apertures in the body), Pranayam (breath control), Dhyan (meditation and contemplation), Yam and Niyams (observance of various self-control principles and other tenets of Yoga) etc., but during 'Samadhi' he is under no obligation to do any of these because he is so absorbed in contemplation and meditation that he is not even aware of his own existence in this physical world, he is so engrossed in his inner self that he is completely numb to all sensations, let alone the sense of awareness to observe this or that rule. Samadhi marks the exemplary state of transcendental neutrality and spiritual exaltedness when the attention is totally focused on the pure consciousness and the inner self with its attendant bliss and ecstasy that the practitioner has no inclination or time to think of anything else, what to talk of the gross body and what it is doing or is supposed to do in this gross world. In fact, in this state he is not even aware of the presence of the body at all.

These two states of Yoga—viz. Hath and Samadhi—are not in exclusion of each other but inclusive in nature. They both are parts of the composite structure of Yoga, complimenting and supplementing each other. The Samadhi is the culmination of Yoga, while Hath is the path leading to it; how can one reach the goal without treading the correct path, and what good is the path if the destination is not reached?

An enlightened, attained and self-realised ascetic does not die like an ordinary ignorant man who does not understand the real meaning of death, leaving him fretting and fuming during his last days and last moments because he wishes to make a last ditch attempt to retain this body. How stupid is he indeed! Is he not aware that the body cannot be made to 'live indefinitely' because it is inherently decayable and perishable? Everything in this material world has a fixed time-frame and fixed life span; they cannot last eternally. Even the fathomless and infinite cosmos has an end and it would come to an end one day.

Anything that is not eternal and not steady cannot be the 'truth' because the 'truth' is always uniform, immutable, unchanging, universal, eternal and everlasting. Since the body is constantly changing right from its conception in the mother's womb till the time it develops wrinkles and becomes decrepit and hopelessly problematic, and finally decays and falls down dead and lifeless inspite of the best of upkeep and care that one takes for it, it follows that it is not the 'truth'. Then, is it not the height of stupidity for grieving for such a body and regarding it as the 'self'? Besides this, the body is a nasty bundle of flesh and bones, of waste matter such as mucous, urine, stool etc. Is a man not ashamed at calling such a filthy bag as his 'self'? Of course the Yogi thinks otherwise; he regards his pure consciousness, the Atma or soul as his 'true self', and the latter never dies. After the so-called 'death' of the gross body, this Atma or the 'true self' of the Yogi simply migrates to some other place.]

47. The wise and enlightened Yogi has no obligations left. He is not attached to and interested in any deed or activity. [For he wishes to remain a neutral observer to what the body does out of its own volition.]

Such a Yogi is said to be 'Jivan Mukta', i.e. he is liberated and delivered even while he lives in this world with a gross body. He becomes free from all taints and other faults; he becomes immaculate and pure and completely cleaned in every way (47).

[Note—The various taints and faults have enumerated in verse no. 10-11 above of this Canto 1.]

48. There are certain categories of people who call themselves as 'Gyani and Virakta', i.e. they proclaim that they are wise, erudite, sagacious, learned and enlightened as well as renunciates who have the correct knowledge of the truth and have consequentially detached themselves from this artificial material world and its sense objects. But on close analysis they have no comparison with a Yogi, an ascetic who diligently practices the principles of Yoga.

This is because such people who boast of their knowledge, learning and wisdom are really imposters who are slaves of their bodies and its natural urges; they yearn for self-gratification and spend their entire life caring for the body, attending to its demands and feeding its insatiable worldly desires and aspirations. Their proclamations of renunciation sound mere hollow boasts made to merely enhance their stature amongst their followers to get more material mileage with them, for had they been truly enlightened and self-realised, they would not have been so worried about their healthy and well toned bodies and their worldly fame as they are usually found to be. They would not gather a crowd of disciples and followers and get worshipped and adored as they are usually seen to be doing.

Such people are contemptible and condemnable. They are nothing better than a mass of flesh (i.e. a body made of gross materials which has no real worth in the field of spiritualism). They can never be true Gyanis and Vairaagis. [That is, they can never qualify to be called truly enlightened, attained, wise and self-realised—or 'Gyanis', and they can never be truly called a person who has developed an extreme sense of renunciation, detachment, indifference and dispassion for all things that are not true and real from the spiritual point of view—or Vairaagis. If a person becomes enlightenment and spiritually exalted, it would automatically mean that he would have learnt the futility of boasting of his knowledge, for knowledge is like an ocean and no one can measure it from end to end; he would shun pursuing worldly fame and bothering too much about the gross and perishable body about which he is convinced that it is of no consequence. Previously it has already been emphasised that to feel proud of one's self and one's body, to advertise one's achievements and noble virtues such as the eclectic virtues of Gyan (knowledge) and Vairagya (sense of detachment), is in itself a sign of ignorance or Agyan which is the opposite of Gyan of which the ascetic is boasting about—refer verse no. 12, 15, 34-39 of this Canto 1.]

On the contrary, a truly enlightened, self-realised and wise Yogi is self-contained and inwards looking; he prefers seclusion and quiet; he prefers to spend his time and energy in meditation and contemplation along with enhancing and augmenting his spiritual achievements instead of milking it for material gains. He would not go around advertising his stupendous mystical powers. [Refer Yogtattva Upanishad, verse no. 76-79 which expressly prohibit such things.] (48).

49. Even learned, erudite and the so-called wise people who are well versed with the knowledge contained in the scriptures, i.e. those who are called 'Gyanis', have to die and enjoy or suffer the consequences of their good or bad deeds done in the previous

life. After the rewards or punishment period is over, they have to come back to take a new birth again as a Gyani (49).

[Note—The person dies and takes a new birth to enjoy the rewards of good deeds done by him in his previous life, or to suffer from the bad effects of misdeeds. Once a stage is reached when all the past deeds and their consequences are exhausted and nothing remains as a baggage to be carried forward to the next life after death, it is then that an enlightened man becomes eligible or entitled to revert back to his original state from which came to such a horrible pass when he got trapped in the complicated cog and wheel structure of worldly delusions, the cycle of deeds and consequences and its accompanying cycle of birth and death to such an extent that he finds himself lost in the labyrinthine catacomb from which he finds it difficult to get out.

Freeing one self by getting rid of deeds is not so easy as it seems on the surface because the equation gets progressively complicated when in the second birth taken to enjoy or suffer the consequences of the first birth, he does other deeds which in turn produce their own set of consequences. This way the cycle continues, spinning out of control and getting more and more complicated and intertwined with each turn of the wheel of birth and death. It is only when true wisdom and enlightenment dawns on the person and he distances himself from the body which is actually doing the deed that he is qualified to be called a renunciate and detached from the deeds as well as being a truly self-realised and enlightened person. If this happens by good luck, then he is said to be back to square number one. Now comes his golden chance to break free from the cycle of birth and death. How? This question is answered next. See also note to verse nos. 51-52 also.]

50. If the good effects of deeds done by him weigh more in his favour combined with his true awakening, he comes in contact with a ‘Siddha’, or an ascetic who has succeeded in his Yoga and consequentially obtained certain mystical and divine spiritual powers that are only accessible after success in Yoga is obtained and not before. In other words, he comes in contact with a truly self-realised and enlightened person as compared with imposters and fame-seekers. This is his great fortune!

If this true Yogi (i.e. an ascetic who has become self-realised and is truly enlightened and spiritually attained) who is approached by a sincere spiritual aspirant or seeker of the ‘truth’ becomes pleased with him, i.e. if the former sees that the latter has the right aptitude and decides that his soul has reached spiritual maturity and has thus become eligible to be initiated into the path of Yoga, he blesses him. That is, the spiritually attained and expert Yogi accepts the spiritual aspirant as his disciple and makes him privy to the secrets of Yoga; he advises him on the various aspects of the path ahead and guides him along because he is the most competent man to do so as he has had himself a first hand experience of Yoga and its various landmark signs of successes as well as the numerous pitfalls that are encountered on the way.

This is the only way the spiritual aspirant and seeker of ‘truth’ can become a successful Yogi himself, and not otherwise. [That is, merely reading of Yoga in the scriptures is not enough without the able guidance of a true teacher. This is a very treacherous path and very dangerous to follow without proper guidance.] (50).

51. It is only then that the spiritual aspirant’s worldly fetters are broken; there is no other way out for him to break free from the cycle of birth and death¹. Oh Brahma! The words of Lord Shiva are not in vain and not without weight. [In other words, what Shiva speaks is indeed the truth.]

Gyan (knowledge of the reality and awareness of the truthful nature of the self, this wisdom) is not entirely able to give Moksha (liberation and deliverance) on its own without the support of Yoga (making relevant efforts to reach one’s spiritual

goal, to sincerely pursue it without wavering, and implementing the great tenets of Yoga philosophy in letter and spirit). [In other words, merely knowledge of what has been said in the scriptures about the pure self, the Atma, the supreme transcendental Brahm etc. are insufficient to achieve success in self-realisation and Brahm-realisation which leads the path towards breaking free from the cycle of birth and death. This profound and sublime knowledge has to be supplemented and complemented with making effort in this direction and practicing the great teachings in life.] (51).

[Note—¹Previously in verse nos. 48-49 of this Canto 1 it has been explained how and why even a person who is called a 'Gyani'—i.e. a person who has knowledge of the various eclectic truths expounded and enunciated by the scriptures, who has thoroughly studied them and is well versed in their doctrines and tenets, can still remain ensnared in the cobweb of ignorance and delusions as well as trapped in the cycle of birth and death. Normally a person who has acquired 'Gyan', i.e. who has become enlightened and realised, should not face this fate because Gyan is meant to bestow liberation and deliverance, and not trap anyone. If this objective of spiritual emancipation and salvation is not achieved for the reasons enumerated in the aforesaid verses and elsewhere then the very purpose of gaining Gyan is defeated. If a man remains trapped in captivity inspite of the knowledge of how to break free from his captivity and bondage, then there is no use of his having this knowledge, and all the efforts made and time and energy spent in this direction go down the drain. Hence, such a man is called an 'Agyani' for all practical purposes inspite of his having studied the scriptures and having a literal knowledge of their texts.

But there is a subtle difference between the man who is called Agyani because he has not even read the scriptures and is not aware of the reality, and a man who is Agyani because he has forgotten his goal and got charmed by the enticements proffered by the material world. In the latter case, a stage is reached when he is fed up of everything and wishes for true peace and rest. Then at least he has the required knowledge of what to do, how to do it etc. He has the technical know-how to proceed in the correct direction once he realises his follies and shortcomings; he knows how to repent and atone for his misdeeds and how to break free from this cycle of deeds and their consequences. As compared to this lucky man, the poor chap who is not even aware of the path and the means to find out the path gets completely lost. But even this man can achieve success if he has the will and the grit, though it would take more time and energy for him to obtain freedom as compared to the Gyani who has already done his initial homework previously but was misled from the chosen path due to his own stupidity.

A truly Agyani man would not even be aware that he is an Agyani, that he is trapped and needs freedom, that he is suffering from avoidable miseries which are his own creation, and there are ways to overcome them. He would think that it is his fate and blame the gods for his torments. On the other hand, the Gyani would realise that surely there must be some flaw in his method of handling things that has caused him so much suffering, and then he would patiently go about analyzing the reason for his sufferance and endeavour to find a way out of this quagmire instead of blaming his fate and the gods for them. So he approaches a wise, competent and expert teacher and guide to advise him, to show him the way to address and fix his spiritual problems. It is this 'teacher and guide', called a Guru', who is being referred to in this present verse. Though both the teacher and the disciple are Gyanis in their own right, the former is better positioned than the latter because he had successfully implemented what he had learnt from the scriptures and has reached his spiritual goal while the latter failed to do so and hence need expert guidance. The Guru has reached the exalted stature of self-realisation and has tasted the elixir of spiritual bliss, while the disciple is still on his way. See verse no. 52 below which reiterates this observance.

Refer also to verse nos. 13-15 of this Canto 1 of this Upanishad as well as verse no. 14-18 of Yogtattva Upanishad.]

52. Likewise, Yoga cannot be successful and its full potentials realised without the help and support of Gyan. They should be coordinated and judiciously mixed in order to achieve success and reap the combined benefits of both¹.

It is after many births (i.e. after a very long time and many ups and downs) that Gyan inspires an aspirant to pursue Yoga² (52).

[Note--¹It is an obvious observation. In order to succeed in any endeavour whatsoever, one must have a thorough knowledge of that field. Otherwise it would be like jumping in the ocean without proper preparation and knowledge of swimming—inviting certain death by drowning. If one wishes to cook food, he must also know how to light the stove and how to put it off; just the knowledge of switching on the electric oven is not enough if one does not know how to switch it off.

²This is because originally a spiritual aspirant was under the impression that obtaining knowledge and expertise as to what is the truth would empower him to obtain access to that truth. But in practice he gets bogged down in delusions and false sense of pride of knowledge. The result is far from his expectations, for though now he would refrain from indulging in misdeeds and sinful acts, but he would continue to do good deeds in the hope that their good effect would provide him liberation and deliverance. But they don't, and this fact has been stressed earlier in verse nos. 48-51. When finally true wisdom dawns upon his intellect and he wonders why this situation has arisen, he then strives to find out the cause and the remedy—and it is then that Gyan comes to his aid once again. It enlightens him that he needs to practice Yoga in order to fully realise the benefits of obtaining Gyan. In other words, he must implement the knowledge that the scriptures teach in their correct fashion, with the correct perspective and in the proper context. The word 'Yoga' itself means to forge a union between two entities. So he realises that all the limbs of Gyan, all its various branches and sub-branches are to be effectively coordinated to bring about some meaningful benefit from them. Its like an orchestra—every step of music played by different musical instruments have to be in perfect and constant harmony with each other; each member has to be perfectly in sync with all the other members of the team—otherwise the music of the orchestra comes apart; even one misstep would grind the entire orchestra to a halt.

The effort to effectively bring about the union of the individual Atma with the supreme Atma of creation is called Yoga, and the attainment of the ultimate destiny of the soul whereby it finds eternal peace and tranquility is the real purpose of Gyan. It helps in obtaining final liberation and deliverance of the soul, called realising Moksha, an achievement that provides the ultimate emancipation and salvation to the creature. After that, he would not have to enter the cycle of birth and death anymore. Hence, Yoga and Gyan are like the two legs of a person by the help of which he reaches his spiritual destination easily.]

53. On the contrary, if one is empowered by the spiritual strength that Yoga (meditation and contemplation) provides, Gyan (truthful knowledge of the reality the soul and its stupendous potentials; self-realisation) can be obtained in one lifetime itself (i.e. in a short time span and without much effort)¹.

Hence, there is no better path for obtaining Moksha (liberation and deliverance from ignorance and delusions about this world and body) than Yoga² (53).

[Note—¹To understand how this is made possible, we can take the following simple example. A science student learns the basics of science more easily if he sees the principles being applied in practice as compared to the case when he has to grasp their meaning merely from text books in an abstract manner. Practice is a better tool

for learning than mere theory. So by practicing the principles of Yoga, of which meditation and contemplation are important and unavoidable tools, a spiritual aspirant is better placed and equipped to understand the real meaning of the concept of the terms 'true self' and 'self-realisation' than merely reading about them in theory form in the voluminous texts of the scriptures and hearing about them in long religious discourses. Yoga is a quicker and more effective method, a sort of practical laboratory for implementing and putting into effect the knowledge acquired through the process of Gyan.

²This is because meditation and contemplation would wizen the spiritual aspirant about his true self, and he would then realise that the body which he had hitherto being treating as his 'self' is a fallacious notion. In other words, he breaks free from this basic fetter; he manages to liberate himself from this ignorance and its attendant delusions. Once the body-factor and its attending problems are eliminated, there is freedom of the 'spirit'; the aspirant does not have to get tied to the deeds done by the body and neither is he bothered about this world which he had needed to look after this body, to take care of the body's needs. This is called Jivan Mukti. Refer also to verse no. 47 of this Canto 1 above.]

54. A spiritual aspirant thinks that by practicing Gyan, i.e. doing meditation and contemplation, for a long time would lead him to obtaining Mukti or Moksha. That is, he thinks that acquisition of knowledge and deeply meditating upon its profound truths would lead him to obtaining liberation and deliverance from this world of ignorance and delusions; it would help him to break free from the fetters of this perishable body by dissociating himself from it and the deeds done by it. But this is a long drawn and time consuming process. It cannot provide an instant liberation and deliverance (as is possible by Yoga). (54).

[Note—Essentially this verse means that Yoga is able to deliver results in a shorter time span as compared to following the path of Gyan. The word 'Yoga' itself indicates this fact—it brings a union between two units; it acts like a coupling used in trains to join two coaches. It brings to fruition more quickly the benefits of Gyan. This is because Yoga puts to test the theoretical knowledge obtained by Gyan. Here the word 'Gyan' is to be interpreted as knowledge and erudition, as expertise in the knowledge of the scriptures, while 'Yoga' would be its practical application. This is supported by verse no. 98 which says that a Gyani, a person who has Gyan, continues to take birth and death and remain engrossed in worldly pursuance. How is it ever possible to do so if he is an enlightened and wise and self-realised person in the first place? It proves that his Gyan is merely superficial and he has not obtained any real benefit by studying the scriptures.

Herein lies the role of Yoga—it bridges the gap between theory and practice. Only by putting foot on the bridge can one cross the river; merely sighting the other bank of the river or the knowledge of what lies there would be of no practical value. Asking others about what lies on the other side of the river and imagining of it and spending one's lifetime in such thoughts is like mere pursuance of Gyan, while actually crossing the river on the bridge is like taking the help of Yoga to reach the other side. Refer verse nos. 49-53.]

55. Even if hundreds of births have passed, whenever one finds Mukti (liberation and deliverance; emancipation and salvation) it is only thorough the strength of Yoga.

Yoga helps one to break free from the cycle of birth and death. Those who practice Yoga do not have to take repeated births and die again and again (55).

[Note—It ought to be noted here that since this Upanishad is Yoga-centric, it is obvious that it would stress the importance of this spiritual field and emphasise that it is the only superior path to liberation and deliverance. It is not to demean the

importance of Gyan in spiritualism, because it has already been stressed in the very beginning that both Yoga and Gyan are needed for spiritual liberation and deliverance—refer verse no. 13 of this Canto 1 above.]

56. Yoga enables one to mix the two vital winds called Pran (the breath) and Apaana (the wind that moves down in the intestines and which is responsible for digestion and elimination of waste from the anus). This is like bringing about a union of the sun and the moon². This creates such a rare symbolic configuration of cosmic forces of Nature that it becomes possible to kindle the hitherto dormant but all-pervading subtle cosmic energy symbolising the inherent divine powers and strength of the ‘self’ or pure consciousness that lay hidden inside the body made up of the seven basic structural ingredients called the ‘Dhaatus’¹ (56).

[Note—¹The seven Dhaatus of the Body are the structural features or basic ingredients of the gross physical body. They have been elaborately explained above as note to verse no. 40 of this Canto no. 1.

²Verse nos. 68, 116-117 and 133-134 of this Canto describes how a symbolic union of the sun and the moon is brought about, and what the reward of this union is.
]

57. With the awakening or kindling of this latent divine dynamic energy inside the body brought about by Yoga, all the ailments and hurdles that had been tormenting the ascetic are removed. In this state, the ascetic has no fear of the body being pierced by any sharp thing, or its decay and falling down. This is because the ascetic has no relationship with the physical gross body any longer in this state of self-realised existence during which he lives not as someone with a gross body but as someone in the sublime and subtle form of the all-pervading ‘sky’ element.

In other words, he lives not as someone with a gross physical body having a fixed form and shape and subjected to all sorts of limitations that are incumbent to things that are gross and physical in nature but as one who is to be identified with the ethereal Spirit known as the pure conscious Atma, and this Atma in its primary form as the eternal and infinite spirit is uniformly dispersed throughout the length and breadth of the creation just like the air element is uniformly distributed and ubiquitously present in the entire space that is defined as the ‘sky’.

The Spirit and the Pran (i.e. the ethereal Atma and the vital life-infusing wind element respectively) are synonymous with each other for all practical purposes. Since the air or wind element pervades throughout the length and breadth of the sky, it is a natural corollary that the Spirit is also ubiquitously present everywhere where there is the sky, and there is no place in creation where the sky is not present! As compared to them, the gross body is limited to a particular point in space; it cannot be uniformly diffused and universally omnipresent in the entire creation like either the sky or the air element (57).

[Note—When the ascetic is able to extract himself from the entanglements of the web-like body consisting of the gross ingredients as enumerated in note to verse no. 56 above, he finds liberation and freedom to move around without the limiting and shackling effects of the cage-like body. This body is both cage-like as well as web-like. The external features of the body such as the skin and the bones act like the cage, the blood and mucus act like the moat around the fort in which the creature’s Atma is trapped, and the veins and nerves act like the web or net tied around its neck and legs with which this Atma is shackled to the cage. The fire of Yoga burns this web or net along with the cage, and lets the bird in the form of the Atma fly off to freedom.]

58. What is the use of saying anything more or stressing the point further? It is sufficient to say that a true and self-realised Yogi (i.e. an ascetic who sincerely practices Yoga in a holistic manner) does not die. He lives in this world like any other living being who has a body, but like a piece of camphor that has been burnt out (58).

[Note—When camphor is in its raw state, it is white and its presence is felt immediately by its strong smell; it is volatile, easily catches fire and burns rapidly, giving a lot of smoke and light. This situation symbolises an ordinary living creature. His body is attractive, it emits a body odour, he is emotionally and bodily restless, and he is easily aroused and becomes angry. On the contrary, burnt-out camphor has none of these qualities. So the ascetic who had burnt all his sense of pride and ego (called Ahankar) which symbolically burns his body has nothing of worldly qualities left in him. Besides this, a piece of burnt-out camphor is of no use to anyone. Similarly, an ascetic who has burnt all his worldly ties is of no good to others, thereby freeing him of disturbances created by them. Prior to its burning, the physical piece of camphor could be seen, smelt, tasted and touched, but when it is lit it burns and vanishes into oblivion, leaving no trace behind.]

Similarly, the ascetic uses Yoga and its stupendous energy to burn himself up and merge his elements with their primary cosmic forms, leaving no trace of his 'self' after death. Even while he is alive he is deemed to be non-existent because the gross body which lives in this world is not his 'true self', for the latter is his Atma which gradually vanishes into the cosmic Atma or the Supreme Self just like a piece of camphor that gradually starts to reduce in size and shape and ultimately vanishes into thin air even though it is not lighted.]

59. The Chitta (the sub-conscious, the conscience and the subtle aspect of mind) is invariably attached to the Pran (the vital spark of life that sustains consciousness in the living creature's gross body)¹.

Similarly, the Mana (mind and the subtle aspects of the heart; the thoughts and emotions) of a creature has bound the latter in fetters like a bird tied with a strong string or cord² (59).

[Note--¹This is because only as long as there is life inside the body would it think and feel anything. As soon as the Pran leaves the body, such as at the time of death, the body stops to feel any sensations, and in spite of all the organs present in it as they were before death, it would be un-conscious. It cannot think, it cannot see, not hear, nor taste, nor speak etc. In short, the Chitta ceases to function.]

²The Mana is attached to the gross material world because it appears so very attractive and charming for the senses. The enchanting world offers a chance for the Mana of the creature to satisfy his yearning for self gratification. The body would rather enjoy the sense objects of the world than to suffer hardships which renunciation and other spiritual paths demand of it. The Mana would never let the creature believe that the world is false and the body is perishable. Instead, it makes the creature live in a make-believe world of magical charms, creating an illusion of immense joys and happiness in this involvement. So it is metaphorically said that the Mana has tied the creature like a bird tied with a string, preventing the pure 'self' to detach itself from the world and get freedom from its falsehoods and illusionary charms by following the rigorous path of Gyan and Yoga.]

60. The Mana cannot be controlled or reined in so easily by any method, no matter how much thought is given to do so. The only way to subdue or conquer the Mana is to exercise control over the Pran factor; there is no other way (60).

[Note—When an ascetic has been able to exercise control over his sense organs and natural urges by rigorously following the tenets of Yoga and Gyan, it is only then that he is automatically able to control his Mana (the thoughts of his mind and the

emotional impulses of his sentimental heart). If he remains a serf of his senses and remains engrossed in appeasing them at all costs, then the control of the Mana is out of question for him. The control of Pran is equivalent to exercising rigorous self-control or self-restraint because controlling of the Pran or the vital winds is possible only through the process of Pranayam which are breath controlling exercises that involve strict control over the body and its external organs of perception and action. In other words, 'controlling the Pran' is a metaphoric way of saying 'controlling the self'.]

61. Oh Vidhe (the one who established the codes and laws of conduct for the creation; Brahma the creator)! This Mana cannot be controlled or reined in by logics, debates, reasoning, the web created by scriptures, various magical charms, tactics, maneuverings, skill and other devices. It can be done only by the well established and proved method of Yoga. [This is because Yoga gives direct and practical guidelines of how to control the body and its sense organs, thereby setting the stage for controlling of the Mana.] (61).

62. If one is not aware of how to truly control the Prans (the vital winds present in the body) and embarks on doing Yoga, then he is subjected to great miseries, tribulations, sufferings, distress, pain, frustration and ultimate failure due to his half-baked knowledge of how to do Yoga successfully and in a holistic manner¹ (62).

[Note—¹It should be observed here that mere physical control of breath by claspings the nostrils is not the aim of Yoga or the meaning of controlling the Prans, and this fact would be amply clear in the next verse. As far as the physical exercise of controlling of breath is concerned, nearly all the Upanishads that deal with Yoga and its physical aspect consisting of various exercises describe elaborate methods of controlling it. One such universally acknowledged and well known method is called 'Pranayam' whereby the breath is controlled by a series of steps divided into three basic units—Purak referring to inhalation, Kumbhak referring to holding of the inhaled breath, and Rechak referring to exhalation.]

63. Those who try to gain true control over the vital air element (called the Pran) by merely relying upon physical exercises (such as Pranayam) and hope to attain the stupendous glories and spiritual powers available to real Yogis (i.e. acclaimed and self-realised ascetics) through this method are as foolish as someone who is trying to cross a great ocean sitting atop a mud pitcher which is half-baked (63).

[Note—This verse implies that proper knowledge of the philosophy of Yoga, a clear and holistic understanding of its objectives and its real spiritual benefits of providing liberation and deliverance, is very essential to an aspiring ascetic and must be properly understood by him in a comprehensive manner before he starts on this journey. Earlier also it has been emphasised that Gyan, true knowledge, wisdom, erudition and enlightenment, is an important tool for success in Yoga. This Gyan not only means knowledge of the various steps in the physical exercises of Yoga, but more importantly about the deep and far-reaching metaphysical imports of each tenet of Yoga and how the physical exercises can be related to these tenets so as to pave the way for the practitioner's spiritual emancipation and salvation. Physical exercises would give him certain super human powers, such as the various Siddhis which would entitle him to lift himself from the ground and float in the sky, assume any form he wishes, go wherever he wishes without any hindrance, become invisible and enter any body he desires, but these are mere magical charms and gains of Yoga limited to this gross world. They would not relieve his soul from the horrors of the cycle of birth and death. The latter should be the main objective of doing Yoga, the main purpose for which one has embarked on this arduous journey in the first place.

Unless the ultimate goal is achieved and the objective fulfilled, the entire exercise is futile. Both Gyan and Yoga are complimentary to each other—‘Gyan’ enlightens the aspirant about his goal and the correct path to be followed to reach it and ‘Yoga’ actually helps him to go there. Gyan is empowerment through knowledge and wisdom, while Yoga is its implementation.]

64. Even if the ascetic is successful in controlling his Prans (his vital winds, by the virtue of doing various Yoga exercises such as Pranayam), he still finds it hard to control his Chitta (i.e. his sub-conscious mind which is regarded as his second inner self after the Mana, the subtle mind). As a result, the Chitta never allows him to become free from taints, faults and impurities that cast their dark shadow on him (64).

65. Oh Padmaj (one born from a lotus; a reference to Brahma the creator)! It is only when the inner self and its sub-conscious is cleansed of all its blemishes, faults and impurities that taint them and act as a veil eclipsing the inherent illumination emanating from the self-illuminated pure consciousness called the Atma that its brilliant splendour and glory shines through. It is the ‘light’ which comes from self-realisation; it is the light of enlightenment called the ‘light of Gyan’ or the illumination provided by knowledge and self-awakening that is called ‘enlightenment and self-realisation’. This makes the Yogi a true ‘Gyani’—i.e. the ascetic who has acquired true wisdom, erudition and knowledge of the reality and the ultimate Truth, who has become enlightened about the real aim and purpose of doing Yoga in the first place is the one who is entitled to be called a truly attained and realised Yogi, a wise, self-realised and enlightened ascetic.

This spiritual attainment and realisation of the Truth and Reality is only possible on the strength of Yoga (65).

[Note—This verse emphasises two basic points—one, that true and real benefit of Yoga is obtained by taking the help of Gyan because the latter not only shows one the path to be followed but guides him along, and two, that true Gyan can be obtained by following the correct path of Yoga because the latter leads to self-realisation and tapping one’s inherent spiritual strengths. They complement and supplement each other and act like two strong legs of a man which helps him walk steadily to reach his goal without stumbling and falling over midway. Refer also verse no. 12-15 of this Canto 1.]

66. Hence, a sincere spiritual aspirant should diligently practice Yoga with resilience. Those seeking Moksha (liberation and deliverance; emancipation and salvation) should practice the control of Pran (i.e. they should practice control of the sense organs of the body by controlling the vital forces of life called the Pran; they should learn self restraint).

[This verse can be read as follows—those spiritual aspirants who seek Moksha should learn to control their Pran by constant and diligent practice of Yoga.] (66).

67. Yoga is the best auspicious thing to do for a spiritual aspirant. Yoga is Shiva personified (i.e. Yoga is an embodiment of all the glorious virtues that Shiva stands for, for instance beauty, auspiciousness, truthfulness, holiness, renunciation and enlightenment of the highest order).

It is the finest path of spiritualism and it helps one to realise one’s spiritual powers and obtain one’s objectives. There is nothing better than it (67).

68. Yoga makes it possible to establish a union of the two apparently opposite forces in creation which are otherwise irreconcilable, such as for example it can forge a union between the Pran (the breath which remains restricted to the upper part of the body and has a tendency to move upwards and escape through the nostrils) and the Apan (the vital wind which moves downwards in the intestines and escapes through the anus)¹, between the various Dhaatus (elements) of the body (of which there are five primary elements, seventeen and twenty three secondary elements which would depend upon the system of classification adopted, nine tertiary elements, and finally the seven structural elements)².

It helps metaphorically to establish the union between the moon and the sun. [That is, it has the stupendous ability to bring together and establish a bondage or union between two such opposite forces of Nature as the moon and the sun, the former being an epitome of the eclectic virtues of remaining cool, calm and soothing while the other symbolises the dynamism displayed by the natural forces of creation such as energy, heat and fire. The moon is cool while the sun is blazingly hot; the moon shines in the night while the sun shines in the day. It is unimaginable to think that they can co-exist. But Yoga is so powerful that it can bring this about in a symbolic manner in order to effect a neutral state of existence when these two opposite forces of Nature cancel each other out.]

Therefore Yoga, with its majestic powers and astounding potentials, is the well chosen and correct instrument that can actually bring about a union between the creature's individual Atma, his 'self', and the Parmatma, the cosmic and supreme 'Self'.

[Yoga can perform this seemingly impossible task of bringing together the individual creature called the Jiva-Atma and the supreme transcendental Brahm called the Parmatma because it has this stupendous potential and astounding powers to effect this union. This has been symbolically emphasised by saying that it can bring the moon and the sun together; it can unite the Pran and the Apan.] (68).

[Note—¹The Pran wind is present in the upper part of the body, while the Apan wind is located in the lower half. The former is upwardly mobile while the latter is downwards mobile. From all practical point, the chances of their ever coming together are almost negligible. But the practice of various exercises of Yoga makes this actually feasible and possible, thereby establishing its claim to bring about the union of the Jiva-Atma and the Parmatma.

² The gross body can be studied at various levels depending upon the classification used to study its constitution and structure. The structural elements are variously called the Bhuts, the Dhaatus and the Tattvas.

(a) The *Primary level* of the elements—This consists of the five primary elements called the 'Pancha Mahabhuts'. They were formed at the beginning of creation, and consist of earth, water or fluid, fire or energy, air or wind and sky or space elements in increasing degree of subtlety.

They can be studied at two levels—one at the very core level, and the other at the more general level.

(a) (i) The study of the body at the core level of the five Bhuts consisting of the five primary elements consisting of the sky or space, air or wind, fire or energy, water or fluids, and earth. Refer verse nos. 1-2, and 5-6 of Shaarirako-panishad which is Chapter 20 of this volume. Briefly, the earth element formed the solid part of the body, the water element formed the fluid part, the fire element formed the warmth and heat of the body, the movement of the body is revelation of the air element, and the subtle space between various organs and tissues of the body, both at the external as well as internal levels, is the sky element.

(a) (ii) The next level would be the various Koshas or Sheaths that are made of a combination of these five elements. They are the following—Anna Maye Kosh (the

food sheath), Pran Maye Kosh (the vital wind sheath), Manomaye Kosh (the mind sheath), Vigyan Maye Kosh (the intellect sheath), and Anand Maye Kosh (the bliss sheath). These Koshas are also like the elements or units that decide the complexities of the creature's body and its position in the hierarchy of evolution.

All the living organisms can be classified into the following five types depending upon the number of Koshas they have—(i) Udbhij—these are those life forms that are born from seeds, such as members of the plant kingdom. These have only one Kosha, the Anna Maye Kalaa. In other words, they depend on food and become food for others higher up in the evolutionary ladder. (ii) Swedaj—they are those which are born from dampness and sweat, such as fungi, algae, bacteria, germs, mosquito, lice, flies etc. They have two Koshas, viz. Anna Maye and Pran Maye. That is, they are formed from food, they live for food and they die as food. Besides this, they also exhibit signs of life, e.g. the mosquito and lice have life like any other member of the animal kingdom. (iii) Andaj—they are placed higher up in the evolutionary ladder, and are born from eggs, whether inside the mother's womb or outside. Such birds as pigeon, sparrow, parrot, peacock etc. come under this category. They have three Koshas which are Anna Maye, Pran Maye and Mano-maye. The last Kosh refers to the fact that such creatures have a mind and heart which enables them to think, albeit in a primitive level. (iv) Jaruyuj—these are the creatures that are born as embryo that develops inside the mother's womb. Under this class come the animals such as horses, cows, dogs, elephants etc. They have four Koshas, such as Anna Maye, Pran Maye, Mano-maye and Vigyan Maye. The last Kosh refers to their ability to have a higher level of thinking ability called intelligence. The human being comes under this last category with the added benefit of having five Koshas. Besides the four Koshas mentioned above in other creatures of this category, the man has the fifth one and it called the Anand Maye Kosh. It is only possessed by a man and not by other creatures in the sense that the man can realise the true meaning of the terms 'bliss and happiness that is eternal and substantial' by the virtue of his attaining higher level of intelligence and his ability to delve into the secrets of the concept of truth itself and then realising that kind of happiness and bliss that is not superficial and which is not limited to enjoyment of the sensual pleasures of the body and the material comforts of the world, but which has a holistic and all-inclusive dimension that incorporates the spirit or the soul.

(b) The *secondary level* of study of the body and its structure would be at the level of the Tattvas. It consists of the Linga Deha made up of the seventeen Tattvas which are seventeen dimensions or units or elements that constitute it—the five organs of perception (ear, eye, nose, tongue and skin) + the five organs of action (hand, leg, mouth, anus and genital) + the five Prans (the five subtle forms of the vital winds present inside the body—such as Pran, Apaana, Samaana, Vyan and Udaana) + one Mana (mind) + one Buddhi (intellect) = seventeen units or elements of creation at the micro level. [Reference Shaarirako-panishad, verse no. 16.]

The gross body can be further classified as consisting of twenty three elements. They are the following—

(1) The five gross organs of perception present in the body such as the ear, skin, eye, tongue and nose make up the five gross units or elements of creation at the micro level of the body of the creature. [Total 5 organs of perception.]

(2) Then there are the five organs of action such as the anus, genital, hand, leg and speech (mouth). These are the five gross organs which add their count to the number of elements or units or dimensions that exist in this creation at the micro level. [Total 5 organs of action.]

(3) Besides these, there are the five subtle sense perceptions such as the perceptions of hearing (relevant to the ear), feeling or touching (relevant to the skin), seeing various forms and shapes (relevant to the eye and the faculty of sight), taste (relevant to the tongue) and smell (relevant to the nose). [Total 5 senses of perception.]

(4) The eight Vikaars such as one Mana (mind) + one Buddhi (intellect) + one Ahankar (pride and arrogance) + one Akash element + one air element + one fire element + one water element + one earth element = total of eight elements that cast their shadow on the purity of Nature (just like the shadow of the earth casts its shadow on the bright moon to result in the lunar eclipse). These elements are called the eight 'Vikaars' (literally meaning faults, errors, shortcomings or imperfections) that are present in Nature and affect the basic nature of all living beings.

Thus the tally comes to twenty three elements of creation as follows—5 organs of perceptions + 5 organs of action + 5 senses of perceptions + 8 Vikaars = total 23. [Reference Shaarirako-panishad, verse no. 17-19.]

(c) The next level of study of the body is the *tertiary level*. The tertiary elements that constitute the body all living beings would be the following nine—the three Gunas such as the Sata which the best quality in creation, the Raja which is the medium quality, and the Tama which is the lowest quality (refer Shaarirako-panishad, verse nos. 7-13), and the six aspects of Anatahakarans which is the inner self of the creature consisting of the sub-conscious or conscience that governs his innate character. The five aspects of Anthahakaran are the following (1) Mana or mind, (2) Buddhi or intellect, (3) Chitta or the faculty of concentration and memory; knowledge and consciousness, (4) Ahankar or ego, pride, arrogance, (5) Vrittis or inherent character, traits, habits, inclinations and temperaments of a creature based on these basic components of the subtle body—refer Paingalo-panishad, Canto 2, verse no. 3), and (6) the various Vasanas (worldly passions, lusts and yearnings—Muktiko-panishad, Canto 2). The total comes to $3 + 6 = 9$. These nine decide the inherent character and basic nature and temperament of the creature.

(d) The 7 Dhaatus—The structural features of the gross physical body consists of the so-called seven *Dhaatus*. These stand for the structural constituent of the body which supports and sustains its existence. According to ancient Indian system of medicine, they are the following—(1) Rasa (lymph and mucous; sap), (2) Rakta (blood), (3) Maansa (flesh), (4) Meda (fat and muscles), (5) Ashthi (bones and cartilage), (6) Meja (marrow), and (7) Shukra (semen).

According to other interpretations, these seven Dhaatus which form the structural features of the gross body and give it its shape and support it are the following—(1) all forms of fluid ingredients such as blood, urine, mucous, lymph etc, (2) bone and cartilage, (3) marrow, (4) flesh, fat and muscles, (5) abdominal organs such as stomach etc, (6) skin, and (7) Naadis (arteries, veins, capillaries and nerves).

(e) The structure of the body as explained in the Upanishads can be easily understood when we analyse it in the context of modern science of chemistry. This gross body of a creature can be compared to the molecular structure of any chemical substance or any thing in this world for that matter that is made up of certain basic elements. The molecules are also not visible to the naked eye just like the ingredients of the body mentioned above except some of them such as the skin and mucous much like the external features of the finished chemical product.

At the next level comes the atomic structure, or the subtle level of constitution of the body. It is like the atoms of any chemical molecule that make up the basic building blocks or units of that molecule. For example, Benzene has a hexagonal structure which would be like the gross structure of the creature's body called the Dhaatu, while the Carbon and Hydrogen atoms (C_6H_6) that go in to form the basic and fundamental ingredients of Benzene are like its subtle structure called the Bhut.

To understand how one element can transform itself into so many forms, we can take the example of isomerism in chemistry. The word 'iso' means the 'same', and 'meros' means 'parts'. Hence, isomerism refers to the phenomenon whereby two or more compounds that are composed of the same chemical formulae, i.e. they have the same molecular composition but different three dimensional structures; they differ in physical or chemical properties. Such things are called 'isomers' of the principal element.

Extended further, this phenomenon of isomerism would apply to the concept of the same Atma residing in all the living beings having a mind boggling variety of physical structures, besides the fact that all the creatures have the same Atma as well as the same basic elements as their essential identity.

Then there are two types of isomerism—i.e. structural isomerism and stereo isomerism. The concept of structural isomerism refer to those isomers which have the same molecular formulae but different structural arrangement of atoms or groups of atoms around the central atom or ion called Structural Isomers and this phenomenon is called structural isomerism. This would be like different species of living organisms which have the same Atma at the core, the same set of fundamental five elements set up around this basic core, and then comes the arrangements of secondary elements around this basic core to give rise to varying structural variations in the species as they evolved. Stereo isomerism is when the same molecular formulae represents two or more compounds which differ in the spatial arrangement of atoms or groups of atoms. Such compounds are called Stereo Isomers. In this case, we deal with one given species such as the human species which have all the gross features the same but the internal geometric patterns in which the secondary and tertiary elements exist determine the individuality of a particular man and sets him aside from all others of his ilk.

A related concept is isomorphism wherein there is apparent similarity of form between individuals belonging to different races or species. In the field of chemistry it refers to the existence of two or more chemical compounds with the same crystal structure; they differ in chemical composition but have the same crystalline structure. This would be like speaking of the entire human race, or of all the mammals for instance who would exhibit similar external features but have different internal chemistry in the sense that all have their own set of characteristic qualities, virtues and values, their own independent personality, intelligence, emotional quotient etc. Their mental and intellectual setup, their emotional and sentimental quotient, their inherent natural temperaments and inclinations etc. would differ from one individual to another depending upon the combination in which the three Gunas (Sata, Raja and Tama) exist in them.

In this context, the three Gunas that determine the individual character of the creature, that determine his 'individuality' as compared to the general character of the group to which that individual belongs, are like the isotopes in chemistry. The isotope refers to the phenomenon wherein one of two or more atoms of the same chemical element that contain the same number of protons but different numbers of neutrons in their nuclei and therefore have the same atomic number and chemical properties but different mass numbers and physical properties. For example, two brothers have the same genes and the same inheritance, but the presence of the three Gunas in different ratios between them changes their personality and thought processes. One may be a highly righteous man while the other might be just the opposite. Their parents are the same, their upbringing is the same, they have attended the same school and ate the same food, but there is a deep chasm when it comes to their character as individuals.

Refer to verse no. 40, 56 and 147 of this Canto no. 1 in this context.]

69. In other words, merger and mutual nullifying of all the opposite natural forces and qualities in creation so as to bring about a state of non-duality marked by exemplary neutrality, homogeneity, uniformity, universality and equanimity of the highest order and of the purest form is the purpose of Yoga.

Now I shall preach you about the eclectic knowledge which is called 'Yog Shikha'¹ (69).

[Note—¹The word Yog Shikha refers to the pinnacle of spiritual achievement obtained by following the great tenets of meditation and contemplation. The word 'Shikha' means the tip or apex, while the word 'Yoga' means meditation and

contemplation done to bring about a union of two or more forces of Nature together—like the case of bring together of the sun and the moon cited above in verse no. 68. Yoga brings into effect the union of the individual soul with the cosmic Soul; it forges an everlasting relationship between the micro and the macro level of existence so that the false sense of duality and distinction are eliminated and a wholesome uniformity is established. Yoga is the process by which the two sides of an equilateral triangle are extended to meet at the apex which symbolises the climax of one's spiritual endeavours.]

70. When the practitioner of Yoga sits in the Padmaasan posture (the lotus posture) or any other comfortable posture suitable to him and meditates using a Mantra (a mystical formulae consisting of syllables, letters, words or phrases), his body begins to shiver and vibrate in a subtle manner (70).

[Note—Refer Yogtattva Upanishad, verse no. 52-54.]

71. The spiritual aspirant should sit with ease and exercise full control over his limbs (both the hands and legs). [That is, he should stop constantly fiddling with his hands and shuffling his body in a fidgety manner. He should sit absolutely quietly in a calm and composed manner.] He should withdraw his attention from wandering anywhere in the external world, and instead of allowing his sight from jumping from one object to another he should focus it on the tip of his nostrils while meditating upon the divine Mantra OM and contemplating upon its divine glories (71).

72. A wise and erudite aspirant should enshrine the transcendental Supreme Being in his own heart (as his pure conscious Atma which is self-illuminated and radiant with divine effulgence) and concentrate his attention on him through the medium of meditation and contemplation or Yoga.

He must contemplate that this body is like a majestic palace having only one pillar or foundation to support it (in the form of the one Atma or the pure conscious soul personifying the Supreme Being whom he has enshrined in his heart). [In other words, he must concentrate on the fact that his entire being represented by the gross as well as the subtle components of the body relies upon the Atma or the pure consciousness that lives inside it to not only give this body its life, strength, vigour and vitality but also its worth, significance and importance as a living entity. If this Atma is removed from the body, the latter would not even be worth its gross weight as proved by the fact that as soon as a man dies, his dead body is cremated or buried as early as possible as it begins to decay and emit a foul smell.]

This palace has nine doors¹; it has three supporting posts²; and there are five Gods who reside in this body³ (72).

[Note--¹These are the two ears, two eyes, two nostrils, one mouth, one anus, and one urethra; refer Shwetashwatar Upanishad of Krishna Yajur Veda tradition, 3/18.

²These are the three Gunas of Sata, Raja and Tama which determine the character of the creature and his qualities, or the three basic elements which determine the constitution of the body such as Pitta (bile), Kaph (mucous) and Vayu (wind).

³These Gods are the patron Gods of the five elements from which the body is made. These five elements and their Gods have been enumerated in Yogtattva Upanishad as follows—(a) Brahma the creator is the patron God of the earth element (verse no. 85-86); (b) Vishnu the sustainer is the patron God of the water element (verse no. 88-89); (c) Rudra, the angry form of Shiva the concluder, is the patron God of the fire element (verse no. 91-93); (d) Ishwar who is the mouth of the entire creation in his macrocosmic all-encompassing and all-pervading form of the air element without which no life is sustainable in this living world is the sustainer and

the patron God of the air element (verse no. 95-97); and (e) Lord Shiva called Mahadev, the great God, is the patron God of the sky element (verse no. 98-99).

Refer also to Canto 1, verse no. 165 and to Canto 5, verse no. 2 in this context.]

73. During the time one is doing meditation, he should not pay any attention to the body, but instead concentrate his attention on the illumination emanating from inside his body from an ethereal, divine and holy entity whose rays of light resemble that of the radiant sun. [This sublime and subtle entity is the pure conscious Atma residing in the subtle space of the heart and shines with its own illumination just like the celestial sun does in the sky.] (73).

74. The aspirant should contemplate upon this splendorous subtle form of the sun and focus his attention on the fiercely burning fire in its center. This fire is like the flame on the tip of the wick of a burning oil lamp. This divine vision is the vision of the supreme Parmeshwar, the Supreme Being revealed in the inner self of the aspirant (74).

[Note—The sun is a metaphor for the splendorous Atma residing as the pure consciousness inside the individual creature, and this Atma is as glorious, radiant and splendorous as the sun. In metaphysics, the celestial sun is invariably regarded as a manifestation of the Viraat Purush, the macrocosmic revelation of the Supreme Being known as Brahm. The sun is the only celestial body in the sky which provides ‘light’ to the entire world—another way of saying that the sun infuses life, energy and vitality into this creation so much so that existence sans the sun is not imaginable. This fact is employed here to draw a parallel between the Atma and the sun because without the Atma the body is a dead entity much like the world which would be dead without the sun; it is the Atma as the pure consciousness that ‘lights’ up the inner self of all living beings much like the sun that lights up the external world for him.]

75. Progressing further in his meditation, the aspirant goes beyond this splendour of the subtle sun. He submits himself to the Supreme Being through the second opening (end) of the Sushumna Naadi¹ (75).

[Note—¹This Sushumna Naadi is the tubular duct passing through the center of the spinal cord, with its lower end blocking the mouth of the Kundalini, the coiled subtle energy center lying at the base of the spinal cord, and the upper end opening out through the Brahm Randhra, the hair-like slit on the top of the skull. It is believed that an expert practitioner of Yoga is able to divert all his vital life forces through this Kundalini into this Sushumna Naadi, push them upwards right up to the Brahm Randhra, and then finally make his exit from the body by rupturing this area of the skull. This is his final liberation—or ‘Kaivalya Mukti’. His Pran winds merge inseparably and eternally with the air element present outside the body in the cosmos, never to re-enter the body again, while the latter would soon disintegrate into the primary elements from which it was formed in the beginning, i.e. into the earth, water, fire, air and sky element. This is called ‘Videha Mukti’ because it is obtained by discarding the gross body, and since it is the only one of its kind in the sense that reversion to the gross body is not possible even if one wants, it is also called ‘Kaivalya Mukti’.

The phrase ‘submit himself to the Supreme Being’ means to have a divine glimpse of Brahm who is said to have his abode in the area of the head around the Brahm Randhra. This is a symbolic depiction of the fact that Brahm stands for intelligence, thoughts, erudition, sagacity, enlightenment and wisdom which are the functions of the brain located in the head. It ought to be noted here that the Atma, the conscious soul, has its abode in the subtle space of the heart, the place designated as

the center for such eclectic virtues as compassion, mercy and kindness. This is also the location of the symbolic lotus present in the subtle heart where the Atma lives.]

76. By rupturing the suture in the skull, known as the Brahm Randhra, a successful practitioner of Yoga is able to have a divine glimpse of the supreme Pada, i.e. he is able to have a holy vision of the grand abode of the Supreme Being.

If unfortunately an ascetic becomes lazy or careless in his spiritual pursuit, or he becomes over confident of himself, he would not be able to have this divine vision or any tangible success in his efforts (76).

77. An aspirant is able to get the full auspicious benefits of doing Yoga if and when he successfully adheres to its strict tenets and obeys all its doctrines diligently and resiliently in all the three phases of time¹. That is, when he constantly practices Yoga sincerely and steadfastly without any negligence and callousness on his part, it is only then that he is entitled to reap its full benefits; otherwise not.

I (Shiva) have narrated this Yoga to you (Brahma) in brief (77).

[Note—¹The three phases of time when he is expected to be vigilant in doing Yoga are the following—(a) when he is a young adult, during his middle ages and during his old age—i.e. throughout his life; (b) during the three points of the day called the three Sandhyas, i.e. at dawn, at noon and at dusk; (c) the three points of time measured on a larger scale such as the past, the present and the future.

In other words, an expert ascetic is expected to be vigilant in doing Yoga, or constantly observing the strict tenets of meditation and contemplation no matter what time or phase of life he is passing through. For a wise ascetic, each moment is to be spent in doing Yoga for each passing moment is as precious as the one gone by and the one coming ahead. Not a second of life is to be wasted.]

78. When he is able to harness the stupendous powers and astounding spiritual strength inherent in Yoga, when he is empowered with Yoga's mystical and majestic powers after numerous births (or after a long period of time and prolonged and sustained practice)—it is then that all his sins and their evil consequences are destroyed; it is then that he is able to happily realise the quintessential knowledge of the ubiquitous supreme Ishwar, the Supreme Being called Brahm (78).

[Note—Yoga helps him to realise his own true 'self' and its stupendous glories and powers. It is already mentioned in verse no. 72 above that the primary condition for meditation and contemplation is to visualise that the Supreme Being is enshrined in one's subtle heart, and verse no. 71 says that he must use the Mantra OM for the purpose of it. This OM is a word symbol of Brahm, incorporating in its ambit the entire gamut of creation right from its beginning through its development and culminating in its conclusion, only to restart the cycle again. So this present verse is an extension of these two verses.]

79. When the above becomes a reality, it is said the ascetic has become a 'Siddha', i.e. his efforts to do Yoga have borne fruits for him and he has successfully accomplished it; he is rewarded by numerous spiritual and mystical powers collectively called the various 'Siddhis'. All his worldly fetters are broken and he is able to pierce through this hardened shell known as the world and find his true and final liberation and deliverance (much like a chick emerging from inside the shell of the egg to find freedom from the hellish and suffocating confines of the egg shell).

Now I (Shiva) shall narrate the process of doing Yoga (i.e. the exercises of Yoga) (79).

80. Only a person who has successfully been able to exercise control over his own two vital winds called Pran (breath) and Apaana (the vital wind that moves down in the intestines), i.e. one who is a successful practitioner of Yoga himself, should be made a guide and teacher of Yoga. [Obviously, this is a very practical advice because Yoga relies more on practice than mere philosophical understanding of metaphysical and spiritual concepts. It involves complicated postures and exercises, and for this an expert hand is needed to guide a new comer. If Yoga exercises are not done under proper guidance, they are very dangerous for the ascetic for they might result in serious injuries to the body. A person who does not know the pitfalls and the intricacies of Yoga, who is not well versed in the intricate detailed process of various steps involved in numerous Yoga exercises would be more dangerous if chosen as a guide than not doing Yoga at all.]

The aspirant should first obtain the Guru's (teacher's) blessings by serving him devotedly. [When the teacher is pleased with his disciple, the former would feel a sense of affection and have a moral obligation towards the latter, and would then be more sincere and willing to impart him full knowledge like he would be doing to his own son. Otherwise, the whole exercise would lack sincerity and commitment.]

The aspirant should now prepare to conquer the Prans (vital winds) himself (under the guidance of the teacher) (80).

81. The area of the body where the focus of his attention should be fixed has a length measuring twelve fingers-width, and breadth measuring four fingers-width. It is soft, supple and delicate, and white or grey in colour (81).

82. By carefully learning the process of activating the vital energies trapped inside the body from the wise and erudite Guru (teacher of Yoga), the aspirant should diligently make relevant efforts to control the vital winds forcefully (because the wind is an element that does not want to any harness to be put on it and so it is an uphill and arduous task to bridle it. The wind is like a wild horse that is very difficult to tame and control.

The Kundalini is a coiled subtle energy center having three and a half loops in the coil. It becomes straightened as a result of the process mentioned here (by which the vital winds are controlled and the latent energies are activated). [This process releases the trapped energy in the Kundalini.] (82).

83. The anus should be constricted (so that the Apaana wind does not escape through it during the pressure to be exerted for activating and straightening of the Kundalini) and the Kundalini should be jerked so that it is aroused from its dormant, hibernating or sleeping mode, and instead coaxed and activated¹.

If the aspirant is successful in doing so, i.e. if he is able to activate the Kundalini and harness its stupendous treasury of cosmic dynamic energy that lies latent in it in a dormant form, he is able to symbolically conquer death; he would have no fear from death. [This is because for one, he would have all his organs under his control, his body would be very healthy and toned up, he would not have to suffer from numerous ailments that afflict the body and which cause insurmountable torments for an ordinary man, and secondly, should he decide to finally discard the body and free himself from its limitations he would easily channelise all his vital winds up through the Sushumna Naadi with the aid of energy provided by the Kundalini and make his painless exit by rupturing the Brahm Randhra at the top of the

head. He would not have to suffer the normal horrors of a declining body and the final moments of death.] (83).

[Note—¹This phenomenon is like uncoiling a hose pipe full of very cold water during winters. The water and the pipe have been lying under frigid conditions for a long time and the pipe needs some amount of warming and vigorous shaking to uncoil it, soften it up and remove its rigidity, make it flexible so that its water content is released and it begins to flow again.

In the present case, the Kundalini is the subtle energy center that traps the dynamic energy of creation in the body of the individual. It is located at the lower end of the spine. Its mouth is closed by the Sushumna Naadi. The Kundalini is compared to a serpent whose mouth is shut by this Naadi. When the serpent is shaken and jerked into life, the hot breath of it would melt the clogging wax in its mouth and release the venomous gases trapped in this snake's elongated body. When the anus is shut tight, the heat in the lower bowls and abdomen create sufficient energy that would unclog the Kundalini and melt the wax sealing its mouth, thereby releasing its hitherto trapped energy which would then snake up the only opening available to it, i.e. the tubular Sushumna Naadi—see verse no. 86 of this Canto below. This released energy snakes up through this Naadi and reaches the other end of it at the top of the head (skull) in the area of the Brahm Randhra (the cranium).

The process of activating the Kundalini has been elaborately described in the book 'The Serpent Power' by Arthur Avalon & Sir John Woodroffe.

According to the Yogchudamani Upanishad, verse no. 36 of Sam Veda tradition, the energy of the Kundalini is located above/at the top of the 'Kanda' in the form of a coil having eight spirals. It covers the mouth of 'Brahma Dwar' (literally, the doorway leading to Brahma). It remains ever present, but dormant, in that place.

The Dyanbindu Upanishad, verse no. 69 of Krishna Yajur Veda tradition, which is Chapter 15 of this volume describes how to activate and ignite the latent cosmic energy present in the Kundalini. This verse is quoted here—"The person desirous of activating the Kundalini and releasing its subtle energy for his spiritual benefit as well as to empower him with great mystical and occult powers should sit steadily in the Padmasan posture. The palms of the two hands are placed one on the top of the other, face upwards and put on the heels of the two legs (which have already been folded in from the knee joint in such a way that the heels are just opposite the navel, the sole is pointed upwards and inwards towards the body, and the toes of the leg of left side rest on the thigh of the right side and of the right leg on the thigh of the left side). The chin is drawn in and held tightly near the pit of the throat below the Adam's apple.

While sitting in this posture, the practitioner should focus his mind on the patron deity of the ascetic, usually on Lord Shiva who is the supreme Brahm as manifested in the form of the 'pure self'. The Apaana Vayu (i.e. the wind in the lower part of the body, especially in the lower intestines and pelvic region) is drawn or pulled upwards, while at the same time the Pran Vayu (i.e. the breath moving in the upper part of the body, especially in the nostrils and lungs) is made to divert inwards or held from escaping. [This physical exercise is very difficult and requires a lot of practice and patience. It results in mixing these two primary winds in the body. This is effectuated when the Apaana wind is pulled up by the upwards tug of the Pran wind, and the latter is pulled down by the downwards tug of the former, resulting in a balancing effect.]

The net result of this exercise is that the practitioner is able to experience the astounding potentials of the released powers of the trapped subtle cosmic energy that was hitherto lying dormant in a hibernating state in the Kundalini. [When the two winds cross each other's path, they create enough force that shakes the Kundalini and unplugs its mouth to release the energy trapped inside its coils. This is like doing physical exercises in a gymnasium to unfold rigid muscles and tone them up.] (69).

The benefits of activating the Kundalini and the process do so have been succinctly described in Krishna Yajur Veda's Yogtattva Upanishad, verse nos. 81-84 which is Chapter 17 of this volume.

An entire Upanishad called the Yog Kundali Upanishad belonging to the Krishna Yajur Veda tradition is dedicated to this theme of activating the Kundalini. It is Chapter 27 of this volume.]

84. This is a very esoteric and secret knowledge that I have divulged to you in brief. One should sit in the Vajra Aasan¹ and constrict the upper part of the body. [That is, he should control the Pran or breath from escaping like the Apan wind was restricted by closing the anus in verse no. 83 above.] (84).

[Note—¹The *Vajra Aasan* is the following—the body is curved or arched backwards like a bow in such a way that the head touches the upturned soles of the feet. To give effect to this Aasan, one should sit on the ground with the two legs bent backwards from the knee and the soles pointing upwards behind the buttocks. The upper part of the body is slowly bent backwards until the rear of the head touches the upturned soles from behind. This posture is called Vajra after the weapon of the same name held by Indra, the king of Gods, which gives him invincibility in the entire creation. In other words, the practitioner of Vajra Aasan too acquires such great powers that he too becomes invincible and infallible. Refer Yog Kundali Upanishad, verse no. 6 in this context.]

85. The fire needs air to remain kindled, and that is why when one is able to control and harness the vital winds and concentrate their energy on the Kundalini, the dynamic energy present in a subtle form in the latter remains perpetually active; it is not allowed to subside and get doused; it is not allowed to flicker and die away.

The Kundalini has immense dynamic energy trapped inside it. The intensity of it is so powerful that it can effectively conquer all the three worlds (in a symbolic manner)¹ (85).

[Note—¹Here the term *conquering of the three worlds* have two connotations—(a) The three states in which the consciousness exists—i.e. the waking state called the Jagrat, the dreaming state called the Swapna, and deep sleep state called the Sushupta. This happens for the following reasons. (i) By controlling his sense organs during the waking state of consciousness, he has literally vanquished the material world which is the focus of attention of these organs; this world no longer disturbs him. (ii) Next, since he has controlled the mind and its sub-conscious, he remains free from their influence during the dreaming state. Since the dreams are the result of the sub-conscious mind at work and the latter has already been conquered, there is no question of his mind creating a world of dreams which he would not like to exist, or which is not according to his temperament and inherent nature. The mind would not dream dreams that the ascetic would not like to dream of. In other words, he has controlled the wayward mind and through it his dreams, because dreams are the playfield of the mind and the sub-conscious. (iii) When he has been able to conquer the first two states and crossed into the third state of consciousness, called the deep sleep state, both the gross body and the subtle mind are non-existent; they have no role to play now. But under ordinary circumstances, this state is very temporary for the man in a deep sleep state reverts back to the earlier two stages when the time comes for him to wake up to the realities of this material world where he lives. When it happens, the temporary bliss that he had obtained during the deep sleep state vanishes in thin air. But in the case of a realised and expert ascetic this does not happen for he remains perpetually in a state of bliss, ecstasy and oblivion, unconcerned with this artificial world of material objects driven by the mind and the intellect on the one hand, and by the sense organs of the body on the other hand. In

other words, he has crossed this third state of Sushupta, which is transient, by conquering it to proceed to the fourth state called Turiya, a state of bliss, ecstasy and happiness that is perpetual.

This is a metaphoric way of saying that an ascetic who is able to harness the energy of the Kunkalini by practicing Yoga has conquered the three worlds by not only controlling himself in his waking state by self restraint of his sense organs, but also controlling his world of dreams by controlling the sub-conscious mind, and then the higher existential state of consciousness called deep sleep. That is, he is in total control of his self and is like an emperor who is invincible for his enemies, the latter being the uncountable worldly detractions and inherent faults of character created by various Gunas that tend to mar his spiritual progress.

(b) The other interpretation of the term 'three worlds' refer to the stupendous mystical powers called the Siddhis (of which there are eight in number) that he gets by being successful in Yoga. Armed with these Siddhis, he can perform super-human tasks and achieve success in doing things that a normal emperor's army is unable to do. He can go anywhere he likes in the three worlds consisting of the terrestrial world where humans live, the nether world where subterranean creatures live, and the celestial world of Gods and Spirits. He can assume any form there, defeat even the strongest of enemies and the fiercest of animals, and even defeat death itself which is otherwise undefeatable. (Refer Yogtattva Upanishad, verse nos. 51, 73-75, 59-60 in this context which explicitly state this fact.)]

86. When the subtle energy of the Kundalini is stoked by the concentrated vital winds present inside the body (by doing various Aasans and as described in verse nos. 82-84), it rises up and snakes up the Sushumna Naadi. [This Naadi is the tubular duct whose lower end opens into the mouth of the Kundalini. So when the mouth is unclogged by heating the Kundalini by Apaana wind, the energy thus released naturally would enter this tubular duct.]

It is metaphorically said that it has entered the Chandra Mandal, i.e. the realm of the moon because the entrance of the vital winds and the energy into the Sushumna Naadi causes a sense of titillation and ecstasy for the ascetic. Such emotional feelings as titillation, joyfulness, ecstasy, exhilaration, elation and exultation are associated with the Moon God.

It is said that now it pierces through the Brahm Granthi¹ (86).

[Note—¹The word *Granthi* means a knot. It also refers to the ganglions that help to coordinate the different nerves just like major junction boxes in the network of electric wires in a building. The word Granthi also refers to the glands that control all the major nerves and veins in the body. Just like a knot binds something, these Granthis of the body bind the subtle energy present in the body from being released. If we treat them as representing the ganglions then it means that by the process of Yoga in which the subtle energy of the Kundalini is released in the spinal cord, or the Sushumna Naadi to be precise, these hitherto clogged and inactive ganglions are reactivated and they begin to function in prime shape. If we consider them as glands then it would mean that the functioning of these glands is restored and this in turn helps the body to work properly.

The Brahm Vidya Upanishad of Krishna Yajur Veda, verse nos. 70-71 describes the three main Granthis where these three Gods have their symbolic abodes in the body of the individual creature—viz. Brahm Granthi, Vishnu Granthi, and Rudra Granthi.

According to Tantra literature, there are three Granthis—viz. Brahm Granthi, Vishnu Granthi and Rudra Granthi. They obstruct the upwards movement of the energy or power of the Kundalini. Each of the six Chakras (whirling energy centers of

the body) has two Granthis on either side. The Brahm Granthi is situated between the Muladhar Chakra and Swadisthan Chakra.

Refer also to Yog Kundali Upanishad, Canto 1, verse no. 67-74 of the Krishna Yajur Veda tradition which describes how the energy of the Kundalini passes through the various Granthis and reaches the top of the head. This Upanishad is Chapter 27 of this volume.]

87. Then the energy of the Kundalini pierces through the Vishnu Granthi¹ and establishes itself in the Rudra Granthi². At this stage, the aspirant should practice the Kumbhak phase of Pranayam³ repeatedly and replenish the strength of the vital winds present inside the body. [This is made possible because the inhaled air which is rich in oxygen is first sucked in through the nostrils during the Purak phase of Pranayam. It is then allowed to stay inside the body for some time during the Khumbhak phase of Pranayam to enable it to oxidise all the tissues and remote corners of the body besides rejuvenating the vital winds of the body. The toxic gases which were earlier trapped inside the different parts of the body have been yanked out due to the heating of the body by Pranayam, activating the Kundalini and holding the Apaana wind from escaping from the anus by closing the latter. These toxic gases, such as carbon dioxide etc., are then collected and exhaled during the Rechak phase of Pranayam.] (87).

[Note--¹The *Vishnu Granthi* is situated between Manipur and Anahat Chakras.

²The *Rudra Granthi* is located between Vishuddha Chakra and Agya (Gyan) Chakra. The energy or cosmic divine powers of the Kundalini has to pierce through these three knots before it can reach the Sahasraara Chakra at the top of the head.

³The word Pranayam refers to control of the breath and *Kumbhak* is the phase of Pranayam when the inhaled air is held inside the body for a certain pre-fixed time before being exhaled.]

88. The aspirant should then practice the piercing of the 'Surya Mandal' or the realm of the subtle sun in the body. By doing this successfully he finds peace, calmness and fulfillment. This is brought into effect by doing the Kumbhak phase of Pranayam four times. [This is a reference to the fact Kumbhak would have resulted in his body becoming light as all the toxic gases are by now eliminated and all the tissues are well oxidised and charged. The body feels rejuvenated and fresh. The sun is a cosmic reservoir of fire and heated gases. The Khumbhak phase of Pranayam is compared to this sun because like the latter, the body of the practitioner acts like a pitcher in which the heat is trapped along with the vital airs. This result in a virtual cauldron of fire and the body symbolically acquires the same properties as the sun—it glows radiantly, gives out a shine that forms a radiant halo around it, and it acts like a center around which all life revolves much like the planets going round the celestial sun. Even as no impurity can ever tarnish the sun, no worldly impurities and imperfections ever affect the purity of the Atma and the body of a practicing ascetic. His body is not an ordinary mortal gross body like that of ordinary people but is a divine entity empowered by spiritual strength and cosmic energy much like the sun in the sky.] (88).

[Note—Refer verse no. 73 of this present Canto 1 in this context. Refer also to Yog Kundali Upanishad, Canto 1, verse nos. 85-87.]

89. Having pierced through the three knots (as mentioned in verse no. 86-87) which had been acting as a millstone around his neck, tying him down and preventing the stupendous divine energy of the Kundalini from reaching the Brahm Randhra, the aspirant is now freed from all fetters and becomes eligible to attain Brahm. [That is,

now he can enjoy the extreme bliss and happiness which comes with self-realisation and Brahm-realisation.]

Now I (Shiva) shall narrate the signs of such an acclaimed and realised spiritual aspirant (89).

90. A spiritual aspirant should stay in a lonely and calm place. He should eat less and concentrate his energy on spiritual pursuit, such as meditating and contemplating upon the various aspects of Pran and other metaphysical concepts which form the quintessential path that can lead him to the elixir of eternal life. It is an unmatched remedy for all the worldly ailments—both physical and spiritual—that had been tormenting him in the past (90).

91. The practitioner of Yoga should do Purak (inhalation of air/breath) through the Surya Naadi (the Pingla duct passing through the right nostril), withhold this breath inside the body according to the prescribed method of Yoga during the second phase called Kumbhak, and then do Rechak with it (i.e. exhale it) through the Chandra Naadi (the Ida duct passing through the left nostril) in the third and final phase of Yoga (91).

[Note—The three phases of Pranayam done to unfold the trapped energy of the Kundalini have been described in almost a similar fashion in Yog Kundali Upanishad, Canto 1, verse nos. 20-31.]

92. This form of Yoga involving the Surya Naadi (the right nostril) should be repeatedly done as it is able to eliminate a number of bodily ailments, such as those related to the stomach and abdomen as well as diseases associated with worms in the body (92).

93. In the beginning of the process, the practitioner should inhale full breath through both the nostrils and pass it down the body and press it out near the Kundalini. In other words, full breath should be inhaled so that the abdomen is filled with wind, and then the abdominal walls are to be pressed hard so that whatever trapped wind there is in the intestines is eliminated as flatus passing through the anus. [This is a sort of preliminary and preparatory stage for the next phase of Pranayam involving holding in the abdomen of the inhaled wind, or doing Kumbhak.]

Then the inhaled wind or breath that had been earlier pulled in through the Pingla Naadi (right nostril) should be held in the abdomen and finally expelled or exhaled out of the body through the Ida Naadi (the left nostril) (93).

[Note—Refer Yogtattva Upanishad, verse nos. 37-42.]

94. This exercise helps to remove the diseases associated with cough in the throat. The body's warmth is enhanced indicting the rejuvenating of the fire element present inside it. This dries up the excess water content of the Naadis, hence reducing the amount of mucous etc. present in them and other channels of the body, such as the throat. This also helps to remove the various faults and impurities of the various essential elements of the body which are fluid in nature, such as blood, lymph, semen, the different enzymes, hormones and other such vital secretions of the many internal organs of the body. [This cure is effected by their being heated by the body's rejuvenated fire element, and the numerous faults associated with excessive presence of water inside the body such as odema etc. are also taken care of.] (94).

95. This all-powerful 'Kumbhak Pranayam', i.e. holding of the inhaled breath, can be done effectively even during walking as it can be done while sitting.

If it is done while walking, the inhalation is to be done through the mouth (by opening the mouth and taking in a big gasp of air, instead of through one of the nostrils as done during sitting Kumbhak). After holding this wind in the abdomen for a certain fixed time, the exhalation is to be done through the nose (by closing the mouth) (95).

96. This process helps to cool the body. It helps to overcome the problems caused by excessive bile (which is hot in nature) as well as hunger and thirst.

The practitioner should pump in air in his chest just like an ironsmith pumps it in his furnace where he melts the iron (96).

[Note—A close reading would show that the wind should be pulled in with full intensity through the mouth, held in the stomach for sometime and then expelled through the nose with all the strength that one can muster. Even a trial of this exercise would prove its effectiveness—it completely oxidises all the tissues of the body and it feels active and rejuvenated after this walk instead of feeling tired and fatigued. The expulsion of the wind through the nose ensures that its congestion is removed and any trace of mucous clinging to the nostrils is blown out, thereby cleansing the air duct and facilitating unhindered flow of the Pran wind in and out of the body. This verse is obviously 'Yoga in action'!]

97. Coming back to the normal mode of doing Pranayam, i.e. while sitting, one should continue to do Rechak (exhalation) and Purak (inhalation) till the time he is not tired. The inhalation is to be done through the Surya Naadi (i.e. the Pingla Naadi implying the right nostril) (97).

98. [If the inhalation is done through the Surya Naadi or the right nostril, then obviously—] The Rechak Pranayam, i.e. the exhalation of the wind, should be done through the Chandra Naadi (the Ida Naadi, implying the left nostril).

This helps to calm down the bad effects of disturbed Vaat (mucous), Pitta (bile) and Vaayu (wind) in the body. It results in enhancing the strength of the latent fire element in the body; it is kindled and stoked to remain active and warm (98).

99. This above-mentioned process helps to activate the Kundalini and remove the problems (ailments/diseases) of the mouth. It is auspicious and gives comfort to the practitioner. It clears the Brahma Naadi (the Sushumna Naadi) and eliminates the numerous diseases of the mouth such as accumulation of mucous etc. (99).

100. The 'Bhastra Kumbhak' (inhalation through the mouth and then holding the wind in the abdomen) should be done as much as possible. While doing Pranayam, the aspirant should sit comfortably and steadily in one of the Asanas (sitting postures). This helps to unravel the secret of the three Granthis of the body¹ (100).

[Note--¹In other words, by doing Pranayam properly one is able to open the knots present at strategic points in the body. These knots, called the Granthis, act like blocks that impede the free flow of energy, vital stimuli and nutrients in the body through the various Naadis (the network of various nerves and veins). Yoga exercises help the body by untying these knots, resulting in reinvigorating the body. The three Granthis have been described in verse nos. 86-87 of this Canto above.

The Bhastra Kumbha has been explained in detail in Yog Kundali Upanishad, Canto 1, verse nos. 32-39.]

101. Now I shall narrate about the three ‘Bandhs’ (closures). By practicing Pranayam that helps to do them on a daily basis, one is able to win control over the vital winds of the body (101).

[Note—Essentially this verse means that the vital winds present inside the body would escape during the practice of Pranayam if certain exit points are not closed tightly. This closing is called ‘Bandh’. The various Bandhs have been described in Upanishads dealing with Yoga practices, the chief being Yogchudamani Upanishad of Sam Veda tradition (verse no. 46-51), Dhyanbindu Upanishad (verse no. 73-78^{1/2}), Yog Kundali Upanishad, Canto 1, verse nos. 47-52, and Yogtattva Upanishad (verse no. 112-128) of Krishna Yajur Veda tradition.]

102. The process of Kumbhak helps the ascetic to break through or overcome all the four hurdles¹ that he faces in his spiritual endeavour, hurdles which impede his progress and create obstacles in his path to success. Kumbhak should be accompanied by practice of the three Bandhs that I (Shiva) shall describe to you (Brahma) now (102).

[Note—¹The four hurdles of Yoga are the following— Though it is not mentioned clearly what these four hurdles are, they are the following—1 gross body with its external organs of action and perception + 1 Mana or mind + 1 Buddhi or intellect + 1 Ahankar or ego, pride and a false sense of self-importance = 4.

From the perspective of Tantra philosophy, the four hurdles that Kumbhak helps the ascetic to overcome so that his Pran wind can provide him liberation and deliverance are the four ‘Peeths’ described in verse nos. 170-175 of this Canto 1. They are the Kaam Roop Peeth, the Purna Giri Peeth, the Jalandhar Peeth, and the Uddiyan Maha Peeth.]

103. The first is called ‘Mool Bandh’, the second is ‘Uddiyan Bandh’, and the third is called ‘Jalandhar Bandh’. Their signs are as follows (in the verses narrated below) (103).

104. The anus is pressed hard by the heels of the leg, and at the same time it is constricted voluntarily using the muscles of the rectum. By repeatedly doing this, the vital wind (i.e. the Apaana Vayu) is diverted upwards. [That is, when the anus is closed, the intestinal wind called the flatus would not be able to pass down and out through it, and naturally then it would force itself in the upward direction.] (104).

105. When this is effectively done, the Pran (the wind that is located in the upper part of the body; the breath), the Apaana (the wind in the intestines that has been blocked from passing out by blocking the escape route through the anus), the Naad (the cosmic sound that is heard when one concentrates and does meditation) and its accompanying Bindu (the dot present on the top of the symbol of Naad, symbolising the focal point in the cosmic bowl from where this sound is generated and where the mind is supposed to be focused during meditation so that Naad can be heard)—all these four are made to unite due to Mool Bandh. This exercise of Mool Bandh helps this to become a reality; the practitioner becomes an expert in uniting them by doing the Mool Bandh successfully. There is no doubt about it (105).

[Note—Refer verse no. 157 below of this Canto 1, as well as Yog Kundali Upanishad, Canto 1, verse no. 46.]

106. The next Bandh is called ‘Uddiyan Bandh’. It should be done at the end of the Kumbhak phase of Pranayam but before the Rechak phase. [That is, it should be done

when one prepares to exhale the wind which was held inside the body during Kumbhak.]

This helps the Pran (the vital wind force in the body, referring to the breath and other vital winds) to get established in the Sushumna Naadi (106).

107. Since this is done while the heated air is still inside the body (because it is done prior to exhalation), it helps to literally 'lift' the vital airs inside the Sushumna Naadi, and hence wise ascetics have given it this name 'Uddiyan', meaning to 'fly or lift from the ground'. Elderly ones assert that it is easy to accomplish it (i.e. it is not as difficult as it sounds) (107).

[Note—Refer Yog Kundali Upanishad, Canto 1, verse no. 47-50.]

108. One should not be lazy or careless in doing this Mool Bandh. By practicing it, even old people can become young. Effort should be made to strengthen the area around the navel with this Bandh (108).

109. By practicing this continuously for a period of six months one is able to conquer death. [That is, his body is sufficiently well tuned that it can withstand the onslaught of old age and its attending problems with great ease and resilience.]

The third Bandh is called 'Jalandhar Bandh'. This should be done at the end of the Purak phase of Pranayam. [That is, it is to be done when the inhalation process is complete.] (109).

110. During the Jalandhar Bandh, the throat is constricted, resulting in creating of an obstruction in the path of the wind (i.e. the breath). It should be done in a determined manner by constricting the throat, and concentrating the vital wind in the region of the heart (or the upper part of the chest) (110).

111. This Jalandhar Bandh fulfills the thirst of the practitioner for Amrit, the elixir of eternity and bliss.

The throat is constricted and the wind inside is pushed downwards (111).

[Note—Refer Yog Kundali Upanishad, Canto 1, verse no. 51.]

112. Around the center of the neck, this wind is made to expand and enter the Brahm Naadi located at the back of the neck. [This Brahm Naadi is the Sushumna Naadi going up to the head through the spinal cord behind the throat, and entering the head region from the base of the skull.]

At this stage, the ascetic should sit in the Vajra Aasan (refer verse no. 84), and stir the Kundalini into activity¹ (112).

[Note--¹He should shake the Kundalini by voluntarily moving his muscles in the lower abdomen and the pelvic region. It ought to be noted here that when one has to do any strenuous exercise or make any strenuous effort, such as for example lifting a heavy weight or pulling something heavy with a rope, he has to hold his breath and tighten his abdominal muscles to prevent the flatus from escaping through the anus in order to garner sufficient strength and stamina to perform that arduous task in hand. This is a thing that anyone can experience any time. This is done almost involuntarily by the body in order to collect itself to face the ordeal in front of it. The same effect is brought about here in Yoga, but this time it is done voluntarily, forcefully and systematically.]

113. He should focus on activating the energy of the Kundalini like the ironsmith ignites his furnace by pumping air into it through the bellows¹.

This helps to pierce through all the three Granthis². It is just like the case when a red hot iron rod is pushed inside the bamboo stalk, resulting in the knots on the bamboo being burnt from the inside and a hole bored through them (113).

[Note—¹This pumping is done when all the exit routes for the vital winds have been effectively blocked by doing the three Bandh exercises—viz. the Mool Bandh, the Uddiyan Bandh and the Jalandhar Bandh. The trapped air is heated and then the Apan wind is made to enter the Kundalini. This is aided by exercising the muscles of the lower abdomen and pelvic region, moving them so as to felicitate the opening of the mouth of the Kundalini and allow the pressurized air to sneak into the bore-hole.

²The Granthis have been described in verse no. 86-87 of this Canto 1.]

114. This is the way how the vital winds are used to pierce through the various Granthis located at the rear part of the body (along the vertebral column). When this happens, a sensation of pricking is felt which resembles the bite of an ant (114).

115. The practitioner should practice to hold the vital wind in the Sushumna Naadi. With this, he is successful in piercing through the Rudra Granthi (see verse no. 87) and becomes a personification of Lord Rudra (one of the forms of Lord Shiva). [In other words, by harnessing sufficient energy to untie the Rudra Granthi, the ascetic assumes spiritual and other mystical powers of Yoga that makes him senior and most respected amongst ascetics, and this is metaphorically said when he is compared to Lord Shiva who is the patron deity of all ascetics.] (115).

116. When the Chandra Naadi and the Surya Naadi (i.e. the Ida and Pingla Naadis corresponding to the left and right nostrils respectively) are brought in harmony, i.e. when they are equally de-clogged and breathing through both of them is done equally easily¹, the aspirant is deemed to have pierced through the three Granthis symbolising the three inherent Gunas (i.e. the three qualities of Sata, Raja and Tama) that are present in all persons².

Having managed to pierce through this barrier, the ascetic attains a state of existence that transcends it, i.e. that is not conditioned by any of the three Gunas. Therefore he becomes an embodiment of Lord Shiva himself; he inculcates in him all the auspicious virtues possessed by Shiva along with all the mystical powers, called the various Siddhis, that accompany success in Yoga (116).

[Note--¹Until the time when all the three Granthis are not pierced and the vital wind has not entered the Sushumna Naadi, the person is not able to breathe freely from both the nostrils. The very fact that the passages of the two nostrils are free and allow a free way to the inhaling and exhaling exercise proves that all the toxins in the body have been eliminated and the person has reached the stage when he has successfully achieved the aim of doing Pranayam—to detoxify the body and prepare it for the ultimate goal of Yoga, which is to make one experience the inherent divinity and the shine of the pure consciousness present inside the person's own self. This shine of the conscious 'self' and the glory of its divinity were marred by the various faults and impurities that had wrapped the person's true 'self' in a dark veil of delusions and ignorance. The various Gunas are the paints that had virtually obscured the real colour of the soul. When they are scrapped off by means of Yoga, the original shine of the pure consciousness comes to the fore. Refer also to verse nos. 56, 68 and 133-134.

²A person who is spiritually inclined and has a clear conscience is the person who is a true Yogi (a true ascetic) and is the one who has symbolically vanquished the

three Granthis representing the three Gunas. These Gunas are compared to ‘knots’ or Granthis because they are impediments in realisation of one’s natural qualities and powers of the soul; they prevent the inborn divinity and auspicious spiritual nature of the creature to come to the fore. These Gunas act as conditioning elements, influencing the creature and its overall character. These three basic Gunas or qualities that are present in all the persons in different ratios decide his individual temperament, behavioural patterns, thought processes, and other character and personality traits. The best of the three is Sata which refers to noble traits of auspiciousness and righteousness; a man having a greater proportion of Sata would naturally be a holy, pious and a spiritually inclined man. The second is Raja which makes him inclined towards the world and its mundane affairs and frantic life; he would like to enjoy the world and the comforts provided by its material and sense objects. The last is the Tama quality which makes him pervert, sinful, of a low mental caliber, and very selfish. Such a man is said to be covered by a dark veil of delusions and ignorance.

This conditioning by the varying ratios of the three Gunas results in the creation of myriad variety of characters and temperaments in the creatures, whereas the Atma, the pure conscious soul in all living beings, is the same in all of them. This ‘piercing of the three Granthis’ is a symbolic way of vanquishing of these three Gunas, or being able to overcome their influences. A person who is free from their fetters is a free man. This is equivalent to his obtaining Mukti, or getting liberation and deliverance from all conditionings effects of and influences exerted by all extraneous elements which mar his own spiritual nature.]

117. This state of accomplishment in Yoga when the two divine forces of Nature are united, i.e. when the Shiva element (represented by the Chandra Naadi or the Ida Naadi) and the Shakti element (represented by the Surya Naadi or the Pingla Naadi) are united by the process of Pranayam done as matter of routine during Yoga, the ascetic experiences extreme sense of elation, ecstasy, bliss and joy which is comparable to the one experienced by a thirsty elephant who is able to drink cold water through his trunk to his heart’s content (117).

118. The Sushumna Naadi is like a strong duct which is as robust as Vajra (the sturdiest and the strongest material in existence from which Indra, the king of Gods, had his weapon crafted). The practitioner holds the vital winds (the Apaan wind along with other winds collected from the other parts of the body, such as Vyan, Samaan and Udaan) in this Naadi. At that time, a scintillating display of light is witnessed there in this Naadi which symbolically resembles the simultaneous appearance of twenty-one glittering gems (118).

119. All these splendid twenty one gems (scintillating spots of brilliant light like sparklers from a fire-work display) appear to be threaded together in the Sushumna Naadi like a garland of splendid gems.

The spiritual aspirant proceeds on this path towards obtaining Moksha, or finding his liberation and deliverance for his ‘self’. Hence, this Sushumna Naadi is regarded by ascetics as the royal highway to obtaining Moksha, and therefore to acknowledge this fact they have called it the ‘Vishwa Roopani’, or the personification of the best way to obtaining Moksha in this world. [In this sense, the scintillating light would be like the lamp-posts along this highway which not only illuminates the way for the ascetic as he progresses in his meditation, but also act as signposts to indicate the level of success he has attained.] (119).

120. Just like the sun and the moon which move continuously and in a systematic manner all through the day and the night respectively in a regular cycle, the wise and expert ascetic ensures that his Pranayam and its accompanying exercises (Purak, Kumbhak and Rechak) continue uninterrupted and unhindered day and night.

This constant practice of Pranayam enables him to retain the wind during Kumbhak for a prolonged period, as the body would have become accustomed and trained to retain it involuntarily. [In other words, after a long practice, the Kumbhak phase would become so natural for him that while he sleeps, his natural breathing would stop. The wind drawn in would be held inside the body without causing any discomfort to the ascetic all the while he sleeps. For all practical purposes, his body would lie like dead because his breathing function—consisting of inhalation and exhalation—has stopped and the abdominal muscles show no movement.] (120).

121. This process of Kumbhak should be repeatedly done by inhaling air/wind through the left nostrils (called the 'Pashim Dwaar'). This is a shortened form of full Kumbhak. [The full form would be to inhale through one nostril and exhale through the other nostril in the first round, and then reverse the process by inhaling from the second nostril and exhaling through the first. This cycle is alternated with each inhalation and exhalation.] (121).

122. When the air is drawn in through the left nostril, it fills the entire body during the phase of Kumbhak. [In other words, the breath oxidises all the tissues of the body while it is held inside during Kumbhak.] It is then expelled during the Rechak phase of Pranayam. [Though it is not mentioned here, the exhalation is done through the right nostril. The only difference between this brief form of Pranayam and full version of Pranayam is that in the former case the inhalation is once again done by the left nostril and not through the right nostril as would be the case in regular and full-fledged form of Pranayam.] (122).

123. No matter where the body is located, i.e. in whatever condition it is and whichever place it is in, the wise and erudite ascetic is able to successfully control both his body and mind to concentrate on doing Yoga. [The necessity of a secluded place is an ideal situation, but sometimes it is not practically feasible. This verse addresses this problem.]

Only such an ascetic is truly able to attain success in Yoga. [This is because he has been able to exercise real and full control over his senses and prevent them from getting distracted by the cacophony created by the mundane world and its frantic life in which he is forced to live due to various existential circumstances.]

He is deemed to be eligible for and has the right competence to obtain Mukti (liberation and deliverance). He lives in this world without a trace of Ahankar (ego, pride and haughtiness of his spiritual achievement or mystical powers that accrue to him as a reward of Yoga). This makes him happy and blissful. [This is because Ahankar is at the root of all problems that come in the way of blissfulness and happiness in this world. It creates in its wake a chain of jealousy, ill-will, spite, anger, emotional and sentimental restlessness etc, never allowing the person peace at any time.]

Those who are stupid enough to take repeated births and die consequentially are self-destroying their chance for emancipation and salvation. Such people can never hope to step on this eclectic and divine path of Yoga (123).

124. As one progresses further in his Yoga practice, he will reach a stage when his sub-conscious has been sufficiently eliminated from existence, i.e. his sub-conscious mind ceases to function and recollect any sensations pertaining to the body or the sensory inputs originating in the external world. In this stage, the practitioner does not even feel the distinction between the various winds, i.e. all his Pran Vayus become indistinguishable from one another; they merge into one another to become one single 'air element'. [That is, he is unaware of the fact that he is breathing or not; whether the wind held inside has been expelled or not. This is the perpetual state of Samadhi, the trance-like state of oneness of existence.]

When he has reached this stage, if he still seeks the guidance of scriptures that deal with Yoga or even consults a Guru no matter how expert he is, the ascetic cannot hope to obtain Moksha (final liberation and deliverance from the fetters of the body, and with it from the world). [This is because he is still doubtful and skeptical of his success; he is not confident and certain of himself. If anything is done without being certain of its effectiveness and the fruits or rewards that come on its successful completion, then it is natural that it is done half-heartedly and the result would not be up to the expected mark.] (124).

125. Even as the leech sucks out blood from the body, the Brahm Naadi (the duct leading up to the head; the Sushumna Naadi) of an expert ascetic who is constantly doing the various Yoga exercises as enumerated in this Upanishad, is able to weaken all the elements of the body (and that is why the body becomes thin and emaciated) (125).

[Note—When an ascetic has ventured to do this stern form of Yoga in the first place, he is mentally ready and prepared to shed the body voluntarily in order to obtain liberation and deliverance from its cumbersome burden. He does not wish to suffer the horrors of old age and a failing body and the intense pain of the last moments of life, and wait for them to happen in the normal course by hoping to retain the body, for then it would be too late for him. So naturally he is not bothered by this gross body becoming weak and thin. He has more than compensated for this by a robust Spirit and the attainment of majestic mystical powers called the various Siddhis.]

126. When practice of the various Bandhs and other aspects of Yoga (such as Pranayam) are done regularly, the Chitta (the sub-conscious mind) and the Atma (pure consciousness) become one; they virtually merge into one another. Then the Bindu does not fall; it is not expelled; it is not destroyed and ruined (126).

[Note—The word 'Bindu' literally refers to the 'dot' on the top of the symbol for the divine Mantra OM, but more practically here it refers to the 'semen' which represents the distilled and concentrated form of life-injecting vitality and stamina present in the body of the practitioner. Usually when strenuous exercises are done by a person of a weak physique, this semen is involuntarily ejected. So this verse stresses the point that this does not apply to the ascetic who also does strenuous exercises and has become physically weak in the gross body, but it does not imply weakness of his internal organs or any loss of his inherent strength, vitality and stamina.]

127. In the higher stages of Yoga when the practitioner does not have to do Rechak (exhalation) and Purak (inhalation) but remains in the Kumbhak state of filled air (i.e. when he has learnt to control his breathing for prolonged periods), he begins to hear various sounds collectively called Naad¹. This is the cosmic sound which is heard by him. During this stage, he also tastes the Amrit, the elixir of eternal bliss, dripping from the Chandra Mandal². [The 'Chandra' is the moon which is supposed to be the

heavenly pitcher full of this Amrit where it was stored by the Gods for their own use. It is like the honeycomb full of sweet honey and so full that the honey leaks and drips for anyone to pick up its drops.] (127).

[Note—¹Refer verse no. 147 of Canto 1 below.

²Refer verse no. 146 of Canto 1 below.]

128. Then thirst and hunger along with all other shortcomings of the body are eliminated. The ascetic remains perpetually submerged in his own state of eternal consciousness (128).

129. It is out of great affection for you (Brahma) that I (Shiva) have narrated these signs of Yoga.

The four broad types in which Yoga is divided into are basically the Yoga which has been outlined by me. However, these four types of Yoga are the following—Mantra Yoga, Laya Yoga, Hath Yoga and Raj Yoga (129).

[Note—Refer Yogtattva Upanishad, verse no. 19.]

130. All these four types of Yoga are in fact the same thing, and hence the combined form of Yoga is called 'Maha Yoga', i.e. the great Yoga. It incorporates all the details of these four independent forms of Yoga. [In other words, a comprehensive Yoga would be one in which all the four forms are an integral part.] (130).

131. Usually everyone uses the Mantra 'Hans-Hans' to do Japa (repetition). But by the grace of a wise teacher the ascetic realises that the real Mantra that ought to be repeated during the course of Yoga in which the wind rises up in the Sushumna Naadi is 'So-a-ham, So-a-ham'¹ (131).

[Note—Refer Canto 2, verse nos. 5, 8-11 and Canto 6, verse no. 20, 51-54 of this Upanishad which highlight the importance and significance of this Mantra. Briefly this Mantra means 'That is me'; or 'that supreme transcendental entity in none but me'. The word 'me' refers to the awareness of the pure consciousness and does not refer to the physical gross body of the ascetic. The word 'Hans' literally means a Swan which is considered as the wisest bird and is used as a metaphor for something that is extremely pure and divine. Hans is the vehicle of Saraswati, the goddess of wisdom and knowledge, as a symbolic iconographic depiction of the fact that the auspicious virtues of enlightenment, wisdom, erudition and possession of truthful knowledge of the reality are borne by an entity that is called Hans. In the realm of metaphysics, this Hans refers to the Atma, the pure and conscious 'self' of the creature. That is why this Mantra 'Hans-Hans' is same as 'So-a-ham'; the latter is the implied and essential meaning of the Mantra 'Hans'. Since a Yogi is expected to choose the best and leave aside the not-so-important aspect of anything, he chooses the Mantra 'So-a-ham' over the Mantra 'Hans'.

There are a number of Upanishads that describe the Mantra 'Hans'—viz. (a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyan Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 2, verse nos. 9-11, Canto 6, verse no. 20, 52-54; Yogtattva Upanishad, verse no. 99. (b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93.

The Mantra *So-a-Ham*—This Mantra is extolled in a number of Upanishads as a synonymous of the Mantra 'Hans'. For instance—(i) Sam Veda = Yogchudani

Upanishad, verse no. 83. (ii) Krishna Yajur Veda = Braham Vidya Upanishad, verse no. 34, 78-79.]

132. [This verse describes what is known as Mantra Yoga.]

The Yoga done with the aid of this eclectic Mantra 'So-a-ham' is the one which is called 'Mantra Yoga'. The divine effects of this Mantra is witnessed through the 'Paschim Dwaar', the left nostrils (from where the elixir of bliss and happiness, called Amrit, drips and tasted by the ascetic—refer verse no. 127). [In other words, when the ascetic does Pranayam using the left nostril to draw in air as described in verse nos. 121-124 above, the Mantra which he should use is So-a-ham. See also verse no. 143 and 145 of this Canto 1 below.] (132).

133. [This verse describes what is known as Hath Yoga.]

'The letter 'ha' of the Mantra So-a-ham stands for the sun and its divine glories. The letter 'sa' of the Mantra So-a-ham stands for the moon and its divine glories'—when the ascetic does the full exercise of Yoga with this eclectic understanding and faith, he symbolically establishes a union between these two divine entities because they are part of the same Mantra. Such Yoga is called 'Hath Yoga' (133).

[Note—Refer verse nos. 56, 68 and 116-117 in this context.]

The letter 'Sa' is a silent sound made while one draws in breath, i.e. does Purak, and since this is done through the Ida Naadi, also called the Moon Naadi passing thorough the left nostril, it represents the Moon God. On the other hand, the letter 'Ha' is the silent sound made while exhaling breath through the Pingla Naadi, called the Surya Naadi passing through the right nostrils, and hence it stands for the Sun God. In other words, the letter 'Sa' is the Mantra for the Moon God and 'Ha' is the Mantra for the Sun God. During the Kumbhak phase of Pranayam, both exhalation and inhalation are stopped and a mixing of the air takes place inside the body. This would be tantamount to bringing together of the Moon and the Sun. The Sun is hot while the Moon is cool; therefore this process neutralizes them both and brings about evenness and homogeneity. All restlessness, agitation, state of flux and fidgeting are stopped. A state of profound calmness and serenity is established. This process of doing Pranayam by inhaling through the left nostril symbolising the Moon God and exhaling through the right nostril symbolising the Sun God has been outlined in Krishna Yajur Veda's Yog Kundali Upanishad, Canto 1, verse nos. 9-17. It is called 'Saraswati Chaalan'.]

134. When a union between the individual Atma (soul) of the practitioner of Yoga, called the 'Kshetragya'¹, and the Parmatma (the supreme Soul) is brought about by this practice of Hath Yoga², then this Yoga eliminates the very cause of all spiritual and other problems that have been tormenting the ascetic till now³ (134).

[Note—¹The word *Kshetragya* means one who is the Lord of a particular realm and knows about everything there; he is responsible for everything being done in his realm and is almost like a commander or magistrate for that area. Since the Atma, or the pure conscious soul of a person is the supreme authority as far as that individual person is concerned, it is not only responsible for what that person does but is the true identity of that person much like the magistrate or the commander represents the king or the government in his person and all his actions are deemed to be done on behalf of the king or the government though he is an independent person.]

²The *Hath Yoga* is the Yoga that teaches how to bring about the union of Pran (the breath, the vital wind that resides in the upper part of the body) and the Apaana (the wind that moves down in the body and helps in digestion and excretion, the vital wind that lives in the lower part of the body) by means of strict following of the eight

fold path of Yoga such as observance of Yam, Niyam, Aasan, Pranayam, Pratyahar, Dharna, concentration and visualization of the presence of the Supreme Being in the point of the forehead where the root of the nose meets the middle of the eyebrows, and Samadhi. It teaches the practical aspects of spiritual Yoga and includes various exercises—Bandhs, Aasans, Mudras and Pranyam.

³The union of the individual soul and the supreme Soul is the main spiritual objective of Yoga. It therefore strives to bring about a meeting of the Kshetragya and the Parmatma. All problems that the creature faces is due to the fact that it has forgotten its high pedigree and origin; it has forgotten that it is the Supreme Being personified. This is because the pure consciousness of the individual and the cosmic consciousness is the one and the same, albeit viewed on different scales—the former is at the micro level while the latter is at the macro level of existence. Had the creature been aware of this basic tenet, there would have been no question of it getting bogged down and entangled in worldly delusions and their attendant problems. To remove this apparent artificial dichotomy is the main spiritual purpose of Yoga. As has been outlined in note of verse no. 124, 133 above, this union is symbolically brought about in the Kumbhak phase when not only the inhaled and exhaled winds but all other vital winds present inside the body are mixed and homogenized into one ‘air element’. This removes artificial distinctions between them and a universal harmony is established in their functioning. This unification is symbolised as a union between the Atma and the Parmatma.]

135. Persistent and consistent practice of Hath Yoga results in Laya Yoga¹, i.e. it helps in the merger and dissolution of the individual soul of the creature, called the Jiva, with the supreme Soul of creation known as Brahm; it helps to bring about oneness between them. The Chitta (the sub-conscious mind and its power to think, remember and act as a referral bank of the intellect) dissolves in the Atma, and the vital winds in the body lose their inherent restlessness and become calm and quietened² (135).

[Note--¹The word ‘Laya’ means merger and getting dissolved. Hence, *Laya Yoga* refers to the merger of the individual soul with the supreme Soul of creation as described in verse no. 134 above. Refer also to Yogtattva Upanishad, verse no. 23 in this context.

²In other words, as meditation and contemplation progresses, the ascetic’s restless mind becomes quiet and calmed down. He enters that phase of Yoga which is called Samadhi, because all his bodily awareness of the external world of sense objectives also ceases in a gradual manner, and with it the restless tendencies of the sense organs. This happens because the sense organs of the body have a natural affinity towards this material world of sensual pleasure and comfort for it (the world) provides these sense organs the opportunity to gratify themselves. The sense organs are not concerned what effect this has on the creature’s long term spiritual interests; they want immediate gratification. Hence, when the mind and its sub-conscious are pulled away from this world, the body naturally becomes quiet and calm. This is symbolised by saying that the vital winds in the body have become calm and quiet, because all efforts of the body are made possible by one or other of these winds.

According to *Subalo Upanishad*, canto 9, verse no. 14 of the Shukla Yajur Veda tradition, there ten winds in the body, and they perform specialized tasks as follows. (1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apaana—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaan—this controls the tongue and the faculty of taste (verse 4); (5) Saman—this controls the skin and the faculty of touch (verse 5); (6) Vairambh—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antarayaam—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11)

Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naag—this controls the ‘Chitta’ or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

Under ordinary circumstances the mind is constantly restless because it is being fed by stimuli received by the sense organs of perceptions and must simultaneously respond to them by ordering the organs of action to act accordingly. By attaining success in Hath Yoga, the physical gross body consisting of both the organs of perception and action is controlled, which in its wake would help to control the mind and its sub-conscious. When Hath Yoga is successfully done, the sense organs are forcibly stopped from being attracted towards the various sense objects of the world; the mind would therefore have no cause to be distracted. This results in obtaining a state of great tranquility, serenity, calmness and quietness. This is another way of saying that the ‘winds have become quietened’ because all the activities of the body are made possible by the winds.

These winds are like the many horses of the king’s royal chariot which together help pull the latter under the control of an expert charioteer. An expert ascetic who has successfully done Hath Yoga is deemed to have established control over these winds by controlling the body and its sense organs. The winds now become one and stop their individual random activities which had hitherto been buffeting the creature’s mind, tossing it in various directions, thereby acting as an impediment in his ability to focus his attention and concentrate his mind on any given task at hand. This is metaphorically indicated by saying that he has established ‘Laya Yoga’ by merging all the different units of his existence and establishing them in one unit called the ‘consciousness’ (the Atma) at the micro level, and with the supreme cosmic consciousness (Brahm) at the macro level. In other words, an expert ascetic who has been successful in controlling his sense organs as well as his mind by doing Hath Yoga has virtually reined in all these winds much like an expert charioteer controls the numerous horses of the king’s chariot. Once this happens, all the winds work in sync with each other, i.e. their independent activities cease and they become one unit which is easy to handle. The harmonized wind or air element can now be focused on spiritual pursuits so that the boat can move ahead without being tossed and kicked around by ever-changing directions of the wind and reach its destination smoothly and with ease. This harmonizing and unification of the various functions of the body which results in its calming down and overcoming of its restlessness is like the case of the chariot moving comfortably and pleasurably if the horses move in a coordinated manner instead of pulling randomly here and there to rock the vehicle, or like the case of a boat whose sails are full of wind blowing in a single direction without changing course frequently and violently. Refer also verse nos. 66-69 of this Canto 1.]

136-137. The extreme sense ecstasy and a feeling of utter bliss obtained by the union of the Atma and the Parmatma brought about by Hath and Laya Yogas is comparable to the one obtained at the climax of intercourse when the male semen is ejaculated in the female vagina to bring about a union between the male sperm and the female ova (137-137).

138. Raaj Yoga¹ helps in obtaining the various Siddhis (mystical powers) such as Anima etc. [Refer note to verse no. 44 above.]

These four Yogas (Mantra, Hath, Laya and Raaj) are possible when the Pran and Apaana Vayus (the two main vital winds) are merged with one another. That is,

when a union between all the functions of the body is brought about and full control of the mind and body is established (138).

[Note—The Yogtattva Upanishad, verse no. 129 states that when an ascetic is successful in doing Raaj Yoga, he need not worry about doing Hath Yoga any longer. This is because Raaj Yoga entails total control of the mind and intellect. Once this objective is achieved, i.e. once the restlessness of the body and its wayward sense organs are brought under control, there is apparently no necessity for making special efforts to control them. These have been the cause of so much distress, restlessness and discomfort for the mind, and through it for the Atma of the creature. Once the mind is controlled, the body would automatically be controlled. The Raaj Yoga, which deals primarily with the control of the mind, ultimately leads to the state of Samadhi.

¹The *Raaj Yoga* is therefore the primary form of the two aspects of Yoga concerned with 'self control', the other being the Hath Yoga. Whereas the Hath Yoga deals with the control of the body and its sense organs by strenuous exercises involving various Mudras, Aasans, Bandhs and Mantras, the Raaj Yoga is dedicated to control of the mind. Therefore, Hath Yoga is merely an instrument to aid the Raaj Yoga. In other words, the main objective of Hath Yoga is to enable the practitioner to achieve success in Raaj Yoga. Thus we see that the Yoga propounded by Patanjali is the one which is known as Raaj Yoga because it fulfills the objective and definition of this ultimate and noble form of Yoga by observing certain strict rules of conduct and self control.]

139. Oh Brahma! I (Shiva) have described this process of Yoga to you. Success in it can be obtained by constant practice; there is no way except this. [In other words, there is no short cut for it.]

This is the considered view of Shiva and hence it cannot be otherwise (139).

140. By practicing Yoga in a persistent and consistent manner for a very long time, one can gradually obtain Mukti (liberation and deliverance) from the fetters of this mortal and gross body in this world. For example, it takes a lot of practice for a monkey to reach a high place on a tree. [The monkey starts at the lower branches and gradually makes its way up a tree with a dense covering of foliage. Likewise, the ascetic starts with Pranayam and other simple exercises and gradually proceeds with his Yoga exercises to ultimately reach its higher level attain complete success in it.] (140).

141. If total success in Yoga is not obtained in this life due to some reason, such as being lazy and doing it half-heartedly, and the ascetic dies, then he has to take a new birth depending upon the various Vasanas (unfulfilled worldly passions, yearnings and desires) of his previous life. [In other words, one of the main causes for remaining unsuccessful in Yoga is the prevalence of various Vasanas in life. This acts as impediment in successful completion of Yoga. Hence, attempt should be made to vanquish all the Vasanas.] (141).

142. In the next birth, if the creature has some pending rewards of his past good deeds, then he becomes fortunate to come in contact with a learned and self-realised Guru (moral preceptor, guide and teacher). With his help he enhances his spiritual stature and obtains quick rewards by proceeding ahead in his spiritual endeavours on the symbolic path called the 'Pashim Dwar'¹ (142).

[Note—¹The word *Pashim Dwar* refers to the auspicious and noble path of Yoga by doing Pranayam especially through the left nostril, because the word 'Pashim' means

the left. This form of Pranayam has been described in verse nos. 121-124 and 132 of this Canto 1 above.]

143. By the good effect of the practice of Yoga done in one's previous life, a speedier result is obtained in the current life. [This is the reason why some acclaimed ascetics are able to achieve success in a short period of time while others spend a life time for the same effect.] This is called 'Kaak Mat'¹ (143).

[Note—¹The word 'Kaak' means the 'crow', while 'Mat' means 'according to someone's view'. Therefore the composite word *Kaak Mat* means the view expressed by some great sage who had to assume the form of a crow due to some deeds that he had done in his past life. But even in this body of a crow he could successfully do Yoga and find his liberation and deliverance. It refers to the great legendary sage named Kagbhusund who retells the story of the Ramayan, the epic story of Lord Rama, for the benefit of Garud, the great bird which is a vehicle of Lord Vishnu. This episode is narrated in the epic Ram Charit Manas by Goswami Tulsidas in its 7th Chapter called the Uttar Kand, from Doha no. 63 to no. 125.]

144. There is no better advice than the one given by Kaak Mat. By following this advice one can easily find Mukti, i.e. one can get liberation and deliverance in whatever body one lives. This is the teaching of Lord Shiva (and hence is correct and truthful) (144).

145. By doing Hath Yoga the creature is able to conquer the world (because he would have established full control over his sense organs which are the basic cause of his remaining tethered to this world of sense objects).

But without practicing the famous 'Paschim Marg/Dwar' form of Yoga he would not find Moksha (emancipation and salvation; final liberation and deliverance)¹ (145).

[Note—¹The Paschim Dwar form of Yoga refers to doing steady Pranayam involving the left nostril and the use of the Mantra 'So-a-ham', meaning 'I am that Brahm'. Continuous repetition of this Mantra has a profound psychological impact upon the practitioner, and by and by he indeed becomes one like Brahm. This form of Mantra Yoga leads to the Laya Yoga—i.e. the use of this Mantra leads to the situation whereby the practitioner identifies himself with the supreme transcendental Brahm instead of his body. As soon as this happens, he is deemed to be liberated from the fetters that tie all the creatures to this body and the world. This is obtaining Moksha through the Paschim Dwar Yoga. Refer verse no. 121-124 and 132 of this Canto 1 in this context.]

146. First all the different diseases of the body are eliminated and then, as a consequence of this, the body itself feels light and detoxified. Then the ascetic becomes uniform and steady in whatever circumstantial situation he has to live in this world; he never feels uneasy, distressed, anguished and agitated¹. In this eclectic and divine state of quietude, equanimity and fortitude, he enjoys the bliss obtained by drops of Amrit, the elixir of eternal bliss and happiness, dripping from the moon (which is said to be the celestial pitcher of this elixir)² (146).

[Note--¹That is, he has managed to effectively exercise self control over himself in a holistic manner. Nothing ruffles him, whether it pertains to the external world or to his own body. This is because since he has effectively controlled his sense organs of perception as well as his mind, the latter are not attracted by the illusionary charms of this material world of sense objects, and since he has been regularly practicing exercises of Yoga his body has been toned up and detoxified of all the poisons that

had been at the root cause of all his physical ailments. Resultantly, he becomes quietened and characterised by the virtues of equanimity and fortitude.

²The moon's light is very cool, soothing and comforting for agitated nerves, and its effect on the nerves is the opposite of that of the sun. Here it means that when an ascetic has reached that state of success in Yoga when all his individuality has been lost, when he has been able to exercise full control over his gross body and its sense organs as well as his subtle body and its mind, heart and vital winds, he enjoys the same calmness and quietude that is enjoyed when one lies under the open sky in the shine of a full moon after a long hard day at work. Refer verse no. 127, Canto 1 of this Upanishad as well as Yog Kundali Upanishad, Canto 1, verse no. 73.]

147. An ascetic should learn to control the vital wind forces in the body¹, and then harness their stupendous powers to effectively control his essential elements called the Dhaatus².

When the fire of Yoga has been kindled in this way and is burning vigorously, one hears various types of sounds or roars called 'Naad'³. Besides this, the body becomes very malleable and flexible (because all the stiffness of the body and its muscles and arteries has been eliminated by being made supple and elastic by constant exercises and getting detoxified and warmed by the heat generated during Yoga) (147).

[Note—¹Refer Yogtattva Upanishad, verse no. 95-97, 106.

²Refer verse nos. 40, 56 and 68 of this Canto 1.

³The word *Naad* has two connotations here. One refers to the sound heard when one stands near a blazing fire, and the other refers to the cosmic sound heard in the head when all external sound-interferences having their origin in the external world cease. The first sound is the one heard when one stands near a blazing fire. In this case, one naturally hears different genres of sounds typical of a burning fire—such as for example a hissing sound, a sputtering sound, a crackling sound, a rustling sound, a whistling sound, a roaring sound etc. They are caused by the crackling of firewood and various impurities in it as well as the ingredients added to keep the fire burning brightly along with the friction created in the various layers of air which are at different levels of temperature around the fire. In the present context, the same effect is obtained when the ascetic does Yoga because the internal airs get heated and this burns the different impurities present inside the body. As this heated air rises, its sound is heard more distinctly in the ears. To this is added the cosmic sound of Naad heard in the head when all sounds originating in the external world are excluded during concentration of Yoga. Refer verse no. 127 above of this Canto 1.]

148. The ascetic is able to overcome the effects of various seasons such as rainy and winter seasons. [That is, he is the same all year round; no changes in weather or circumstances ever ruffle him.] His grossness and languor are eliminated. He becomes so light that he can move through the sky (like a bird). He can assume any form he wishes and has the speed and agility like that of the wind element. He becomes all-knowing, all-wise and omniscient (148).

[Note—Refer Yogtattva Upanishad, verse no. 51, 73-75, 97, 102, 108-111, 126-127 etc.]

149. All the three worlds (the celestial, nether and terrestrial) becoming accessible to him and he can move in them at his free will¹. All the eight Siddhis² are accessible to him. Say, when camphor is burnt, how can it have any hardness left in it? [Here the ascetic is compared to camphor that has been burnt and has lost all its earlier stiffness and grossness.] (149).

[Note—¹Earlier, verse no. 85 of this Canto has described how to conquer the three symbolic worlds.

²The eight Siddhis have been enumerated in note to verse no. 44 of this Canto.]

150. In the same way (like the burning of camphor), how can hardness and rigidity indicating arrogance, stubbornness and haughtiness ever remain in an ascetic when his 'Ahankar' (ego and false sense of pride) is eliminated.

A spiritual aspirant free from Ahankar is so enriched with glorious powers of the real 'self' (the pure consciousness) that he can do anything he wishes¹.

An ascetic who has conquered his Ahankar becomes the best ascetic amongst his peers. He is deemed to have obtained his freedom (from the bondage of Ahankar which acts like a formidable shackle too difficult to break). He can assume as many forms as he wishes (by the virtue of the various Siddhis he has obtained—refer Yogtattva Upanishad, 105, 109-111) (150).

[Note--¹In other words, it is the Ahankar that prevents a man's true potentials from coming to the fore. For example, there are situations when one has been stubborn and inflexible in dealing with certain circumstances, but in due course of events he realises his follies and understands that he was at fault. But ordinarily he would desist from accepting his mistakes because it would hurt his exaggerated ego, inflated self-pride and a false sense of self righteousness; he is too proud to admit that he has indeed committed a grave mistake. He would rather suffer from the consequences and blame others for his misfortunes than accepting his errors. If his haughty and stubborn behaviour has hurt others and caused unwarranted mental or physical agony to them, he would refuse to relent and ask for forgiveness—for he is too proud and full of Ahankar to do so. This is what is meant here. A true ascetic has stupendous mystical powers but he is never proud of them or his spiritual achievements. He is pious, humble, and simplicity personified.]

151. Such an accomplished ascetic becomes Mukta (liberated and delivered) even while he is alive in this world and lives in this physical gross body. [This is because this body becomes irrelevant for him; he has obtained complete control over it so much so that the normal bodily functions such as output of urine, stool, saliva, mucous and sweat etc. have come almost to a standstill—refer Yogtattva Upanishad, verse no.57-58. This is called 'Jivan Mukti'.]

Worldly Siddhis (accomplishments, successes and eclectic specialized powers) are of two types—Kalpit and A-Kalpit¹ (151).

[Note--¹The *Kalpita Siddhis* are the ones which are created with efforts made for them using various means and methods. They have a limited scope, are perishable, and have predictable and imaginable powers and potentials that can be foreseen. On the other hand, the *A-Kalpita Siddhis* are those which are self-generated and cannot be created by any artificial means, are natural and with unimaginable mystical potentials and powers that cannot be predicted. Refer also Canto 5, verse nos. 46-55 of the present Upanishad as well as the Yogtattva Upanishad, verse nos. 56-102, and the Brahm Vidya Upanishad, verse nos. 23-24.]

152. The 'Kalpita Siddhis' are those that are obtained by diligent efforts and conscious endeavour on the part of the ascetic or any spiritual aspirant. Success in obtaining mystical powers and acquiring spiritual authority in this case of Kalpita Siddhis is done with the help of various juices and essences called the various 'Rasas' (such as the Som Rasa used in fire sacrifice as an offering to the Gods and is said to be divinely blessed), the different medicinal herbs called the 'Aushadhis' (which are also used in fire sacrifices to clear the environment of toxic gases and germs), all the different

deeds called ‘Kriyas’ (which are auspicious, righteous and noble in character and would therefore result in creation of positive energy and right circumstances conducive to one’s all round welfare and well being, here referring to the numerous rituals associated with formal fire sacrifices and other religious activities), and practice of ‘Mantras’ (i.e. doing Japa or repetition with them—this helps to harness the stupendous positive energy encrypted in their letters and words as well as to help the mind to learn concentration which in turn helps in training it to become calm, quiet, rested and focused on the work at hand, thereby achieving desired results with full attention of the mind’s faculties at work) (152).

[Note—These Siddhis are called *Kalpita* because their powers and potential effects can be predicted and imagined depending upon the medium used to acquire them. Such as for example, if one particular herb is consumed during the course of Yoga, its benefits as well as harms can be well predicted in advance. Similarly, the effects of the Mantras, Kriyas (deeds), and Rasas (juices; extracts) can well be ascertained before hand; they can be predicted with a great degree of accuracy.]

153. These Kalpit Siddhis are not everlasting; they are transient in their effect, and their mystical powers are less effective and less potent. Some of them can be obtained easily without much hassle and even without employing any special means, while others require some sort of special effort and employment of special means or ways or measures as well as some degree of diligence on the part of the aspirant to be successfully accessed (153).

154. The A-Kalpita Siddhis, on the contrary, are those whose stupendity, far-reaching mystical powers and grand effects cannot be imagined, pre-conceived, foreseen and predicted in advance. Such Siddhis are the exclusive domain of the Supreme Being called the Ishwar; they are possessed by him and are under his command. Such Siddhis are numerous and of different genres. They are available to (or can be accessed by) an honest and sincere ascetic who is engaged in self realisation with steadfastness of purpose, with persistent consistency and diligence. He is independent of any other props to support his spiritual journey except following the eclectic path of Yoga (meditation and contemplation). That is, he relies on Yoga only for his spiritual emancipation and salvation (154).

[Note—In other words, such an aspirant who sticks to only one path for his spiritual liberation and deliverance, i.e. who follows the path of Yoga as envisioned in this and other Yoga Upanishads, is the only one who can successfully acquire such mystical powers and astounding potentials as the ones that come under the classification of ‘A-Kalpita Siddhis’. He therefore would not take the help of any kind of external help in accomplishing his spiritual goal of attaining self-realisation and liberation from the bondage of this gross and perishable body. He would not use medicinal drugs or their spin-offs in the form of various juices and essences such as the Som Rasa used during formal fire sacrifices to keep him going in his spiritual practice and maintain the level of his energy, strength, stamina and vitality, nor does he rely upon so many other ways and paths said to provide liberation and deliverance to the soul as proffered by various versions of different scriptures and their myriad interpretations. He relies only on one eclectic path of Yoga to the exclusion of all others. No one can judge the intensity and reach of his spiritual powers because they are unimaginably great and astounding.]

155. Such A-Kalpita Siddhis are obtained by acclaimed ascetics by practicing Yoga for a long period of time. Those ascetics who have no Vasanas (worldly passions, yearnings and desires) are the ones who can acquire them, and their acquisition gives

them immense strength and powers. They can assume any form they wish. These Siddhis are eternal and everlasting; they are not perishable (155).

156. Besides using them to attain oneness with the Parmatma, the supreme Soul of creation, the supreme Brahm, the ascetic should otherwise keep them a top secret. To be in possession of such stupendous mystical powers is a sign of a successful and accomplished ascetic who is Brahm and self realised (156).

[Note—Refer Yogtattva Upanishad, verse no. 73-79.]

157. Just like high-flying birds cruising through the sky have a panoramic view of different pilgrim sites as they move ahead towards their destination, these Siddhis also provide the ascetic many different grand visions of the magnificent glories that are associated with their acquisition, but he remains unconcerned and unruffled by them, and instead moves ahead on his spiritual journey steadily and unwaveringly (157).

[Note—Such wise, erudite and enlightened ascetics have a broad perspective and a broad vision of life and its existential Truth. They are not narrow-minded and stringy in their approach to life and its problems. They look at everything from a high moral ground and with a spiritual perspective. Their view of the world rises above the mundane and the selfish, and inspite of living in it they remain totally aloof and dispassionate. Their demeanour and world-view resembles that of a bird that is flying over a pilgrim site—it sees it from a broad angle and the holiness of the place passes as a fleeting thought through their mind as they fly across it overhead, only to move ahead and put it behind. The bird might even take a short break from its flight and rest for a while, but it never gets emotionally and physically attached to the pilgrim site in the hope of finding salvation by staying put in it. Likewise, the wise ascetic does his duties and remains totally detached from this world, always remaining focused on his spiritual goal by being meditative and contemplative every moment of his life. He experiences everything in this world, he experiences and witnesses the benefits of Yoga, acquires the various Siddhis and witnesses the accompanying acclaim and stupendous powers, but they do not go to his head. He is not tied down by them; he is not shackled by anything. The glamour and adulation of success in Yoga which results in acquisition of different Siddhis do not bother him the least and they do not disturb his calm demeanours. Instead of boasting of them and employing them for worldly gain, he utilizes them to further his efforts in obtaining final liberation and deliverance from this life and its problems.]

158. When an ascetic is not at all affected by loss or gain, i.e. when he remains steady, calm and unmoved under all circumstances, whether they entail great emotional and physical distress and anguish such as when caused by losing something that is very dear to one, or the much excitement and elation that accompanies when something precious is obtained by an ordinary man, it is only then that he is entitled to be called a truly realised ascetic. All the eclectic and mystical Siddhis are easily accessible to him on their own; he won't have to make special effort to acquire them (158).

159. Even as an expert goldsmith is able to tell the purity of gold, the possession of different Siddhis and how the ascetic tackles them is a good measure to identify an ascetic who has attained Jivan Mukti. [The Jivan Mukta ascetic is one who enjoys the benefits of Yoga without letting the charms of the various mystical powers that accrue with it to trap him in their snare of worldly fame; he remains totally detached from the world and the body inspite of remaining alive and doing his duties normally. He remains ever engrossed in doing meditation and contemplation.] (159).

160. The stupendous mystical powers possessed by an accomplished and enlightened ascetic are rarely witnessed or seen openly; they remain hidden and secret with him; he never divulges them or boasts of them. [This is because he does not wish to advertise them for gaining worldly fame and popularity, and he should not even do so as it is prohibited by the scripture—refer Yogtattva Upanishad, verse no. 76-79 in this context which proscribes exhibition of one's spiritual powers.]

An ascetic who has no Siddhis (but boasts of possessing them by showing some sleight-of-hand tricks) is regarded as being shackled and tied in fetters. He has no chance of obtaining Mukti (liberation and deliverance) whatsoever (because he is an imposter and fraud) (160).

161. A person whose gross body is freed from the decrepiting and disabling effects of old age and who is free from the fears of death is the one who is deemed to be Jivan Mukta¹ (i.e. one who is freed from the fetters imposed by the gross perishable body on his eternally and inherently free spirit).

On the other hand, those who continuously die (to take birth again) are no better than animals, chicken, worms and insects. [Why this happens is explained in the next verse no. 162.] (151).

[Note--¹A person who sincerely follows the tenets of Yoga has a well tuned body which is free from all the evil effects of decay and old age. This point is repeatedly stressed in Yoga Upanishads. The practical reason is the rigorous physical detoxifying and revitalizing exercises that are part of Yoga. They rejuvenate the body and keep it in prime shape. So, the bad effects of the normal aging process have no influence upon them. Refer various verses of this Canto 1 itself on this topic, viz. 2, 5, 10-11, 43, 92, 84, 99, 146 etc.

Besides this physical benefit, an accomplished ascetic is wise and enlightened enough to realise that the body is not his true self, but it is the pure consciousness Atma residing in that body. Such a person is the one who has truly understood the meaning of bondage as well as of freedom. The body is like a prison for him from which he would want to break free. But he realises at the same time that till the time he lives in this world he cannot do so, for the body is the habitat of the Atma. So, when he has freed himself from the deluding effects of the body by becoming totally indifferent to it and its natural instincts to be pulled towards this material world and its charms and then subsequently get trapped by them, he has in fact broken free from this prison and obtained liberation (Mukti). This body would not be able to trap his soul any longer. The self-realised person would not be bothered by what the body does; he would remain like a neutral spectator of all the deeds done by the body. As such, he would not be responsible for these deeds and their results, the root cause of all worldly problems and the reason why the soul remains trapped in the cycle of birth and death. Such an existence is indeed one which is the life of a free man who is not enslaved to any master. He can do whatever he likes, go wherever he wants, and live as he wants. This in the context of Siddhis would be tantamount to his acquiring them; he is enabled by this Siddhis to do whatever he wants, go wherever he wishes, and live a life the way he wants.]

162. Oh Padmaj (i.e. Brahma, the one born from a divine Lotus)! Such creatures (as those who are mentally and emotionally attached to the body and enjoy it because this body affords them the chance of self gratification and enjoyment of the material comforts of the sense objects of this deluding world) die only to shed their physical gross body, but they do not find true liberation and deliverance from it because they have to take another birth again with a new gross physical body. The creature's Pran—i.e. his primary forces of life representing his 'self' and his 'being', the

essential life forces and consciousness that represent the true identity of the creature—is tied (emotionally attached) to the body to such an extent that it does not wish to forsake it, and the result is that at the time of death when the body has to be abandoned under compulsions of its natural decay and destruction process which is conventionally known as ‘death of the body’, this Pran immediately finds a new body for its self for it (the Pran) cannot or does not want to live without it (the body).

Under this circumstance, how can this creature ever hope to get rid of the burdensome encumbrance known as the body; his Atma, which is his ‘true self’, would remain shackled to one or the other form of the gross body. [This is the called the cycle of birth and death.] (162).

163. True Mukti (liberation and deliverance; emancipation and salvation) is only possible when this situation of having a gross perishable body and being emotionally attached to it is done away with. If this body was not perishable and had it been eternal, it would have been the supreme transcendental Brahm personified. But since the former condition is not true, it follows that the latter is also not true.

Therefore, for a truly realised and wise ascetic who is enlightened about this truth vis-à-vis the body, the latter becomes totally irrelevant. With this enlightened view, he regards his ‘essential self’, i.e. his pure conscious Atma, as being separate and distinct from the body, and therefore ‘he’ (as his Atma, and not the body) becomes an ethereal, sublime and subtle entity that is a ‘non-body’. In other words, he does not show any of the typical characteristics of the gross physical body such as to become old and die. He, on the contrary, becomes eternal, imperishable, subtle and sublime which are the divine characteristics of Brahm.

In this way, this spiritual aspirant becomes truly liberated and delivered in spite of having a physical gross body, and consequentially becomes one like the supreme Brahm¹. [In other words, as soon as the ascetic realises who ‘he’ truly is, i.e. when he understands the fact that his true self is his pure conscious Atma and not the gross and perishable body, he becomes an entity that is no longer identified by the body but by the soul. And this soul has the eclectic virtues of being sublime, eternal and non-perishable, the virtues possessed by Brahm. Hence, the soul or Atma of the ascetic representing his ‘true self’ becomes one like Brahm. In fact, these two entities—Atma and Brahm—are the same entity in two forms, they are both the non-dual entity known as the universal, ubiquitous and quintessential Consciousness, the only difference being that the former has an existence at the individual level of creation, i.e. at the micro level of existence in the form of the individual Jiva (creature), and the latter has its existence at the macro level of creation as the all-pervading and all-encompassing Brahm.] (163).

[Note--¹Brahm and Atma are not two separate and distinguishable entities but are essentially one and the same non-dual consciousness that pervades uniformly throughout this living world. The only reason why they appear separate and distinguishable from one another is the way they are visualised by the perceiver. The Atma is seen at the micro level of existence whereas Brahm is visualised at the macro level of creation. For an ordinary man of low intellect and who is ignorant of the profound spiritual truths as expounded in the scriptures, these two have different existences, but for a wise and erudite man there is no difference between them; it is only the perspective of viewing that creates an illusion of difference. These two ways at viewing the same thing might distort its reality but the basics, the fundamental nature and primary form of this one non-dual entity would not change or get affected due to distortions in view and illusions of perception.]

To illustrate how this is possible, we can take a simple example. There is only one moon in the sky, but if say ten pots of water are placed on the ground then we will have ten independent images of this same moon in the water of these ten pots. Does it mean there are ten + one = eleven moons? If the answer to this question is an emphatic ‘no’, then the same answer would apply to the universal truth that there is no difference between the Atma of uncountable creatures and Brahm.]

164. An ascetic who thinks of nothing but Brahm, who contemplates upon none but Brahm, it is only then that such an enlightened ascetic is deemed to be liberated and delivered. Such a wise and enlightened ascetic does not treat his body and its sense organs as the desired objective or goal of his life. That is, he does not believe in pampering and gratifying the body. On the contrary, he treats the body as a prison from which he ought to liberate his Atma by being detached from and uninterested in the body. He loses all attractions for the body and its charms, and even begins to loathe them (164).

165. When the self-realised and enlightened ascetic becomes one with the supreme Brahm and indistinguishable from the latter, his body no longer remains a mere city with ten gates or doorways and ten avenues represented by the ten chief Naadis¹. But upon self-realisation, this body dissolves its independent existence and becomes one with Brahm and indistinguishable from the latter in the sense that it is henceforth identified by the primary elements called the Bhuts—earth, water, fire, air and sky elements—from which it is primarily made just like the bubbles of water merge and vanish in the water from which their were formed initially² (165).

[Note—¹The body is likened to a *city* because the pure consciousness known as the Atma and the true ‘self’ of the creature lives in it. The Pran, which refers to the vital winds present in the body and which keep the body alive and active, enables the Atma to enjoy its residence in the body, for had the Pran not allowed the body to remain alive and active, the latter would have been useless for the Atma. A body without the Atma is like a dead city.

The *ten doors* of this city are the following—two ears, two eyes, two nostrils, one mouth, one anus, one urethra and one Brahm Randhra (the hair-like slit present on the top of the head).

There are said to be *ten chief Naadis* in the body. They are the chief ducts present inside the body through which the Pran—vital life-consciousness represented by the vital winds and life impulses present in the body which keep the body alive and distinguishes a living body from a dead one—moves while the man sleeps (refer Paingal Upanishad, Canto 2, verse no. 12 of Shukla Yajur Veda tradition. They are likened to broad avenues of a grand city in which the Atma lives. According to Yogchudamani Upanishad of Sam Veda tradition, verse no. 15-17, they are the following—Ida, Pingla, Sushumna, Gandhari, Hasti-jivaha, Pusa, Yashaswani, Alambusa, Kuhu and Shankhani.

Refer Canto 5, verse no. 2 in this context.

²The entire creation has come into being from one single source known as Brahm. The five elements called the Panch Bhuts (earth, water, fire, air and sky) are the primary building blocks or bricks that are cast from the same original source called Brahm. The gross body of the creation was moulded from these five elements. Therefore it follows as a corollary that the creation can be regressed and traced back to come to that single point. Since the elements from which the gross body of the creature is crafted are lifeless entities, it follows that the former is also lifeless. The factor that makes the body ‘alive and living’ is called the pure consciousness and it is the ‘self’ of all living beings. In other words, a wise ascetic sees the body as a

revelation of the elements, while his 'self' as a manifestation of the cosmic Consciousness called Brahm which infuses life into this otherwise lifeless body.]

166. This body is filled by ten types of vital winds¹. It has ten Indris or sense organs (five organs of perception and five organs of action)². The body is supported by six Chakras (swirling subtle energy centers)³, and it roams around in a great forest consisting of six Vishayas (objects of the sense organs of perception)⁴ (166).

[Note—¹The *ten winds* are the following—Pran, Apaana, Samaana, Udaana, Vyan, Nag, Kurma, Krikar, Devdutta and Dhananjay. [Refer—Trishikhi Brahmin Upanishad, Canto 2, verse nos. 77-87 and Subala Upanishad, canto 9, verse no. 14 of Shukla Yajur Veda tradition.

These ten Prans are divided into two broad categories—viz. the five main Prans and the five subsidiary Prans. The main Prans, their functions and locations in the body in brief are the following—(1) Pran— this is the main vital wind and usually refers to the breath without which life is not possible; it is the vital wind located in the upper part of the body. It is the wind that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without this wind infusing life in the body no other wind would be of any significance to the creature. It is present in the mouth, nose, heart, navel, big toe of the leg. (2) Apaana—this is the wind that passes down the intestines, and is responsible for ingestion of food, its digestion in the intestines and the final excretion of the waste product from the body—its grosser content through the anus and its fluid contents through the urinary system of the kidneys. This is the wind that moves down in the body and is chiefly located in the lower part of the body—in the intestines and anus, lower abdomen, thighs, knees. (3) Samaana—it is uniformly present throughout the body and as the name itself suggests it is responsible for uniform pressure and balance in the body besides equal distribution of nourishment throughout the body by maintaining proper circulation of blood. It is said to be especially present in the ears which are said to be the specialized playing field for the Samaana wind as it helps maintain balance in the body through the semi-circular canals in the ears. It also helps to coordinate the ears and the intellect because the latter would base its decisions on what it hears with the aid of the ears. (4) Udaana—this is the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases through the nostrils and mouth in the form of exhalation and cough. It is predominantly present in the hands, legs and the various joints of the body. (5) Vyan—this wind helps in maintaining equilibrium and pressure within the body as well as to ensure equal distribution of nutrients in the body by maintaining circulation. Hence, it works in close coordination with the Samaana wind. It also helps to control the functioning of the other winds. It is located in the ears, thighs, waist region, heels, shoulders and throat.

The Brihad Aranyaka Upanishad of Shukla Yajur Veda tradition, in its Canto 3, Brahmin 9, verse no. 26 clearly lays down the pyramidal structure of the five important vital winds. The Dhyandindu Upanishad, verse nos. 95-99, of the Krishna Yajur Veda tradition not only describes the 'colours' of the five principle winds but also their 'Beej Mantras', while this same Upanishad in its verse nos. 99-100 emphasises the fact that the 'different names' given to these vital winds are artificial and actually there is no difference between them.

Besides these five main Prans, the other five winds are called as junior Prans or subsidiary Prans because their main function is to aid the functioning of the main Prans. They are located in the skin, muscles and the bones. Their main functions are the following—(6) Nag—this junior wind which helps in exhaling breath and belching. (7) Kurma— this subsidiary wind helps the eyelids to open and shut. (8) Krikar— this creates the sensation of hunger. (9) Devdutta— this creates sleep. (10)

Dhananjay—it prevents decay and deformation of the body immediately after death for some time.

²The *ten organs* of the gross body are the following—five organs of perception such as eye, ear, nose, tongue and skin, and five organs of action such as hand, leg, mouth, anus and genital.

³The *six Chakras* are the subtle energy centers of the body which act as power houses which supply energy for the various functions of the body. They are the following--(1) The 'Mooladhar Chakra' is located between genitals and anus in the area called the perineum; (2) The 'Swadhisthan Chakra' is located in the groins of males and the Bhug area of females. It has a 5-headed male phallus like a sprouting seed and its counterpart in the female is the clitoris. (3) The 'Manipur Chakra' is located in the navel area, is shaped like a gem and is surrounded by the network of Naadis (nerves) called solar plexus. It is also the site of the Sun energy; (4) The 'Anahat Chakra' is located in the chest between the heart and lung area and it is shaped like a swan looking downwards. It is also assumed to be like an 8-petal lotus facing down; (5) The 'Vishuddha Chakra/Kanth Chakra' is located in the throat. To the left of it passes the Eda nerve representing the moon, to its right goes the Pingla nerve representing the sun, and in the center is the Sushumna nerve through which the Kundalini energy rises up from the base of the spine to the skull. (6) The 'Agya Chakra or Bhru Chakra' is located between the eyebrows and root of the nose. It is also called the third eye of enlightenment and wisdom.

Refer Saubhagya Laxmi Upanishad, Canto 3 of Rig Veda tradition, Dhyanbindu Upanishad, verse nos. 44-49 of the Krishna Yajur Veda tradition, as well as Yograjojanishad, Yogchudamani Upanishad, and Jabal Darshan Upanishad, Canto 4 of the Sam Veda tradition.

⁴The six objects of the body pertain to the five organs of perception and one mind = six. The five perceptions are sight (eye), smell (nose), sound (ear), taste (tongue) and feel or touch (skin) + all the things about which the mind thinks = six in total. The sense objects of the material world are categorized into six groups according to these six faculties of the body. For instance, all things that have a shape, fixed contour, colour and form are the subject matter of the eye and the faculty of sight. Similarly, things that emanate a smell are the subject matter of the organ of the nose and the faculty of smell; things that emanate sound are the subject matter of the ear and the faculty of hearing; things that have chemicals that induce taste are the subject matter of the tongue and the faculty of taste; things that can be felt and touched are the objective of the skin and the faculty that gives the sense of touch and feel; and finally those things that require thoughts, imagination, comprehension, rationality, analysis and application of intelligence are the subject matter of the mind.]

167. This body has four Peeths¹ or symbolic altars where the ascetic offers his symbolically prayers to the Supreme Being enshrined in his own self. [In other words, the body is treated like a pilgrim site where the Shakti principle of Divinity is worshipped according to Tantra philosophy. The word 'Peeth' is indicative of this—because the word refers to the pilgrim sites where the Divinity is worshipped in its female manifestation as a Shakti or Goddess instead of the male form as a God. When any fire sacrifice is done, a seat is designated for the deity to be worshipped, and it is also called a Peeth.]

The four Vedas² are like the lighted lamps that show illumination to it. [That is, the four Vedas illuminate the wise person's mind and show him the auspicious, correct and noble path through the dense dark forest of delusions and worldly pitfalls through which he has to traverse during his journey of life so as to enable him to reach his objective of obtaining emancipation and salvation for his soul and attain self-realisation and Brahm-realisation. When this happens, the wise person is said to

have reached his true spiritual destination, while if he remains trapped in the cycle of birth and death he has missed his spiritual target. Even as lampposts along the highway not only illuminate the path below but also act as a beacon for travelers who might otherwise be lost in the pitch darkness of the night, the Vedas and the Upanishads guide the spiritual aspirant onwards in his spiritual journey by showing him the correct path to be followed. They act as a beacon of hope and crutches for weary spiritual travelers who are in desperate need of help and guidance in the wilderness that the world is.]

For a wise, erudite and enlightened ascetic, the cosmic ethereal sound called the Naad³, represented by the ethereal word OM complete with its Bindu, is like the grand cosmic male phallus with the drop of semen dripping from it. It is a state of eclectic bliss and ecstasy, and it is a symbolic abode of Shiva and his divine cosmic energy called Shakti⁴ (167).

[Note—Refer Canto 5, verse no. 3 in this context as it is almost identical in tenor.

¹The word *Peeth* means a seat or pedestal for an idol of a deity. In practical life it refers to a center of temporal or religious authority or sect. In the context of the body the word refers to the four sheaths which form the body that harbours the Atma at its center. These four are the Annamaye Kosh or food sheath, the Pranmaye Kosh or the wind sheath, the Manomaye Kosh or the mind sheath, and Vigyanmaye Kosh or the intellect sheath. According to Tantra Shastra, the Peeths are said to be the places where the Shakti (cosmic dynamic energy of creation) is located. They are the following—The first seat or Peeth is called Kaam Roop Peeth, the second seat called Purna Giri Peeth, the third seat is called Jalandhar Peeth, and the fourth seat is called Uddiyan Peeth. These Peeths or seats and their locations have been described below in verse nos. 171-175 of this Canto 1. We can compare these four Peeths with the four corners of square or a rectangle. These corners decide the exact shape and size of the figure because the lines that form the outline simply join these corners. They are also like the four cardinal points of the celestial globe—viz. north, east, south and west.

²The four Vedas are the Rig, Sam, Yajur and Atharva.

³Refer verse no. 105 of this Canto 1. The Naad is the cosmic sound heard by an ascetic when he is in deep meditation mode. As any sound originates from a source and then radiates out in the form of waves much like ripples created on the surface of a calm lake when a stone is thrown in it, the Naad has its cosmic origin in the one-point source called Brahm. This is the symbolic Bindu which is represented as the dot put on the top of the geometrical symbol for Naad which is also used as a monosyllable Mantra known as OM. The Naad consists of such sound frequencies that are not normally audible to the human ear just like the case of the radio waves present all around us in ether that are not heard by us except for the use of special instrument called the 'radio'. The frequencies of the sound waves of Naad require specially trained neurons in the mind to be heard by an ascetic, and this fine-tuning is done by meditation and contemplation. Ancient sages and seers who did hear this Naad pondered over the matter and came to the conclusion that the monosyllable word OM was the nearest analogue to the sound produced by Naad, and hence they prescribed it as a synonym for Naad.

The symbol of OM and Naad is 'ॐ', and it resembles the sixth Sanskrit alphabet which is a long vowel sound resembling 'Ooo' as in 'boot, root or soot'. In the symbol of OM, the Bindu or the 'dot' is placed on the top of a crescent-shaped moon or a concave bowl placed on the top of this letter such that this dot is hanging at its focal point. In modern parlance we can imagine what it signifies. This dot is the focal point from which the cosmic Naad originated when the process of creation first started (what the modern science recognizes as the 'Big Bang'). This sound spread to all corners of the cosmos. The human skull is also concave from the inner side, and

the brain is located just below it—resembling the ‘Chandra and Bindu’ placed on the sign for OM. The implication is very obvious—this Bindu or ‘dot’ generated the cosmic Naad which is heard by the ascetic when he focuses his entire concentration in the head by diverting all his senses away from the external world and fixing their attention on one point in the head, called the Agya Chakra or still higher up in the Brahm Randhra Chakra. These are the points in the body where the cosmic sound waves are caught hold of by the sensory receptors in the brain which then transmit this data to the brain’s processing area which in turn translates this signal as Naad. The skull and the brain are the receptors in the human body that catch the signals emanating from the cosmos just like a modern day roof-top dish antenna catch signals from orbiting satellites to transmit audio and visual signals originating in some far away land to be seen and heard by us in our homes directly. Just like a simple short-circuit in this electronic device can blank-out the signals, the slightest digression and carelessness on the part of the spiritual aspirant would prevent him from hearing the Naad. But that does not mean that the Naad is not present in the surrounding ether.

The reverberation and vibrations caused by this cosmic Naad is very overwhelming for the ascetic and he literally drowns in its sound. The vibrations massage his nerves and relaxes them; he feels a sense of extreme ecstasy and bliss due to this, and that is comparable to the one obtained at the time of ejaculation of sperm during intercourse—hence the reference to the male phallus and the semen dripping from it. There is no vulgarity in this explanation. This analogy is cited to give a physically imaginable and verifiable idea of the extent of bliss and ecstasy obtained when the ascetic reaches the climax of Yoga so that he can hear the Naad. This apparatus is called the ‘Naad Lingam’ in Canto 2, verse no. 6 below in this Upanishad, and Canto 3, verse nos. 1-10 narrate how the audible word is created by this Naad.

In brief, the concept of Naad and Bindu have been employed by this Upanishad to describe how the wise ascetic realises that this cosmic dynamic energy has been utilized by the body to empower him with majestic powers that makes him as powerful as Brahm.

Refer verse no. 178 below also of this Canto 1.

⁴This is also why this condition is compared to the ‘cosmic union’ of Shiva representing Brahm and his own energy personified as Shakti which produced this sound energy called Naad in the ethereal space of the cosmos. It was Brahm’s ecstasy and bliss of self-realisation that produced a cosmic shiver and shook the ether to create vibrations which in turn set in motion the process of creation. In the terms of Vedanta, Shiva is known as Brahm, while this Shakti is known as Maya. According to the Sankhya philosophy, this Shakti (the dynamic cosmic energy and the female aspect of creation) is called Prakriti (Nature) in the context of Brahm who himself is called the Purush (the macrocosmic Male aspect of creation).

The philosophy propounded here in the context of Yoga pertains to the Tantra school of Indian philosophy which is a modification of the Vedanta and Sankhya philosophies. It recognizes that this creation came into being by the union (Yoga) between Shiva (the supreme transcendental and imperishable Brahm) principle and Shakti (the dynamic Shiva) principle. They are not separate from one another, but a unified principle called ‘Shiva-Shakti’. The relationship between Shiva and Shakti is like that of fire (Shiva) and its power to burn (Shakti). In the inactive state it is Shiva, while in its active state it is Shakti. They are inseparable from one another; they are non-dual two-in-one entity. The Shiva is ‘Nirguna Brahm’ wherein the divine attributes called the various Gunas (qualities and characteristics unique to every individual and which determine his temperament and nature) are inherent but lying in a dormant, latent and neutral state. When these Gunas become active and begin to unravel or manifest themselves in the process of creation and its evolution, the same Shiva (Brahm) becomes ‘Saguna’—i.e. with Gunas.

From this Shiva's cosmic Shakti or dynamism comes into existence the Naad, the cosmic vibrations in ether that translate into sound element. Since any sound must have a central point of origin, there developed the concept of the Bindu, the dot or the central point. The Bindu represented the Shiva principle which provided the first spark of life to set off the process of creation, drawing from the vision of a drop of the male semen which is a necessary spark to initiate the process of physical life in this world. The crescent-shaped bowl called the Chandra placed on the top of the geometrical sign for OM was the cosmic womb into which this cosmic sperm was dropped. Their union resulted in the first conception and the eventual evolution and devolvment of the vast creation. The two primary components of creation are therefore the 'Bindu' and the 'Chandra'—the former symbolising the cosmic sperm and the latter standing for the cosmic bowl or womb where this sperm was placed.

The primary cell of the sperm and the egg are both single, and they resemble a 'dot' because of their microscopic form. Therefore the word 'Bindu' would refer to both the cosmic sperm as well as the cosmic ovum—hardly distinguishable from one another in their primary form as consisting of a single generative cell. It is their union that creates the conducive environ for producing the spontaneous burst of energy called the 'Shakti'. It is just like two ingredients in physical science that remain harmless and neutral when separate but produce an explosive mixture when brought together.

By extension, just like a single-celled male sperm and a single-celled female egg bring about the creation of the complex structure of the living being consisting of his gross physical body that is visible and so powerful, the 'Beej Mantra' is the seed from which the external form of the main body of any given Mantra is generated. The word 'Beej' in the context of Mantras means a 'seed' from which the Mantra evolved, and it would be analogous to this 'Bindu'.

From the union of Shiva and Shakti evolved the twenty four Tattvas (elements) as follows—one Mahat + one Ahankar + the ten sense organs called the Indris (five organs of perception—ear, eye, nose, tongue and skin, and five organs of action—hand, leg, mouth, anus and genital) + one Mana (mind) + the five subtle elements called the Tanmatras (the senses of perception—sight, smell, sound, taste and touch) + the five gross elements called Bhuts (earth, water, fire, air and sky) = 23 total. To this is added the inherent 'Shakti' or energy that empowers them all to function according to their assigned duties, and the total comes to $23 + 1 = 24$ in all.

From the Shiva (the attributeless Brahm) principle at the macro level evolved the five Gods or deities—viz. Vishnu, Brahma, Ishan, Rudra and Sada-Shiva. The Shakti resides in the Kundalini, the coiled subtle energy center in the human body, located in the region of the Mooladhar Chakra situated at the base of the spine.

The Jiva or the living being is none but this Shiva (Brahm) himself, but covered by a veil of ignorance and mired by delusions. When Yoga and other methods spiritual awakening are employed to remove this veil, the aspirant is able to arouse the latent divinity in him and realise the Shiva principle inherent to him. In other words, he becomes self and Brahm realised. This is his Moksha or Mukti—emancipation and salvation, or liberation and deliverance. He becomes empowered to find liberation and deliverance from the dark dungeon of ignorance and delusions.]

168. [The different Chakras and Peeths narrated below in verse nos. 168-178 have also been described in Canto 5, verse nos. 6-12.]

In fact, this human body is the medium by which one can obtain all spiritual benefits and find emancipation and salvation for one's soul as well as liberation and deliverance from this world, i.e. one can get Moksha and Mukti respectively with the aid of this body. Since this body provides all these spiritual facilities to an aspirant, it is likened to a temple of Lord Shiva. [This is because a man goes to a temple to worship its deity to obtain the latter's blessings for one's wish fulfillment and seek

divine intervention for all his worldly problems. But a worldly temple does not provide the same spiritual experience that one gets if he treats his own body as the temple of Shiva. In the latter case, the experience becomes very personal and unforgettable, and therefore requires no further proof of its veracity and truthfulness. Which temple is better than one's own body where the supreme transcendental Brahm resides as one's own Atma, as one's own 'self'? Further, a lot of formalities and rituals are involved in formal temple worships none of which are needed when one worships the Supreme Being in one's own Atma. A temple cannot be carried wherever one goes, which is not the case with the body. What a wonderful idea it is—one has not to run around in various pilgrim sites or make endless rounds of temples in order to seek the divine blessings, for the Lord lives inside his own self.

The honourable and revered deity represented by the Shiva's lingam is established on a pedestal called the Mooladhar Chakra situated in the region between the anus and the genital. [Refer also to Canto 6, verse no. 33, and Canto 2, verse no. 6, 10. This Lingam refers to the Mool Kanda. Closure of the Mooladhar Chakra is an essential part of Hath Yoga, and it is called Mool Bandh. Naad is heard by this closure—refer Canto 2, verse nos. 5-6 and Canto 3, verse nos. 1-3 in this context.] (168).

[Note—The fact that the body is the holy site where Lord known as Ishwar is established in the form of the Lingam is endorsed also in Canto 2, verse nos. 6, 8-14, and as the Atma representing the supreme transcendental Brahm in Canto 1, verse no. 72 and Canto 5, verse nos. 2-5. Refer also to Skand Upanishad, verse nos. 10-11 of Krishna Yajur Veda tradition, and to Jabal Darshan Upanishad, Canto 4, verse nos. 48-59 of the Sam Veda tradition.]

169. The Jiva (living being) is Shiva personified, and the Mooladhar is its foundation or base. It is here that the great source of cosmic energy is established in the coiled structure called the Kundalini (169).

170-171. The place which is the progenitor of all the vital winds and the basic air element, which is self-illuminated as it is the creator of the fire element and its inherent light and energy, which is the source of Naad (the cosmic ethereal vibrations) and its concentrated energy represented by its Bindu (literally the dot placed on the top of the symbol of Naad represented by the Mantra OM but more practically representing the point-source from which the cosmic Naad originated and then spread out in the vast bowl of the cosmos represented by the hemispheric bowl placed below the Bindu), which is the creator of the Jiva (the living being; the creature) in its purest and fundamental form known as the 'Hans' (a reference to the Atma of the creature residing in the subtle heart and which is pure consciousness and the true identity of the Jiva), which is also the progenitor of the subtle Mana (the thinking mind and its emotional aspect represented by the heart), and which is the place from where all desires and yearnings originate—this place is called 'Kaam Roop Peeth', or the seat from where all worldly desires and passions spring forth. [It is also called the Bhag Chakra.] (170-171).

[Note—Refer to the Dhyani Bindu Upanishad of Krishna Yajur Veda, in its verse nos. 44-45 describes the Kaamroop Peeth.

Canto 5, verse nos. 5-15 of the present Yogshikha Upanishad also describes these Chakras.]

172. The Swadisthan Chakra is situated at the base of the genital and has the shape of a lotus with thousand petals.

The Manipurak Chakra is located in the region of the navel and it is shaped like a lotus with ten petals (172).

173. Oh Kamal Sambhav (i.e. Brahma, the creator of the visible world)! The Anahat Chakra is situated in the region of the heart and it is shaped like a lotus having twelve petals.

The second seat called Purna Giri Peeth is located here (173).

174. The Vishudha Chakra is located in the pit of the throat and it is shaped like a lotus having sixteen petals.

The third Peeth called the Jalandhar Peeth is located here (174).

175. The Agya Chakra is located between the two eyebrows and is shaped like a lotus having two petals. [One can visualise this area of the body as follows—the two eyebrows are the two unfolded petals, while the thalamus and the stem is represented by the nose.]

The fourth Peeth called the Uddiyan Mahapeeth is located on it (175).

176. The Chatrastra Chakra is located at the site where the earth (representing the living creation and the visible world) has its beginning, and its patron deity is Lord Brahma, the creator¹.

After that is the Chakra shaped like a crescent moon, called the Ardha Chandrakar Chakra. Its patron deity is Lord Vishnu, the sustainer and protector of creation. This Chakra is situated on the water element² (176).

[Note--¹That is, this Chakra has four corners and it represents the earth which acts as the base for all living world as is known to us. The four corners are the four directions into which the earth is hypothetically divided for the purpose of study and helping the creature to decide his location. They are south, west, north and east.

²In other words, the water element is symbolically shaped like a shallow convex bowl or tray because the water assumes the shape of the vessel in which it is kept and it cannot be held in a completely flat surface. So the vessel that can hold water must be slightly curved like the crescent moon.

The Dhyani Bindu Upanishad of Krishna Yajur Veda, in its verse nos. 27-28 describe the subtle heart shaped like a divine Lotus as a Peeth where the supreme Lord known as Vishnu is honorably seated.]

177. The Agni Chakra representing the fire element is triangular in shape and its patron deity is Lord Rudra (Shiva), the concluder of creation¹.

The Vayu Chakra representing the wind or air element is shaped like a hexagon and its patron deity is Ishwar, the Supreme Being² (177).

[Note--¹The colour of fire is red or orange, and the sign depicting danger is a triangle. That is why road signs depicting danger are triangular in outline. Fire is the most dangerous of the natural elements, hence it is represented by the triangle.

²The severe cyclonic storms appearing during the rainy season are observed to move in rapid circular motions, changing directions unpredictably and frequently. The tornadoes or twisters and hot whirlwinds during summers also move in rapid circles that sweep across the land and change course unpredictably. This natural tendency of the wind to move in circles and change direction at will is represented by depiction of its basic shape as a hexagon—which is an-almost circular shape but having corners and straight lines to indicate that the wind has the inborn characteristic of moving in a particular direction for some time and then suddenly changing course and taking another direction. This is the reason why one feels the wind blowing

sharply against one's face if one stands in the 'corner' of a large hallway. The movement of the air is more marked at sharp bends as compared to smooth turns.]

178. The Akash Chakra representing the sky or space element is shaped like a circle and its patron deity is Sada-Shiva (the eternal truthful Brahm)¹.

The Bindu is in the form of Naad located in the middle of the eyebrows. This is the site of the Mana (mind and intellect)² (178).

[Note--¹The best shape that the forces of Nature allow in order to retain everything within the outer boundary of existence is a rounded ball, a sphere. Since the sky encloses everything in existence and prevents them from scattering about and getting lost in the wilderness of creation, it must have a spherical shape. This is the basic principle of physics that when any thing moves around any central attracting entity such as the planets moving around the sun, the path that they take is circular because of the natural gravitational pull of the sun. The circular shape is the ideal shape that allows everything to be under the control of one central controlling authority and preventing them from scattering around, dashing against each other chaotically, or running amok and getting lost in a tangential manner. The natural forces of centripetal and centrifugal begin to play simultaneously to ensure a circular outline.

In the present case of the creation, the sky represents the supreme Brahm around which the rest of the creation revolves. So in metaphysics this Brahm is like the physical sun in the sky, the rest of the planetary system that goes around the sun in circles is like the rest of the creation that revolves around this Brahm. This is the macrocosmic picture, while the microcosmic counterpart would be the Atma around which the rest of the being of the creature revolves. Even the microscopic atom is shaped like a sphere or ball because the electrons must take this shape if they have to remain in their place orbiting around the central nucleus. The sky appears to be like an inverted hemisphere, but considering the fact that what we see is only the half part of it, it follows that when we complete the hemisphere it would be a circle.

²Every circle has a central point, the focal point. The entire existence and the world of the creature revolve around his mind and intellect, because the Upanishads have repeatedly stressed that this world exists because the creature has wished it to be there. Should the mind decide to eliminate this existence, to terminate it, it can simply shut its attention and divert it away from it and the world would immediately cease to matter to the creature. The mind and its other aspect the intellect is like the sun in the sky because it illuminates the world for the creature in the sense that he becomes aware of its existence because the mind receives the sensory signals emanating from the world and perceived by the various sense organs of perception. It then decides that the world and its sense objects are there. If the mind is diverted elsewhere, the world would be plunged in darkness in spite of there being bright daylight. In other words, it is the Mana that 'illuminates' the world for the creature much like the celestial sun. Therefore, the area of the body where the mind and intellect reside is the central or focal point of the body much like the sun in the sky, and it is around it that the entire existential being of the creature revolves. A man without the mind and intellect is called 'mad' for this precise reason because his behaviour and deeds are unpredictable and chaotic. Since every aspect of this creation revolves around Brahm, and since it is the latter that illuminates the creation in the form of consciousness and life, it is a natural corollary that the Mana is the natural habitat of Brahm as symbolised by the latter's abode in the Vyom Chakra and the Agya Chakra—the former representing the higher state of Brahm's abode in the sky element, and the latter representing Brahm's ability to show light and illumination to the creature through his faculty of intellect. From the angle of anatomy, the former is represented by the cranium and the latter by the cerebrum.

The Mana is the 'focal point' of the decision making process for the creature. The positioning of the Bindu at the midpoint of the eyebrows is a symbolic indication of

the fact that the brain's stupendous powers to think and analyse are located in this region. It is like the headlight of a car which shows the driver the path ahead. That is why when we concentrate and deeply contemplate upon certain thing, our forehead is furrowed and it physically appears that the entire energy and powers of the brain are concentrated at the mid point of the eye. This is therefore also metaphorically called the location of the 'third eye of wisdom'. The ancient sages had visualised that the focal point of the two eyes would naturally be somewhere behind them at a point equidistant from them. This would be the spot where the images formed by what the two eyes see could be synchronised and produce a three dimensional image of the object seen. A three dimensional picture is more clear as compared to a two dimensional view of the same thing. This is indicated by saying that the 'third' eye of wisdom represented by the Bindu is located at the point where the two eyebrows meet. The word 'third' is indicative of the 'three-dimensional' effect that wisdom and enlightenment creates for a wise and erudite ascetic.

The Naad is the cosmic sound generated in the center of the cosmic hemisphere. This hemisphere has a concave inner surface (or convex outer surface) resembling the skull from the inside. The Bindu in this case would be the brain which receives signals from the outside world and makes the creature aware of the latter's existence.

This shape of the skull also helps to concentrate the energy and waves originating in the vast cosmos on to the Bindu which is located at the mid-point of the two eyebrows. The curvature of the skull facilitate this process by helping to concentrate the cosmic sound waves on this point which are then caught by the sensory receptors of the brain, which then interprets these waves as 'sound' called Naad. This is similar to our modern day satellite dishes that dot every other home to catch television signal from all corners of the world and bring them within reach of our eyes so that we are able to have knowledge of what is happening in distant corners of the world without actually going there. This is a metaphoric way of saying that we have the benefit of deep insight into things that we cannot see directly. In the realm of metaphysics and spiritualism it would be the knowledge of the esoteric and mystical Brahm that is omnipresent and ubiquitous but beyond the reach of ordinary creature's receptive capabilities.

The importance of repetition of the Mantra OM lies in the fact that it produces a booster effect and enhances the resonance of this cosmic Naad so much so that it reaches a crescendo and overwhelms the practitioner; he hears nothing, he feels nothing except the vibrations of the Naad.

Refer verse no. 167 of this Canto 1, as well as Canto 3, verse no. 11, Canto 5, verse nos. 27-28, 34 also in this context.]

Thus ends Canto 1

Canto 2

1. Brahma requested Shiva, 'Oh Lord! I wish to hear about that eclectic knowledge (of Yoga) which enables one to acquire the mystical powers of Khechari—literally referring to the mystical power that comes to an ascetic in the higher stages of Yoga when he can float in the sky like a bird, but here it means the powers that enables him to divert his vital winds and other vital factors of consciousness from a lower state of existence to an exalted state when he can experience the presence of the supreme transcendental Brahm in his own self (1).

2. Shiva replied, 'Oh Brahma, listen. What I shall tell you now is a secret and esoteric knowledge. Success in it is a long-haul process and can only be achieved by a disciple who has served his Guru (teacher) selflessly and diligently for a period of twelve years (2).

3. This knowledge should be imparted in its entirety and in a comprehensive manner to a disciple who possesses certain auspicious and noble virtues, such as being magnanimous and generous, a disciple who is disciplined and ready to observe self-restraint, and who strictly follows the tenets of Brahmacharya in full (i.e. who observes the strict laws of celibacy and self-control of the sense organs). [These qualities should be in addition to the one mentioned in verse no. 2—i.e. to do service to one's Guru for twelve years to indicate his earnest intentions and sincerity of purpose.]

This eclectic and esoteric knowledge cannot be taught to and accessed by one who is proud, greedy for material gains, or is lazy and indolent in any way (3).

4. A disciple who is wise and erudite enough to understand the essence and the hidden meaning of the divine Mantra given to him by his moral preceptor at the time of his initiation into the religious fold by the latter and has thereby become enlightened and realised, it is only such a disciple who is deemed to be competent enough to actually benefit from any knowledge and wisdom sought to be acquired by study of the scriptures or by any other means. It is only he who attains success in any spiritual and religious exercise (4).

[Note—It is not enough to become a disciple of a Guru and accept a Mantra from him as a panacea for all spiritual ills. Simple repetition and mechanical process are useless unless their deep metaphysical meaning is understood and the process is done with great faith and devotion as to its efficacy and potent in providing spiritual solace, succour, emancipation and salvation. A Mantra is like a formula of mathematics, and a student who understands intelligently how it is applied can solve all the complex problems that need the application of that particular formula, while a student who has learnt it by rote just with the aim of clearing his exams would fail to do so in practical life. A disciple who grasps the intricacies of a spiritual Mantra is deemed to be enlightened himself and competent to enlighten others about it, and since he is enlightened he cannot be haughty and boastful of his achievements or misuse the various mystical powers that come to him as a result of success in Yoga. He would be humble and pious in an exemplary manner.

Another thing is that if anything is done intelligently, with correct knowledge of how to go about it and done with full understanding of the results, one would be careful to avoid pitfalls and get deflected and perplexed by numerous alternatives and charms proffered by vested interests to divert his attention from his main goal; he would remain steady and unwavering in his pursuit. His efforts bear quicker and better results with less time and energy involved. The Mantras are mystical formulae to harness the cosmic divine energy in creation according to the individual spiritual needs of a particular person much like medicines taken by a patient to overcome his specific and individual ailments. The doctor prescribes a medicine to his patient on an individual basis much like a Guru who identifies the spiritual problems of the disciple and then prescribes a particular Mantra best suited for his individual spiritual needs. So if the patient is intelligent and wise, he would observe all the restrictions imposed by the doctor and take his medicine properly besides fine tuning his lifestyle which might have been contributing to his ailments. In other words, an intelligent disciple treats the Mantra as a holistic remedy for all his spiritual ailments and a device that can help him to obtain liberation and deliverance from this cycle of birth and death. He realises and has firm faith both on the Guru as well as on the Mantra much like a

patient who is expected to have firm faith in his doctor and the medicine prescribed by him. If the disciple does not understand or know the full meaning of the Mantra and what he is supposed to be doing, he would not reap the full benefit like a student who gets a first division in college by learning the text book by heart but not understanding the subject comprehensively and intelligently, complete with its practical applications. The result would be disastrous for his career after he leaves college—what good for example a degree in engineering is if a person does not know how to tackle a mechanical emergency in a factory where he is employed on the basis of his first division marks-sheet! At the most the Mantra would give him some initial benefit and some degree of respect amongst his peers, or it might even provide him with certain mystical powers that come bundled with this Mantra, but that would be limited to worldly gains such as acclaim, a famous name, a large crowd of disciples, pomp and pageantry as an accomplished ascetic and other material benefits that comes with acquisition of mystical powers, but without benefiting his spiritual aim which after all is the main purpose of accepting a Mantra from a Guru.]

5. The Mantra which possesses the stupendous cosmic force represented by the Shiva and Shakti principle, or which is a personification of Shiva-Shakti as a non-dual entity displaying two sides of the same Divinity that is the supreme transcendental almighty Brahm displaying his cosmic dynamic powers, arises from the Mooladhar (Chakra—see Canto 1, verse no. 168).

It is rare and difficult to find someone who is well-versed in this Mantra and competent enough to preach it. It is equally rare and difficult to find someone who would hear it attentively or who has had the privilege of hearing about it and its meaning explained; someone who would understand and accept the profundity of the Mantra's import and importance; someone who would have faith in its mystical powers and potentials as the vehicle that can take the aspirant to his spiritual destination (5).

[Note--The Mantra preached by other Gurus is 'Hans-Hans', but by Shiva it is 'So-a-Ham' (Canto 1, verse no. 131 of this Upanishad) which means 'that (Brahm) is me', and is therefore called a Mool Mantra, or the 'principle' of all the Mantras, or the 'principal Mantra', and it is therefore likened to a 'Linga', or a symbol and personification of Shiva principle itself.

Refer note to verse no. 10 below for a detailed analysis of the concept of Mantra in relation to the Linga of the Shiva principle.]

6. The place (Mooladhar) from where such an eclectic and esoteric divine Mantra originates is called Naad Lingam and it is consciousness personified¹. An aspirant who knows about it, who is aware of its spiritual significance and importance is said to have obtained Mukti (liberation and deliverance) even while he is alive, i.e. he obtains 'Jivan Mukti'² (6).

[Note—¹Earlier Canto 1, verse no. 168 has asserted that there is a symbolic Shiva Lingam situated on this Mooladhar Chakra. This Lingam is the symbol of the deity Shiva who represents the supreme transcendental Brahm in his greatest glory of being a personification of eternal truth, auspiciousness and cosmic consciousness. When an ascetic is in deep state of meditation and contemplation, he hears the cosmic sound called Naad. The shape of the Shiva Lingam is like a short cylinder with a dome at the top and accompanied by a ring encircling it from all the sides at the lower end, a structure that is acoustically designed to facilitate the hearing of this cosmic Naad. The circular ring under this Lingam, called the Arghaa, represents the crescent moon placed under the Bindu or dot on the top of the symbol of Naad which is the sixth Sanskrit alphabet, i.e. the long vowel 'Ooo' as in *root*. The composite structure represents the Shiva-Shakti principle of creation. Therefore, an ascetic who becomes

wise and enlightened enough to understand all the intricacies of Yoga and the profound effect of Mantra used during the process is indeed liberated from the bondage of his physical body and establishes himself in his pure conscious form of the Atma which is Shiva or Brahm personified. In this context, refer verse nos. 9-10, 13 of Canto 2.

²The Mantra used to enable the ascetic realise who truly he is, is 'So-a-ham', i.e. 'that (Brahm) is me'. He in other words realises that his true identity is not his gross and perishable body but the eternally truthful Atma personifying Shiva, the cosmic truth and consciousness. A person who realises his true identity as being his Atma and not the body is deemed to have broken free from the fetters of ignorance that had made him captive of the body under the impression that the latter was 'he'. Once enlightenment dawns upon him when he understands the true import of the Mantra 'So-a-ham', this wrong impression is immediately dispelled. This is why emphasis is laid in earlier verse no. 4 on understanding the real meaning and essence of the Mantra to derive actual benefit from it, besides the fact that only an intelligent aspirant can do so because it requires a higher level of intellect to make it possible.]

7. A spiritual aspirant (an ascetic who practices Yoga with wisdom and intelligent application of its principles) who deeply contemplates and intelligently analyses the various aspects of Yoga and its Mantra along with their profound spiritual effects, who does Pranayam and at the same time understands my (Shiva's) true form along with its metaphysical importance and significance—such a wise aspirant is able to soon acquire the various Siddhis (mystical powers) such as Anima etc. [These Siddhis have been described earlier in Canto 1, verse nos. 44 and 151-157 in detail.] (7).

8. Oh Brahma! The mystical formulae used during meditation and contemplation (to kindle self-realisation and provide Mukti and Moksha—liberation, deliverance, emancipation and salvation to the creature) is called a 'Mantra' because of the following facts—it has its genesis in my teaching, it has been devised by me and prescribed by me as an effective means of obtaining spiritual grace, it is being directly preached by me, Shiva, who not only personifies Brahm but is also the most revered, acclaimed, competent and enlightened preceptor for the entire creation as well as the patron God of ascetics, it has its origin in the Mooladhar Chakra (because this Mantra is heard by the ascetic as the Naad when he meditates upon me in the form of the symbolic Lingam located here as also the fact that success in Yogic exercises depend upon success in harnessing the energy of the Mooladhar Chakra and controlling it), and because it is the root and essence of all other Mantras (as it enlightens the spiritual aspirant of his real identity, which is the main aim of all spiritual endeavours) (8).

9. [There is a lot of symbolism and dual meaning in verse nos. 9-11. A great deal of play on the word 'Mool' is being done here.] Since this Mantra preached by me (i.e. 'Hans' or So-a-ham as narrated in Canto 1, verse no. 131) represents my (Shiva's) true and essential eclectic conscious form, or it is a personification of the cosmic Shiva principle and represented as a Lingam (a male phallus situated on the Mooladhar Chakra) which is shaped like a elongated root (such as a radish or a carrot), it is called a 'Mool Mantra'¹—i.e. the root for all Mantras.

This Mantra represents the subtle cause of creation, expansion and development, and the conclusion or dissolution of everything in existence (i.e. it represents Brahm) (9).

[Note—¹The word 'Mool' has a dual meaning—it means a 'root' as well as the 'essence or fundamental aspect of anything'. Therefore the Mantra Hans or So-a-Ham

preached by Shiva not only is the best of all the Mantras but also the foundation upon which self-realisation and Brahm-realisation rest. This Mantra enables the practitioner to realise the profundity of the spiritual truth that his 'true self' is not an ordinary mortal body but a divine entity that is ethereal and transcendental consciousness called the Atma. The Mantra 'So-a-Ham' is one of the great sayings of the scriptures because it enlightens one about his true self. The Mantra preached by Shiva represents both his gross symbol of the Lingam as well as his subtle form as cosmic energy and consciousness personified. In other words, the Mantra 'Hans' referring to the purity of the soul because it refers to the divine bird Swan which is universally employed to imply something that is holy, pure, incorruptible, immaculate, wise and enlightened has a great spiritual potential.]

10. This Mantra represents the supreme Ishwar (the Supreme Being, the Lord of all creation); hence it is his Linga or symbol. [In other words, this Mantra is the subtle body of Ishwar even as the physical Lingam represents his gross symbol.]

It is called Linga¹ also due to the fact that it always lives inside all the living beings as their integral part (known as the Atma, the pure conscious soul). [There is another interpretation of this sentence. The male genital organ is a phallus, called a Linga, and it is an integral part of the body of an ascetic. The location of the symbolic Shiva Lingam inside the body had been depicted as being on the Mooladhar Chakra which is the center of the sexual organs and consists of sensory nerves directly related to this organ. In the female it is represented by the clitoris. So, the symbolism is obvious. It is due to this reproductive organ that the creation has come into being, and with this symbolism it is easy to understand that the male is indeed a personification of Brahm, the eternal cause of everything that exists. When extended to include the female, it follows that she is the Shakti of that Shiva (male) representing Brahm; she is Prakriti and Maya personified as far as an ascetic is concerned.] (10).

[Note—¹Linga—The word *Linga* literally had a number of interpretations—such as the gender of any thing or living being, the genitals and especially the male phallus, a sign, a mark, a token, a symptom or symbol of anything. According to Shankya philosophy, it is the 'prime nature', and according to Yoga philosophy it is the Mooladhar Chakra and its phallus-like Kanda (the Nabhi Kand) which together represent the Shiva-Shakti principle. It also stands independently for Shiva, the principal creative force and the supreme divine power of creation, and is depicted as a male phallus in the form of a cylindrical structure with a dome at the top and an encircling ring at the lower end. This composite symbol is called a Shiva Lingam and it stands for the Shiva-Shakti principle of creation—i.e. for the supreme transcendental Divinity known as Brahm, the sublime pure consciousness, and its dynamic manifestation known as Shakti which is the energy of this consciousness at work. The erect vertical part resembling the phallus symbolises the Shiva principle, and the circular ring at the base represents the female Shakti principle. The ring also symbolises the cosmic bowl or crucible where this creation was first conceived, and as such represents the Shakti aspect of Shiva. It also can be visualised as a seed from which a shoot is coming out; the former represents the Prakriti and the latter represents the Purush. This combination is known as Brahm and Maya in Vedanta, as Purush and Prakriti in Shankhya philosophy, and as Shiva and Shakti in Tantra and Yoga philosophy.

This symbolism of 'Linga' to represent Shiva and Shakti principle of creation of the Tantra philosophy both at the subtle level as well at the gross level is employed adroitly in this Upanishad from verse no. 5 onwards to describe in detail its various connotations, especially in relation to the eclectic Mantra 'So-a-Ham' as a symbol of Shiva because it is preached by Shiva himself in this Upanishad, and the Mooladhar Chakra and its associated Mool Kand or Nabhi Kand as another symbol of Shiva-

Shakti principle revealed in the body of all persons. These two are the Lings or Lingams of Shiva at the sublime and subtle level, while the Lingam usually worshipped in the temples is the gross symbol of the same principle. In fact, Canto 1, verse no. 168, and Canto 5, verse no. 5 of this Yogshikha Upanishad assert that the Shiva Lingam inside the body is represented by the Mooladhar Chakra.

The Mantra preached by Shiva is 'Hans-Hans' (Canto 1, verse no. 131 of this Upanishad) which is actually a acronym for the full Mantra 'So-a-ham' meaning 'that (Brahm) is me', and is therefore called a Mool Mantra, or the 'principle aspect or essence of all the Mantras' or the 'principal amongst all the Mantras', and it is therefore likened to a 'Linga', or a symbol and personification of Shiva himself.

It must be noted here that the Mooladhar Chakra is shaped like the concave bowl representing the cosmic womb, and over it is placed the Mool Kanda or the Nabhi Kanda which is shaped like the male phallus. The entire structure represents the Shiva Lingam seen in temples. Verse no. 168 of Canto 1 also points a finger in this direction by saying that a Lingam is placed on the Mooladhar Chakra. This apparatus consisting of the Mooladhar Chakra and the Kanda is located inside the body, and its external symbol is the Shiva Lingam seen in temples. Comparatively, the one inside the body is subtler to the one present as an idol in a temple. Since Yoga is based primarily on both the Tantra philosophy as well as on the Vedanta philosophy, emphasis is laid on this symbol to represent Shiva as a personification of the eclectic and glorious virtues of the transcendental supreme entity known in Vedanta as Brahm.

Again, since the pure consciousness is a non-dual, uniform and universally present entity, whether at the level of the individual creature or at the cosmic level, it is this 'pure consciousness that is metaphorically represented by the symbolic Shiva's Lingam that is present inside the body which is taken as a representative of Shiva or Brahm. In other words, the Lingam present in the body is a symbol of the pure consciousness residing in all the living beings as their Atma, as their 'true self'. This pure consciousness or Atma is a manifestation of the supreme cosmic Brahm in a microcosmic form. And this Brahm is synonymous with Shiva.]

11. It is a symbol of all the forms and manifestations that is taken by the ethereal Divinity represented by the Shiva principle. [The word 'it' here refers to the divine Mantra preached by Shiva. As such, it not only encrypts the Shiva principle and embodies the pure consciousness at one level, but also includes the cosmic generative powers at the other level, and hence it is likened to Shiva's Lingam.]

Hence, it is also called a 'Sutra'. [The word 'Sutra' means a formulae or a secret code by knowing which one can solve great puzzles or questions. This is the main purpose of any Mantra—to unravel the great spiritual secrets to the person who is dedicatedly worshipping his deity with a particular Mantra devoted to this deity so as to unravel the profound mysteries of this cosmic entity. In the present case, this entity is Shiva and his Shakti.]

The Shaktis represented by it are 'Maha Maya' (the great delusion-creating powers of Brahm, here represented by Shiva and his divine consort Parvati), 'Maha Laxmi' (the divine consort of Vishnu who is the sustainer and protector of creation; the second of the Trinity Gods) and 'Maha Saraswati' (the divine consort of Brahma who is the creator of the physical world as well as the Vedas which are the repositories of knowledge that is needed to sustain this world in an orderly way; that is why Saraswati is regarded as the patron Goddess of knowledge and wisdom as well as speech and expertise in any particular field) (11).

[Note—The Gods of the Trinity, viz. Brahma, Vishnu and Shiva, are simply visualised as the same Brahm performing different functions in its three distinct forms, a clear case of delegation of authority at the cosmic level. Since Brahm is a

neutral entity and its dynamism is revealed in the form of Shakti or cosmic energy, these three Goddesses are the three counterparts of the same universal Shakti that enables Brahm to carry out what it wishes. In Brahm's manifestation as the creator and settler of this creation in the form of Brahma, this Shakti assumes the role of Saraswati who empowers Brahma with the requisite knowledge so that he can actually set about his assigned task of creation which is a very technically complicated and intricate job. Likewise, Vishnu needs material wealth to sustain this creation, to feed it and look after its upkeep, so the Shakti is envisioned as Laxmi, the Goddess of wealth and prosperity. Shiva is responsible for conclusion, and this indirectly means that things really come to a head when its sustenance and perpetuation becomes impossible, there is intrigue, infighting and strife, and the creation eats itself out like a parasite. Thus, Parvati is the patron Goddess representing Maya because delusions and ignorance are the basic cause for tussle leading to destruction in this world.

See not to verse no. 12 below also.]

12. These three goddesses are invisible and represent the primary cosmic forces of creation that are sublime and subtle as well as dynamic and forceful. The entire world has come into being because of these dynamic forces of Nature; they have created the visible world from invisible entities (just like a mother creates the offspring in her womb, hidden from the external world, and lets the world see this creation of hers only when it is ready to stand up and face the turbulence and vagaries of this physical world)¹.

The subtle and sublime powers of a Mantra used in Tantra form of worship are revealed in the form of the Bindu and Peeth² (12).

[Note—¹These three Goddesses represent the three primary requirements for the visible creation to come into being. The first is Maya—this indicates that the world has come into existence because the Atma, the cosmic Consciousness, which is primarily very immaculate and enlightened, allowed itself to be overcome by delusions and surrounded by a veil of ignorance that hid its true form as an exalted entity. It thereby felt uncomfortable and unsatisfied with its own self and sought comfort and happiness elsewhere. So in its ignorance it decided to create an environment which would help it to gain happiness and comfort, forgetting in the process that it is allowing it's self to be trapped in a quagmire.

Then comes the role of Laxmi—signifying the need of material wealth and prosperity to sustain his utopian view of this world as an abode that never exhausts of its riches, comforts, pleasures and charms. Since the Atma is already covered in a veil of ignorance and delusions, it is never satisfied with what it has and yearns for more and more.

The role of Saraswati is interwoven in this complex fabric because success in any enterprise needs relevant knowledge and expertise. This Saraswati is a double-edged sword, for on the one hand knowledge is empowering and liberating, and if misused it can be horribly decapitating, destructive and ruinous.

Finally, extreme indulgence and extravaganzas lead to moral decay, degradation, turpitude and ultimate destruction—represented by Maya once again to complete the cycle.

²In Tantra worship, Bindu is regarded as Shakti, the dynamic aspect of Shiva, and the Peeth is the seat of this Shakti. There is another way at looking at these two words—Bindu represents the cosmic sperm which represents the dynamic energy, potentials and powers of Shiva, and the Peeth would then be the seat of this Shiva energy, i.e. the base of the Shakti, the seat from where Shiva derives his immense cosmic powers and authority.]

13. Oh Brahma! When the Bindu-Peeth is ruptured or conquered by the force of the Pran Vayu (i.e. by the Apaana wind located in the lower end of the body), the ascetic is able to have a subtle and sublime vision of, or experience the presence of the Naad Lingam. [That is, when the ascetic does Yoga exercises by adopting different postures, one of which is the Mool Bandh whereby the aperture of the anus and the genitals are pressed and closed shut in the lower part of the body, the Apaana wind is forced to be incarcerated and get heated and pressurized in the abdomen. This wind would then violently shake up and force its way into the Mooladhar Chakra, enter the Sushumna Naadi and move up to meet the Pran wind in the upper part of the body which is similarly trapped by the simultaneous doing of Pranayam (breath control exercises). The resultant collision and mixing of the two primary winds create a grave howl which resembles the distant sound of a storm which in metaphysical terms is called the reverberation of the Naad heard in the cosmic ether. The ascetic begins to shiver and shake as if possessed by some super-natural Spirit, but actually it's the cosmic vibration resonating in his entire frame that makes him shake like a leaf shivering during a severe storm. The entire process is metaphorically called the emergence of the Naad Lingam from the Bindu Peeth—i.e. it is the emergence of the cosmic Naad as a shoot emerging from the Mooladhar Chakra and spreading out like the branches of a huge tree. The body here is the 'huge tree', and the shaking that occurs in it is like the wind shaking the leaves on this tree's numerous branches. Actually, the vibrations of the Naad massage the nerves in the body, and the sense of extreme titillation that this produces is interpreted as ecstasy and exhilaration by the brain, which derives extreme bliss from hearing this Naad. All external senses are dulled into oblivion; the ascetic hears nothing, sees nothing, feels nothing, smells nothing and tastes nothing except the overbearing sound of Naad and its titillating exhilaration.]

This process of rising of the Pran winds is a metaphor for the rise of the spiritual aspirant from a lower state of existence to a higher and exalted state when he not only hears the Naad but becomes witness to the presence of the supreme fount of bliss associated with it. This exalted state of existence is called enlightenment and Brahm realisation. It brings the aspirant face to face with the supreme Brahm residing in his own self as the pure consciousness and the eclectic virtues of wisdom and enlightenment. This is called 'Brahm Shammukhi Karan'—or being in the presence of Brahm, or a process that brings the aspirant face to face with Brahm. [The seat of Brahm is said to be in the upper part of the head, in the region of the Vyom Chakra or the Agya Chakra which are located in the region of the cranium and the cerebrum respectively because intelligence, wisdom, knowledge, erudition, thinking and analyses etc. which are the functions of the brain are the characteristics of Brahm. Brahm is also manifested as the pure consciousness that pulsates throughout the being of the creature as his vital signs of life. As the Atma it resides in his subtle heart, the location of the Hridaya Chakra. So when the vital winds reach the head, the ascetic feels an extreme sense of bliss and peace which is tantamount to his attaining the exalted state that rises above the mundane existence ridden with mental worries and all sorts of emotional turmoil. This extreme sense of beatitude and felicity is associated with the state of Brahm-realisation—i.e. the practice of Yoga brings him face to face with Brahm. Hence, this process is called the 'Brahm Shanmukhi Karan' or the process that brings the spiritual aspirant closer to Brahm so that he can have a first hand experience of this divine entity.] (13).

14. This (symbolic Lingam representing the true self that leads to Brahm-realisation or Shiva awareness) is easily brought to light or made known to the aspirant by the blessing and grace of his Guru (moral preceptor and Yoga teacher).

The supreme transcendental Brahm is the ubiquitous conscious Divinity that is present in all the three levels of existence—the gross, the subtle and the sublime (14).

15. Brahm in the form of the five gross elements of creation (earth, water, fire, air and sky) is called ‘Panch Brahm’ as well as Vairaaj. This form of Brahm is comparatively grosser in nature when considered against its other subtler and more sublime forms which are invisible and without any attributes. These subtle and sublime forms of Brahm have three dimensions, one of which is Hiranyagarbha (the macrocosmic subtle body of Brahm, and the sum total of all the subtle bodies in creation). [The other two aspects of this Brahm are the Viraat Purush or the macrocosmic gross body of Brahm, and Ishwar or the macrocosmic causal body of Brahm.]

These entities are represented by the cosmic Naad. In other words, Naad is the all-incorporating and all-inclusive cosmic representative of Brahm in his gross, subtle and sublime forms. So when the ascetic hears Naad during Yoga, he is deemed to have witnessed Brahm first hand (15).

16. The supreme transcendental and sublime Brahm is the only and the final Truth in existence. It is an embodiment of truth, pure consciousness and supreme bliss that are eternal, infinite and imperishable. It is beyond the purview of proof and logics (i.e. Brahm does not need any proof to be established because its existence is too obvious to be denied, and it is so esoteric and super natural that physical logics fail when applied to this mystical entity). It cannot be indicated or implied or explained by any fixed formulas, instructions or directions. Neither the mind nor the speech have any access to it (i.e. the mind cannot imagine, learn about and then explain or describe Brahm using the faculty of speech; Brahm cannot be limited to words and phrases and it also cannot be understood by the application of intelligence and rational logics of the mind) (16).

17. The supreme transcendental and sublime Brahm is Shuddha (pure, uncorrupt, immaculate and taintless). It is Nirakar (has no forms and shapes and attributes). It is Nirvikar (without any faults, impurities, blemishes and shortcomings). It is Niranjan (innocent and without any worldly fault or taints that may cause any darkness to cling to it). It is Anant (endless, eternal and infinite). It is Aparichhedya (it cannot be pierced and conquered). It is Anupam (unprecedented, unparalleled, inimitable, unequalled, most excellent and peerless). It is Anamaye (it is healthy, without any ailments, imperfections and defects). It is Aparmaan (it cannot be measured and fathomed; it cannot be hemmed in) (17).

18. This supreme divine entity (Brahm) reveals its self to the spiritual aspirant by practicing of the Mantra dedicated to it (much like constant practice of anything makes one an expert in it). [Since the Mantra of a particular deity is like the key to unlock the divine secrets associated with that deity, when one uses this key he is able to unlock these cosmic secrets and access the spiritual treasure hidden inside it. In the present case, the treasure is the supreme transcendental Brahm symbolising the divine cosmic energy of creation as well as pure consciousness.]

Now listen from me (Shiva) the various signs of success and the process by which this mystical power (Siddhi) can be obtained. [The Siddhi referred to here is

the spiritual power that comes with Brahm realisation as well as by self realisation.] (18).

19. Those who are truly wise, enlightened and realised ascetics see that self-illuminated divine form of Brahm in the illumination or light emanating from a lighted lamp, the bright moon, the glow worm, the electric and the stars. That is, Brahm is 'illumination and light' personified. The words 'illumination' and 'light' are metaphors for divine virtues and eclectic glories marked by holiness, mystic and majesty that are so characteristic of the Supreme Being (19).

20. Such acclaimed ascetics who have successfully realised Brahm and have become self-realised are soon able to achieve success in acquiring the glorious mystical powers called the Siddhis such as Anima etc. that naturally come to him with this spiritual achievement.

There is no Mantra greater than Naad (represented by the monosyllable word OM)¹. And there is no greater God than the Atma. [This is because the Atma is pure consciousness and the supreme transcendental and sublime Brahm personified. The Atma is this Brahm residing in the body of the individual creature himself. This Atma is Shiva personified.] (20).

[Note--¹Refer Yogtattva Upanishad, verse no. 63-64 in this context which prescribes OM as the divine Mantra for meditation. But the Mantra preached by Shiva in our present Yogshikha Upanishad is 'Hans-Hans' or 'So-a-ham' as expounded and elucidated in Canto 1, verse no. 131. Apparently this seems to be contradictory, but they mean the same thing—the first Mantra OM which encrypts Naad relates to the supreme Brahm or Pranav, while the second Mantra Hans relates to the state of self-realisation when the aspirant realises the eclectic fact that the Brahm to which OM refers is none but his own 'self' as his pure conscious Atma which is like a divine Swan floating in the subtle space of the heart of all living beings.]

21. There is no greater worship than researching about the Atma, (the pure self and pure consciousness). [This is because when one researches about anything, his whole concentration is focused on his project, which is the main aim of meditation and worship—viz. to focus on one's self on one's object of devotion. And since this Atma is none other than Brahm, it follows that by focusing on the Atma the worshipper is concentrating on Brahm. What better ways of worshipping of the Supreme Being can one find?]

There is no pleasure, joy and happiness greater than being perpetually contented and satisfied. [This is because when one has the eclectic virtue of contentedness, one would stop feeling the need to want more, to yearn for more, and then to strive to acquire more of it in an endless cycle of wants and desires and their attendant discontents, frustrations, discords, envy and jealousy.]

A person who is my sincere devotee would become fulfilled and contented by understanding what I am saying here. This would make him happy and blissful. [This is because now he has learnt the secret of his spiritual welfare directly from me, Shiva, whom he adores as his Lord. He would not have to waste precious time, energy and effort to find out the way for his spiritual well being and deliverance by consulting numerous sources, and then go about verifying their trustworthiness and effectiveness. He has learnt the great principles of spiritualism directly from me.]

A person desirous of acquiring the various mystical and spiritual powers called the Siddhis should make diligent efforts to learn the intricacies of this esoteric knowledge, and once having known it he should keep it secret with him.

[Advertisement and self boasting is prohibited in the scriptures. This is because ordinary people would be skeptical about this spiritual aspirant's efforts and achievements. They would treat him as a performer of black magic or someone who has gone out of his head by not conforming to the standard and routine way of life expected to be lead in this world which is accustomed to observing standards, routine practices and material yardsticks. People would regard a realised ascetic's spiritually exalted state of existence marked by dispassion and neutrality as being a sign of mental disease and odd behaviour, or worst that he is possessed by some evil Spirit! They would castigate him and ostracize him from society, ridicule and demean him, and generally cause great annoyance to him, thereby destroying his peace of mind. If that does not happen, the opposite is equally disturbing for him—people would flock to him for blessings and patronage, showering him with praise and material gifts, and seeking his intervention to solve their personal problems by using his mystical powers; if he refuses he would be called a selfish man. Therefore, it is enjoined for a truly exalted man who has become realised to shun all such things for his own betterment and good as they act as impediments and drags in his spiritual progress.] (21).

22. A spiritual aspirant who has great faith and devotion in his chosen God and a similar level of faith and devotion for his Guru (teacher) is deemed to be a great soul (for he would be benefiting by the auspicious blessings and grace showered upon him by both of them). All sublime knowledge, wisdom and erudition would gradually unravel themselves to him subtly and imperceptibly on their own in a gradual manner without his making any great or special effort for acquiring them (22).

Thus ends Canto 2

Canto 3

1-2. That which is worthy of bowing before and showing great honour and due reverence to, that which is said to be knowledge, enlightenment and consciousness personified, that which is the origin and cause of all mystical powers and authority, that whose knowledge and awareness provides a man with liberation and deliverance from the cycle of birth and death [1]—it is that divine and eclectic entity which is known as 'Akchar' or the one who is imperishable and immune to decay and destruction, it is that eternal and all-pervading entity which is symbolised by the great cosmic reverberating sound known as Naad, and it is also known as 'Shabda Brahm' or the supreme Divinity revealed in the form of the ethereal 'sound' called Naad, which in turn is at the root of the divine Mantra OM and the entire spectrum of the spoken 'word'. [Refer verse nos. 5-11 of this Canto.]

The divine subtle cosmic energy that supports the entire creation is present inherently in the Mooladhar Chakra, and it also known as 'Bindu' or Shakti [2]. (1-2).

3. It is in this Bindu (the point-source of ethereal energy in the cosmos) that Naad (the all-pervading cosmic vibrations in ether that ultimately translate into sound) originates¹. This is just like the case of a sprout of a huge tree having its origin in a small seed². The subtle energy of sound present in the Naad is called 'Pashyanti', and

it is utilised by a wise and erudite ascetic to see and visualise the rest of the world around him³ (3).

[Note--¹Naad is a form of cosmic sound, and this sound is a manifestation of the energy created by vibrations in ether. In other words, during the process of Yoga, when the vital winds, especially the Apaana wind is made to activate the Mooladhar Chakra by literally vibrating or shaking it into action, the latent energy trapped inside it is activated to produce the sound much like striking of the tuning fork produces sound as demonstrated to science students in a school physics laboratory. Another example to show how sound has a pinpoint Bindu or dot as its origin is the ripple created on the surface of a calm lake when a stone is thrown in it. The ripples would originate in a single point where the stone had touched the surface of the water, and then the waves spread out in concentric circles, one after another, to far corners of the lake. Since sound also travels in the form of waves in cosmic ether which fills the entire space of the sky, this example would show why and how the origin of Naad was envisioned in the Bindu (dot; a single point) by the ancient sage who had first visualised it.

²This is another interesting analogy. The seed is round and small—almost like a Bindu or dot—when compared to the huge tree that it would produce. The sprout is like a Lingam or phallus coming out of it. One is left marveling at the wonderful imagery used in the Upanishads to explain concepts.

³The Naad or cosmic sound that is physically heard during Yoga is a manifestation of the activated dynamic forces of creation, or the ‘Shakti of Brahm’. The inherent energy that is present in this Naad is this dynamic force or Shakti itself. Taking a parallel from the physical world, the Naad is like the eye of the body, but the eye functions as an organ of sight only because it has the energy to do so and has been empowered by the faculty of sight located in the brain to see. The apparatus of the eye has an aperture or hole, called the pupil, located in the center of the iris, and it is this ‘hole’ through which the eye actually sees. In the present context, this ‘hole’ (pupil) would be the ‘Bindu’, while the eye itself would be the Naad in the center of which the Bindu is located because the structure of the eye derives its significance only due to this pupil. But when we look deeper we observe that the entire apparatus has importance for the creature only because it enables him to ‘see’. This ‘power to see’ and the ‘faculty of sight’ would be like Brahm in the context of the cosmos because though it is hidden from view but it is nevertheless the only component in the entire setup that drives it.

In other words, the ascetic sees this living world characterised by the presence of sound as a revelation of Brahm who is universally and uniformly present throughout it in an imperceptible and subtle form. The fact that sound characterizes this world as a ‘living’ entity as opposite to being a ‘dead’ one is proved by the fact that there is utter silence in a morgue or grave-yard whereas there is hustle and bustle of vibrant life in a busy city. For all practical purposes of Yoga as described in this Upanishad, this Naad and its subtle energy called Pashyanti are located in the Mooladhar Chakra. That is why it is called the site of the Naad Lingam as described in Canto 2, verse nos. 5-6. Refer also to Canto 1, verse nos. 105, 167.]

4. [The earlier verses had dealt with the Naad that was heard by the ascetic while the mind was fixed in the Mooladhar Chakra. Now the attention shifts to the heart region where the Hridaya Chakra or the Anahat Chakra is located.]

The roaring sound heard in the region of the heart is like the distant thundering and reverberating rumble of the clouds. Oh Brahma! The divine Shakti located here is called ‘Madhyama’ or the one that is located in the middle (because the heart is located in the central part of the body and mid way between the Mooladhar Chakra at the bottom and the Brahm Randhra Chakra or Sahasrar Chakra at the top of the head) (4).

5-6. [Verse nos. 5-10 describe how a man is enabled to speak.]

This Shakti derives its powers from the Pran Vayu (breath). [This is because the breath draws in fresh air and oxidises the blood. The breath also keeps the heart beating as is evident from the fact that the heart immediately stops beating if the breath is stopped as it happens during death by suffocation.]

This power of breath enables a person to speak and thereby enable this Shakti (the Madhyama Shakti of the heart or Anahat Chakra) to move out of the body by the way of the mouth (in the form of the spoken word) and spread its wings to reach another person in the form of the energy of the sound that translates into the word heard by him.

This Shakti which moves out from the mouth in the form of sound or the spoken words to be transferred to another person in the form of words heard by him, is called 'Vaikhari'.

While doing so, i.e. while spreading out to reach other places, it acts like the tree which gives out new shoots and spreads out its branches along with the leaves and flowers and fruits to reach a wider area much away from the location of its roots. When the dynamic energy of the cosmic Naad passes through the cavity of the mouth and rubs against its walls and fine-tuned by the muscles of the tongue when the vital forces of life called Pran (breath) are exhaled through the open mouth, its frequencies undergo certain changes so much so that now they come within audible range and can be heard as the spoken word. The tongue's flexible muscles help to make the jumble of meaningless sounds into meaningful words that are clearly articulate and understandable [5].

This produces various genres of sound from which arise all the alphabets of the language—from the first letter 'A' (as in *alloy*) of the Sanskrit alphabet to the last letter 'Ha' (as in *hung*).

Combination of letters produce words, and combination of words produce phrases, sentences and paragraphs, and their numerous spin-offs such as poetry and stanzas [6]. (5-6).

[Note—These two verses briefly describe the genesis of the spoken language. See verse nos. 7-9 also below.]

7. All the Mantras, all the Vedas and other scriptures, all the Purans and numerous other narratives and poetical compositions, all the uncountable dialects and languages in existence—they are all indeed a manifestation of the Vakya or the word which is a manifestation of the cosmic dynamic energy called Shakti in its second form known as 'Vaikhari'. The dynamo that powers this Shakti is the beating heart—or the activated Hridaya Chakra because as soon as the heart stops to beat no one can speak a word (7).

8. All the seven basic sounds of classical music, called the 'Swaras' (Sa, Re, Ga Ma, Pa, Dha, Ni) as well as all the various Gathas (narrative compositions that were transmitted orally by being rendered into poetry) are manifestation of Naad¹.

Goddess Saraswati, the patron goddess of speech, learning and wisdom, who resides in the mouth of all living beings (and enables them to speak in their own tongue or language), is indeed a manifestation of Naad. [That is why Saraswati is depicted in iconography as holding a Veena, the Indian lute, as a symbol of her singing prowess. Since singing needs a finer tuned voice, special vocal skills and expert command over the language and its finer nuances, and also because the verses

have to be memorized by heart to be sung without break as compared to the simple and routine exercise of daily talking or speaking, the most appropriate depiction of the eclectic nature of the cosmic Naad is not as simple words spoken in daily routine life but as the inherent music of classical and melodious singing. This is also why in the Upanishads that describe Naad, it is likened to the cosmic ‘music’ heard by the ascetic while he is submerged deep in meditation.] (8).

[Note--¹This is because Naad incorporates all known genres of sound. There is no sound that is not incorporated in Naad. Refer Naad Bindu and Aksha-maliko Upanishads of Rig Veda tradition as well as Jabal Darshan Upanishad, Canto 6, verse nos. 2-37 and Yogchudamani Upanishad, verse no. 80 of the Sam Veda tradition in this context of the sound produced by Naad.

Now let us briefly analyse how the uniform sound of the Naad is broken up into letters and forms what is called speech. When the exhaled breath rubs against the muscles of the vocal cords, it produces a sound resembling the cosmic homogenous sound called the Naad. But as it happens, the angle at which the breath rubs against these vocal cords and the flexible muscles of the tongue help to break up the wavelength of this homogenous sound wave into many waves of differing wavelength and frequencies, thereby creating sound of different tones, notes and pitches. These sound waves are modulated and fine-tuned in such a way that they are interpreted by the brain of the hearer as letters, which in turn form intelligent words and sentences. The Swars are the basic or primary form in which the Naad is broken into.

It ought to be noted here that the basic Swars or tones and notes of music are ‘seven’ in number and the colours in the sunlight are also ‘seven’; there is a natural and obvious correlation between them which leads us to a very interesting analogy. Just like the sunlight is scattered into seven basic and primary colours—viz. violet, indigo, blue, green, yellow, orange and red when it is scattered by the water molecules in the earth’s atmosphere during and after rainfall into seven wavelengths resulting in the formation of the rainbow, as well as when white light breaks up into seven colours when it passes through a transparent glass prism, the uniform sound of the Naad breaks up into waves of seven wavelengths or frequencies which are picked up by the brain as seven Swars—viz. Sa, Re, Ga, Ma, Pa, Dha, Ni. This is ‘music’, but when the same theory is extended further we can imagine how the sounds of the vowels, consonants and sibilant letters are formed. To understand how this comes about, we can draw on the example of light in physics and recall the physical phenomenon called the ‘Raman Effect’ in which the monochromatic light is further scattered to produce additional lines in the spectrum when a beam of light is further scattered by a transparent material medium. The ‘Raman Effect’ shows how the energy and hence the wavelength or the frequency of the light falling upon a suitable molecule is ‘modified and modulated according to the combined effect of the basic energy of the molecule as well as the energy of the incident light during the process of light transmission through this medium’; it is because there is an exchange of energy either way between the incident light and the molecules of the medium through which it is being transmitted. Therefore the modification or modulation is surely characteristic of the molecule of which the medium is made up of as much as it is on the energy of the incident light.

In the present context we can now easily visualise how the sound waves of different wavelengths or frequencies are created and why a single basic sound-form can be further broken up and fine-tuned to form the different letters of the same group of vowels and consonants of the Sanskrit language. The modulation and modification is done by the vocal cords in close concert with the tongue and the muscles of the mouth cavity which have been designed and constructed by Mother Nature with expert sense of acoustics in mind. Different subtle characteristics and temperaments of the speaker which are controlled by numerous elements which determine an individual’s uniqueness, such as his different Gunas (inherent virtues and qualities of

which there are three main ones—viz. Sata, Raja and Tama), the different Vrittis and Vasanas (mental tendencies, natural temperaments, passions, desires and habits), Ahankar (ego, self-pride), Mana (natural inclination and state of the mind and heart), and so many other incidental factors that determine his personality, outlook, emotions, sentiments, state of the mind and thought processes come into play to decide how the same wavelength or frequency of sound that creates a given letter, and hence the spoken language, is modulated and modified by different individuals to create different impressions of the meaning of the same word. It shows how the same word of the same language is spoken differently by different people, and how it is transformed to mean different things to different people.]

9. When the Pran Vayu (the vital winds of the body, especially the breath and the one which infuses life and vitality in the body) is heated and activated by the subtle energy present inside the body, especially the one known as Madhyama (see verse no. 4 above), it transforms or metamorphoses into sounds revealed in the form of words, sentences and paragraphs during its movement inside and outside the body (as narrated in verse nos. 5-6 above)¹ (9).

[Note--¹The sound is produced when the exhaled air vibrates the vocal cords in the throat. So a combination of factors come into play here—viz. the movement and speed of the air moving in the outwards direction through the mouth, the health and flexibility of the muscles of the throat and the vocal cords, the constriction that is created in order to make the air rub against the cords with the desired angle and force etc. The Pran wind is aided by the Apaana wind also as these sounds are produced in the mouth and not in the nose. It is to be noted here that the Madhyama Shakti has transformed itself as Vaikhari Shakti in the mouth. Earlier the Pran Vayu was inhaled and exhaled through the nose when the mouth was shut and the man was silent during Pranayam. To speak, this same Pran Vayu changes its path and now it moves through the mouth, thereby activating this Vaikhari Shakti latently present there but hitherto lying dormant. The Apaana wind is known to move down in the body, and hence it creates a sucking action of air in the mouth when it is opened to speak. This is like the filling on an iron-smith's bellows. The 'inhaled' breath is the Apaana wind which fires the oven present in the lower end of the body—i.e. the Mooladhar Chakra, to arouse its 'Pashyanti Shakti' (described in verse no. 3). The energy then leaps up and powers the dynamo of the heart—i.e. it activates the Hridaya Chakra, and through it the 'Vaikhari Shakti' (described in verse nos. 5-6). The latter produces 'sound'. The upward pressure exerted by the compressed winds in the body is the cause of the activation of this Shakti. Since air that is being expelled with force through the cavities of the mouth and the throat to produce a sound which is fine-tuned by the tongue into articulate words is located in the upper part of the body, this aspect of vital wind that is associated with speech is called Pran.

In short, that aspect of the Pran Vayu that is inhaled during the time the mouth is open while one speaks is called Apaana, and the Pran Vayu that is exhaled and which actually produces the sound is called Pran. The Apaana stokes the fire of life in the body from below like the fire present in the oven below the grate, while the Pran is the heated and activated wind that moves up in the oven and makes a hissing and rasping sound as it rushes up and out of the mouth of the oven. This is also why we cannot speak while drawing in air but only when it is expelled from the body—because the wind responsible for speech is Pran and not Apaana.

But it must be noted that both these two vital winds work in close cooperation with each other and do not oppose. No one can speak if there is no energy in the body to do so, and the Apaana wind is responsible for digestion of food in the intestines so that the body is properly nourished and energized. Besides this point, the Pran wind would depend upon the Apaana wind to be honoured as the producer of vocal sound because it is the Apaana wind which heats up the body from below and helps to build

up sufficient pressure on the lungs so that the air is expelled with enough force and pressure to produce sound when it ruffles or rubs against the vocal cords in the throat.

In a similar vein, the Pran wind keeps the body alive and active because no one can live for a second if the breathing stops, and the dead body would have no use for the Apaana wind located in the intestines and the lower part of the body. Thus we observe that body these two winds play hand-in-hand and are like the two wheels of the chariot to make life meaningful and livable for the man.]

10. When a self-realised ascetic understands that his speech (or whatever words are spoken by him) is nothing but a revelation of the stupendous powers of his own Atma (pure consciousness) in the form of the Shakti (the subtle energy) called Bhaikari that has revealed itself as the faculty of speech and the spoken word, he is blessed by Goddess Saraswati (the patron goddess of this energy and its revelation as speech) so much so that whatever he utters becomes a reality. None of his words go in vain; they are truthful and bear fruit (10).

11. Since Saraswati is the patron goddess of knowledge and wisdom besides being the goddess of speech, it follows that such an ascetic (as described in previous verses) is himself a creator of the Vedas, various scriptures and Purans (ancient histories)¹.

The Bindu and Naad² are like the Moon and the Sun³, or like the Agni (fire) and the Vayu (wind)⁴ respectively.

Hence, a spiritual aspirant who has the grand ability to bear both these two primary forces of creation can have the required prowess, aptitude and skills to become a symbolic creator of the Vedas, Purans and other scriptures⁵ (11).

[Note—¹In other words, an ascetic who has realised the true divine potential of his Atma is blessed with such mystical powers that he need not study the various scriptures separately to become learned and wise, for all the eclectic virtues that are purported and implied in the teaching of the scriptures in the form of their various tenets, maxims and axioms automatically come to him on their own. Another interpretation would be this—the Atma is Brahm manifested, and since all the scriptures are creations of Brahm in the form of divine ethereal words that are eternal and imperishable, and this Atma is the one which makes the ascetic speak these words by harnessing the Vaikhari Shakti, it follows that the words spoken by the ascetic are the words of wisdom spoken by none else but Brahm. That ‘Shakti’ aspect of Brahm which reveals itself in the form of words of wisdom is personified in the form of the Goddess Saraswati.

²The Bindu means a ‘point-source’, and Naad refers to the ‘un-manifest cosmic energy in the form of sound’ that radiated out in the cosmic ether from this point-source. Therefore, the Bindu would refer to the passive Brahm and the Naad would mean in this context the dynamic and active energy of this Brahm radiating out from this point-source to all the directions of creation much like the rays of the sun radiating out from its disc to illuminate the vast realm of this world. Refer note to verse no. 3 of the present Canto 3 also.

³The Moon is a passive source of light because it simply reflects the light of the Sun falling on it, and hence the active source of light is the Sun. Had there been no Sun, the Moon would not show its light. In the context of Brahm and creation this analogy applies most aptly. The stupendous and astounding powers that Brahm inherently possesses are highlighted in the context of the most fascinating, majestic and magnificently wondrous world it has created using its own energy called Shakti. Had this creation not been in existence, the powers of Brahm would have remained unknown and un-revealed; it would not have come to the fore. In other words, the active principle of Brahm is revealed in the form of the Shakti which resembles the grand Sun in the sky—brilliant, splendorous, potent and fiery in its form, whilst the

principal itself is passive and reflected in its own glory like the Moon shining in the glory of the Sun. That is why Brahm is said to be personified grand virtues of peace, tranquility, serenity and calmness represented by the Moon, while Shakti is a personification of energy, heat, vigour, vitality and dynamism symbolised by the Sun.

³The same analogy applies to the fire and wind elements in this context. Since the Bindu is regarded as the Shakti principle of Brahm in Tantra literature because it is this principal point from where the primary form of active and dynamic Brahm started to reveal its self in the form of Naad, it is likened to the 'fire element'. The Naad itself is sound and the latter needs the medium of ether to travel as waves and spread in all the directions. Therefore, Naad is likened to the 'wind element'.

⁵In other words, an ascetic who realises that he is Brahm personified as his subtle Atma or pure consciousness residing inside his inner self on the one hand, and as the various functions that this Brahm or Atma performs with the help of the gross body, one of which is the speech or the spoken word on the other hand, he is said to be an enlightened and wise ascetic. Since scriptures are synonymous with wisdom, erudition, eclectic knowledge and enlightenment, such an ascetic is deemed to be an expert in them, a fact metaphorically emphasised by saying that he can create these scriptures.]

12. When one becomes self realised and aware of the conscious Atma inherently present in his own self, the rest of the appendages of this Atma such as the gross body consisting of the various sense organs as well as the subtle body consisting of the vital winds and the mind-intellect complex become redundant, non-significant to the extent that they are as good as being non-existent (12).

13. There is no greater spiritual achievement or benefit than becoming aware of the Atma or pure consciousness known as the 'self'. Such a self-realised person is called 'Atma-Gyani'—i.e. a self-realised and enlightened person who has a true and holistic knowledge of his Atma, one who is aware that his Atma is his true self as opposed to the body. His mind and intellect are profoundly influenced by this awareness, and then the greatest of worldly grief, miseries and sorrows do not ruffle him in the least (13).

14. An 'Atma-Gyani' is able to control the wayward nature of his mind and its sub-conscious by doing Yoga (meditation and contemplation). This is because Yoga helps him to effectively exercise control over his organs as well as his mind; their energy which was hitherto directed at the world is now diverted to the Atma. When this happens, he is able to experience and subtly witness the consciousness himself because all external distractions which had prevented him from doing so earlier have now been eliminated with the control of the mind and the sense organs of the body (14).

15. The exhilaration and eclectic feeling of extreme bliss and happiness, the profound sense of ecstasy and elation obtained by the awareness of the conscious Atma as one's own self is eternal and perpetual as it never fades away. This is unlike the bliss, happiness, joy and ecstasy obtained by enjoying the sense objects of this world through the sense organs of the body because they are perishable and transient.

This extremely exhilarating feeling of Atma-realisation cannot be understood or grasped by mere application of intellect. This eclectic feeling is eternal and indescribable as much as it is beyond the purview and definition of pleasures and comforts which are associated with the enjoyment of this mundane material world,

because the latter itself is transient and perishable, and so how can it ever give happiness and joy that are eternal and imperishable? (15).

16. All living beings in this world are mortal whereas the Atma is immortal. Similarly, the supreme Brahm is also immortal, imperishable and indescribable. He is not attached to anything pertaining to the mortal world. [It is to be noted here that this visible world is created by Brahm's Maya—i.e. by his delusion creating power. Therefore, what is seen as this world is merely an illusion much like the water seen in a mirage in hot desert, and like this mirage it is as illusory, transitory and perishable. Brahm himself is synonymous with wisdom and enlightenment, and not with ignorance and delusions that this world represents. Further, the Atma is a personification of Brahm. So, when it is said that the Brahm is not attached with this world in the context of a self realised ascetic it is implied that this ascetic himself is not attached to this world and treats it as a mirage.] (16).

17. That supreme Brahm has no specific signs or attributes or epithets by which it can be recognised or known, and neither is it the object of any sign. It is beyond the purview of any logics. It is Anupam (unprecedented, unparalleled, inimitable, unequalled, most excellent and peerless). It is Apaara (that which cannot be crossed or of which no end can be found). It is Achadya (something which cannot be pierced and ruptured; one that is impregnable). It is Achintya (something that is beyond imagination and thoughts; something that is beyond comprehension, grasp and visualization). And it is Ati-Nirmal (something that is exceedingly pure, untainted and immaculate). (17).

[Note—Refer Canto 2, verse no. 15-19 also.]

18. It (Brahm) is the support, base and foundation of all living beings, providing them with solace and succour, but it has none for its own self and neither does it need one. It is free from all faults, imperfections, dearth and shortcomings. It is free from all proofs (i.e. it does not require any proof to establish its authenticity and establishment). It has no likeness of its kind or any similes that can be cited to give an idea of its divine nature and grand eclectic form. It has no parallels, and nothing with which it can be compared or matched. It has no organs, gross or subtle (18).

19. It (Brahm) is neither gross and physical nor atomic and subtle. It is neither small nor big. It is without any birth (as it is eternal and infinite) and therefore it is imperishable. It cannot be understood or grasped by any of the organs of perception such as the eye, ear etc. and their respective sense of perceptions, such as sight, sound etc. [In other words, Brahm is such an enigmatic, esoteric and mysterious entity that it cannot be understood or grasped by seeing it in some form in physical terms that can be perceived by any of the five organs of perception. For instance, Brahm does not have a gross form that can be seen by the eye; it does not emanate a smell or fragrance that can be picked up as smell by the nose; it does not speak so cannot be heard; it is so sublime that it cannot be felt or touched; and it is not a chemical that it can be tasted and defined as pungent, sweet, salty etc.] (19).

20. It (Brahm) is omniscient and all-knowing. It is all-pervading, all-encompassing and omnipresent. It is an embodiment of peace, tranquility and serenity. It is established in the heart of all the creatures.

Brahm's holistic knowledge is possible with the help of guidance provided by a Brahm-realised Guru. But those who lack this realisation can never hope to know anything about Brahm (20).

21. It (Brahm) is Nishkal (one that has no variations and fractions; one that has no Kalaas or separate forms and attributes; one that has no imperfections, faults, blemishes, taints and imperfections that can scar its immaculacy and purity). It is Nirguna (without any verifiable attributes, virtues and qualities). It is Shaanta (peaceful, serene, calm and tranquil). It is Nirvikaar (without any attributes and qualities that cause any blemishes or taints on its innocent and immaculate nature and form; it is without any faults, shortcomings, imperfections and the like). It is Niraasraye (it has no support for its own self or need any support, base, foundation and help for its own existence and to help establish its authority).

It is Nirlep (i.e. it is dispassionate towards, unattached with and uninvolved in everything). It is Niraapaye (fearless, secure, protected and safe from any attack or intrusion in its glorified stature). It is Kutastha (i.e. it occupies an exalted place or possesses a high stature in existence; it is divine, holy, subtle and sublime; it is hidden, esoteric, enigmatic and secret). It is Achal (unwavering, unmoving, uniform, unchanging, unalterable and immutable). And it is Dhruv (steady, constant, perpetual and immovable—like the legendary Polar Star which is also called 'Dhruv') (21).

22. That Brahm is beyond the reach of all forms of darkness; it has crossed darkness and is established gloriously in its own illumination (much like the sun in the sky or the glow-worm on earth). In fact, it is the source of light for illumination itself. Brahm is beyond the parameters and definitions of 'Bhaava'¹ or the lack of it. The only way to become aware of Brahm is by way of having firm faith and conviction in its divine and glorious existence and its magnificent overriding cosmic authority, and fortifying this belief by personal experience and personal witnessing (22).

[Note--¹The word *Bhaava* has a broad and varied meaning and covers such notions as emotions and sentiments; ideas, feelings and concepts; moods and tenors of existence; ways and methods; state or condition of being, the numerous and varied dispositions of existential life; the designs and intentions of the heart and mind. Therefore it means that Brahm is a neutral entity that remains unruffled by anything in this creation. It maintains stoic calm and poise by remaining equally distant from any and all of the various attributes and qualities that characterise this creation. But total neutrality and equanimity does not mean that Brahm is an impotent, insignificant, ineffective or inane entity because whatever that exists has its existence due to Brahm. Therefore, the virtues coming under the ambit of Bhaava are also created by Brahm though the latter prefers to remain neutral and distanced from everything as well as unaffected by their influences. Earlier it has already been emphasised that Brahm is a very mysterious entity that cannot be defined, cannot be comprehended, and that is beyond the reach of logic and intellect. This fact must be borne in mind while one reads this verse.]

23. Oh Padma Sambhav (Brahma)! This great and supreme Tattva (essence and principle of existence) can be known by devotion and faith only. When a spiritual aspirant withdraws his mind from the external world and focuses it on his inner conscious self, it is only then this Brahm can be realised and its knowledge gained or accessed. [This is because the truthful inner conscious 'self' is the Atma or pure consciousness, and it is Brahm revealed in this divine eclectic form. This Atma can be

known or realised by turning inwards rather than seeking it somewhere outside in the material world.] There is no other way (23).

24. The creature obtains a new body in its next birth depending upon the various factors that impinge upon its mind to mould its thoughts and notions. In other words, when a creature dies thinking about a particular thing, it is bound to take a new birth in such a way that would make the access to that thing easy in the next birth¹.

Similarly, the Mana (mind and heart complex) has a natural tendency to turn towards those objects of this material world which appeal to the creature² (24).

[Note—¹Suppose for instance a man wishes to acquire fame and renown as a scholar in this life but could not fully accomplish his goal, so when he dies he would be re-born in his next life in a learned household or provided with opportunities that would give him fame and honour as a learned scholar. If one wishes to earn money, he would be born as a rich trader or businessman, or in such a family.

²For instance, if a man wishes to be a scholar, his mind would concentrate on studies to the exclusion of all other pursuits, and his heart would have a natural longing for knowledge. Both his mind and heart would love to spend time with good books and in the company of scholars instead of wasting time in worldly pleasures and indulgences of the sense organs. If he is fond of sweets, the Mana would be obsessed with sweets and not salty eatables. The mind and the heart work together in concert to help the man to focus on the things dear and close to his heart. Otherwise the heart would be constantly nagging him and pulling his attention away from the place where the mind wishes to concentrate. Naturally, this internal tussle would create great anxiety and tension for the man who would be torn apart between the demands of the heart and the mind; he becomes restless, disoriented and fidgety. We then say that his Mana is not under control and focused on the task at hand.]

25. A spiritual aspirant who focuses his attention on me (the divine Shiva principle representing Brahm) is able to steady and fix his mind and his sub-conscious upon me; he constantly remembers me and nothing else. As a result, his individual 'self' dissolves in me and becomes one with me. He becomes synonymous with me, the supreme Ishwar (Lord of creation, the supreme Brahm). [That is, when the aspirant concentrates his attention on the supreme transcendental Brahm during his lifetime, his mind and heart would be constantly riveted on this eclectic principal of creation, and when he dies he would reach the objective of his attention—i.e. he would become one with Brahm. The fact that one gets the reward in consonance with the deity he worships and adores has also been elaborately explained in Canto 5, verse nos. 47-54.]

Such an exalted and self-realised spiritual aspirant who remembers me constantly is therefore blessed with all the glorious virtues symbolic of his being my personified form, i.e. he becomes all-knowing and omniscient like the supreme Lord, he possesses the majestic and mystical powers possessed by the supreme Lord, and he becomes almighty and infinitely empowered like the supreme Lord himself (25).

Thus ends Canto 3

Canto 4

1. The supreme transcendental and sublime Consciousness known as Brahm is one and non-dual. It is not proper to create false and imaginary duality in it which in turn gives rise to schism, dichotomy or illusion of distinction in its many and varied manifestations or revelations. It is this non-dual, indivisible, immutable, steady, uniform and universal Brahm that is erroneously imagined as a Jiva or an ordinary living being who forms an individual unit of a creation having countless species and classes of such Jivas with as many variations in characteristics, qualities and attributes just like the case when one falsely imagines that a snake is present in what actually is a harmless length of rope. [In other words, the numerous and uncountable varieties of creatures that are visible in this creation, each different from its neighbour and each unique in his own right, are all one and the same Brahm. It is merely a flight of a fertile imagination and a fallacy of conception to treat them differently from one another.] (1).

2. Even as a length of rope instantly appears to be a snake out of ignorance of its true form, the pure conscious and sublime Brahm too appears in the form of this imaginary world that is mortal and gross only due to the ignorance about its reality and truth (2).

3. The world as it appears to be is nothing but an illusionary and deceitful creation of imagination. When its true nature is researched it is found to be nothing but Brahm. This visible world is a manifestation of the illusion and deception creating powers of consciousness in the form of Brahm, and nothing else. That is, it is out of delusions originating in ignorance that one imagines this multifaceted world and its multifarious material charms to have an actual existence which is separate and distinct from the consciousness known as Brahm (3).

4. The notion that there is an entity that is uniformly all-pervading and universally omnipresent everywhere, and that there is a place or medium where this entity is present, or which is permeated by it or completely soaked, suffused and infused by it, is also imaginary. [In other words, since Brahm is non-dual and nothing that exists in not Brahm (or, everything that exists is Brahm manifested in that form), it follows that there are no two separate entities such as the one that is known as 'Brahm' and the other that is known as the 'creation where this Brahm is present ubiquitously, or in which this Brahm has manifested himself'. There is no distinction between one entity that would be the pervading one, and the other entity in which it would pervade. Or, there is no distinction between the all-pervading Brahm and the world in which it is said to pervade.]

When one becomes aware of this supreme eclectic Truth of creation, everything becomes one, single and non-dual Brahm for him. That is, both the supreme consciousness that lives in the creature as his Atma and the creature himself become synonymous with each other. Or, Brahm and the world lose their dual existence; they both become one, inseparable and an immutable whole (4).

5. Oh Brahma! All living beings have the same origin in the supreme Atma called the Parmatma. [The supreme Father of creation is called 'Parmatma' because his Atma or soul or pure consciousness is the one which creates the rest of the creation as its offspring just like an ordinary father creates his own son or daughter. Therefore, all the units of the entire creation are like siblings; they have a common ancestor and carry the same gene. This is a remarkable observation and if taken seriously can uproot the cause of all hatred and strife in this world. It is also like the case of the

same image of the sun seen in countless number of mirrors. One observes as many suns as there are mirrors, but does that mean that there are numerous suns in the sky? Certainly not.]

Hence, all the living beings are manifestations of the same supreme Atma or Parmatma because each one of them has the gene of the same supreme Father present inherently in him as his own pure conscious Atma (5).

6. It is this Brahm that bears all names and all forms in this world along with doing all deeds. In fact, the name, form and deed themselves are nothing but Brahm revealed in these forms (6).

7. Just like an ornament having its origin in gold is basically and essentially nothing but gold and would not have been in existence without this gold (and that is why it is identified as 'golden' and nothing else), this world having its origin in the supreme consciousness known as Brahm is nothing but Brahm revealed or personified in that form (and hence it is identified as 'Brahm' or 'consciousness' and nothing else) (7).

8. The Jiva Atma (the living being having an Atma or pure conscious soul) and the Parmatma (the supreme Atma which is the sum total of all souls in existence and which is no different from the individual Atma) are one and the same; they are synonymous with each other; there is no difference between them.

Those who are ignorant enough to perceive a difference between these two are the ones who have fear from this world. [This is because then they would distinguish between two people by treating one as a friend and the other as an enemy. This differential treatment would start off a chain reaction and snatch the peace and calmness of the mind. A person would begin to fear and hate his enemy on the one hand, and get jealous even of his friend's rise and influence on the other hand.] (8).

9. It is out of Agyan (lack of truthful knowledge) that there appears to be a difference between Brahm and Jiva, or between Brahm and this world. Therefore, those persons who are ignorant get deluded into believing that such a distinction exists, and consequentially they see a difference between any two given units of creation. [It is such an ignorant man who would find a particular thing pleasant and the other unpleasant. He would enjoy one circumstance and abhor the other. Instead of this, a wise and realised man would treat everything with the same level of dispassion, noninvolvement, equanimity and stoicism because he would see no difference between them.]

When a person understands and becomes enlightened about the fact that every living thing in existence is nothing but the pure consciousness called the Atma in that form, he stops distinguishing between them and treats all of them as being alike (9).

10. This eclectic truth can be understood by experience and also by practically witnessing it. This can be understood by the following example. When a man dreams, everything he sees appears to be real and true, but its falsehood and imaginary nature comes to knowledge only when one wakes up and sees the reality of the physical world. [In the same way, when one wakes up to the reality and truth of Brahm, the world that he was seeing earlier and which he believed to be the truth and real thing appears to be like a dream—false, imaginary and illusionary. The world that he sees now, i.e. the world seen after he has realised the fact that it is Brahm personified, undergoes a sea change; it appears different from the world seen earlier before

enlightenment. The same world assumes a different character, colour, form and connotation. Whereas earlier it was a world of so many myriad characters, colours and forms, each a separate unit and different from the other, after Brahm-realisation it appears to have one single non-dual essential form, and it is Brahm or Atma revealed in these forms.] (10).

11. The two states of consciousness, viz. the waking and dreaming states, cannot co-exist. One cannot be awake and dream at the same time, and one cannot dream and be awake simultaneously either. When true wisdom and enlightenment dawns on someone, the notion of duality and the existence of dichotomy in this world vanish for good. In other words, for an enlightened man, everything becomes uniformly one and non-dual in its basic form as Brahm or Atma personified (11).

12. The concept of there being a seer (the principal) who sees something (the object) through the process of seeing (the intermediary) are the three corners of the artificial triangle-like world created by the three Gunas (basic qualities) called Sata, Raja and Tama. All the three corners are falsehoods and deceptions created by ignorance of the reality¹. For in fact it is Brahm that is the seer of all and the one who is seen. [With the distinction of the seer and the seen out of the way, the third corner—viz. the process of seeing—automatically becomes redundant because with the merger of the aforesaid two points, the entire structure collapses into one single point.]

This Brahm is beyond the purview of the three Gunas; it is un-influenced and un-tainted by any of the three Gunas. It is omnipresent, uniform, infinite and eternal. It is pure consciousness personified (12).

[Note—¹The three Gunas are basically inherent qualities present in all the living beings in this world which exert their influence upon the mind of the creature and conditions its way of working. In this case, the predominance of one Guna over the other would make a man see something as being good and attractive and useful for him over other things. They influence his decision making process and relevant powers; they corrupt the way the person should actually be viewing the world had there been no interference from them. These Gunas act tinted glass through which one sees the world, and so obviously the colour of the glass would affect the view and the world would be coloured with the colour of the medium through which it is seen. Since the man sees a distorted version of the world, his responses would also be proportionately distorted.

For example, a man with a predominance of Raja Guna would be more inclined to get attracted towards material comforts proffered by the world but would try to obtain them by righteous means as far as possible as compared to a man with a greater ratio of Tama Guna who would even commit murder to acquire it even without batting an eyelid. On the contrary, the man with a dominant Sata Guna in him would first analyse the long term effect of that the particular thing would have on his spiritual well being and health and then decide to what extent he should allow himself to get involved in it.

The concept of the three corners of the world distorting the fact of everything being one can be easily understood in the context of the prism and how it treats white light. The ordinary sunlight when it passes through the glass prism breaks up into seven colours, and then each of these colours appears to have a distinct and independent existence. One person might begin to love the violet colour and the other would prefer the yellow colour. But a wise man would rather prefer the sunlight as he knows that these independent colours are all present in the sunlight in a well balanced ratio which have been decided by Nature for his all round benefit, while independent colours of these lights would naturally have a mismatched ratio of natural benefits

and any one given coloured light cannot have all the benefits of all the other six colours.

The Dhyān Bindu Upanishad of the Krishna Yajur Veda tradition, in its verse nos. 93/1-93/15 uses the same idea to explain why the Atma sees the world differently and why it appears itself to be tainted by the imperfections of the world by saying that the Atma lives enclosed in a lotus present in the subtle heart from where it peeps into the world through the coloured petals of this lotus, thereby seeing the world coloured by the colour of the petal through which it is observed.

That is why when the sense of duality creates two distinct entities—viz. the one entity that is the viewer and the other entity that is being viewed, it is obvious that the three Gunas would influence the process of viewing. One man might see something with one perspective which would be completely different from the way the other man views the same thing. For example, the same woman is viewed as a mother by one man while the other sees her as his wife and still the third sees her as his sister. Another example would be a dish of sweets—one man would lunge for it and grab it at the first opportunity while the other man would abhor it because he knows that it is bad for his health. This distortion comes only when there are two independent entities, but such a situation vanishes when the state of non-duality prevails. For instance, a wise man would see the nutritional value in this dish rather than its taste or getting unnecessary overworked about its bad effect on his health. He would eat moderately and take a balanced diet.

Hence, the view of non-duality and equanimity is the enlightened view of one who is truly Brahm-realised.]

13. A pitcher made from clay is nothing but clay in its essential form, but this does not mean that clay is pitcher; it's a misconception and the height of delusion as well as ridiculous and incredulous to even imagine that clay is pitcher.

Similarly, it is wrong to see silver in the silvery white glare of the shining inner surface of the oyster shell.

Likewise, to see the Jiva (the living creature) in Brahm is equally delusory, erroneous and misleading. [This is because the basic defining characteristics of Brahm and Jiva are wide apart and at odds with each other. For instance, while Brahm is eternal, imperishable, infinite, all-pervading and immaculate, the Jiva is mortal, perishable, limited with a gross body, and subject to world influences and corruptions.

As soon as the notion of all the living beings or Jivas being images or manifestations of Brahm takes hold, the existence of an independent entity known as a Jiva which is distinct and separate from Brahm would immediately vanish (13).

[Note—In the present analogy, the Jiva is the clay pitcher while Brahm is clay. It is the presence of Brahm in the form of the Atma residing in each living creature that has made the latter show signs of consciousness, life and vitality, because as soon as this Atma is removed from the scene, this Jiva instantly becomes a non-existent and non-consequential entity much like the case when the clay-pitcher becomes meaningless if the 'clay' is removed from it. The 'clay' is the defining element that determines the basic value, nature, importance and worth of a vessel called a clay-pitcher just like the Atma is the defining element that determines the worth and importance of the body of the creature.

But Brahm is not the Jiva for the simple reason that there is not one but uncountable number and species of living beings in this creation, they being so varied and physically different from one another that the whole branch of science known as botany and zoology have still to find all the varieties of plants and living creatures that flourished and walked on the surface of the earth since its inception and would do so in the future to come. If Brahm is deemed to be one and a non-dual entity then it would be absurd to imagine that Brahm is only one of these myriad mind-boggling

varieties of Jivas to the exclusion of all others. The same sample of clay is moulded by a potter in numerous shapes and sizes of pitchers, but all of them are basically 'clay' in nature though each is assigned a distinct name and shape and used for different purpose. But the primary ingredient of all these pitchers and pots is only of one shape and colour—it is known as clod of earth or a lump of clay, and as nothing else. Likewise, though the creatures have so many forms, names and qualities, their basic nature as the Atma or Brahm is universally and unequivocally the same.]

14. Even as clay appears to be in the form of a pitcher, gold as a large ear-ring, or an oyster shell as silver, Brahm (the supreme transcendental cosmic Consciousness) is too called a Jiva (a living being) (14).

15. Just like the perception of the colour of blue in the otherwise colourless sky is erroneous, false and illusionary (because the sky is inherently colourless and the bluish colour that it seems to have is due to the scattering of sunlight from the molecules of various impurities present in it's atmosphere), the appearance of water on hot sand in a mirage formed in a desert is also due to an erroneous perception based on imagination which is false and illusionary (because it is also caused due to refraction of sunlight above the hot air in the desert), and to imagine that a stump of a tree would ever produce a flower is equally incredulous and too far-fetched, to imagine the existence of the mortal, gross and perishable world in the divine and eclectic entity known as Brahm that is basically pure consciousness, eternal, imperishable, truthful and sublime is equally laughable, incredulous and erroneous to the hilt (15).

16. One hears and tells stories of phantoms and ghosts, but they have no real existence; their existence is limited to imaginary folk stories and tales of fantasy.

Similarly, it is said that the Gandharvas have a city¹, but it has no real existence and is simply a figment of one's fertile imagination.

Just like imagining that there are two moons in the sky is height of stupidity and delusions, to imagine that the world has its existence in Brahm is equally hilarious and a stupid and absurd proposition (16).

[Note--¹*Gandharvas* are celestial dancers and singers created by ancient mythology. They are said to conjure up a fascinating world of majestic charm just like a magician does on stage. But it is all an imagination because there is no such thing as a heaven where dancing and singing occurs. The term is used as a metaphor for illusive charm and fascination with something which has no substance and credence.]

17-18. Just like the waves arising in an ocean are nothing but water, houses made of bricks and mud are nothing but earth, and the elements are all subtle and invisible in their basic atomic form [17], this world is also a manifestation of Brahm in its essential form. It is Brahm that is seen as this world. In fact, whatever is seen around is nothing but Brahm.

It is false to say that an impotent lady has a son, or the mirage in the desert has physical water that can actually be drunk [18]. (17-18).

19. Just like the existence of a tree in the sky is absolutely impossible, the world is equally false and imaginary. Indeed, all is nothing but Brahm.

For instance, when a mud or clay pitcher is lifted in hand and examined critically, one sees nothing in it but solidified earth element (as mud or clay). This pitcher is nothing but mud or clay. [That is, no other element can be imagined in it—

viz. it is not gold or silver, it is not fire or wind, it is not iron or wood. Likewise, this world is nothing but Brahm.] (19).

20. In the same fashion, when one observes this world closely and analyses it, one comes to the conclusion that it is nothing but Brahm in its essential and fundamental form.

Similarly, the eclectic notion that ‘I am nothing but the pure conscious Atma; I am not the gross body and its sense organs, and neither am I the subtle elements of this body such as the Pran (vital winds) or Mana (mind)’—this enlightened view is the truthful understanding of one’s own ‘self’, but the irony is that out of utter ignorance and misconceptions one sees ‘physical bodies’ all around him and recognise these bodies as different Jivas or living beings. It is out of sheer ignorance that one regards these bodies as the true identity of the Jiva concerned instead of recognizing the universal fact that the body is merely a habitat of the Jiva and his true ‘self’ is the pure consciousness residing in his bosom as his Atma. In fact, he sees himself also as an entity with a physical gross body and identified with it rather than having the aforementioned holistic, truthful and spiritually enlightened view of one’s ‘true self’ as being pure consciousness that is nothing but the supreme cosmic Consciousness known as Brahm personified (20).

21. Even a person who knows the truth about a length of rope and recognises it as such in the light of the day would be deluded and misled to imagine it as being a serpent in the dark. That is, even knowledge sometimes is overshadowed by the overriding veil of darkness representing ignorance. [In other words, it is very important to overcome the darkness of ignorance if one were to actually benefit from his knowledge.]

We observe in this instance that the knowledge that there is some elongated thing lying on the ground has created two independent impressions on the same individual—one of it being a length of rope, and the other of it being a serpent. In another instance, the same clod of mud or clay assumes two meanings when one sees its manifestation as a pitcher—one enlightened view is to recognise it in its essential form as clay or mud, and the other is to assign a name to the physical shape that the clay or mud has assumed, i.e. a ‘pitcher or pot’.

In a similar fashion, the essential spiritual entity that is ethereal and is known as the pure conscious Atma has been assigned a name when it assumes a gross body of a creature. In other words, the nameless, formless, attribute-less, invisible and ethereal Atma that is uniform and universal in this creation is assigned different names when it assumes a gross body with physical characteristics, each such body different from the other. [In other words, in spite of the fact that the same soul or Atma resides universally and uniformly in all the living beings, we treat them differently—we even go to the extent of assigning two names to identical ‘twin siblings’ so that they can be separately identified on the basis of their independent physical bodies. This is like identifying two mud pitchers on the basis of their exteriors such as for example a smaller pitcher and the one slightly bigger than it, the one that stores well water and the other that stores river water, one that is called a ‘pitcher’ and the other that is called the ‘pot’ etc. whereas all of them should actually be called ‘a vessel or container made of earth or clay’, or better still simply moulded forms of ‘earth or clay’ which has no other name but ‘earth or clay’.] (21).

22. Ignorance and delusion is defined as having the concept of duality in something that is primarily non-dual. For instance, to think that this is the Atma and this is not the Atma is out of ignorance of the reality. In fact, every living thing is the Atma (infinite, eternal, invisible, sublime, subtle and pure consciousness), and nothing but the Atma.

To treat the Atma as the gross and perishable body is as erroneous and incredulous as treating a harmless length of rope as snake, or imagining the presence of silver in the shiny inner surface of the oyster shell (22).

23. Only those who are ignorant and deluded regard the Atma as the body much like the stupid man who believes that the earth is the clay pitcher or the simmering rays on the hot desert (i.e. the mirage) is water on the surface of the desert sand (23).

24. Timber is collected and a log-cabin or a small wooden dwelling is made out of it. Once the structure is ready, the timber is no more simply called timber but is now recognised as a log-cabin or a house or a hut. Similarly, iron is used to make a sword, and then the same piece of iron is now called a 'sword' and not 'iron'.

In the same manner, the body of a living being is created by the Atma, which is the 'true self' of this living being, as its habitat and for carrying out its various wishes. But when this happens, the body henceforth comes to be known as the same living being's identity instead of being merely the Atma's external form or manifestation or dwelling. [In other words, once the Atma manifests itself as the creature with external physical features of a body with certain characteristic attributes and virtues, everyone would recognise and know about that particular individual with what is visibly seen and not with what is not seen. That is, though it is well established that the Atma is the true identity of an individual, it is too abstract a notion and too hypothetical a proposition to be easily understood and dealt with in this material world where everything is verified in material terms and is to be seen and felt to be believed in and to have any relevance, value and importance. It is much easy to deal with a physical gross body than an abstract concept of the 'consciousness' or the 'Atma'. So for all practical purposes, the world likes to deal with this individual in his physical and verifiable form as the body instead of his subtle and ethereal form as the soul or Atma which actually is his 'true identity'. Consequentially, the creature comes to be identified with his body rather than his Atma. This is the genesis of all problems associated with the world as well as with the concept of duality. It creates a deception which is so life-like and real that it appears to be the real thing and the truth.]

Therefore the truth in all the examples cited above is different from what the apparent exterior makes it out to be. For example, the truth is that the log-cabin is timber in its essential form, the sword is iron in that form, and the physical body of the living being is the Atma in that form. Any other thought is erroneous and deluding (24).

Thus ends Canto 4

Canto 5

[This Canto has an uncanny resemblance to Canto 1, verse nos. 162-178, Canto 2, verse nos. 12-22, and Canto 3, verse nos. 1-12. The fact that the same concepts are

repeated once again shows one of two probabilities—either Shiva had preached Brahma on two separate occasions or he had repeated the concepts to drive home their importance.]

1. Now I (Shiva) shall further elaborate upon the various concepts of Yoga and narrate the mysterious form of the enigmatic and esoteric Brahm. Oh Brahma, listen carefully (1).

2. The body is like a city (in which the Atma representing the supreme transcendental Brahm, who is the Lord of creation, lives). It has ten holes or apertures (openings) with ten doors (gates) guarding them¹. The chief ten Naadis (ducts)² of the body are this city's ten main avenues in which ten types of vital winds³ move about. This body is supported by five organs of perception and five organs of action⁴ (2).

[Note—Refer Canto 1, verse nos. 72, 165-166 which state a similar thing.

¹The *ten doors* of this city are the following—two ears, two eyes, two nostrils, one mouth, one anus, one urethra and one Brahm Randhra (the hair-like slit present on the top of the head).

²There are said to be *ten chief Naadis* in the body. According to Yogchudamani Upanishad of Sam Veda tradition, verse no. 15-17, they are the following—Ida, Pingla, Sushumna, Gandhari, Hasti-jivaha, Pusa, Yashaswani, Alambusa, Kuhu and Shankhani. They are the chief ducts present inside the body through which the Pran—vital life-consciousness represented by the vital winds and life impulses present in the body which keep the body alive and distinguishes a living body from a dead one—moves while the man sleeps (refer Paingal Upanishad, Canto 2, verse no. 12 of Shukla Yajur Veda tradition. They are likened to broad avenues of a grand city in which the Atma lives.

³The ten vital winds are the following-- Pran, Apaana, Samaana, Udaana, Vyan, Nag, Kurma, Krikar, Devdutta and Dhananjay. Refer—Trishikhi Brahmin Upanishad, Canto 2, verse nos. 77-87 and Subalo Upanishad, canto 9, verse no. 14 of Shukla Yajur Veda tradition.

⁴The five organs of perception are the following—ears, eyes, nose, tongue and skin. The five organs of action are the following—hands, legs, mouth, anus and genitals.]

3. There are six Chakras (whirling subtle energy centers)¹ in the body forming its pedestals. There are six dense forests in it represented by the five objects of the sense perceptions² and one Mana (mind).

This body has four Peeths (the holy seats where the divine Shakti principle of Tantra philosophy are established)³, and it is illuminated by the light (knowledge) emanating from the four Vedas⁴. [In other words, the body is treated like a pilgrim site where the Shakti principle of Divinity is worshipped according to Tantra philosophy. The word 'Peeth' is indicative of this—because the word refers to the sites where the Divinity is worshipped in its female manifestation instead of the male form.] (3).

[Note—Refer Canto 1, verse nos. 166-167, 170-178; Canto 2, verse nos. 6-14.

¹The *six Chakras* are the subtle energy centers of the body which act as power houses which supply energy for the various functions of the body. They are the following—The 'Mooladhar Chakra', the 'Swadhisthan Chakra', the 'Manipur Chakra', the 'Anahat Chakra', the 'Vishuddha Chakra/Kanth Chakra' and the 'Agya Chakra or Bhru Chakra'. ²The five perceptions of the body are sight (eye), smell (nose), sound (ear), taste (tongue) and feel or touch (skin). Therefore, the things that are the objects of these five perceptions are the following objects that have a form and

colour which can be seen, the things that emanate some smell or fragrance which can be smelt, things that emanate sound and the sound itself such as music and the words spoken by a wise teacher that can be heard, things that have a taste and can be tasted and then liked or disliked, and objects that can be touched and felt.

³The word *Peeth* means a seat or pedestal for an idol of a deity. In the context of the body the word refers to the four sheaths which form the body that harbours the Atma at its center. These four are the Annamaye Kosh or food sheath, the Pranmaye Kosh or the wind sheath, the Manomaye Kosh or the mind sheath, and Vigyanmaye Kosh or the intellect sheath.

According to Tantra Shastra, the Peeths are said to be the places where the Shakti (cosmic energy of creation) is located. They are the following—The first seat or Peeth is called Kaam Roop Peeth, the second seat called Purna Giri Peeth, the third seat is called Jalandhar Peeth, and the fourth seat is called Uddiyan Peeth. These Peeths or seats and their locations have been described below in verse nos. 171-175 of Canto 1.

⁴The four Vedas are the Rig, Sam, Yajur and Atharva.]

4. The holy and eclectic nature of this (human) body is indicative by the fact that its sign consists of Naad and Bindu¹. It is like the heaven where Lord Vishnu and his divine consort Laxmi reside². It is this (human) body by which one can hope to attain all Siddhis, i.e. one can accomplish everything with this body, and ‘everything’ implies both worldly fame and material prosperity, majesty, pomp and pageantry, as well as spiritual liberation, deliverance, salvation and emancipation. [In other words, the options are open for the man to choose whether he wishes to remain trapped slogging in this cycle of birth and death or find final liberation and deliverance from it.] (4).

[Note—¹This body is the holy abode of the supreme transcendental Brahm as the Atma (pure consciousness). At the same time this body is the visible manifestation of the stupendous powers of Brahm on display in the form of the Pran (the vital winds and life forces) and Shakti (inherent strength, energy, vitality, vigour and stamina possessed by the body to perform stupendous and astounding tasks). Hence the body is a metaphoric abode of both Brahm and its dynamic power called the Shakti in their various manifestations. Refer Canto 1, verse nos. 72, 167-168; Canto 2, verse nos. 6, 10, 20; Canto 3, verse nos. 1-15; Canto 5, verse no. 2-5, 13-15; Canto 6, verse nos. 32-33, 47.

This is metaphorically said when Naad and Bindu are called its signs or symbols or insignias. The Naad is representative of Brahm’s sublime existence which is most subtle and ethereal because Naad means ‘sound’ and it has no attributes and forms besides being very subtle and ethereal in nature. On the other hand, Bindu represents Brahm’s active and dynamic form as the concentrated beam of energy because the word ‘Bindu’ means a point source.

These twin concepts of Naad and Bindu have been explained elaborately elsewhere in this Upanishad earlier also, especially in Canto 1, verse no. 167, 178, Canto 3, verse no. 3 and 11, Canto 6, verse nos. 71-73.

²*Lord Vishnu* is the macrocosmic all encompassing manifestation of Brahm known as the Viraat Purush of Vedanta and Vishnu of the Purans. Vishnu’s divine consort is *Laxmi* representing the Maya or delusion-creating powers of Brahm or the Shakti or the dynamic and energetic aspect of Brahm. This Maya keeps the creature trapped in its shackles and a make-believe world of astounding charms so that the wheel of creation and destruction goes on endlessly and Brahm would not need to have to create it afresh. This ability of Brahm is revealed in the Shakti which enables all this to become effective and be brought into practice.]

5. [The following verse nos. 5-15 describe the various Chakras and Peeths in the body. Reference should be made to Yograj Upanishad which describes them in similar terms.]

The area between the anus and the genital has the triangular Mooladhar. This is said to be the symbolic abode of Lord Shiva (i.e. the Shiva Lingam is said to be established here).

In fact, the Jiva (the living being) is Shiva personified (5).

[Note—Refer Canto 1, verse no. 168-177, Canto 2, verse nos. 5-14, Canto 3, verse nos. 1-11.]

6. [Verse nos. 6-12 describe the various Chakras and Peeths in the body and are similar to verse nos. 168-178 of Canto 1. Refer also to verse no. 74 of Canto 6 which mentions seven Chakras.]

The great center of transcendental cosmic energy subtly present in the body is located here (in the region of the Mooladhar Chakra) as the Kundalini. It is here that the vital winds of life as well as the fire element inherently present in the body get their subtle energy to keep themselves active (6).

7. It is here that the Bindu (the subtler dynamic forces that reveal themselves as 'conscious life'), Naad (the sound symbolising the revelation of this dynamic force in the form of energy represented by sound waves), Hans (the conscious Atma residing in the subtle heart and which breathes air that produces the sound 'Hans Hans' as it goes in and out of the body through the nostrils and throat; the rustling, hissing, rasping or bristling sound heard when one puts one's ears on the chest close to the heart) and Mana (mind, the subtle body of this Atma) have their origin (7).

[Note—This is because the Kundalini energy keeps the vital forces of life in the body alive and activated by lending them warmth and vitality so necessary for survival. It is like the fire burning at the bottom of the grate in the oven, the crackling sound of the firewood and the hissing sound of the rising air are like the Naad and the rustling sound made by the Pran as it passes in and out of the body when the creature breathes. If the Kundalini is cooled down, the entire body has a cooling effect and this is tantamount to death or a comatose state of existence symbolising that life is fast ebbing from the body.]

8. The Peeth (holy pilgrim site) that blesses the worshipper by fulfilling all his desires and wishes is called the 'Kaam Roop Peeth' and is symbolically located on the Swadhisthan Chakra. It has a hexagonal shape and situated at the base of the genitals (8).

9. The Manipurak Chakra is located in the Nabhi (navel) area. It has ten corners or petals.

The heart region has the Maha Chakra having twelve corners or petals. This Chakra cannot be harmed or suppressed or subdued in a living being (obviously because as long as the creature lives the heart continues to beat uninterruptedly) [In other words, it is not possible to kill anyone by pressing the heart so as to force it to stop beating; the heart would not stop beating as long as the man is alive. This fact can easily be verified and understood in the context of the Kantha Chakra or the Vishudha Chakra located in the throat. If this Throat Chakra is pressed too hard the man suffocates to death, while on the contrary pressing of the Heart Chakra would only revive the sinking heart instead of shutting it down as usually done in

emergencies when attempts are made to revive a patient suffering from a severe heart-stroke by thumping and pressing the heart.] (9).

10. Oh Kamalsambhav (Brhma)! This (Maha Chakra) is also called the Purna Giri Peeth.

The Visudha Chakra is situated in the bore or hollow of the throat. It has sixteen corners or petals (10).

11. The Jalandhar Peeth is located here (in the throat where the Vidudha Chakra is situated).

The Agya Chakra is situated between the two eyebrows. It is an excellent one with two corners or petals (11).

12. On the top of it (i.e. on the Agya Chakra) is located the Udiyan Peeth.

All these sites in the body are symbolic abodes of the divine Shakti (the dynamic aspect of Brahm revealed as subtle energy centers) (12).

13. [Verse no. 13-15 describe the shape of the five elements from the Tantra philosophical point of view and similar to Canto 1, verse nos. 176-178. Refer also to Yogchudamani Upanishad, verse no. 72 of Sam Veda tradition, Trishikhi Brahmin Upanishad, verse no. 8 of Shukla Yajur Veda tradition, and Yogtattva Upanishad, verse nos. 83-102 of Krishna Yajur Veda tradition.]

The realm of the earth has a symbolic four-cornered outline (shape). Its patron God is Brahma. The realm of the water has the symbolic shape of a crescent moon and its patron God is Lord Vishnu (13).

14. The realm of the fire element is triangular in shape, and its patron God is Lord Rudra (the angry form of Shiva).

The realm of the air or wind element has a hexagonal shape and its patron deity is Sankarshan¹ (14).

[Note—¹*Sankarshan* is the older brother of Lord Krishna, i.e. Balaram, according to the Purans. The word literally means 'well drawn'. In his earlier incarnation, he was Laxman, the younger brother of Lord Ram. Laxman was an incarnation of Seshnath, the legendary hooded serpent on whom Lord Vishnu reclines on the surface of the cosmic ocean of milk known as Kshir Sagar. Hence, Sankarshan is Lord Seshnath who is supposed to support the earth on its hoods.]

15. The realm of the sky is rounded (and that is why we see the sky like a inverted hemisphere). Its patron deity is Sriman Narayan (Vishnu).

The realm of the Mana (mind) is in the area around the central point of the two eyebrows, and its symbolic form is the cosmic sound called Naad¹ (15).

[Note--¹The brain and its focal point where the virtues of wisdom and intelligence are located, is externally marked by the tri-junction of the root of the nose and the two eyebrows. This is the area of the cerebrum of the brain. When we have to pay special attention on anything or concentrate deeply on any subject or when we are in a contemplative or pensive mood, the eyebrows create a furrow at this point. It is a metaphoric way of saying that the body is attempting to focus its mind and intellect on the subject under consideration or is concentrating on something which requires special focusing of all the available powers of the brain. This point is also metaphorically said to be the location of the third eye of wisdom for the same reason. During the practice of Yoga, it is hear that the Yogi (the practitioner of Yoga) tries to

fix his attention. According to ancient iconography, Lord Shiva who is the greatest Yogi is said to radiate a beam of light from this point, the beam which is so powerful that it can reduce to ashes all worldly delusions and passions much like the powerful beam of laser. This is symbolically depicted in the ancient Puranic story which says that once when Kaamdeo, the God of passions and lust, had tried to break Shiva's meditation on the behest of other Gods, Shiva had opened this third eye, and the rays of light beamed out from it reduced to ashes Kaamdeo in an instant.

The ancient sages visualised that this point would be the focal point where the sight collected by the two eyes would be focused behind them in the mind (brain) in order to enable the man to see things with a sharply formed image having three-dimensions and in a cohesive and clear format. Otherwise, they thought, the images formed by the eye would be blurred and distorted.

The Mana takes the form of the Naad because one has to concentrate one's mind during meditation to hear it.]

16. Oh Padmasambhav (Brahma)! All the places I (Shiva) have narrated to you are symbolic abodes of Lord Shiva. [This is because Shiva is Brahm personified in the form of supreme consciousness, and anything that matters in the body is consciousness. Without the consciousness being present in any spot of the body, it would be dead and worthless.]

Now I shall narrate the web of Naadis (tubular ducts of the body) to you (16).

17. Situated above the Mooladhar triangle is the Sushumna Naadi (literally a tubular duct, but here referring to the main nerve passing through the center of the spinal cord) measuring about twelve fingers in length. It is also called 'Brahm Naadi'. [This is because it links the Kundalini directly to the Brahm Randhra at the top of the head and it is through it that the Pran Vayu, the vital winds, rises from the base of the body to ascend and finally escape through the Brahm Randhra to provide liberation and deliverance to the ascetic who practices Yoga. The cosmic Naad representing the presence of Brahm is also heard when the vital Pran wind moves up in it. In other words, this Sushumna Naadi helps an ascetic to become Brahm-realised, and hence the name. The immense significance of this Brahm or Sushumna Naadi has been highlighted in Canto 6, verse nos. 4-19, 22, 35-47 of this Upanishad.]

It is believed that it is like a bamboo which has been split into two at its base (17).

[Note—There are many Yoga Upanishads that describe the Naadis, e.g. (i) Sam Veda's Jabal Darshan Upanishad, Canto 4, verse nos. 5-22 ½, 35-42, 46-47, Canto 5; and Yogchudamani Upanishad, verse nos. 15-21. (ii) Shukla Yajur Veda's Trishikhi Brahmin Upanishad, Canto 2, verse nos. 67-76, 88-89, 99. (iii) Krishna Yajur Veda's Kshuriko, verse nos. 8-20; Varaaha Upanishad, Canto 5, verse nos. 23-30; Yog Tattva Upanishad; Dhyana Bindu Upanishad, verse nos. 50-60.]

18. On both the side of it are the two Naadis called Ida and Pingla which go up to the nostrils (18).

19. The Naadi on the left of Sushumna is Ida, and the vital wind that moves in it has a golden (Hem) hue or shade (i.e. it is of a yellowish tinge)¹.

To the right of Sushumna is the Pingla Naadi which represents the Sun God. [That is, the vital wind that blows through it has the vitality and energy that is equivalent to that of the sun.]² (19).

[Note--¹According to Dhyana Bindu Upanishad, verse nos. 95 of the Krishna Yajur Veda, the vital wind which has this colour is the Apaana wind. To quote—"The Beej

or seed letter of the Apan wind (the primary air which moves downwards in the body and helps in food intake and its movement through the intestines, its digestion and elimination from the body) is the Sanskrit alphabet 'Ra'. It has the hue of *golden yellow* resembling the brilliant sun, and represents the fire element."

²By saying that the vital wind passing through the Pingla represents the sun and the fact that the sun is like a hot piece of gold and yellow in colour, it is implied that both the Naadis are equally important and carry the vital life forces in them. This is a very obvious observation because one breathes through both the nostrils and both are equally important for the normal health of the man. Even if one of the nostrils is clogged as during severe colds, notwithstanding which, the body feels suffocated. Further, during the process of Pranayam or breath control exercise, the inhalation and exhalation of air, called Purak and Rechak respectively, are done alternately through the left nostril and right nostril, i.e. through the Ida and Pingla Naadis respectively.

The great importance of these three primary Naadis have been elaborately described in the context of Pranayam in Canto 1, verse nos. 90-102 and 116-120.]

20. In the navel region there is a Naadi called Vilambini. It is from here (navel) that all the Naadis originate—both the ones that go upwards and the ones that go downwards in the body (20).

21. This clutch of Naadis in the region of the navel is called the Naadi Chakra, and it is like the egg of a hen.

The two Naadis called Gandhari and Hast-Jivaha originate from it and go up to the two eyes (thereby controlling the function of seeing) (21).

22. The two Naadis called Pusha and Alambusa originate from there and go up to the two ears (thereby controlling the function of hearing).

The great Naadi called Shura rises from here and goes up to the center of the two eyebrows. [Hence, this Naadi helps in concentration of attention and focusing of the mind, especially during meditation. It also helps the ascetic in self realisation when it is said that the third eye of wisdom located in this spot is opened.] (22).

23. The Vishwodara Naadi is also located there, and it helps to take in all the four types of foods¹ (by creating a taste for them and helping in their digestion). [That is, this Naadi controls the entire function of digestion and taste.]

The Naadi called Saraswati rises from here and goes up to the tongue (thereby controlling the function of speaking) (23).

24. The Naadi called Raka also has its seat here (Nabhi Chakra). It creates the strength and the ability to drink. [Hence, it controls the function of thirst and the ability to drink and hold this drink inside the body without immediately vomiting it out.]

Besides this function, it creates hunger and clears mucous from the nostrils. [Therefore, it has a direct role to play in colds and catarrhs on the one hand, and the general ability to eat and digest food on the other hand.] (24).

25. The Naadi called Shankhini originates here (Nabhi Chakra) and goes up to the throat and faces downwards there, pointing to the place of its origin (navel). It helps to take the nutrients of the food eaten to the mind (brain). [Hence, it provides nourishment to the brain and controls its proper health and functioning.] (25).

26. There are three Naadis that go downwards from the navel. Out of them, the Naadi named Kuhu, helps in elimination of stool, and the one named Vaaruni helps in passage of urine (26).

27. The Naadi named Chitra goes up to the Siwani (the suture between the male genital and the anus) and controls the discharge of sperms (semen). [Therefore, it controls sexual behaviour, male potency and virility.]

I have described the Naadi Chakra (the network of Naadis) to you. Now listen to what constitutes Bindu (27).

28. Brahm, in its dynamic form and active principle is represented by the word Bindu (a dot or point source of energy or Shakti). This Brahm has three types of bodies—viz. the gross, the subtle, and the sublime and transcendental.

The gross body of this Brahm is the 'Bindu' (drop) of semen. [This is because the sperm in this drop or 'Bindu' of semen has all the vital life-infusing capacity and ability that is the hallmark of Brahm. The semen is the gross body of the sperm just like the gross body of the creature which harbours the vital spark of life-consciousness in the form of the Atma.]

The subtle body of this Brahm is the 'Bindu' manifested as the Shakti or stupendous energy and life giving vitality present in the form of the five legendary Fires of creation called 'Panch-Agni'¹ (28).

[Note—¹The five cosmic holy fires that reveal the astounding active dynamism of Brahm are called Pancha-Agni. They have been elaborately described in *Chandogya Upanishad*, canto 4, section 10 to 13. There are the following—(a) 'Garhyapatya' (गार्हपत्य—the fire of the household hearth; the main fire of the formal fire sacrifice), (b) 'Dakshinagni' (दक्षिणाग्नि—the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end), (c) 'Ahawaniya' (आहवनीय—the fire to invoke the Gods during a ritualistic sacrifice), (d) 'Sabhya' (सभ्य—the fire of the Vedic period which was continuously lit) and (e) 'Awasathya' (आवसथ्य—the fire of the later Smriti period).

However, the present Upanishad enumerates a set of different five Fires as follows in verse nos. 29-32.]

29. The sublime form of Brahm transcends all these forms and definitions. It is like the divine elixir of life called 'Som' (the sanctified liquid drunk during holy fire sacrifices and offered to Gods as an offering, the one which provides the Gods with immortality, and the one which is stored in the moon as the heavenly Amrit, the ambrosia that is the eternal drink of life and bliss).

This Brahm is supreme and transcendental. It is ubiquitous and quintessential in creation. It is the universal witness of everything. It is steady and unequivocally sublime in its divine form, and is eternally exalted.

The 'Kalagni' (one of the forms of Fire, especially the one which is said to be burning in hell and which burns everything at the time of doomsday) is located below in the nether worlds called the Patal (29).

30. The Fire present (burning) inside the body is called 'Samulaagni'¹. This creates the Naad. [That is, the roar of this fire burning inside the body is heard in the form of a sound compared to the cosmic sound called Naad. It is like the distant roar of an ocean or the one heard when wild fires rage in the forest. It is caused when the air is heated and a strong breeze is kicked up due to the fire.]

The Fire called 'Vadvaagni' (also called 'Badvaanal') is present in the bones of the body² (30).

[Note--¹According to Garbho-panishad, paragraph 5 of Krishna Yajur Veda tradition, the body of the living organism is called 'Deha' or body because it harbours the Fire element in it. It is called 'Samul' because it originates in the Moolkand located in the lower part of the body in close association of the Mooladhar Chakra and Kundalini. Refer Canto 1, verse nos. 168, 177, Canto 2, verse nos. 6, 10-13, and Canto 5, verse nos. 5-6 in this context. This fire supports life and vitality in the body, and in its absence the body would freeze to death just like the absence of the Vadvaagani would freeze the earth into a lifeless barren stretch of wilderness.

²On the earth, it is the fire present in the bottom of the ocean and all freshwater lakes, keeping them warm and supporting an entire aquatic eco-system. The Vadvaagni is responsible for keeping the bowls of the earth hot so much so that the core of the earth is molten lava. The rocks found inside the earth's crusts have been hardened over millions of years due to pressure and the heat of this Vadvaagni because the initial soft crusts of clay, mud and dust were baked and solidified as rocks. Since this fire is stronger near the center of the earth and gradually cools down as one moves up, the core of earth is molten while the upper most layers are soft earth of varying softness, and the intermediary layers are hard and black in varying degrees giving rise to a wide array of minerals such as coal, iron, gold etc. No wonder then that the hardest element in existence, viz. diamond, is also found underground, much below the upper cooler strata of earth, where heat and pressure had compacted the rock into most dense and hardened textures. The presence of fire underground in the deep belly of the earth is evident when we draw water from bore-wells in winter; while the atmosphere is freezing cold, this water would be comfortably warm and rejuvenating.]

31. That Fire which is latently present in the rocks (e.g. coal) and wood (e.g. hard-wood) is the one that is present in the bones. This Fire which is present in the earth is the one which is present also in the bones (31).

[Note—Here, the bones are likened to the rocks and hard-wood that support the earth and prevent its collapse. The implication is obvious because the bones support the gross structure of the body just like rocks and hard-wood found in earth support the softer upper layers and prevent the earth from being squeezed and distorted out of shape under various natural pressures and other factors such as meteor strikes and cosmic winds that continue to shower upon earth unpredictably. The rocks have managed to keep the earth maintain its shape even after 4.5-5 billion years of its existence, and after its core is being constantly made hollow by mineral extraction and all kinds of wanton exploitation done by men for his vested selfish interests without bothering for the consequences on a long-term basis. Had there been no bones, the body of the man would be no different from, say, that of an amoeba or sponge. All the internal organs are held in place because the bones maintain the exterior shape and act like a safe cage for them.]

32. The powerful Fire in the form of the potent energy of the 'Electric' lives in the sky in the form of lightening. This fire is the one that lives and charges the inner self of all living beings¹.

The form that the Fire takes in the sky as the 'Sun' (the cosmic cauldron of fire) is the one that lives and charges the navel² (32).

[Note—¹The inner self is the Atma which is the pure consciousness residing in the bosom of all living beings, and without which no man can live. The abode of the Atma has been said to be the subtle heart where there is a subtle Lotus in which this Atma actually resides. The heart is known to beat continuously, and it is a medical fact that this beating of the heart is due to a subtle electrical current passing through

its muscles. When the heart becomes weak, doctors implant heart pacers or other forms of mechanical devices running on batteries that supply the necessary electric stimuli to the muscles of the heart. The presence of electric current in the heart enables its beating to be monitored by the ECG machines. Similarly, the functioning of the brain also runs on subtle supply of electric currents, and the flow of impulses in the wide network of nerves is also like the flow of electric in an electronic gadget having circuits and wires.

In brief, the ‘consciousness’ present inside the body is like the ‘electric’ present in the sky as the lightening. The presence of ‘fire’ in its most potent form in lightening is very evident when a lightening strike during severe storms can reduce to ashes anything in spite of the fact that it is heavily drenched and soaked in water and should normally escape being burnt by ordinary fires on earth.

²That is why the navel is said to be the symbolic subtle abode of the Sun God in the body in the form of the Nabhi Chakra or the Manipur Chakra, the whirling energy center located in the region of the navel. It is to be noted here that all the Naadis also have their center of origin in the region of the navel, in the Nabhi Kand—refer Yogchudamni Upanishad of Sam Veda tradition, verse nos. 13-17. These Naadis would then resemble the rays of the sun which have their origin in the latter and radiate out to all parts of the world. The sun as a metaphor of life and Brahm is depicted in the form of the solar system where all the planets revolve around the central hub called the sun, and their existence and place in the solar system is determined by the continued presence of the sun. This is the picture at the macro level, while the navel representing the sun and the cluster of Naadis supporting life in the body of an individual symbolising the sun’s rays would be the picture at the micro level. Just like the rays of the sun not only illuminate the world but also infuses life, energy and warmth in it, the Naadis carry consciousness to all corners of the body and makes the latter alive and active.]

33. The Sun appears to rain down the ‘fire of hell’ causing death and destruction (because of its scorching heat that reduces everything to cinders during hot summers and even causes wild forest fires). On the contrary, the moon rains down the soothing elixir of life in the form of its moonlight. This moon symbolically lives in the base (pit) of the throat and faces downwards to pour the nectar of life to soothe the creature. [When a man is very thirsty, he gulps down plain mucous to calm down his parched throat a bit. The Moon is the patron God of passions and love, and its manifestation is the semen which is cool and mucous-like. Sentiments and emotions are also controlled by the Moon God, and that is why when one becomes emotional and sentimental, mucous seems to well-up and choke the throat.] (33).

34. The Bindu, the symbolic center of divine wisdom and spiritual enlightenment situated in the center of the two eyebrows, is like pure crystal. It is said to be the subtle form of Lord Vishnu (34).

35. Those wise ones who remember the essential meaning of these symbolic five forms of the Fire called Panch-Agni are deemed to be contented as having eaten and drunk to their heart’s content and wanting nothing more. They are deemed to be happy and fulfilled as one feels when he has successfully done a great fire sacrifice. There is no doubt about it (35).

[Note—This is because these five fires represent the energy of Brahm in its entirety—the gross form as the fire of the earth and bones, the subtle form as the fire of the Atma and Electric, and the sublime form as the fire of enlightenment and wisdom represented by the Bindu in the center of the eyebrows. Besides this, they have also understood that sins create the fire of hell represented by the fire of the netherworld

and sun, while goodness creates bliss and peace represented by the elixir pouring out of the moon.]

36. The spiritual aspirant should prepare himself by resting and purifying (detoxifying) his body by first sleeping comfortably (i.e. having adequate sleep so that he feels refreshed and does not dose off or feel lethargic during practice of Yoga) and then eating moderately and easily digestible food (so that he does not either feel hungry or bloated and drowsy). Then he should sit in a comfortable Aasan (sitting posture of Yoga) (36).

37. He should clean his vital wind called the Pran Vayu (inhaled and exhaled winds) by diligently doing Pranayam involving the three steps of Purak (inhalation), Kumbhak (holding of breath inside the body) and Rechak (exhalation). [The entire process has been described in Canto 1.]

Then he should worship the hidden Shakti (subtle energy) present in the Mool (i.e. the Mooladhar Chakra) by pressing and constricting the anus, i.e. by practicing the Mool Bandh¹ (37).

[Note—¹This Mool Bandh is described in detail in the following Upanishads—Yogchudamani, verse nos. 46-47; Dhyan Bindu, verse nos. 73-76 (Chapter 15 of this volume); and this present Yogshikha, Canto 1, verse nos. 104-105.]

38. Next, he should practice the Uddiyan Bandh¹ in the region of the body between the navel and the genital. This helps the aspirant to lift his inner-self, i.e. his vital winds present inside the body from the lower half to the upper part where the Uddiyan Peeth is located (between the eyebrows) (38).

[Note—¹This Uddiyan Bandh is described in detail in the following Upanishads—Yogchudamani, verse nos. 48-49; Dhyan Bindu, verse nos. 73-76 (Chapter 15 of this volume); and this present Yogshikha, Canto 1, verse nos. 106-107.]

39. To constrict the throat is called Jalandhar Bandh¹. Next, one should practice the Khechari Mudra² with full concentration (39).

[Note—¹This Jalandhar Bandh is described in detail in the following Upanishads—Yogchudamani, verse nos. 50-51; Dhyan Bindu, verse nos. 77-78½; and this present Yogshikha, Canto 1, verse nos. 109-111.

²The Khechari Mudra has also been described in Yogtattva Upanishad, verse nos. 117-122 of Krishna Yajur Veda tradition, and is Chapter no. 17 of this volume.]

40. In the Khechari Mudra, the tongue is inverted and pushed up the back of the upper palate into the base of the skull. The eyesight is fixed in the center of the eyebrows (40).

41. The practitioner of Khechari Mudra sits with his head bowed. Because of the stupendous powers and strengths obtained by doing this Yoga exercise, his Amrit Tattva (referring to the semen) becomes so strong and powerful that even if it is put in the fire it cannot be destroyed. The wind force¹ is also not able to sway him (41).

[Note—¹The wind is considered as one of the strongest forces in Nature as evidenced by the bevy of destruction caused by severe storms in their wake. In the case of the body, the wind force is represented by the ten vital winds present inside the creature's body. These winds together are responsible for functioning of the body in totality. The meaning of this verse is that the practitioner of Yoga who does the Khechari Mudra is able to control his own body to such an extent that no Natural forces or natural urges can overcome him.]

42. He does not have to suffer from excessive hunger, thirst, sleep and laziness. The practitioner of Khechari Mudra of Yoga has not to fear from death (because he would have had gained full control of his vital winds or Prans, and therefore can decide when the Pran would leave the body or whether they should leave it or not, thus effectively overcoming death because death occurs when the life giving vital wind called Pran leaves the body) (42).

43. Then the ascetic rises to establish himself in the Uddiyan Peeth (the center of the eyebrows—refer verse no. 11-12 above) and reaches the exalted and sublime state of existence which resembles the vastness of the open heaven-like sky. This state has no support and needs not one either. It is pure and corruption free. It is like having reached the divine abode of Lord Vishnu (i.e. it is the state of utmost enlightenment and wisdom because Vishnu is said to reside in the Bindu or a specific spot located in the center of the eyebrows—refer verse no. 34 above). And this state of existence is free of all faults, imperfections, shortcomings and blemishes associated with worldly existence (43).

44. Then one should meditate upon Lord Narayan who sits atop a divine lotus in the glorious realm of the moon, called the Chandra Mandal. From there the Lord showers his benevolence in the form of Amrit or the elixir of bliss and eternity (in the form of the moonlight) (44).

[Note—The moon's light is very soothing and has the opposite effect to that of the sun's light which is scorching—refer verse no. 33 above.]

45. The experience of the supreme transcendental Lord (Narayan, Vishnu) is sufficient to break up all the hardened knots of the mind and heart of the ascetic. [That is, he becomes malleable and softened to the core. This implies that he would abandon all his earlier arrogance and stubbornness, and become humble, pious and kind to the core.]

It can eliminate all dilemmas and confusions that mire his spirit. [This is because he has become wise, enlightened and self-realised.]

And it can destroy all the hoarded consequences of his past deeds and overcome their demoting effects that he would have been forced to suffer otherwise, and at the same time it prevents the accumulation of fresh deeds and their consequences. [This is because self-realisation and enlightenment entails that the ascetic must have become wise enough to realise that his true 'self' is the conscious sublime Atma which does not do any deeds, rather it yearns to break free from the fetters created by the gross body, and the only way to do this is to distance itself from whatever the body does. This way the Atma would be free from the deeds and the consequences of these deeds done by the body.] (45).

46. Oh Sureshwar (the chief amongst Gods, i.e. Brahma)! Now I (Shiva) shall describe the various Siddhis¹ (special spiritual powers) to you. These help the aspirant to obtain true comfort, happiness and joy. By having complete control over the sense organs, by remaining absolutely calm and serene under all circumstances and provocations, the spiritual aspirant is able to virtually conquer his Prans (i.e. he is able to exercise full control over all the functions of his own body, including the external and internal ones) (46).

[Note—¹The Siddhis mentioned here have been enumerated below in verse nos. 47-54 of this Canto 5. Refer to Yogtattva Upanishad, Chapter 17 of this volume, verse nos. 56-60, 73-75 in this context.]

47. [Verse nos. 47-57 revolve around the idea that one's rewards in life depend upon the ideals that he holds dear and close to his heart and which he adores and pursues as his goal in life. A man should be careful in selecting the deity to be worshipped because not only different deities give different rewards but they also reflect his ideals and goals of life. These deities are personifications of the different virtues and aspects of the supreme Divinity known as the Supreme Being or Brahm, but each has his limitations and field of influence unlike the principal power known as Brahm from whom they derive their authorities. When one worships a particular deity or God, his entire being is concentrated on the virtues that this deity stands for, and this has a profound psychological impact on the worshipper. These virtues leave an indelible mark on him, and he cannot escape their influence upon him. Refer Canto 3, verse no. 25 also in this context. For instance, a man working in a perfume factory would emanate the sweet aroma even long after he has left the premises and gone home much like a chain smoker whose body smells of tobacco even though he might not have smoked a stick of cigarette for a long time. This smell gets into his blood and corrupts his system.]

When an accomplished practitioner is able to focus his mind during Yoga and become completely engrossed in hearing the Naad (the cosmic sound heard during deep meditation and contemplation, the sound that reverberates through his entire being and vibrates through his nerves and veins), he is said to acquire the mystical powers to hear distant sounds not normally heard by the ears. [That is, he develops the power to hear about things that had occurred in the distant past, are happening in some distant place out of earshot in the present time, and would happen in the future. His brain is so trained because he would not have heard the Naad in the first place if it had not been sufficiently fine-tuned. He develops transcendental powers of perception and deep insight so much so that he can foresee things and happenings in advance, or can have the hindsight long enough to see them occurring long back in time. It also means he can hear voices of the Spirits in heaven, the words of Gods and the Mantras that remain eternally etched in the cosmic ether in the form of sound waves.]

Similarly, when he has focused his mind and concentrated his attention on the Bindu (the dot size spot on the forehead between the two eyebrows where the source of wisdom and enlightenment is said to be located), he is able to have a deep insight into everything. [That is, he develops a high degree of practical wisdom and intelligence that pertains to this material world along with the mystical powers and astounding ability to have an insight into the paranormal. These help him to acquire a sight that is beyond the normal sight of the eye, and have a transcendental, super-human power of vision.] (47).

48. When the Mana (mind) is submerged in the thoughts of the Kalatma (i.e. when he has developed the enlightened view-point that the same pure conscious Atma transcends all the three periods of time such as the past, the present and the future), a wise and enlightened spiritual aspirant is able to become 'Trikalagya'—i.e. he knows and sees everything in the three phases of time, the past, the present and the future. [That is, he transcends the borders of time and place, and becomes omniscient and all-knowing.]

Besides this, he acquires the astounding mystical ability of being able to enter the body and mind of others. [That is, he can know what others think by being able to read their minds, he can influence their temperament, thoughts and behaviours by controlling their mind along with controlling all their actions and deeds by controlling both their mind as well as their bodies. In other words, he can do things through the medium of the other person; whatever the other person does is actually being done by this specially empowered Yogi.] (48).

49. When his mind meditates about and experiences the presence of Amrit (the elixir of eternity and bliss) in the head, i.e. when the enlightened ascetic is able to experience the presence of the supreme transcendental source of eternal bliss and peace known as Brahm in the region of the Vyom Chakra and the Brahm Randhra Chakra by focusing the attention of his mind and the energy of his vital winds called Pran there, he is able to vanquish thirst and hunger (for worldly things, sensual pleasures and material comforts) along with overcoming the bad effects of all (spiritual) poisons¹. [That is, by becoming Brahm-realised and experiencing its attendant spiritual ecstasy and bliss, the ascetic has nothing more to desire and wants nothing in this material world. The enjoyments and comforts of this material world are transient, artificial and inconsequential as compared to this spiritual high of ecstasy and bliss experienced by Brahm-realisation. He is deemed to have overcome all spiritual hurdles by way of overcoming the numerous faults and imperfections that create uncountable obstacles in his spiritual progress and reaching of the ultimate goal of emancipation and salvation.]

When his mind is engrossed and focused in meditating upon the earth element² and contemplating about it, he acquires the mystical powers that allow him to take his mind to any corner of the earth, even in beyond it to the nether world called Patal. [That is, this mystical power empowers him to transcend all physical and geographical barriers that usually impede the reach of an ordinary man, and his mind can go anywhere without any hindrance. He can think of everything that exists on this earth, and his mind can even visualise what is hidden inside the bowls of the earth and beyond it. While living on one part of the earth, he can know what is happening on its other side. This also would imply that nothing in this world would ever influence his mind and captivate it by trapping it in its charm and preventing it from breaking free from its shackles and proceeding ahead.] (49).

[Note—¹Refer Yogtattva Upanishad, verse nos. 57-60, 62-64.

²Refer Yogtattva Upanishad, verse nos. 85-87.]

50. When his mind is engrossed and focused in meditating upon the water element¹ and contemplating about it, he has nothing to fear from this element. [That is, he need not fear from any harm being caused to him from water in any form, such as drowning in it or suffering from any water borne disease or some internal medical problems arising out of water such as oedema of lungs, dropsy of tissues and other diseases due to misbalance in the water content of the body.]

Similarly, when his mind is engrossed and focused in meditating upon the fire element² and contemplating about it, he has nothing to fear from this element. [That is, he cannot be burnt by fire; his body never has to suffer from lack of vital heat and energy; he never suffers from fever and other diseases due to misbalance in the fire element in Nature. Besides this, his speech acquires all the potent of this element because fire is said to be an integral part of the faculty of speech. He has proper eyesight because again the fire and its light are responsible for the faculty of sight to

function properly. He has not to suffer from lack of hunger or digestive problems because the fire is responsible for the proper functioning of both.] (50).

[Note—¹Refer Yogtattva Upanishad, verse nos. 88-90 ½ .

²Refer Yogtattva Upanishad, verse nos.90-94.]

51. When his mind is engrossed and focused in meditating upon the air or wind element¹ and contemplating about it, he is deemed to have acquired the ability to move in the sky like birds. [That is, he becomes so light that he can float in the air.]

By fixing his mind in the exalted sky element², which is a metaphoric way of saying that by becoming as exalted and sublime as the supreme Brahm himself who has an exalted abode as high as the sky, such a realised and acclaimed ascetic can acquire such mystical and eclectic powers as Anima etc.³ (51).

[Note—¹Refer Yogtattva Upanishad, verse nos. 95-97.

²Refer Yogtattva Upanishad, verse nos. 98-102.

³Anima is one of the eight mystical powers that are collectively called Siddhis.

They have been listed as a note to verse no. 44 of Canto 1 of this Upanishad.]

52. When a realised and enlightened ascetic's mind is engrossed and submerged in meditating upon the Viraat (i.e. the Viraat Purush) and contemplating about his stupendous divinity (i.e. when he is submerged in the thoughts of the Supreme Being in his vast, attributeless and invisible but all-pervading, all-encompassing and all-incorporating macrocosmic form as the Viraat Purush from whom the rest of the creation has come into being), the ascetic is able to acquire such great glories and divine virtues called 'Mahima' as the ones possessed by the Viraat himself¹.

Similarly, when his mind is engrossed and submerged in meditating upon the four-headed Brahma (i.e. the creator of the visible creation as well as the four Vedas) and contemplating about his great glories, he acquires the mystical powers to create the world if he so wishes² (52).

[Note--¹That is, he now transcends all the limitations of the physical world and even the paranormal world of the Spirits to reach the supreme exalted stature where he acquires such mystical powers as those possessed by Brahm when the latter revealed himself as the Viraat Purush. This Viraat Purush is much senior and more powerful than even the individual gods of the Trinity, i.e. Brahma the creator, Vishnu the sustainer, and Shiva the concluder of creation, for the simple reason that all of them have been created by this Viraat to carry out specific jobs on his behalf. The powers of these three Gods are tailor-made to enable them to carry out their respective functions, but the Viraat has all the powers of these three Gods vested in him, because the Viraat is the supreme Authority who delegates these powers to these Gods in the first place, and anyone who does not possess any power cannot delegate it to someone else. According to the Vedantic view of creation, the Viraat is the macrocosmic gross body of Brahm in the subtlest and the most sublime form. Brahm first metamorphosed itself into the Hiranyagarbha, the subtle body of creation, and the latter evolved into the Viraat. The entire creation has come into being from the body of this Viraat. So the latter incorporates the entire creation in its form. In other words, the Viraat is the sum total of all the gross bodies of all the individual creatures in creation. By extension, the ascetic who has acquired the stature which makes him one like the Viraat becomes very near to Brahm and acquires the enviable exalted stature of being superior to even the Gods because this Viraat is superior to all the Gods put together. This fact is indirectly asserted in Yogtattva Upanishad, verse no. 105, 107-111.

²That is why Puranic lore has numerous tales of great sages who had the power to revive even the dead and create entire worlds if they so wished. An example is sage Vishwamitra who created a heaven for his patron king Trishanku. And another

instance is that of sage Bharadwaj who created an entire mini city complete with all royal comforts to entertain and test the sincerity of Bharat, the younger brother of Lord Ram, while he was on his way to bring back his older brother from exile in the forest. This episode appears in the epic Ramayana in its 2nd Canto called 'Ayodhya Kand'.]

53. When the ascetic fixes the attention of his Atma (his conscious self) on Indra, the king of Gods and a metaphor for sense gratification and indulgence in worldly material comforts and pleasures derived from the sense objects in this world, he obtains the greatest material comforts and pleasures that the world of sense objects can ever hope to provide anyone¹.

Similarly, if he fixes the attention of his Atma on Vishnu, the sustainer, care taker and protector of the world, he would acquire mystical powers to sustain, take care and protect the world. [That is, with this mystical power he can well look after his dependants and his subjects. He becomes a kingly figure because this is the basic function of any good king—to sustain, protect and look after the general welfare of his subjects.] (53).

[Note--¹This is because *Indra* is a metaphor for all things sensual and the natural tendency of the mind to remain engrossed in enjoying the material comforts and pleasures of the world with the sense organs. The word 'Indra' is derived from the word 'Indris' meaning the sense organs of the body. These sense organs have an inherent and natural inclination to be attracted towards the world and its material objects, and then derive comfort and pleasure from them. They would naturally swerve towards them and find a natural habitat in them. It is a Herculean task to pull them away from their natural habitat just like it is almost impossible to pull a man out of his own house and forcing him to disown it. So, if the ascetic remains engrossed in thinking about the material comforts of the world, he would strive whole-heartedly get them. This verse has a double meaning—on the one hand it is a sarcastic comment on those stupid ascetics who suffer great difficulties in first acquiring mystical powers and then frittering them away by using them to pursue and obtain such low-value and despicable objects as the material comforts of the world and personal glorification in spite of knowing that they are transient and perishable and would be demeaning for their soul, and on the other hand warning those who are newcomers in the spiritual field and are yet unaware of how to use the mystical powers once they are accessed by being successful in Yoga. The fruits of Yoga are emancipation and salvation for the soul, and not indulgences in the world and being captive of the sense organs need for constant and infinite gratification.]

54. When the ascetic thinks of Rudra (the angry form of Lord Shiva) while meditating and fixes his mind and attention on his virtues (which are fiery in nature and consume the world in the fire of anger), he is able to acquire such great fiery powers that would enable him to annihilate the world if he so wishes just like Lord Rudra himself.

Likewise, if he meditates upon Lord Narayan (Vishnu), he becomes one like him and acquires mystical powers possessed by the Lord. And if he meditates upon Lord Vasudeo (another name of Vishnu who is regarded as the Lord of the eight Vasus¹, the important entities created by the creator for the welfare of the creation when it came into existence in the beginning, such as material wealth without which life in this world would be difficult to sustain), he is able to acquire all the eight Siddhis² (i.e. he is able to acquire lordship over all these eight Vasus, and therefore over all the vital components of creation that help to sustain the creatures in this material world).

[In other words, an ascetic would acquire the virtues of the entity upon which he meditates. If his idol of adoration is something as horrible as anger, if his mind is always restless and agitated, if he is always full of jealousy and ill will towards others, if he is always thinking of violence, cruelty and spite, then he would acquire these lowly virtues because one becomes what one constantly thinks about. This is indicated by the word 'Rudra'. On the contrary, if he thinks and contemplates about nobler things and higher virtues of life such as the emancipation and salvation of the spirit, he would acquire those eclectic virtues as the ones personified by Lord Narayan. And if he is more concerned with the care, upkeep and general welfare of his dependants and subjects, he would be always thinking in the term of providing enough for their comfort and wellbeing so that they do not have to face dearth of any material necessities of life, and this is metaphorically depicted by saying that he would acquire the virtues of Vasudeo or would become as exalted and empowered as Vasudeo.] (54).

[Note—¹These *Vasus* are the various patron Gods who preside over the essentials of life; they are eight in number—Vishnu is the sustainer, Shiva who is the annihilator, Kuber who is the treasurer of the wealth of the Gods, the Sun, Water, Fire, Wealth represented by gems and gold, and 'Ray' representing glory and fame. The element 'Fire' is the most potent, prominent and essential force in creation, because without fire the world would freeze to death. Hence, the Fire-God is said to be the chief amongst the Vasus. The 'fire' element is the active force in creation and is primarily responsible for kindling the cosmic cauldron that set in motion the process, and once having set it in motion it then sustained it and would finally annihilate it by burning it to cinders. On the other hand, Lord Vishnu is the passive force of creation represented by his other form of Viraat Purush which is the primary male aspect of creation. Lord Vishnu, who is the sustainer of the creation, is the Lord of Laxmi who is the Goddess of wealth, and is the supreme creator because Brahma, the old patriarch of creation who created the visible world and its creatures, was himself born atop the divine lotus that emerged from the navel of Lord Vishnu. Lord Vishnu utilizes the services of Laxmi who is the personification of the active forces of creation to create, sustain and annihilate the world. The Vasus are symbolic Gods who represent those essentials aspects of creation without which life would be difficult to conceive and sustain and finally conclude.

The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluder or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following-- Dhruv (ध्रुव), Dhar (धर), Som (सोम—the sap of an elixir-providing plant called Som which is used during religious ceremonies as sanctified liquid offered to the Gods), Aapha (आप—water), Anil (अनिल—wind), Anal (अनल—fire), Pratush (प्रत्यूष) and Prabhas (प्रभास).

These eight Vasus are the semi-Gods who symbolise the various types of assets needed to sustain this world. They therefore represent such assets as jewels, precious stones and gems, gold and other forms of wealth and property. Vasus also refers to the fire and water elements as well as their grosser forms as the terrestrial fire and water bodies such as ponds and lakes; to the virtue of radiance, splendour and glory;

to the ray of light; to Kuber (the treasurer of Gods), Shiva, Sun, Vishnu, and a simple and pious gentleman.

Lord Vishnu has one of his names as *Vasudeo* because he is the sustainer and protector of creation, signifying his undisputed lordship over all the essential elements in Nature, called the Vasus of which there are eight in number, created at the beginning of creation to help sustain the upcoming creation.

²The various Siddhis are enumerated in note of verse no. 44 of Canto 1, and in verse nos. 47-54 of the present Canto 5.]

55. An ascetic who is not only well-versed with the real meaning and intent of the various tenets of Yoga in their literal sense but is also an expert exponent of them in practice, being a personification of Yoga itself, who is self restraint and practices the various principles of Yoga in their entirety, is able to achieve fulfillment of all his wishes. Success in any endeavour depends upon one's sincerity of purpose, commitment and diligence, and this applies to Yoga as well (55).

56. The Guru (moral preceptor, teacher and guide who helps the spiritual aspirant to achieve his spiritual goal by showing him the correct path best suited for him and lending him a helping hand all the way through till the goal is achieved) is like Lords Brahma, Vishnu and Sada Shiva personified for the ascetic (and therefore is to be honoured and shown the same reverence). There is no one more exalted and important in the three worlds than one's Guru (56).

57. When the disciple worships and reveres his Guru, who is selfless and unconcerned with any material gains and who has the necessary erudition himself so that he can show light to others, as the one who gives him the divine gift of eclectic knowledge and who lights up the spiritual path for him, when he has devotion for such a Guru and treats him with the same reverence that he shows for the Parmeshwar (the supreme Lord God), he is blessed by the Guru who rewards him with the fruit of knowledge and wisdom. As a result, the disciple acquires the eclectic knowledge that the Guru possesses in a comprehensive and holistic way. [The Guru would be pleased by his devotion and sincerity and would not hide anything from him like a father who would not conceal anything from the son who serves him with great devotion and love. The Guru might even tell him certain secrets that he may not tell his other disciples out of love and affection for this particularly devoted and committed disciple. The result being that this sincere disciple gets his special attention which translates into his chances of learning the great secrets that largely remain unknown to his fellow students.] (57).

58. There is no difference between the Guru and the supreme Lord (Shiva); both are alike. In other words, while the Guru is as exalted and worthy of the same honour and reverence as one shows to the supreme Lord, the Lord himself is to be honoured like an exalted and honourable Guru because he shows the devotee the correct and proper path for his spiritual well being.

One should therefore honour, worship and serve one's Guru with full commitment, devotion and sincerity (58).

59. One should never treat the Guru at par with one's own self¹. On the contrary, one should certainly treat the Guru at par with the Supreme Being (59).

[Note—¹This is a very important observation especially in the context of the teaching of Upanishads that the same Atma lives in all living beings. The reason is that though

this is a fact, the other truth that the knowledge of the Guru is far superior to what one knows oneself is also equally important and should be kept in mind. The teachings of the scriptures are universal but they have to be understood in the proper context and correctly interpreted. For example, if the Atma is the same in all living beings, then would any man in his senses go and embrace a lion? The idea behind the universality of the Atma or soul is not as preposterous and ridiculous as embracing a lion because the animal also has an Atma—for if one pretends to be so enlightened as to treat a lion as one's dear and argue that one ought to go and embrace it to establish the truth of the tenets of the Upanishad that the same Atma lives in all the creatures, then why does he not think twice before killing innocent animals for fire sacrifices or to satisfy his hunger for meat, why does he treat someone as his friend and the other has his enemy, why is there so much strife and blood-letting in this world?

The idea of the universality and uniformity of the Atma, its quintessential and ubiquitous nature, is more subtle and sublime. The idea is to remove so much dichotomy, schism, discord and disharmony between men and communities in this world where strife and warfare, where blood spilling and hatred, where animosity, jealousy and ill-will are so rampant. Say, why should one treat one man as his brother while the other as his arch enemy if the Atma is the same in both? Instead of this, there ought to be universal brotherhood, compassion, love and grace all around.

The Guru has certain knowledge that the disciple does not have. And therefore he must be shown great respect for this simple reason that he is superior in knowledge than one's own self. Since knowledge is the greatest asset that one can ever hope to possess, the Guru is richer than one's own self, for money and other worldly riches can perish and be stolen by thieves but knowledge is an eternal and imperishable asset that would come in handy wherever one goes and would entitle him to respect and honour even in unknown countries. In fact it is this knowledge and wisdom that makes the Guru so revered and honourable. It is this knowledge and wisdom of the Guru that is worshipped and not his physical body or his Atma for the simple reason that the body is loathsome, perishable and gross, and the Atma is the same in all the creatures, including the disciple. But the degree of knowledge, erudition, wisdom and skills that the Guru possesses are unique to him and much superior to others.]

60. A person who has acquired the knowledge of this Yogshikha Upanishad is indeed very wise and enlightened. He has deemed to have acquired the best of knowledge worthy of acquisition in all the three worlds (i.e. in the terrestrial world, the nether world and the celestial world of heavens) (60).

61. An acclaimed Yogi (i.e. a self-realised, wise and practicing ascetic) remains immune to the good or bad effects of deeds and actions; he is not concerned with either the auspicious consequences or the inauspicious ones of what is happening around him.

He becomes free from the fear of being affected by such negative notions as sorrows and grief, of being rendered handicapped by physical or spiritual ailments and shortcomings, of being defeated and subdued by others, and of getting trapped in the endless cycle of taking a birth in this world and then dying (61).

62. But a true ascetic should not allow his mind to remain trapped in the enticing charms proffered by the various Siddhis which are the various mystical powers that come automatically as one progresses in Yoga and are a part of the whole exercise of Yoga but are not its aim and final spiritual objective¹.

The Mana (the thinking mind and the emotional heart combine) is naturally restless and inclined towards the material world and its sense objects which have a natural affinity for the sense organs of the body because they gratify the latter's desire

for pleasure and comfort. Therefore, the ascetic should not rely upon and expect that the Mana which is uncontrolled would ever help him in acquiring spiritual powers called the Siddhis².

But at the same time this Mana is a powerful tool in the hands of the ascetic if he is able to control it and focus its attention to nobler objectives such as to obtain access to the knowledge of the supreme transcendental Brahman and the eclectic essence of Divinity. This would pave the way for his Mukti—i.e. it would liberate him from the cycle of birth and death by enlightening him about his true 'self' which is pure consciousness and distinct from the body and the world in which he lives. This would deliver him from all worldly miseries and torments from which he had been suffering from time immemorial.

Besides this, enlightenment about the supreme power of the almighty and eternal Atma gives freedom from being bonded to inferiority complexes in this mortal world. This is tantamount to Mukti for the ascetic. There is no doubt about it (62).

[Note—¹The Yogtattva Upanishad is very explicit on this subject. In its verse nos. 21-22 and 76-79 it clearly prohibits the ascetic to avoid getting deluded by the charms of the mystical powers that come with success in Yoga and showing off his prowess because they might give him worldly glory but would be demoting for him vis-à-vis his spiritual progress. These Siddhis are like a double-edged knife—they can be a potent and powerful instrument for breaking free from the fetters that shackle the ascetic to this body and the world, thereby paving the way for his liberation and deliverance, or they can be like a knife that chops off the wings of a bird and grounding it for eternity if he allows them to sweep him off his feat by the worldly glory and fame and their attendant material benefits that these Siddhis bring in their wake.

These Siddhis are the special ability that the ascetic acquires due to Yoga, such as the ability to become small and huge, to go wherever he wants, to fly in the air, to hold his breath for prolonged times and remain alive even when buried underground, and so on and so forth. But all such skills would naturally give him worldly fame as people are naturally attracted by those who have super-human or super-natural powers. The reason is that all men are suffering from one cause or another and seek some ready-made divine intervention that would help them overcome their worldly miseries. This is one prime reason why they flock to pilgrim sites—to seek divine intercession of Gods to alleviate their sufferings. Rare are those who go to holy sites seeking Mukti or Moksha, meaning liberation and deliverance from the cycle of birth and death, and salvation and emancipation of the soul respectively. Likewise rare are such people who read the scriptures for the purpose of acquiring true knowledge, for the majority do so for acquiring fame and wealth as renowned scholars who are much in demand and go around lecturing others while they themselves are neck-deep in the swamp from which they teach others to escape.

Similarly, Yoga is not to be used for worldly gains of acquiring fame and a big fellowship of disciples by being able to perform some magical feats based on the various Siddhis that come naturally with success in Yoga. It would be misuse of Yoga and a highly condemnable, deplorable, demeaning and despicable act much like one selling one's mother for some pecuniary gains, for Yoga is no less than a mother for the ascetic because it nourishes his soul and leads him by the hand towards his Moksha (spiritual liberation and deliverance) much like a mother who would always think for the betterment and a noble future for her child. Yoga is the ultimate potent and effective medicine for all spiritual ailments like surgery in medical science which ought to be used with prudence and wisdom as in the case of emergencies and life-threatening cases such as to remove a malignant cancerous tumour from the body or amputating a gangrenous limb, but surely not for artificial beautification of the gross body as is done in modern times when one undertakes cosmetic surgery to beautify

the body which is however perishable and certain to decay during old age and die one day.

²This is because if the Mana is left to its own devices, it would pull the ascetic towards this world instead of pulling him away from it. The use of the word 'Siddhi' here is in the context of success in spiritual progress towards obtaining Mukti, or liberation and deliverance for the soul from the cycle of birth and death, as has been made clear below. The real aim of Yoga is to establish a union between the individual creature and the supreme Lord, to harness all the scattered energy points in his own body and utilise their joint efforts not only for the spiritual upliftment of the practitioner but also to bring about an overall betterment of his physical health and life. This would give him a chance to lead a peaceful, healthy, constructive, productive and happy life as compared to a life which is led as a burden on the soul as well as the society. Contentment and satisfaction along with enhancement of energy and strength, not only at the physical plane of the body but also at the spiritual plane as well, are some of the natural benefits of Yoga. A life of contentment, happiness, peace and bliss is like obtaining liberation from the fetters of miseries and grief that seems to submerge everyone except a few realised souls in this world.]

Thus ends Canto 5

Canto 6

1. Brahma requested Shiva once again—'Oh Lord! Please enlighten me on the concept of Upaasana¹, for the knowledge of this eclectic path of spiritualism provides one with Mukti (liberation and deliverance; emancipation and salvation) from the entrapping world of delusions and artificiality' (1).

[Note--¹*Upaasana* and its Obstacles—(a) The word *Upaasana* covers the entire gamut of virtues that form the foundation of the process of worship of the Lord by the devotee. Upaasana therefore is defined as worship, adoration and paying homage to one's revered deity; to be devoted and fully committed to any ideal, especially in the field of spiritualism so much that the ideal is personified as a deity. It includes, inter alia, devotion, supplication, dedication, adoration, meditation upon the chosen deity, Yoga, recitation of holy Mantras, religious rituals, remembrance of the Lord, service to him as well as his devotees, selfless sacrifices, unadulterated love and sincere affection for the Lord et al—all these are the various forms of Upaasana of the Lord.

Besides this, philosophically speaking, the worship or adoration of the 'Truth' is also called Upaasana. This worship can be of a chosen deity or of the pure self. This worship embraces both meditation and contemplation because the worshipper physically and consciously focuses his attention unwaveringly on his object of worship, hence it is meditation, and thinks deeply about the ways to attain his object of worship, hence contemplation. The evolution of human psychology from the humdrum and mundane to higher plane of thought and discrimination is the aim of spirituality and the reward is divinity and self realisation. Therefore, spirituality is centered and established around the theme of Atma/soul which is the pure conscious Spirit residing in the creature.

Thus we see that the discriminating intellect has a major role to play in contemplation because it helps to guide the mind to wade through a sea of knowledge, select what it needs and separate the essence from the clutter, to discriminate between what is 'the real truth' and what is only 'the apparent truth'. It eggs the mind on to reach the final conclusion. Thus, whereas meditation is an important tool for a contemplative life, the latter is more intuition based; it relies heavily on the laboratory of the intellect more than the mind to achieve its purpose.

(b) Obstacles—There are certain postulations for success in doing Upaasana and they can be better understood if we know the things that created an obstacle in its success because then the practitioner would strive to avoid them and be on the guard from falling prey to them. So, let us have a brief glance at the obstacles in Upaasana. There are four chief types— (i) physiological obstacles such as hunger, thirst, sleep etc. They can be controlled by practice and self-restraint. (ii) The inherent tendency of the mind and the body to go towards pleasing objects and to resist control. This is called the Vasanas and Vrittis of the creature. Perseverance and persistence is needed here. Gentle prodding and cajoling of the mind and disciplining of the body are needed also. (iii) Our own mistakes such as carelessness, disorganised life, overdoing or indulgences in routine matters. The best way to overcome these is moderation. A gradual disciplining is needed here. (iv) Uncertainty and lack of proper guidance. Here the scriptures help.

The obstacles have been described by Patanjali in his ‘Yog Sutra’ as follows—(i) disease, mental laziness and lethargy, doubt, delusions and erroneous perceptions, lack of enthusiasm, attraction and attachment towards gratification of sense organs and their worldly objects, dithering and falling when the goal is almost at hand, grief, distresses of the body, irregular breathing and non-retention of concentration (Patanjali Yog Sutra, 2/31).

The four obstacles described by Acharya Gaupada in his celebrated Vedanta treatise called ‘Mandukya Karika’ are the following—(i) Laya (state of mental dullness, lack of concentration and even sleep). (ii) Vikshepa (restlessness of mind, agitations, doubts, confusions, uncertainties, perplexities, fickleness, restlessness and other negative traits that dog a creature and snatches away his peace of mind and demeanours). (iii) Kashaaya (entering of the mind into a stupefied state). (iv) Rasavada (the joy of meditation). The 1st obstacle ‘Laya’ can be removed by keeping the mind active and agile by proper and regulated life. The 2nd obstacle ‘Vikshepa’ can be dealt with by forcibly driving away the agitation-causing thoughts from the mind. The 3rd obstacle ‘Kashaaya’ is caused by intense attachment to the materialistic world and its objects. The remedy here is to draw the mind away from the world and consciously cultivate noble thoughts. The 4th obstacle ‘Rasavaada’ is a temporary feeling of joy by the seeker. He must stick to his path and not let this temporary joy to overcome his aim of permanence in joy.

According to Yoga doctrines, there are five hindrances—(i) Avidya (ignorance), (ii) Asmita (ego, pride and haughtiness), (iii) Raag (attachment, infatuation), (iv) Dwesha (aversion, malice, ill-will, jealousy envy) and (v) Abhinivesh (clinging to life).]

2. Lord Shiva replied—‘I shall narrate to you the elementary principles of the concept of Upaasana as expounded and enunciated in the Vedas. Learn about them in a holistic manner, and then you must conform to their essential tenets while you do Upaasana in order to be comprehensively successful in your spiritual endeavours (2).

3. First I bow and pay my respects to the glorious ‘Maha Shakti’, the great divine cosmic and spiritual powers possessed by the Consciousness and revealed in the stupendous powers and authority as depicted by the Mana (the mind which is the controller of all the activities of the body along with the perception of the world), the astounding potentials of the Sushumna Naadi (the chief duct through which the vital winds are diverted during meditation in order to make the ascetic experience the eclectic and dynamic presence of Brahm inside his own self, the duct where the Naad is heard, and the Naadi which acts as a pathway to Brahm-realisation), the Kundalini (the subtle coiled energy center located at the base of the spine which is activated

during meditation, thereby releasing its energy which helps the vital winds to gain sufficient momentum, power and force to rise up the Sushumna Naadi and reach the top of the head from where they can make exit from the body and provide liberation to the ascetic from the bondage of the body), and the Amrit (the ambrosia of eternal beatitude and felicity) symbolically stored in the Moon¹ which the ascetic drinks when he has become successful in his Upaasana (worship). [This refers to the sense of extreme ecstasy and bliss experienced when Yoga is successful.] (3).

[Note--¹The *moon* is said to be the celestial pitcher of Amrit, the elixir of eternity and bliss that is drunk by the Gods. In the human body, it is represented by the Eda Naadi passing through the left nostrils and which is used during Pranayam. (Refer Canto 1, verse 166.) It is also present as the crescent moon, the Ardha Chandrakar Chakra, which is said to be the shape of the water element of which the patron deity is Vishnu, the sustainer of creation, and located from the knee to the hip region. (Refer Canto 1, verse 176 and Canto 5, verse no. 13.).

In the context of Yoga, the moon is compared to the Bindu, literally the 'drop' signifying the sense of extreme bliss obtained at the culmination of Yoga much like the immense sense of contentedness felt at the culmination of the intercourse. This analogy is apt because the Moon God is also said to be the patron God of passions and love as is proved by the commonly observed fact that one becomes sentimental and emotional under moonlight as compared to the sunlight. In the context of the present Upanishad, the Bindu would be the point-source from where the ascetic hears the Naad reverberating in his inner self and providing him with an extreme sense of bliss by massaging his nerves.

4. [The concept of Naadi as the nerves that carry impulses of life and consciousness in the body have been elaborately described in Canto 5, verse nos. 17-27 of this Upanishad.]

There are one hundred one Naadis¹ in the region of the heart and radiate from here to various parts of the body. Amongst them, one goes up to the head. Since this Naadi is facing upwards, it helps one to obtain Amrit, the elixir of bliss and eternal life that automatically comes with attainment of wisdom and enlightenment as symbolised by the upwardly facing Naadi².

The rest of the Naadis spread out to the rest of the body (4).

[Note—¹The heart has basically two types of ducts—arteries and veins, the former taking blood away from the heart and the latter bringing blood from other parts of the body to the heart. Though the term 'Naadi' usually refers to the nerves, it can also mean these ducts that carry blood because the latter is also a metaphor for life and consciousness that pulsates in the body of a man. The nerves however keep the heart alive and beating by their electrical impulses; it is the nerve that makes one feel the pain in the heart during its seizure or when it is under severe strain. Thus, broadly speaking, the Naadis in relation to the heart would be the arteries and veins as well as the nerves that keep the heart beating and charged with its electric power to beat continuously, but in the present context of Yoga, the word Naadi would be the nerves that are clustered around the heart and radiate out in various directions giving the impression that they are originating from the heart.

²The mind and intellect is located in the head, while the Atma which is the pure consciousness of the creature is said to have its abode in the subtle space of the heart. So by saying that when this Naadi looks upwards one obtains access to Amrit, the eternal ambrosia of bliss and happiness, it is meant that one is able to finally taste the nectar of Brahm-realisation which drips from the honeycomb-like mind and intellect located high up in the head by setting a noble target of reaching for something as high and exalted as the acquisition of truthful eclectic knowledge about Brahm who himself has his symbolic abode in the top of the head in the mind-intellect complex,

by meditating and contemplating deeply upon this divine and eclectic entity (Brahm). The heart is dominated by emotions and sentiments; it is more impulse-driven than being rational and thoughtful in its approach to things. On the contrary, the mind-intellect is an intelligent and sober aide which is able to guide the man towards his real goal in life and correct path to be followed to reach it. This fact is metaphorically indicated in this verse by the Naadi which has its origin in the heart but looks up instead of down, for the latter would indicate that the man is more inclined to be attracted towards the lowly charms of this materialistic world and enjoy the pleasures and comforts proffered by them than to look upward and strive for higher goals of life such as acquisition of truthful knowledge of the reality marked by high degree of wisdom, erudition and enlightenment as well as the need for exemplary self-control over the body and its sense organs.]

5. [It would be noted that the major part of this Canto is dedicated to the spiritual significance and importance of the main Naadi called Sushumna which is also known as the Brahm Naadi, the Virjaa Naadi, and the Brahm Rupini.]

Out of the one hundred one Naadis, the best one is said to be Sushumna. This Naadi has a special quality that it can lead to Brahm-realisation and self-realisation; hence it is called by the name of Virjaa Naadi¹. Since it leads one to submerge ones self in the bliss and ecstasy of Brahm-realisation, it is symbolically called 'Brahm-Rupini'—the one who has the form and face of Brahm (5).

[Note—¹The word *Virjaa* literally means the one which is unpolluted and pure, an epithet for the exalted Lord Vishnu, the eternal sustainer, nourisher and protector of creation and the form of Brahm also known as Viraat Purush who is eternally free from all worldly taints, impurities and blemishes. This Naadi is like a holy river that has a unpolluted origin in some high mountain and miraculously remains free from pollution inspite of all the pollutants being poured into its waters as it meanders its way down the plains before merging and losing its identity in the ocean which is ultimately the source of all water on this earth. The one example which can be aptly cited here is the holy river Ganges that originates in the lofty and pollution-free Himalayan mountains, flows through the land and then merges into the ocean in the Bay of Bengal, remaining pure and holy and a provider of Moksha, or spiritual salvation to those who take a bath in its holy waters inspite of the fact that all sorts of city and factory pollutants are being constantly poured into its waters during its long and meandering journey through the broad plains of India. The water of this river is so mystically pure and considered holy that it can be preserved for long periods of time without it getting ruined or becoming unpalatable.

In the present case, the Sushumna Naadi is the duct through which the vital winds called Pran are made to travel up during meditation by expert ascetics which gives them the thrill and ecstasy of self and Brahm realisation, and it is also the path taken by the Pran when the ascetic finally decides to shed his mortal coil and obtain his Moksha or final liberation and deliverance. This Naadi leads straight to the top of the head where the ascetic experiences the bliss and ecstasy of Brahm-realisation. When the Pran finally decides to make its exit, it does so through the Brahm Randhra at the top of the head. Since the flow of Pran through this Sushumna Naadi leads to one's spiritual salvation and emancipation it is called the most exalted of the numerous Naadis and the one that leads the spiritual aspirant directly to Brahm-realisation.]

6. The Ida Naadi goes along its left and the Pingla Naadi is to the right. They kind of escort the Sushumna Naadi by moving along its flanks. The one at the center, i.e. the one who is being escorted is obviously senior to the one who escorts. That is why this Sushumna is considered senior to these two other Naadis (6).

7. Practice should be made to control the movement of the Pran Vayu in the region of the navel where it flows continuously. [That is, one should practice to control the flow of breath by restricting the regular movement of the muscles in the abdomen around the navel. These muscles contract and expand incessantly and in a rhythmic manner to enable the body to inhale and exhale breath by their regular pumping action. When their movement is controlled voluntarily by Yoga exercises, the Pran Vayu is deemed to be controlled because its flow inside the body can be proportionately controlled.] (7).

8. Arising from the rear of the anus is the vertebral column called the 'Veena Danda' (because it literally resembles the long arm of the Indian lute). It supports the body and bears its weight. The Brahm Naadi¹, i.e. the Sushumna Naadi, passes through this bone structure (8).

[Note—¹The Sushumna Naadi is called *Brahm Naadi* for the simple and logical reason that it is responsible for all consciousness or the dynamic living forces of Brahm pulsating inside the creature's body to move through it, as well as the fact that it is conducive to one attaining the exalted state of Brahm-realisation. Each single stimulus originating from the remotest corner of the body travel through the network of nerves and ganglions to the brain through this grand highway of the spinal cord, and all instructions of the brain are passed on to all parts of the body back through this channel. If the spinal cord is damaged or cut at any place, the body is paralysed. Since 'consciousness and life' are synonyms of Brahm, this duct is called 'Brahm Naadi'. According to human anatomy, the spinal cord gives rise to a cluster of 31 pairs of nerves called the 'spinal nerves' which branch out to all parts of the body. The Sushumna Naadi refers to the main nerve in this cluster, and it is the central core of the spinal cord around which all other nerves are grouped. It connects the brain to all parts of the body. The vertebral column protects these Naadis which collectively form the 'central nervous system'.

Yoga Upanishads are focused on different means of activating this Sushumna Naadi and describe in detail how the various Prans or life factors are controlled and diverted by an expert ascetic to enable him to achieve success in this endeavour. This single Naadi is regarded as the most important amongst hundred of such nerves and veins in the body as it is the one which leads straight up to the brain from the base of the body. It is the grand highway through which all senses and impulses flow in the body, and it is the single most important nerve the malfunction of which can disrupt life of any individual. If any other nerve or vein malfunctions, the damage would be localized, but the malfunctioning of the Sushumna Naadi can derail the entire train.

Since the Sushumna Naadi is responsible for helping one to obtain the spiritually exalted state of self-realisation as preached by Yoga, which is another way of saying that the person has understood his true nature and form as the pure conscious Atma which in turn is nothing but a microcosmic form of the supreme cosmic Consciousness called Brahm, it is said that it is the only avenue leading to Brahm, or the Naadi on which one can travel to find the abode of Brahm, just like we say that a certain Mr. A resides on a particular road and his house can be reached only by traveling up or down it, and not by traveling on any other road. All other roads can help him reach that particular road, and there may be umpteen numbers of such avenues, but the ultimate destination where Mr. A is to be found is on this specific road where his dwelling is located. We often find that roads are named after some great personality living along it or who is closely associated with the neighbourhood. In this case this 'great personality' is Brahm, and hence the Naadi which leads one to this exalted Being is named after him as the 'Brahm Naadi'.

Usually an emperor or king lives at the end of a road which is named after him, and equally usually an emperor's palace is built on a high artificially elevated ground

or a ground that is naturally high such as large mound, hill-top or hillock—which is like a high citadel or a capitol hill because it is the seat of power and authority. In the present case, this high ground is the ‘head’ of the creature’s body and it is here that the Brahm lives. This region of the body governs the rest of it, and it is here that the mind and intellect with their stupendous abilities and astonishing controlling authority and powers is located. Hence, it is the seat of Brahm; it is the site of all wisdom, erudition, sagacity, enlightenment, skills and knowledge. All other parts of the body are like the various districts of the vast realm of the empire, and each patron God who controls a particular part of the body is like a junior king who has to dependent upon the will, mercy and grace of the emperor to remain in power and exercise his authority under his jurisdiction.

Verse no. 10 describes this Sushumna Naadi as the abode of the Parmeshwar, the supreme Lord who is none but Brahm, also giving credence to the reasoning given above of why this Naadi is called ‘Brahm Naadi’.]

9. Passing through the center of the vertebral column, this Brahm Naadi is thin and filament like. Through the hole of this vertebral column passes the Ida and Pingla Naadis, and in their center is the Sushumna Naadi which is radiant like the sun (9).

[Note—Like the celestial sun that shines in the sky surrounded by the moon and other planets and stars, the Sushumna Naadi is surrounded by other Naadis and is central to their existence. All other Naadis owe their life and importance to this central Sushumna Naadi because it connects directly to the brain and therefore is central to all impulses and consciousness that pulsates in the different nerves and other tissues of the body; should this all-important Naadi fail to function, the body would be generally paralyzed and become as good as being dead. Its importance is emphasised by comparing it with the sun because the latter is central to the existence of the entire solar system. In terms of Yoga and metaphysics, the Sushumna Naadi is the one which helps the aspirant to attain the eclectic state of self and Brahm realisation; it is through it that the Pran winds are directed in the upward direction which is a metaphoric way of saying that the Spirit is lifted from a low level of existence to a high level.]

10. This Sushumna Naadi represents the entire living world. It is metaphorically all-pervading and ubiquitous (for the simple reason that it is the channel through which all consciousness flows in the body, and without conscious life flowing through the nerves in the body of the man, the world would be meaningless and burden-like for him; a man living a paralysed life would prefer to die than to live like a vegetable and be a tiresome and irksome burden on his kith and kin).

This fact is symbolically stressed by saying that the supreme transcendental Lord called Parmeshwar, who is surrounded by all the glorious elements of creation such as the brilliant and dazzling sun, the luminous moon and the splendorous fire, is established in this Naadi, or he has his abode in this Naadi (10).

11. It is in this Sushumna Naadi that the entire conscious world consisting of all the living beings, all the directions of the earth, all the oceans, the mountains, the hills and the boulders, the islands, the continents and the rivers, all forms of knowledge encrypted in letters and words formed by them and revealed in the form of the Vedas and other scriptures of all denominations, all the qualities and virtues that are exhibited by conscious life (living creatures), and all that is mortal or immortal in existence are established. [This is because only as long as one has consciousness and life in the body that anything in this world would matter to him. For a dead body which has no consciousness and life flowing in its Sushumna Naadi, nothing matters.

Life and consciousness are synonymous with Brahm, and as long as Brahm is present inside the body the latter is able to have any interest in the world. Since the Sushumna Naadi controls the central nervous system linking the brain to all other parts of the body and through it to the outside world, a slightest disturbance in its operations is catastrophic for the creature's existential life; the world would become dark and lifeless for all practical purposes then. A paralyzed man has no interest in the colour of the flower or how jovial or gloomy the world is; his own world has ceased to exist and the rest does not bother him in the least. This fact is metaphorically emphasised once Brahm leaves the body, nothing would matter for the body or the creature. The word 'Jiva' or a creature itself is indicative of this fact—for it literally means 'one who is alive'. A creature who is not Brahm realised is, for all practical purposes, not a 'true Jiva', i.e. he is as good as dead. Though all other Naadis might work normally in such a Jiva, he is deemed to be 'spiritually dead', and as such he is as good as tree or an animal who are living in the technical meaning of the term but have no scope of spiritual salvation and emancipation.] (11).

12. All the forms of sound and speech, all the Mantras (mystical formulas based on letters and words chanted or hummed as prayer in religious exercises), all the Purans (ancient mythological histories), all the Gunas (the Sata—the auspicious qualities, the Raja—the mediocre qualities, and Tama—the lowly and mean qualities), all the seeds (causes), the Atma (the individual creature's consciousness) and the Pran Vayu (vital winds that keep the creature alive)—verily they are established in this Sushumna Naadi. [As explained in above verses, everything in existence has any real relevance for the creature only as long as there is consciousness flowing through the spinal cord. A dead body would not need either the Vedas or the Atma! They are of any importance and relevance only to a living man, and become inconsequential and redundant if the central nervous system collapses.] (12).

13. In fact, the entire world is centered on the Sushumna Naadi. The inner being and core factors of life revolve around this Naadi. It is the essential factor that keeps a creature alive and conscious. [If this Naadi becomes dysfunctional for any reason, the living being would stop being called a 'living being' for it would be nothing but a walking corpse as it were.] Many other Naadis have their origin in it¹ (13).

[Note--¹That is, all other functional nerves that relate to various activities of the body, right from the basic functions of life which are carried out by the external gross organs of perception of the body such as seeing, hearing, tasting, smelling, feeling etc. to those functions that are carried on by the inner organs such as digestion, assimilation, excretion, circulation, reproduction etc. and extending up to the subtlest functions as thinking, understanding, analyzing and deciding on any matter, carry on their respective functions in a coordinated way and help to operate the complex structure of the body because of the proper functioning of this single Sushumna Naadi. Otherwise their functioning or not functioning would be irrelevant for the man who has lost consciousness in his Sushumna Naadi as he would be unconscious of everything and anything around him; he would not be interested in anything whatsoever. For example, a paralysed man whose brain has stopped functioning is not able to have any attraction for the delicious sweets of he was so fond a few days back, and neither would he be attracted by the soothing sound of his favourite song. This fact is symbolically stressed by saying that all other Naadis have their origin in the Sushumna Naadi. This fact is established in the human anatomy which says that the spinal cord has 31 pairs of nerve—called the spinal nerves—branching out from it to different parts of the body, and that it connect the brain to the remotest corners of the body through a network of nerves centered around the central nervous system.

Therefore, this Sushumna Naadi plays a pivotal role in the 'conscious life' of a man.
Refer verse no. 22 also.]

14. The point in the body from where all the Naadis derive their powers is at a level higher in the body, and all their branches spread out from there to the lower parts of the body to control them. [This is a clear reference to the *brain* located in the head and which controls all the functions of the body by sending relevant instructions to the concerned organs and tissues through the path or medium of the Naadis by way of electrical impulses much like modern day data cables or optical fibers that carry messages and data across the globe. Just like all commands and control systems have a central unit or 'server' which monitors and controls the entire setup, all the nerves are said to originate in the brain in the sense that it is their control and command centre and it is from here that their fork out to distant corners of the realm of the body of the creature to carry the message of the brain to them, thereby forming a dense network throughout the body much like the network of arteries, veins and capillaries that help in circulation of blood but are deemed to have their origin in the heart because, as far as they are concerned, the heart is their control and command centre; it is the heart that pumps blood in them. Likewise, it is the brain that sends electrical signals in the form of consciousness and life to all corners of the body, and also receives the sensory perceptions pertaining to the external world through the same network in the form of electric signals. It is the brain that controls all the vital functions of life in the body, and makes the body relevant to the world and vice versa.]

There are said to be seventy two thousand Naadis in the body, and they spread out in the subtle space filled by the subtle wind in the body. [The difference between the Naadis that carry life impulses to and from the brain and the ones that carry blood to and from the heart is that the former carry stimuli in the form of subtle electric currents flowing through them unlike the ones going to the heart which carry more gross forms of life in the form of physical blood. This fact is depicted here by saying that the Naadis having their origin in the center which is at a higher level of the body move through the subtle space and air.] (14).

[Note—It is important to note that earlier it has been said that all the Naadis have their origin in the knot of nerves located in the region of the navel and the groins, in the region of the Mooladhar Chakra and the Nabhi or Mool Kand, and then branch out from here to various parts of the body—refer verse nos. 16-27 of Canto 5. On the face of it there appears to be contradiction between what is said in this present verse no. 14 and these verses, but on close examination we see what they mean. These Naadis get their electrical charge or battery-recharging in the lower region of the body in the abdominal area where the Kundalini and the Mooladhar Chakra as well as the Manipur Chakra are located. The rhythmic movement of the muscles of the abdomen can be likened to the continuous pumping of air into the furnace of the ironsmith by a similar movement of his bellows which keeps the furnace 'charged'. If this pumping stops, the fire in the furnace would gradually die out; it would be 'discharged'. But the area of the body from where the Naadis get their command and to where they report is high up in the brain. The term 'origin' is not to be taken too literally and the hidden meaning is to be deciphered to understand the proper implication of these verses. The brain is the 'origin' of all commands that the Naadis carry to different parts of the body and keep the latter functioning normally, and if the brain is dead then no matter whether the Naadis are kept alive or energized by the Mooladhar Chakra from where they have had their physical origin, the Manipur Chakra from where they get electrically charged by the abdominal pulsations, and the

Kundalini which keeps the fire alive and burning robustly so as to provide the necessary impetus for success in Yoga, they would be of no use for the living being.]

15. All the accesses to the Kundalini (the coiled energy center at the base of the spinal cord) are blocked by these Naadis lying at all possible odd angles to give effect to this blockade (15).

16. If one acquires the knowledge and necessary skills to straighten out the Sushumna Naadi by untangling and jerking it into activity with the help of the Pran Vayu (the vital wind in the body), he can obtain Moksha (or get liberation and deliverance from remaining trapped in this body).

This is achieved by restricting the vital wind (i.e. the Apaana wind) by constricting and pressing the anus¹. This helps one to separate this Sushumna Naadi from the clutch of other Naadis (because this heated wind would then sneak into its bore and wiggle it subtly to soften it up, lose its rigidity and make become more flexible; this helps the Sushumna Naadi to get disentangled from the clutch of other Naadis clinging to it; it also helps to rejuvenate it and literally wake it up from its hibernating state of dormancy) (16).

[Note—¹This process is called the 'Mool Bandh' and it is described in detail in Yogchudamani Upanishad, verse nos. 46-47 of Sam Veda tradition, in Yog Kundali Upanishad, Canto 1, verse nos. 42, Yogtattva Upanishad, verse nos. 117-122, and Yogshikha Upanishad, Canto 1, verse nos. 103-105 of Krishna Yajur Veda tradition.]

17. The breath should be held inside the body (when the anus is being pressed to activate the Apaana wind) by first inhaling it through the nostril that is said to be the passage of the 'Chandra Swar', i.e. the left nostril through which the Ida Naadi passes. [This helps to build up sufficient pressure inside the abdomen, help in concentration and diverting all available energy of the body to give effect to the attempt of diverting the lower wind, the Apaana wind, to activate the Sushumna by entering it.]

The seventy two thousand Naadis form a cage around the Sushumna Naadi (17).

18. The Sushumna Naadi personifies the divine glorious dynamic energy of Shiva, called 'Shakti'. All other Naadis are mere its attendants; they are inconsequential as compared to this Naadi.

The exhilaration-providing nerve, or the nerve which helps to produce the feeling of extreme ecstasy and when it is massaged by the vibrations of Naad resonating in it, is located in the real of the mouth where the tongue has its base¹. [The area of the body where this happens is the 'Kantha Chakra' or the throat Chakra.] (18).

[Note—¹This is why when one has a sense of titillation and extreme sudden cause of excitement such as when there is great merriment, or when some extremely exciting or good news is heard, or something suddenly tickles one's sides or the sole of his foot, a peculiar exclamatory shill cry or a giggling or chuckling sound involuntarily emanates from the throat. In the present context the implication is that at the instant when the Sushumna Naadi is activated, a peculiar sense of titillation and ecstasy follows which results in an involuntary exclamation of exhilaration blurring out from the practitioner's throat which would resemble the merry bleating of a sheep, or the chuckling of a joyous monkey, or the giggle of excited children heard when they are extremely overjoyed and happy.]

19. In order to activate and control the Naadis (nerves) situated above this place (the throat as described in verse 18), one should subtly hum the relevant Mantra and invoke the supreme Shakti (Brahm) that is located in the region called the Brahm Randhra (which is located on the top of the head around the cranium). [That is, once the practitioner has successfully eased the Pran Vayu in the Sushumna Naadi and then has witnessed the extreme titillation produced by it, resulting in his involuntarily chuckling and sighing in ecstasy, he should then hum the Mantra dedicated to Brahm, and it is the divine Mantra 'OM'. Repeating this OM very softly and in a prolonged manner produces a sound in the head which resembles the buzzing or humming of the bumble bee. This sound acts as a massage for the nerves of the brain and titillates them further.]

As soon the sensation of a bumble bee flying around, humming and buzzing around the head is felt, the practitioner should focus his attention on it and abandon the idea or thoughts of getting back to the humdrum life in this mundane world. In other words, he should prefer to remain lost in the state of Samadhi (which is a trance-like state) attained by this eclectic and divine feeling of ecstasy obtained by doing meditation (19).

20. He should contemplate thus—'I bow reverentially to the supreme transcendental Soul which resides in the bosom of all the living creatures, who continuously arrive and depart from this mortal world in an endless cycle of birth and death, in the form of a 'Hans'¹, literally a divine Swan but used as a metaphor for the pure consciousness that forms the Atma or the true self of all living beings. This Atma which is as pure as the Swan is distinct from the creature because it remains steady and constant, without arriving or departing from anywhere.

This Hans does not get involved in worldly activities and it is the illuminator of the mind-intellect complex, thereby being the destroyer of the darkness caused by ignorance and its attendant delusions. [That is, the pure consciousness provides the mind-intellect complex with the necessary wherewithal to gain enlightenment, erudition and wisdom. If the creature allows the mind-intellect complex to work under the overall guidance and control of its consciousness, it would be self-illuminated in the sense that it would be driven by conscience and be enlightened and wise, but if it allows the mind-intellect to be influenced by the enchanting inputs gathered by the sense organs from the external world of sense objects which are notorious for their deluding effects and the alluring bait of sensual pleasures and material comforts that they throw to trap the creature in their snare, the creature would be engulfed in a horrifying veil of darkness symbolising ignorance and delusions.]' (20).

[Note—¹The *Swan* is used in the Upanishads as a metaphor for the pure self of the creature. In Yoga Upanishads it is said that the heart is shaped like a swan to indicate its inherent purity. The Hanso-panishad which is the fourth Upanishad of the Shukla Yajur Veda tradition describes the metaphysical importance and spiritual significance of this metaphoric Swan. The great Mantra 'So-a-ham' ('that is me') also has its origin in the word Hans. Refer Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11 of the present Yogshikha Upanishad.

The enlightened and realised person thinks of himself as a Swan and feels exhilarated that he is not an ordinary man bogged down by worldly fetters, but an exalted soul that is like a Swan.

The bird Swan or Hans is considered the most pure, clean, wise, erudite and clever among the birds. It is said to eat pearls, which means it picks up and accepts only the best amid the variety of things available to it in the form of an assortment of

various gems and jewels representing the dazzling charms of this world. It is also reputed to drink milk leaving aside the water content in it symbolising its ability to imbibe the essence and the best, and leave the rest aside. It is also the vehicle of Goddess Saraswati, the patron Goddess of knowledge, wisdom, intelligence, speech and learning, indicating that it bears these glorious virtues. Hence, the reference to a swan while describing a creature conscious of the vital wind or Pran passing through him means the basic, inherent and intrinsic tendency of that wisened and intelligent creature is to be the best, most pure and divine, wise, awakened and enlightened, adroit, clever and sagacious like the swan, and pick all the goodness and forsake all that is bad in this world. Saraswati rides on a swan, symbolising the creature's inborn enlightenment and excellence of his mental caliber. Symbolically, Saraswati resides in his Pran because it rides on the swan, i.e. in his heart, throat and mind—that is, his heart has purity of emotions, he speaks well of all, and his wise words are sought after by all as priceless gems of wisdom, and his mind is intelligent, discerning and noble. A wise man is expected to pick the truth from amongst the basket of assorted charms present in this creation, and leave aside the non-truths.

The alphabet 'Ha' of the word 'Hans' is sounded by the vibration of the exhaled wind passing through the vocal cords present in the throat or the wind pipe which connects to the nose, while the alphabet 'Sa' is sounded by the root of the tongue which opens into the mouth when the breath is inhaled. Both the nose and the mouth open in the same cavity called the throat. Hence, the inter relationship between 'Ha' and 'Sa' is evident. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his own divinity and sublimity, his exalted and noble stature, till that was pointed out to him. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan. During the twenty-four hour period covering a single day and night, a person inhales and exhales, or breathes, roughly twenty-one thousand times, because each cycle of inhalation and exhalation is equivalent to saying one Mantra 'Hans' consisting of the two syllables 'Ha and Sa' (refer Dhyānbindu Upanishad, verse no. 63).

The Dhyān Bindu Upanishad, verse no. 24 and 62-63, of the Krishna Yajur Veda tradition which primarily deals with meditation and contemplation on Brahm in order to obtain emancipation and salvation of the soul of the creature says that the supreme transcendental Brahm, known also as Pranav, resides in the heart of all the living beings in the form of a Hansa. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his divinity and sublimity, his exalted stature, till that was pointed out to him in this verse. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must do not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

The Yogchudamani Upanishad, verse no. 82-83 of Sam Veda tradition describes this Swan in the context of Yoga. Let us see what it has to say in this context—

“Verse 82--The 'Hansa' resides gloriously and majestically in the center of the two eyes of a creature during the waking state of consciousness. The letter 'Sa' of the Hindi/Sanskrit alphabet represents the 'Khechari Mudra' of the Yogi which is certainly the personification or the image of the word 'Twam' (82).

Verse 83--The letter 'Ha' represents the supreme Lord of creation, called 'Parmeshwar' which is certainly symbolised or represented by the word 'Tat'. [That is, the two syllables of the word 'Hansa', meaning the divine swan, are 'Han' and 'Sa' which stand for the two words of metaphysics which have profound impact—the 2nd word is 'Twam' and the 1st is 'Tat' corresponding to these two syllables respectively.] Any person who concentrates his mind and attention, and contemplates

and meditates upon the letter 'Sa' shall surely become akin to, or equivalent to the form or the image represented by the letter 'Ha'. This is called contemplating upon and practicing of the twin tenets of 'So-a-ham' and 'Tattwa-masi' (83) [82-83].

The Upanishadic sage establishes uniformity and oneness with the two great philosophies and metaphysical concepts of the scriptures — 'So-a-ham' which means 'that is me', and 'Tattwa-masi' which means 'the essence is pure consciousness and it is me'. The word 'that' refers to Brahma which is the universal and absolute Truth and Reality about the existence, and has the qualities, inter alia, of enlightenment, of being eternal, omnipotent, universal, omnipresent, immanent, omniscient etc. When the seeker/aspirant focuses his attention on the self represented by the letter 'Sa' (self) and the 'Khechari Mudra' (when he is unconscious of the external world and focuses his attention on the glorious supreme entity present in the center of his eyebrows), he realises the truth of the maxim 'So-a-ham'. When he opens his eyes of wisdom, the truth of the 2nd tenet 'Tattwa-masi' dawns on him. Put simply, it means that the creature realises that 'he is the same as the supreme Brahma who resides in his Atma/soul present in his bosom/heart'. At the same time, 'the external world seen through this eye of wisdom symbolised by the presence of the divine swan in his eyes is the same Brahma who has revealed himself in this multifarious, diverse and myriad world'. This is the essential truth, or 'Tattwa'.]

21. The cosmic sound called Naad which is heard in the head during the practice of Yoga (which resembles the humming of the bumble bee as described in verse no. 19 above) is distinct from all other worldly sounds. This is because the Naad is heard even without speaking or uttering any word and it is also not the sound heard when one sings or a musical instrument is being played. That is why it is called 'Anahat', or the sound produced without any friction or one entity being rubbed against another or hitting another to produce it. In other words, it is 'self produced'. [Obviously there is no beating of anything or friction between anything in the cosmic bowl where the primary sound of Naad was produced. It is simply 'self produced'.]

In the core or the central point of this cosmic Naad is the entity that is self-illuminated, and hence called 'Joyti' which means 'light'. This subtly visible Joyti has an invisible subtle component called its Mana (mind-intellect complex). When this Mana is dissolved (eliminated or decimated) into nothingness, it is said to be transformed into the supreme abode of Lord Vishnu (21).

[Note—The cosmic Naad is the invisible and attributeless body of Brahm. The situation can be compared to an oil lantern which burns with a soft hissing sound. When one come in the vicinity of this lantern, one would hear this hiss which makes him aware that something is burning nearby. Then one sees the light and realises that the sound is emanating from it. The light is the visible aspect and the hissing sound is the invisible sign indicating the presence of the lamp. The wick of the lantern is the Mana which makes it possible for both the light and the sound to come into being, because had there been no wick in the lantern the very existence of both would not have been possible in the first place. And finally the oil in the lantern is the central cause by which the lantern gets its light or the ability to light the world around it, and therefore it is like the hidden and subtle Lord Vishnu who is at the core but behind the curtain in the whole game plan of this creation. When the lantern's wick is cut off from the tip, the light and sound would automatically be cut out, but as long as there is oil in it, it can always be lighted again by raising the wick.

In the context of this manifested world, the Pran, the vital wind force of life which is a metaphor for life itself, is the Naad because any sound requires the

medium of air to travel in waves. All forms of life are characterised by being constantly on the motion like the waves of sound, and sound itself is also a symbol of life inasmuch that where there is no sound at all we say that there is the 'silence of death'. The visible world is the 'revealed' or 'lighted' aspect of Brahm; the world is actually a manifestation of the invisible and attributeless Brahm in its gross and visible form having attributes. The world is the 'lighted' aspect of Brahm because it is the light emanating from the self-illuminated Brahm or consciousness that lights up the world for the creature, for had there been no consciousness everything would be submerged in pitch darkness just like the period that immediately follows after doomsday. This light and consciousness not only illuminates the world but also indirectly illuminates Brahm just like the light of the sun which lights up the world, gives it its life, energy and vitality and also tells us about the presence of the sun in the sky. Another example is the glow-worm which also is self-illuminated and its presence is known by its own light. Therefore, the enlightened view of the world is one in which the latter is seen in the glory and majesty of the Brahm.

The world can also be compared to the moon because the world is visible as a reflection of the majestic glory of Brahm just like the case of the moon which shines by the reflected light of the sun. Further, since the world is the creation of the Mana (mind of the creature) and the Moon God is the patron God of the Mana, this analogy seems apt. The world exists because of the Mana, i.e. it is the mind that enlightens the Atma which is the creature's true 'self' that such and such world exists. If the Mana is shut off as is done during meditation, the world would cease to exist. When this happens, what remains? It is the pure 'self' or the pure consciousness that remains after the entire external drama is shut off from view. This Atma is Brahm personified, and Brahm and Vishnu are synonyms because the latter is another name for the Viraat Purush which is the macrocosmic gross body of Brahm that is invisible, attributeless and subtle as compared to the visible aspect of Brahm in the form of the gross world. It is from this invisible Viraat, an entity that is characterised by its vastness and infinite dimensions, that the rest of the visible creation, that is similarly vast and infinite, has manifested.]

22. Some wise ascetics assert that the Sushumna Naadi is the foundation for spiritual elevation and the base from which one can achieve success in Brahm realisation. They call it a manifestation of Goddess Saraswati, the goddess of wisdom and enlightenment. [In other words, this is the Naadi which can lead one to the supreme state of spiritual realisation and enlightenment.]

It is this Naadi that creates this world and it is in it that the world dissolves¹ (22).

[Note--¹This is because the Naadi is the main carrier of all senses and consciousness in the body. If the Naadi is paralysed, the world ceases to exist and matter. It has been said that the world exists because the Mana or the mind thinks that it does, and this mind gets its inputs of the external world, it becomes aware that the world exists at all because it is fed with information obtained about it by the external sense organs of the body which collect information and transmit them to the mind through the means of the network of nerves (Naadis). Even the internal organs of the body get their instructions from the brain through this network. Hence, the Naadi is symbolically responsible for the creation and destruction of the world. In this context, refer to verse nos. 8-13 and the notes accompanying them.

Again, the Upanishads say that when the man sleeps, i.e. when the external world has ceased to exist for him, even then the vital winds called Pran keep on moving through the Naadis, keeping the man alive. If this does not happen, he would be paralyzed and even die. Refer Dhyani Bindu Upanishad of Krishna Yajur Veda, in its verse nos. 58-60, and Paingalo-panishad of Shukla Yajur Veda, Canto 2, verse no. 12

which says that when the man is asleep, his Prans move along the various Naadis present in the body.].

23. One should take the shelter of a Guru (a wise and erudite teacher who knows the esoteric secrets of Yoga). [This is to ensure that there is a constant presence of someone who would remove doubts and confusions that occur in one's spiritual endeavour and who would show the correct path to be followed and also give expert advice and guidance when needed. The scriptures are very abstract and often appear to be speaking in contradictory terms. It is here that the role of the true Guru comes into play, but for this to happen he himself must be an expert on the subject. Otherwise it would be very dangerous and have horrendous consequences for the disciple. Refer verse no. 79 of this Canto 6 also.]

When the basic energy center called the 'Adhar Shakti' goes to sleep, the world would also go to sleep. [In other words, when the central nervous system represented by the Sushumna Naadi comes to a standstill, the creature would either be completely paralysed or even die. Thus the world would have no relevance for him. When one sleeps, the sense organs cease to function because the nerve points located on the surface of the body become inactive and do not carry the incoming signals from the sense organs to the brain and its response or instructions back to these sense organs to act accordingly. This is a metaphoric way of saying that when the Naadis sleep the world would also sleep, or cease to exist.] (23).

[Note—Refer verse nos. 8-14 of this present Canto 6 in this context. The word *Adhar* or *Aadhaar* literally means support, basis, base, rest, stay, backbone, substratum, principle, foot, pillar, prop, shoulder, shore, dike, and a means of subsistence. It refers to the base or foundation of anything, any structure or any event. For example when any unfortunate event happens, we try to ascertain the cause or the basic reason why it happened. Once it is determined, the rest is easy to follow. The word *Shakti* however means energy, vitality, stamina and strength. It is the energy trapped in the triad of the Sushumna Naadi, the Mooladhar Chakra and the Kundalini that is sought to be harnessed by the ascetic for his spiritual endeavour of Brahm-realisation leading to his attaining an eternal state of blessedness marked by extreme ecstasy and bliss as well as in aiding him in his liberation and deliverance from the fetters of this body and the world.

In the present case, the triad consisting of the Sushumna Naadi along with the Mooladhar Chakra and the Kundalini plays an all important role in not only keeping the nervous system of the body functioning normally but also is used in the process of Yoga to achieve a spiritual high. The subtle dynamic cosmic energy present in the body is located here and the ascetic strives to arouse it and harness its astounding potentials for his own spiritual well being and upliftment. Since the man's entire life and all his activities revolve around the consciousness present in the body, as the body without consciousness would be a dead body which is good for no one, this apparatus consisting of the Sushumna Naadi, the Mooladhar Chakra and the Kundalini is considered as the pillar, the foundation and the basis of obtaining enlightenment and liberation according to the philosophy of Yoga. Therefore this apparatus is called the Adhar Shakti for the ascetic, the one which empowers the ascetic to progress steadily in his spiritual endeavours and provides him with sufficient energy and vitality to obtain success in it.]

24. When this Adhar Shakti (the nerve system which is symbolised by the Sushumna Naadi in the case of this Yoga Upanishad) is sufficiently activated and energised, the world too becomes alive and active (as explained in previous verses). The eclectic knowledge of this Adhar Shakti paves the way for one to cross the realm of Tama

(darkness) and reach the realm of exaltedness and supremacy (i.e. obtain spiritual light and enlightenment) [Darkness is like ‘sleep’ because it makes a man ignorant and oblivious of what is happening around him, while being ‘awake’ is synonymous for being enlightened and wise.] (24).

25. The knowledge of this fact destroys all ‘Paaps’—i.e. all forms of misdeeds, misdemeanors, evils and other demeaning aspects of life and their attending inauspicious consequences having their genesis in darkness and delusions created by ignorance are dispelled, paving for a man’s auspiciousness and all round spiritual elevation (25).

26. The Adhar Chakra (i.e. the Mooladhar Chakra located between the groins and the anus and from which the Nabhi Kanda rises—refer Canto 5, verse no. 5) is radiant and splendorous with the brilliance of electric. This illumination is its natural quality and inherent to it. When the aspirant is able to have its ‘Darshan’, i.e. when he is able to experience its presence along with its brilliance by the process of Yoga and the grace of his enlightened Guru, he is able to obtain Mukti, i.e. he is deemed to have found the path of liberation and deliverance for himself and his soul. [This is because it is not so easy to experience this Chakra. It is a very subtle and mystical phenomenon that requires a great deal of hard practice, steadfastness of purpose and due diligence. But once its presence is ascertained, the rest is easy to follow because it is like finding the correct gateway to Mukti. It is the ‘entrance’ by which one becomes eligible to enter the Brahm Naadi that leads him ultimately to his goal of Brahm-realisation and self-realisation that culminates in bliss and ecstasy of infinite dimensions. Refer also to verse nos. 8-14, 22 of this Canto 6.] (26).

27. All the inauspicious as well as the auspicious effects of deeds done by the spiritual aspirant (called the Paap and Punya respectively) are burnt and reduced to ashes (i.e. made ineffective and neutralised) by the intense divine energy and dynamic spiritual potentials (called the Tej) of the Adhar Chakra¹.

The practitioner can stop the Adhar Vayu (i.e. the Apaana wind that is present in the lower part of the body and which is stopped from escaping through the anus by constricting the latter) and dissolve himself in the fathomless depth of the sky² (27).

[Note--¹The *Adhar* (pronounced as *Aadhaar*) *Chakra* is, as the name itself implies, is the swirling subtle energy center in the body that forms the basis of all spiritual achievements made by the practitioner of Yoga according to the philosophy pertaining to this school of thought. When the aspirant has activated this center it is but natural that it would thoroughly clean him before he can step ahead in his spiritual path by virtually putting him through the rigours of the ‘fire test’. Spiritual enlightenment entails complete neutrality and equanimity towards everything pertaining to the gross world and the gross body. Deeds, whether good or bad, whether auspicious or inauspicious, are done by the gross body in the physical gross world, for neither the subtle part of the body, i.e. the mind and intellect, nor the sublime part, i.e. the pure consciousness (Atma), do any deed. The Atma is absolutely neutral just like an Emperor should be, while the mind-intellect plays an intermediary role—on the one hand it receives inputs from the external world through the organs of perception of the gross body, and on the other hand it reports to the Atma, is subservient to it and is the ear and eye for the latter. So when the Atma decides to shut off the external world, the mind-intellect obeys its instructions and distances itself from the latter. This is the state of total equanimity and neutrality. In such a state no deeds are deemed to be done by the creature because the Atma, which is the

true identity of the creature, is uninvolved in the deeds done by the body. The actual physical exercise of doing anything is carried out by the gross body only.

When an aspirant steps on the path of Yoga and he has reached a certain stage past the preliminaries so much so that he is able to focus his attention on kindling the energy of the Mooladhar Chakra or the Adhar Chakra, it is natural to assume that he has transcended the mundane and reached a higher state of existence. For an enlightened man it is expected that he must have risen above the concept of doing deeds and then desiring to enjoy the fruits of these deeds or fearing the evil effects of them. This is a metaphoric way of saying that all his deeds, auspicious or inauspicious, have been burnt and reduced to ashes, or made inconsequential or ineffective as far as his 'true self' or the Atma is concerned.

²This awareness of the stupendous power of the Mooladhar Chakra is the first step towards obtaining spiritual Mukti or liberation for the ascetic. His final goal is to detach himself from the entanglement of the body and become free like the sky and the wind which are eternally unhindered and unfettered. This is a gradual process, and the first step in this direction is the kindling of the energy of the Mooladhar Chakra so that the Apaana wind can arouse the Kundalini and enter the Brahm Naadi which would ultimately lead to attainment of a 'spiritual high'.

As one progresses in the spiritual path of Yoga, one reaches a stage called Samadhi, which is a state of consciousness when there is perpetual total loss of awareness of the gross body and the gross world even though the aspirant remains active in this world and does his duties normally. This is made possible because internally he is totally submerged in meditation and contemplation while remaining completely detached from the activities of the body which is the entity that actually does the deed. This state of existence is tantamount to complete 'dissolution' of one's sense of self which one usually associates with the physical gross body. Once the boundary of the gross body is removed, the vital winds present inside the body would automatically merge with the cosmic wind or air element present outside the body in the universe. In other words, the state of 'non-existence' and 'dissolution' is obtained. This is 'Jivan Mukti' because the ascetic is still alive. It is also the 'Videha Mukti' in the sense that the body loses its effectiveness and relevance in his life who is absolutely unconcerned about it and its constant nagging demands or sufferings.]

28. Restrictions of the Adhar Vayu (the Apaana wind) results in the body shivering and shaking. The ascetic begins to dance (i.e. his body shakes and shivers to such an extent that for all practical purposes it appears that he is dancing in a trance-like state) (28)

29. This state enables the ascetic to visualise the entire world in the Sushumna Naadi. This Naadi is the basis of existence of the entire creation along with all the Gods (the immortal and divine beings) and the Vedas (all forms of knowledge). Therefore a wise practitioner should strive to activate this Naadi and both experience and witness this holistic and divine view of existence from the perspective of Yoga (29).

[Note—Refer verse nos. 10-13 of this Canto 6 above.]

30. Behind the Adhar Chakra is the symbolic 'Triveni Sangam' (literally the confluence of the three holy rivers, viz. the Ganges, the Yamuna and the Saraswati). [It has been said earlier that the Mooladhar Chakra is triangular in shape. Refer Canto 5, verse no. 5. This is the significance here—this 'triangular shape' stands for the 'three holy rivers'.]

By symbolically taking a bath there and drinking or sipping the holy water of the place, the creature finds liberation and deliverance from this world (30).

31. It is here at Paschim Lingam that the door to enlightenment is situated, but it remains closed. When this door is opened, one is able to break all the fetters pertaining to the mundane and artificial world of delusions and obtain freedom from its shackling effects (31).

[Note—The ‘closed door to enlightenment’ refers to the closed Mooladhar Chakra, the Kundalini and the Sushumna Naadi. The ‘opening of the door’ implies that the ascetic has been able to unleash their astounding reserve of subtle energy that is now harnessed by him to obtain spiritual ecstasy and liberation from the shackling effects of the gross body on his Spirit.]

32. This is the symbolic location of the moon and the sun. [This has reference to the Ida and Pingla Naadis which originate at the base of the spinal cord along with the Sushumna Naadi and keep the mouth of the Kundalini closed. Further, the Manipur Chakra located in the region of the navel is the whirling energy center symbolically representing the sun and its stupendous cosmic energy. During Yoga, the practitioner opens the closed mouth of the Kundalini so that its energy can move up these Naadis making the creature spiritually aware of the true subtle world of his sublime consciousness as opposed to the gross world of which he was aware prior to this opening.]

It is here that the Lord of this world, called ‘Vishwesh’ (i.e. Shiva representing Brahm) also has his symbolic abode. [This has reference to the Mooladhar Chakra over which the symbolic Lingam of Shiva is situated. Refer verse no. 168 of Canto 1 and verse no. 5 of the present Canto 5.]

By becoming enlightened about this, one can become Brahm-realised. [This is because Yoga enables him to first activate the Mooladhar Chakra and subsequently kindle the hitherto dormant subtle cosmic energy trapped inside his Kundalini which snakes up the Sushumna Naadi. This latter Naadi is also called the Brahm Naadi because it goes up to the top of the head and reaches the brain. According to the philosophy of Yoga, when the vital winds called Pran move up this particular Naadi, the practitioner of meditation experiences an extreme sense of unparalleled ecstasy and bliss. These two latter sensations are like witnessing Brahm first hand. Refer verse no. 18. Further, at the higher level of Yoga, the Pran can even make its exit from the body of the ascetic by escaping through the hair-like slit on the top of the head, called the Brahm Randhra, as clearly laid out in the next verse no. 33-34 below.] (32).

33. The symbol of the supreme Brahm (in the form of the Shiva’s Lingam) is located slightly to the left rear of the Mooladhar. A wise and erudite ascetic should be enlightened about it¹.

By piercing the hexagonal Chakra, the realised ascetic is able to make his exit through the Brahm Randhra² (33).

[Note—¹Refer Canto 1, verse nos. 72, 167-168; Canto 2, verse nos. 6 (Naad Lingam), 8-14, 20; Canto 3, verse nos. 1-15; Canto 5, verse nos. 2-5, 5-16 (as abode of Shakti); Canto 6, verse no. 33. (ii) The Brahm Vidya Upanishad of Krishna Yajur Veda, verse no. 80 describes the Shiva Lingam symbolically present in the body.

²Refer Canto 1, verse no. 177. The Pran enters the Sushumna Naadi and is propelled up by being heated and energised by the subtle energy of the Kundalini. This Naadi passes through various Chakras in the body which are like the different coordination centers for all the nerves spreading out to reach all the corners of the body. While passing through these centers, the consciousness in the form of Pran collects all information on the way and then when it finally reaches the mind (brain) it

conveys all these to the latter which then sets out to perform its job of sifting through the mound of incoming data and selecting the important ones which require special attention of the intellect. The instructions of the mind-intellect complex are then transmitted back to the body and its various organs through the same network of nerves by which the primary and raw information was brought to it.

In the case of Yoga, the external inputs are cut off because the mind is focused on the inner self. This along with the breath control exercises called Pranayam help the ascetic to concentrate the strength and vitality of the Pran wind so much that it is enabled to enter the Sushumna Naadi through the path of the Kundalini. The next Chakra that the Pran enters is the Swadisthan Chakra which is said to be hexagonal in shape and located in the region of the base of the genitals. Refer Canto 5, verse no. 8. This is the one that is being referred in this present verse.

The Pran wind crosses it and moves further ahead to finally reach the top of the head where the Brahm Randhra is located. This is the hair like slit through which it is believed that Brahm had entered the body of the first creature (living being) at the time of creation when the latter was created in the image of the Viraat Purush, the macrocosmic invisible gross body of the sublime transcendental Brahm. This Brahm had then entered and took up his residence in the head from where he decided that he would control the rest of the creation. That is why the mind-intellect complex is said to be closely associated with Brahm because it is the brain that controls all the functions of the body besides being the seat of such grand virtues as wisdom, erudition, sagacity, intelligence, analytical skills, the ability to discriminate between the good and the bad and then decide on the merits of a given situation, and the grand virtue of enlightenment which distinguishes a wise man from an animal. As for the ascetic, if he wishes to obtain liberation and deliverance from this body, he can voluntarily make his exit from the latter by allowing his Pran or vital wind representing his life sustaining forces to make its exit from the Brahm Randhra. Should the ascetic decide to do so, his Atma, i.e. his pure consciousness would withdraw itself from the body and ride literally piggy back on the Pran while it makes its exit through the Brahm Randhra to obtain final emancipation and salvation. See verse no. 34 of this Canto 6 below. The discarded body would eventually disintegrate into its gross elements—viz. earth, water and fire. The air has already left it as the Pran, and the subtle sky or space present inside the body between the various internal organs, tissues and cells would automatically cease to have any existence once the physical structure of the body disintegrates into its elements. In short, all the elements are released and they merge with their primary cosmic forms once the consciousness and Pran leave the body.

The evidence of consciousness withdrawing itself along with the Pran is experienced when the organs begin to become numb and unconscious when the higher state of Yoga is reached. This helps the ascetic to make a painless exit from the body as compared to the death when the Pran is forced to leave the body against its wishes, because then it would try to cling to the body and would have literally to be pulled or torn out of it.]

34. If the Pran is able to carefully pass up through the Sushumna Naadi without getting diverted into the ducts present on the left and the right of it, i.e. without entering the left nostril through the Ida Naadi or the right nostril through the Pingla Naadi, it can go straight up to the head and make its exit from the body by piercing the skull and escaping through the Brahm Randhra (which is the hair like slit marking the place where the two hemispheres of the skull join). This helps the ascetic to attain the final destination of all spiritual endeavours which is literally called the 'Param Gati' and which means to obtain liberation and deliverance of the soul from this body as well as the world. [This is also called the final Mukti or Moksha—final liberation and deliverance, final emancipation and salvation.] (34).

35-36. As long as the living being represented by the Hans (i.e. the pure consciousness known as the Atma which metaphorically is represented by the Swan or Hans and which is the true identity of the creature) continuous to move up and down in the Sushumna Naadi, he is deemed to remain trapped in the cycle of birth and death.

On the contrary, when his Pran becomes steady in the Sushumna Naadi it acquires sufficient power and energy to break through the barrier of the sun and moon (35-36).

[Note—The ‘sun’ is represented by the Pingla Naadi or the right nostril, and the ‘moon’ by the Ida Naadi or the left nostril. The implication of the statement is that the breathing stops through the nostrils during the Kumbhak phase of Pranayam. During this state, the Pran wind is incarcerated in the body which acts like a closed pitcher (Kumbha), and subsequently it makes its exit not through the routine path of the nostrils but through the Brahm Randhra in the top of the skull. As it is obvious here, if the Pran exits through the nostrils as during normal breathing process, it is bound to oscillate between inhalation and exhalation, while if it goes out through the Brahm Randhra its exit would be final. The former would be tantamount to taking birth and death repeatedly, while the latter would be his final Moksha or Mukti.

It is a very interesting analogy here which can be interpreted in a different way also. The ‘sun’ stands for the day when one is involved in all sorts of physical activities involving the body and the material world which is visible and tangible. On the other hand, the ‘moon’ is a metaphor for the night when people sleep and the external world and its activities become irrelevant. The day is like ‘birth’ when the soul gets involved in this world, and the night is like ‘death’ when the same soul withdraws from the external world and becomes unconcerned with it. The day is comparable to the ‘waking state of consciousness’ and the night to the ‘sleeping state of consciousness’.

In other words, as long as the Pran continues to move in and out of the body through the process of breathing, it would not allow the body to die and this process would metaphorically indicate that the ascetic continues to be moving in an endless cycle of birth and death. But if he wants to break free from this cycle, he would have to learn to control his breath, or in other words, learn to exercise self restraint. Once he is successful in this, the Pran would make its exit but not come back. That is, the Pran would now move *not* through the Ida or Pingla Naadis in and out of the left or the right nostrils respectively but would rather enter the Sushumna Naadi and go straight up to the head and escape through the Brahm Randhra. If ‘exit of the Pran from the body is taken to be death’ then this one-way passage of Pran through the Brahm Randhra would be the ‘final death’ of the body of the ascetic, thereby setting his pure conscious Atma free from the fetters of the gross body. This would be tantamount to his breaking free from the cycle of birth and death as well, or piercing through the sun and moon complex. This is because the sun and the moon symbolically indicate this world consisting of an endless cycle of day and night. This is his ‘Kaivalya Mukti’.

By practicing Pranayam the ascetic learns to control his breath and force his Pran, which has already entered the Sushumna Naadi by doing various Aasans and Mudras of Yoga, to move past the nostrils and reach the top of the head from where it would make its exit by the way of the Brahm Randhra. In other words, if the ascetic allows his Pran to move in and out through the nostrils, his body would be kept alive and his Atma would remain trapped in this body as well as the world. But when he becomes an expert in the practice of Yoga and stops the flow of breath through the nostrils by doing Pranayam, the only way the heated and activated wind can escape from his body would be the Brahm Randhra. Once the Pran leaves through this path, it would not be able to re-enter the body. This is a one way exit for the Pran as compared to

the exit through the body under normal breathing process. Therefore, while the former would provide a permanent liberation from the body, the latter would symbolically mean going out (dying) during exhalation and coming back from where one has gone out, i.e. inhalation (taking birth again and entering a new body). Refer verse no. 51 of this Canto 6. The movement of the life consciousness in the different Naadis so as to keep the body alive and active in all planes of existence has been described in Paingalo Upanishad, Canto 2, verse no. 12, and Dhyana Bindu Upanishad, verse nos. 52-60.]

37-40. One should know that the eclectic path of Yoga is to establish a complete and comprehensive harmony, an unchallenged uniformity between all the elements of creation. [In other words, Yoga's main purpose is to bring together the individual creature's Atma, his individual consciousness, and the cosmic Atma or the cosmic Consciousness so as to remove the apparent differences and disparities between them and instead establish an undisputed uniformity between them. This is called the Kaivalya form of Mukti, or the form of spiritual liberation and deliverance, the soul's emancipation and salvation which is unique and one of its kind in the sense that no trace of duality is ever left. It is stressed that to achieve this end, the ascetic has to bring together all his vital winds and merge them with the main wind called the Pran and then collect the Atma and exit from the body to become one with the cosmic wind or air element present outside his body. When this happens, the body would eventually disintegrate into its primary elements which would merge with their respective cosmic counterparts, thereby giving effect to the principle aim of Yoga—bringing together the elements of creation.]

If the Mana's (mind's) propensity to remain restless, agile, fragmented and fragile is removed by fixing it (i.e. its concentration) in the Sushumna Naadi during the practice of Yoga [37] even for a moment or half a moment [38], if the ascetic finds his independent conscious self (i.e. his consciousness as existing in his various organs, both external as well as internal) dissolved into one uniform entity simply known as 'consciousness' in the Sushumna Naadi just like a lump of salt dissolved in water becomes inseparable from the water, or milk and water become inseparable from one another when they are mixed together [39], it can be said that it is only then that all the knots that symbolise his doubts and confusions (regarding what is meant by the concept of non-duality and the main purpose of Yoga) would be removed. These knots of ignorance and delusions keep him tethered to this gross body and the gross world, creating a false notion of duality which create imaginary shackles for his Atma and prevent its emancipation and salvation. When this is made effective, the ascetic becomes as free as the sky (i.e. he is not shackled and tied to anything like the sky element which is eternally free from any fetters) and obtains the supreme state of liberation called 'Param Pad' [40]. (37-40).

41. The spiritually auspicious effect of bathing in the holy river Ganges on its banks at the pilgrim site called Manikarnika Ghaat¹ or at the confluence of this river and the ocean² or even in the ocean itself³ is not even one-sixteenth as compared to allowing the consciousness to flow unhindered in the Sushumna Naadi during the process of Yoga (41).

[Note—¹The *Manikarnika Ghaat* is situated in the ancient city of Varanasi in northern India on the banks of the holy river Ganges. It is believed that Lord Shiva provides emancipation and salvation to all those who are cremated here.

²The *confluence of Ganges and the ocean* is called the holy site of Ganga-Sagar located near the eastern Indian metropolis of Calcutta where river Ganges flows into

the Bay of Bengal. The famous Kapil Muni Ashram (hermitage of sage Kapil) is situated here.

³The famous points where the *ocean* is regarded as being as holy as the Ganges and provides the same spiritual benefit for those who take a bath there are primarily three—in the eastern shore of India at Puri where the famous temple of Lord Jagannath is located, in the southern tip of India where the famous temple of Rameshwaram dedicated to Lord Shiva and said to be consecrated by Lord Rama himself is situated, and in the western shore at Dwarka where Lord Krishna had his capital.]

42. Having an auspicious sight of the religious mountain called ‘Shail’¹, to die in the holy city of Varanasi², to drink the holy water of the pilgrim site of Kedarnath³, and to be spiritually aware of the Sushumna Naadi where the Pran moves during the practice of Yoga—one’s spiritual Mukti (emancipation and salvation; liberation and deliverance) is made possible by all of them. [Or in other words, the ascetic can expect to get the same spiritual reward of Mukti by concentrating on the Sushumna Naadi and making his Pran flow through it as he would get by the other three methods mentioned in this verse.] (42).

[Note—¹*Shail* is the famous Mt. Kailash situated in Tibet and dedicated to Lord Shiva; said to be the Lord’s terrestrial abode.

²*Varanasi* is situated on the banks of river Ganges in northern India where it is believed that Lord Shiva utters the famous Mantra of Lord Ram in the ears of a dying man, thereby providing certain emancipation and salvation to his soul.

³*Kedarnath* is situated in the Himalayan range on the northern side of India and has the famous temple of Lord Shiva. There is a famous freshwater lake located here, and it is called the ‘Mansarovar Lake’ where the Gods are said to take their bath. Its twin site is Badrinath which is also located in the Himalayas and is dedicated to Lord Vishnu.]

43. The auspicious effects of doing one thousand Ashwamedh Yagyas¹ and one hundred Vajapaye Yagyas² are not equivalent to even one sixteenth part of the spiritual benefits got from focusing one’s attention and concentrating the consciousness in the Sushumna Naadi (43).

[Note—¹The *Ashwamedh Yagya*—This is called the horse sacrifice because a horse is sacrificed in it. It is a most ancient sacrifice and can be successfully done by very powerful kings or emperors. The horse is let free to go anywhere it wants for one year and the land where it sets foot is either annexed by treaties or by force in war. The actual sacrifice is though done for only three days. The sacrificial horse is protected by the army and if by chance it is killed by the opposing king then the sacrifice is deemed to be defiled. In practical terms, it was a means to spread a king’s area of influence.

²The *Vajapeya Yagya*—This is performed by one who desires unlimited dominion. This sacrifice had many special features and the number 17 plays a dominant role in it—for there are 17 animals that are sacrificed, 17 objects are distributed as fees for the priests, and it lasts for 17 days culminating in a chariot race in which the patron who does the fire sacrifice is made to win at any cost.]

44. One who perpetually remains moving in the realm of the Sushumna Naadi, i.e. one who does Yoga on a constant basis, deriving immense bliss and great satisfaction from it and remaining focused on achieving success in his spiritual aim of obtaining self-realisation and Brahm-realisation by keeping the Sushumna Naadi activated and the Pran diverted into it and away from other parts of the body by constantly practicing the various aspects of Yoga, is deemed to be free from all sins and their

wicked effects. He therefore becomes entitled to obtain the supreme transcendental state of Mukti (spiritual emancipation and salvation; liberation and deliverance of the soul from the fetters of the body and the world) (44).

45. (That is why--) This Sushumna Naadi is regarded by ascetics as the greatest of pilgrim sites, as the best form of Japa (repetition of Mantras—by metaphorically allowing the Pran or the vital wind to oscillate through it repeatedly), as the best form of Dhyan (concentration of mind, focusing of attention, contemplation and meditation), and the best destination for one's spiritual endeavours (i.e. it is the best path one should seek if one wishes true Mukti or freedom from the fetters of the body and the world) (45).

46. A fraction of the auspicious value of doing Dhyan (concentration of mind, focusing of attention, contemplation and meditation) through the medium of the Sushumna Naadi, i.e. doing Yoga when this particular Naadi is activated, is many times greater than doing other forms of religious rites such as performing many sacrifices, giving away many types of donations or doing huge charities, or keeping religious fasts on many auspicious occasions (46).

47. The supreme cosmic dynamic energy of the transcendental Brahm who resides in the realm of the Brahm Randhra situated at the top of the head is revealed in the form of 'Shivaa'. [Yoga Upanishads treat Shiva as another form of Brahm, and therefore the dynamic energy of Brahm is known by the name of Shivaa.]

This cosmic dynamic energy of Brahm is also known as the pure consciousness and it has an extensive presence in the Sushumna Naadi. [This is because the central nervous system of the body represented by this Naadi is at the core of the man's conscious life and keeps him aware of everything in this world. If the central nervous system blinks even for a moment, the man would fall down unconscious no matter how healthy his other organs are.] (47).

48. The cosmic 'Maya Shakti' (i.e. the great power of the Supreme Being to create delusions and keep the creature engrossed in its deceptions so that the cycle of creation set in motion by the Lord continues to roll on unhindered) is the grosser revelation of the dynamic powers of Brahm by which the latter created this illusion called the world. It is said to be located in the front part of the forehead and is shaped like a lotus¹. In the middle of this lotus is located the transcendental cosmic energy of Brahm which is subtle in nature and is called the Naad Shakti² (48).

[Note—¹This symbolic lotus refers to the Agya Chakra. The forehead symbolically represents the head-light of Brahm much like we have headlights in a car because the eyes of the man's body are located here. The eyes help the man to see the visible creation of Brahm which the latter has created using his maverick powers to create illusions, the power called *Maya Shakti* which literally means precisely this—illusion creating strength and powers. This world is the gross physical revelation of Brahm's stupendous powers to create anything desired. *Maya Shakti* refers to this power of Brahm—to create an illusion which is so perfect and life-like that it appears to be true from all practical view points though it is basically an illusion. This is the great mystery of creation—the world is said to be illusionary on the one hand, and it is pervaded by Brahm who is not an illusion on the other hand. The secret is that the external features of the world as we see is an illusion just like the water seen in the desert mirage, but the underlying principle that creates this illusion in the desert is a scientific truth having a sound reason. Likewise, the world is created by the ability of

the mind to imagine, which is actually Brahm's maverick power on display. Brahm is regarded as being synonymous with wisdom, erudition, enlightenment and knowledge, so the subtle quality of the mind-intellect complex to be analytical, discerning, thinking intelligently, weighing all the pros and cons and then making decisions and arriving at conclusions—these qualities are the subtle revelations of Brahm. But the power of this same mind to imagine and create a astoundingly fascinating world of charming and enticing objects is a revelation of Brahm's Maya Shakti. The man sees this illusions through his eyes situated in the forehead, and this fact is represented here by saying that the 'Maya Shakti is located in the front of the forehead'.

²As compared to this Maya Shakti which has taken a gross form of the physical world having attributes and characteristic features, the *Naad Shakti* is very subtle and has no physical shape or form or attributes. This is because Naad refers to the sound element which does not have any shape or form. It is like the air and sky elements which too have no form or shape. Since sound is a form of invisible energy, it is the first subtle revelation of Brahm at the cosmic level. Scientists call it the 'Big Bang' at the time of creation, while in the sphere of metaphysics it is called 'Naad'—both refers to sound. The concept of Naad and its origin in a point source called the 'Bindu' or dot have been explained extensively elsewhere in this Upanishad as well as in other Upanishads dealing with Naad and Bindu. See verse no. 49 below.]

49. At the 'focal point', literally called the 'Bindu', of this energy generation mechanism is the consciousness which has revealed itself in the form of the Jiva (living being). [This refers to the Atma which is the pure consciousness and the true 'self' of all living beings. At the micro level of creation, this consciousness is called the Jiva, while at the macro level the same entity is known as Brahm.] (49).

50. This consciousness indicative of the presence of Brahm in the living being in the form of his soul or Atma which gives the individual his 'life and identity' is revealed in its gross form as the heart (because without the heart no man can survive). The subtle form of the same divine and eclectic entity resides inside the middle of the heart or at the core of the heart (enabling the heart to beat). [In other words, the presence of the physical organ of the heart inside the body of a man is an ample proof of the presence of the life-giving consciousness known as Brahm in his body because without the heart the man wouldn't survive even for a second. The heart maintains circulation of blood and through it nourishes and protects the whole body much like Brahm who nourishes and protects the entire creation. But the physical organ known as the heart is of no use if there was no subtle life-supporting cosmic energy inside it in the form of the Atma or consciousness that actually enables this gross organ to beat continuously unhindered throughout the life of a man. The heart beats due to the subtle electric current that helps its muscles to contract and expand. This 'electric current' is Brahm in the form of the Atma, the life-giving pure consciousness, residing in the heart of all living beings.] (50).

51. Under the influence of the Pran and the Apaana Vayus, the Jiva continues to oscillate up and down in the body. [This refers to the consciousness present in the body of all living beings which moves up and down the body and radiates to all its corners to keep the body alive and active. This consciousness helps the body to perceive the external world and respond to these perceptions through the organs of perception and action; this consciousness keeps the mind-intellect complex working in prime shape; this consciousness keeps the internal organs and the different tissues and cells of the body working in proper order; this consciousness drives the motor of

the body of the creature called the Jiva. The two vital winds, viz. the Pran and the Apaana refer to the breath that is present in the upper part of the body and the wind passing down in the intestines and is predominantly located in the lower part. The rhythmic movement of the Pran acts like a pump that keeps the bladder-like body throbbing with life, while the Apaana helps it to eliminate the wastes that accumulate in the body. The Pran has a propensity to move upwards while the Apaana has a natural tendency to move downwards. This creates a symbolic oscillating movement for the consciousness, once going downwards along with the Apaana wind but immediately pulled up by the Pran wind only to be pulled down once again by the Apaana. This prevents the consciousness from escaping from the body—i.e. it remains trapped inside it. This is what is referred to in metaphysics as ‘the Atma being trapped by the body’. Refer also to verse nos. 35-36 of this Canto 6.]

Since the vital winds (Pran and Apaana) as well as the consciousness (the Jiva’s vital life-factors) are both invisible subtle and sublime entities, it follows that their movement in the body, whether to the right or to the left, are also invisible and imperceptible. [This refers to the flow of the Pran as breath through the right or left nostrils representing the Pingla and the Ida Naadis respectively. Breath is indeed invisible like the consciousness, and as is obvious now both are synonymous with life because no creature can survive without either of them.] (51).

52. Even as a ball tossed around by the hand never finds rest, the Jiva (the living creature represented by the consciousness present inside a gross body but usually understood to mean the physically visible body of the living being) never finds rest as it is incessantly and persistently tossed up and down by the Pran and the Apaana winds (52).

53. These two winds, i.e. the Pran and Apaana act to pull each other in the opposite direction. That is, the Pran pulls the Apaana in the upper direction, and the Apaana pulls the Pran in the lower direction.

This is metaphorically depicted by the two letters of the Mantra ‘Hans’, viz. ‘Ha’ and ‘Sa’. In other words, the Jiva (consciousness) tries to go up and escape from the body while making the sound of the letter ‘Ha’, and then is pulled down back inside the body while making the sound ‘Sa’. (53).

54. In this way, the Jiva (i.e. all living beings who breathe, for example a man) repeats this Mantra ‘Hans-Hans’ involuntarily while alive. But few understand its metaphysical and spiritual import. On the other hand, those ascetics who are able to grasp the great importance and significance of this eternal and imperishable divine Mantra are indeed wise, erudite, self-realised and enlightened ascetics. [Their entire life is spent in doing involuntary Japa, which is repeating of a divine Mantra and reaping its spiritual benefits, even without making any special efforts do repeat it and obtain its natural spiritual reward. Refer also to Canto 1, verse nos. 131-133; Canto 2, verse nos. 8-11; and Canto 6, verse no. 20.] (54).

55. Above the Kanda (the Mooladhara, also called the Mool Kand) is situated the stupendous source of subtle energy in the body in the form of a coiled structure called the Kundalini. [Refer Canto 1, verse nos. 168-169 and Canto 5, verse no. 5-6.]

This Kundalini can provide liberation and deliverance to wise, erudite and enlightened ascetics on the one hand while trapping those who are ignorant, deluded and stupid on the other hand. [This is because while the wise ascetic uses this

Kundalini in the practice of Yoga to harness the latent cosmic energy trapped inside it for his spiritual enhancement leading to the state of extreme ecstasy and final liberation and deliverance from the body as well as the world, the stupid ascetic on the other hand would enjoy the attendant benefits of Yoga, such as the access to different Siddhis or mystical powers that give him immense authority and super human capabilities, enabling him to enjoy the great fame, attention and public adulation that they bring upon him which would have the effect of dragging him deeper and deeper into the quagmire known as the delusory world, thereby sucking him in and trapping him in instead of letting him find liberation from it.]

This fact is known only to the Yogis (i.e. to ascetics who practice the tenets of Yoga sincerely and diligently) (55).

56. In the entire creation consisting of the three worlds known as 'Bhu' or the terrestrial world or the mortal world consisting of living creatures, 'Bhuvaha' or the sky above the earth and the near space where the sun and moon etc. are located, and 'Swaha' or the distant heaven where the stars and Gods are present, the entities that personify the cosmic energy are such entities as the sun, the moon and the fire. But the combined light, energy, strength and vitality of these are no match for the majestic glory and stupendity, the divine qualities and sublime virtues that are possessed by the supreme transcendental and ethereal entity represented by the word OM. [This entity is 'Brahm', also known as 'Pranav'.] (56).

57. The divine supreme transcendental entity (Brahm) represented by the word OM is more glorious, stupendous and magnificent than the combined glory, stupendity and magnificence of the three Kaals (i.e. the powerful forces of Nature that operate in creation covering the three phases of time, viz. the past, the present and the future), the three Devas (i.e. the three Gods, viz. Brahma the creator, Vishnu the sustainer and protector, and Shiva the annihilator or concluder), the three Lokas (i.e. the three worlds such as the terrestrial world, the nether world and the heaven), the three Swars (i.e. the three types of letters and their sounds, viz. the vowels having a short sound and the long sound, the consonants, and the sibilant letters), and the three Vedas (i.e. the Rig, the Sam and the Yajur Vedas) (57).

58. The tendency of the mind and its various faculties to remain ever restless, agile, freakish, volatile, fickle and unsteady is said to be the cause of this deluding world to come into existence, while the state when this mind becomes focused, steady, peaceful and calm is tantamount to obtaining Moksha (liberation from this entrapping world and its accompanying delusions and attendant miseries).

Hence, one should strive to steady and calm his mind and its various faculties by employing all the strength at his disposal as well as all the power of wisdom and intelligence that he possesses (58).

59. It is the sub-conscious mind and its ability to imagine and conceive things that has not only created this world of imaginary material things and all sorts of delusory perceptions but also expands this imaginary and deluding world so that it acquires an endless dimension.

Obviously, if this sub-conscious mind and its magnificent ability to imagine and remember imaginary things are done away with, the world would automatically cease to exist or matter at all. Therefore, all spiritual aspirants are expected to decimate the role of this tricky mind in their spiritual pursuit (because if they allow

the mind to let it have its way then they are sure to waver and fall on the wayside) (59).

60. The Mana (the mind and its thoughts) is the progenitor of the notion of Ahankar (ego, pride and arrogance). The mind which is conditioned by the sense of ego and pride assumes the dimension of the sky, spreading its tentacles in every direction (i.e. it becomes a huge and insurmountable obstacle in one's spiritual path; no matter what effort the spiritual aspirant makes his ego and pride would put a spanner in the wheel of his progress)¹. The deluding world and its traps are the maverick creation of this mind corrupted by the element of Ahankar².

The wise ascetic must understand that this Mana is not his Atma or his pure 'self'. The Atma is much superior to the Mana; they are not only distinct from one another but the Atma is the Lord of the Mana and it is not the other way round³ (60).

[Note—¹An example would help to explain the implication of this statement. A rich man thinks that he is superior to others and would not like to sit on the floor with them. He would be proud of his worldly possessions that he thinks that he has produced by his own efforts or got as inheritance as a reward of his past good deeds and therefore has the right over them. He never would like to forgo his worldly material possessions and bargain them for the difficult life of a spiritual aspirant, such as leading an austere life and renouncing all material comforts of the world. Similarly a haughty scholar would never acknowledge that his knowledge is limited and so would steadfastly ignore good advice or seek more knowledge. This is because the element of Ahankar puts its leg in and prevents the wheel of wisdom and sanity from moving the chariot of unpretentious simplicity and humility—the hallmarks of spiritualism—ahead.

²It is to be noted that when Brahm had decided to create this world of unimaginable dimensions, the first thing that came into being was 'Ahankar', and the next was 'Maya'. That is, as soon as the immaculate and eternally pure Brahm thought that he has the power to do something as grand as starting the process of creation, the element of 'self pride' and 'ego' corrupted him. No sooner had this happened than the element of 'delusions' swamped him and overcame him from all the sides so much so that Brahm was literally swept of his feet and got himself sucked in the quagmire of the world that he himself had created. He was no longer free to relax and do meditation, for now he had to worry about the sustenance and protection of the world he had created himself. Not only this, he saw that his off springs started petty quarrels and indulged in squabbling, robbing the peace and tranquility that Brahm had been enjoying before this creation had come into being. So he decided to wind up the game, and this resulted in the conclusion of one phase of creation. But this notorious 'Ahankar' element of Brahm did not let him live in peace—for he could not digest the fact that he could not control his off springs and had to punish them by winding up the whole drama altogether. So he decided to give it another try and set out to create the second round of creation. And the cycle continued.

This should act as a beacon of warning for the spiritual aspirant—if this Ahankar is powerful enough that it did not even spare the almighty Brahm from its clutches and drew him in its vice like grip, what chance does an ordinary man has to stand against it? So he should endeavour to nip the bud before it blooms into a flower by cutting off the cause of this world altogether—i.e. to conquer, to vanquish and completely eliminate the mind and crush its maverick tricks. This would do away with Ahankar and also with the Maya that follows in its wake.

³That is, the spiritual aspirant should not despair at the worrying state of the Mana and be assured that though the mind has so many tainting scars influencing its working, it does not mean that the ascetic himself is impure and corrupt because his 'true and pure self' is the consciousness known as the Atma present in his heart which

is a complete independent entity and has nothing to do with the Mana. So when it is said that he should conquer the Mana, it wouldn't harm his own 'self' in the least.]

61. It is the Mana (here referring to the mind and heart combine) that does deeds and gets involved in sins and wickedness. [The gross body is the entity that actually does the physical deed, but it does so at the instructions of the mind. The heart is the seat of emotions, so when the heart is involved in any deed, the creature becomes fully engrossed in it. Both the mind and heart play equal role in making the creature involved in any deed—the mind would control his body and divert his attention to the deed to be done, while the heart would make him endeared to the deed, enjoy it and therefore stick to it for a prolonged periods without getting fed up or weary of it. In other words, when it is said that one is fully engrossed or involved in any deed, it is implied that his mind and heart are both involved in the process. Now, the world is a charming proposition and when the mind and heart get to taste its sweet pill, they are so enamoured by it that they would go to any length to acquire its proximity and enjoy the comforts and pleasures that it has to offer. In this pursuit, they would compel the creature to commit horrendous sins and wicked deeds.]

If the Mana abandons its natural inclinations and habits (by becoming steady and focused on the spiritual path that it ought to follow instead of indulging ceaselessly in this world), there would be no such thing as sin or wickedness on the one hand, and auspiciousness and righteousness on the other. [That is, as soon as the wise aspirant realises the fact that all the problems he faces in his spiritual path are caused by the Mana, he would immediately distance himself from the latter and the deeds done by the body under the instructions of the Mana. When this eclectic state of existence is actually achieved by the Atma which however is the truthful identity of the man doing the deed, he would not be bothered whether the deeds are good or bad, whether they are auspicious or inauspicious. Instead, there would be complete sense of equanimity and evenness in the way he treats this world and deals with it.] (61).

62. When a spiritual aspirant is able to see his own Mana with its own light of wisdom, erudition, discrimination, analytical thinking and logical reasoning, i.e. when he is able to consciously control his mind using its own faculties of intelligence, wisdom and discrimination to decide what is good for it and what is not, thereby becoming steady in his spiritual path by not having any deluding aspirations and worldly desires or getting embroiled in numerous confusions and doubts, and as a result obtains the eclectic state of profound self-control of all his different passions, natural inclinations and temperaments which in turn lead to a high degree of equanimity, contentedness, calm and poise—it is only then that he becomes eligible to have a first hand experience or a divine and holy vision of the supreme transcendental Brahman, something which is most rare and difficult otherwise (62).

63. When an ascetic is able to see his own Mana with its own light of wisdom, erudition, discrimination, analytical thinking and logical reasoning, i.e. when he is able to consciously control his mind using its own faculties of intelligence, wisdom and discrimination to decide what is good for it and what is not, it is only then that he is called an expert and accomplished ascetic. It is only then that he finds true Mukti or liberation and deliverance from the fetters of this world and its delusions. This is the successful culmination of his Yoga practice. It enables him to become indifferent towards everything non-real, non-essential and non-eternal. Instead, he remains focused in remembering the eternal, real and supreme transcendental Truth (63).

64-65. When a spiritual aspirant is able to see his own Mana with its own light of wisdom, erudition, discrimination, analytical thinking and logical reasoning, i.e. when he is able to consciously control his mind using its own faculties of intelligence, wisdom and discrimination to decide what is good for it and what is not, he becomes steady and unwavering in Yoga. Or in other words, he is deemed to be firmly established in Yoga and becomes an established ascetic. This enables him to rise higher in the echelons of those who practice Yoga and obtain a higher position in the hierarchy of ascetics. In effect, he becomes the great ascetic who is like the exalted Lord of all ascetics (a reference to Lord Shiva). [64]

Not only this, he is able to experience the ecstasy and blessedness of witnessing the supreme transcendental state obtained by the most exalted of ascetics. [65] (64-65).

[Note—The emphasis in verse nos. 62-65, 69 of this Canto 6 is on ‘control of the mind’ and the role it plays in helping one to obtain his soul’s peace. As we have seen earlier, it is the mind that is the cause of all troubles for us in this deluding and artificial world which is like a spiritual trap for the man. For example, if the mind decides that it is alright to live in any given circumstance or that the comforts and enjoyments derived from the material world are really not worth the effort made to acquire them, the man would find it easy to cope with even the most adverse of circumstances or lack of material comfort. But it is the mind which sees that other people are enjoying this or that material comfort in this world and then it pokes the man and constantly keeps on nagging at him to go and obtain that thing of gratification for himself, leading to an endless cycle of unsatisfied desires and wants which can never give any rest to anyone. Once the man is able to train the mind to realise that all the things around him are perishable and non-desirable, that the world and its charms are imaginary and deluding while being spiritually demoting and dilapidating, that life itself is short and the soul has been going round and round in circles for innumerable births to take birth as a human being and this is its last chance to break free from this vicious cycle, and that therefore it should focus its attention on obtaining truthful spiritual liberation that can provide it with deliverance once and for all instead of frittering away this golden opportunity in oscillating between non-fulfilled desires and attempts to fulfill them, or wasting precious time to decide what is good and what is bad for it in the long run, or remaining confused about the truthfulness of the conscious Atma and the falsehood of the world around it, it is only then the man can find eternal spiritual peace, happiness and bliss. This very knowledge and awareness is tantamount to obtaining enlightenment and the great contentedness that accompany it. This is the culmination of the journey upon which he has embarked and is the aim of all his spiritual efforts when he had decided to study the scriptures, understand them and implement their doctrines in life as well as when he had made a Guru to help him in this endeavour so that he can find real and meaningful peace for himself.]

66. The supreme, transcendental, eclectic and divine entity known as Brahm, which is an epitome of such glorious virtues as eternal peace, tranquility, serenity and calmness, is much superior to and beyond other eclectic and divine entities such as Bindu (the dot on the top of the symbol for Brahm, i.e. OM, symbolising the origin of creation), Naad (the cosmic sound present in ether and representing the first discernible manifestation of Brahm in the form of sound and its attendant energy), Kalaa (the different aspects of creation revealing the varied qualities of Brahm), Jyoti (light and illumination symbolising wisdom, knowledge, erudition and enlightenment), Ravi (Sun), Chandra (Moon), the Dhruv Tara (the polar star which

remains steady in its place, symbolising the grand virtues of being steady, unwavering, constant, perpetual, consistent and persistent). [These and other such entities are only short aphorisms expressing only a fraction of the composite divine majesty and astoundingly infinite glories of Brahm. Brahm has revealed in all these forms, each being a manifestation of one aspect of Brahm, and therefore each one of them depicts one or the other magnificently glorious and divine aspects of Brahm, but they do not define Brahm in its entirety.] (66).

67. When the self realised ascetic is able to experience first hand the presence of the supreme transcendental Brahm, he spends the rest of his life submerged in extreme bliss and ecstasy, laughing at will and generally being in a perpetual mood of merriment, elation and cheerfulness. In spite of this all round sense of contentedness and happiness, he is always wary and afraid of those things that can throw a spanner in this eclectic state of his blissful and peaceful existence—i.e. he is always scared of this world and its cunning tricks so much so that he remains constantly wary of them and keeps a constant vigil against the traps laid out by this world to ensnare him in its clutches. Once he has tasted the nectar of freedom, it is natural that he would abhor things that would cause him to be bonded once again (67).

68. He forestalls all causes that create sorrows and grief to him. He takes the shelter of wisdom and fortitude if such unfortunate sorrows and grief do occur. He is not attracted to and enamoured by any of the charms and attractions offered by worldly assets and prosperity. In order to keep his spiritual enemies at bay and prevent them from tormenting him unnecessarily, he prefers not to annoy them at all by maintaining a safe distance from them. This is accomplished by remaining completely indifferent towards and paying no heed to any of the sense organs of his own body as well as their respective objects of attraction in the external material world along with other deluding aspects of this world which he treats as being his spiritual enemies. In this way he is not only able to control his enemies but also keep them away from disturbing him. Being thus freed from this fear, he wanders happily and in a carefree manner in this world (68).

69. The spiritual aspirant must be alert enough to realise the moment when his sub-conscious mind and its subtle faculties of paying attention and concentrating upon some thing of importance have been diverted towards the sense objects of this world and involved in having an unending desire for them and then endeavouring to acquire them, because if he is vigilant enough he would take immediate remedial steps to rectify this misdemeanour or misadventure of the mind. The mind is so restless, fickle, undecided and unsteady that it has a propensity to be blown away easily by the slightest gust of breeze representing worldly charms that cause an endless chain of desires, aspirations, expectations and hopes.

So, by being constantly vigilant, the aspirant would prevent his 'self' from being forced to be on a compromising ground with his arch enemy (i.e. the world and its entrapping net of endless material desires and hopes for their fulfillment) due to the mischief created by a careless and fickle mind. [That is, by keeping a close watch where his maverick Mana is, the spiritual aspirant can pre-empt a wide swathe of problems that would otherwise besiege him if he lets off his guard even once or allows himself to be misled by delusions and cunning schemes of Maya. Verse no. 71 below narrates how the Mana can be controlled.] (69).

70. The potentials and powers of the Mana (mind) are similar to the majestic glories of such (visible) entities as the sun and the moon, while its ability to see and perceive is like the stupendous glory of the fire on display.
